Castner & Curran, General Tide Water Coal Agts.

CELEBRATED

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York. 308 Walnut St., Philadelphia.
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all Railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the outputs have increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

STILL ON TOP. PRICES REDUCED. BAKER'S :: TRIPOLINE The Best Metal Polish in the World.

For this year prices to Firemen (as agents) will be one pound boxes, per dozen, \$2.25. One-half gross lots, \$12.00. Gross lots, \$22.50. Three pound pails, \$5.50 per dozen. Five pound pails, \$8.75 per dozen.

Still cheaper (our new Polish)—Baker's Standard—A splendid Polish for heavy work. One pound boxes, \$2.00 per dozen. One-half gross lots, \$11.00. Gross lots, \$20.00. Five pound pails, \$8.00 per dozen.

Cash Must Always Come With Orders to Avoid Delays.

Bed rock prices are here, given to Firemen as agents and they cannot and must not expect to buy from dealers at these prices. Samples sent free on application.

Copy from Original Letter Received from Division 95, Cincinnati, O.

Brotherhood of Locomotive Engineers.

[SEAL.]

CINCINNATI DIVISION, No. 95.

CINCINNATI, OHIO, September 5th, 1889.

This is to Certify, That Brother Chas. T. Brown is a member of this Division, No. 95, B. of L. E., and has been a member of the B. of L. E. for twelve years, and we can recommend him as an upright, honorable and worthy brother.

He has lately connected himself with the Railway Officials' and Conductors' Accident Association, of Indianapolis, Ind., and said Association has no connection whatever with the Order of Railway Conductors, or any other order or society—it being a distinct organization for the purpose of insuring railway employes in the United States, Canada and Mexico, against accidents. Brother Brown has been appointed Special Agent for the United States, Canada and Mexico, for the Mechanical Department of railroads. We feel confident that you will find anything Brother Brown represents to be just what he says.

E. E. McMILLAN, C. E. [SEAL.]

G. BAKER, F. A. E.

INDIANAPOLIS, IND., September 15th, 1889.

TO BROTHER ENGINEERS:—Having been appointed Special Agent for the United States, Canada and Mexico, for the RAILWAY OFFICIALS' AND CONDUCTORS' ACCIDENT ASSOCIATION, of Indianapolis, Ind., for the Mechanical Department of Railroads, and having been informed by reliable authority that some of the unprincipled representatives of other accident companies have circulated the report among Engineers and Firemen that this Association is connected with certain Orders and Societies; on account of such representations, which are untrue in every respect, I publish copy of above letter from Cincinnati Division, No. 95, B. of L. E., which will be sufficient without further explanation.

As all business from Mechanical Department of Railroads comes through my agency, I will furnish every Agent a copy of the above letter, and any application given to an Agent who has this letter in his possession may be the same as given to me in person.

Trusting that I may receive a share of your patronage, and will be more than pleased to add your name, one and all, to our list of membership, assuring you that I will use every honest and honorable means to secure your patronage. For rates, etc., address

CHAS. T. BROWN,

A Parish Priest's Certificate, Certified to by the Archbishop of Mexico.

CELAYA, October 1st, 1889.

I, Parochial Priest and Ecclesiastical Judge of Celaya, State of Guanajuato, hereby certify that I know several people who have been cured by Don Ramon Alva's remedy.

It radically and effectually dispels all impurities in the blood.

FRANCO M. GONGORA,
Parochial Priest and Ecclesiastical Judge of Celaya.

The above signature is that which he uses in all his business, officially and otherwise, and he is an old pupil of mine.

‡ A. P. ARCHBISHOP OF MEXICO.

This medicine has never failed in a single instance to cure the most virulent cases of Scrofula and Contagious Blood Disease.

In cases of diseases which have been treated with mercury by physicians, it requires a few weeks longer to effect a cure, but a perfect cure is absolutely certain in any case, and when once cured, you will find that all traces of mercury have disappeared.

It is perfectly harmless, and is as good for children as for adults.

After you have been cured by it, we ask, as a favor, that you will give your friends the benefit of your experience, by recommending it.

RETAIL PRICE, \$2.00 PER BOTTLE.

THE EIGHT-HOUR MOVEMENT.

The decree has gone forth that on the first day of May, 1890, an effort shall be made by the wage-workers of the United States to establish eight hours as a day's work.

The agitation of the hour question in relation to a day's work dates back to the early days of the century. It is not, therefore, a new question. It is, on the contrary, somewhat antiquated, but it is, nevertheless, active, vital, and aggressive. It will not down. It invites discussion. It courts investigation. In the early days of the present century fourteen hours, as a general proposition, constituted a day's work.

The records show that as early as 1806 the agitation for a reduction of the hours of work was entered upon by the journeymen ship carpenters and calkers of New York.

This was continued with more or less spirit till 1832, when the ship carpenters and calkers of Boston struck for ten hours. They did not succeed. But in 1832-33 these trades in New York and Philadelphia did succeed in establishing the ten-hour day.

The agitation continued and spread. In 1840, Martin VanBuren, President of the United States, issued his proclamation making ten hours a day's work in the navy yards of the nation.

In 1841 the Governor of New Jersey recommended legislation in favor of shorter hours. He said: "Constant and unremitting toil prevents intellectual improvement and leads to physical and moral debasement."

In 1841 a firm of ship builders at Bath, Maine, adopted the ten-hour system.

In 1845 a mass meeting was held at Pittsburgh to urge the adoption of the ten-hour day. A strike followed, which continued for five weeks, and proved a failure, but the agitation continued.

In 1846 immense mass meetings were held in New England, New York and Pennsylvania, and many strikes followed. American workingmen were aroused and were everywhere aggressive.

In 1847 the British Parliament passed a ten-hour law, and immediately American workingmen renewed the agitation with greater energy than at any previous period. Mass meetings were held throughout the Eastern and Middle States.

In 1847 New Hampshire passed a ten-hour law. This afforded great encouragement, and agitation was spirited throughout 1848. In 1850 an Industrial Congress was held at Chicago, and numerous resolutions were adopted designed to ameliorate the condition of working men.

In 1853, eleven hours, as a day's work, went into operation in many places. Three hours had been gained to thousands of

working men. In many instances, four. In Massachusetts and Rhode Island ten hours for a day's work became the rule, but in some of the States eleven and thirteen hours were still demanded. Throughout the West the ten-hour system became the rule.

In 1868 Congress passed the eight-hour law for all Government workingmen.

In 1867 the National Labor Congress, at Chicago, urged the eight-hour movement, and in 1868 many strikes occurred for the eight-hour rule. They did not succeed, but some victories were gained.

In 1869 the Boston Eight-hour League was formed.

In 1872 it is estimated that 100,000 men struck for eight hours. Eight hours as a day's work was established for stone masons, plasterers, painters, plumbers, brick layers, paperhangers, plate printers, and carpenters in some localities.

The agitation proceeded, and in 1878 and 1879 the 4th of July was selected as the day for eight-hour agitation and demonstration.

In 1886, May 1st was designated as the day to inaugurate the eight-hour system, and a general strike resulted. The movement was not a success, nor yet a total failure. Some trades succeeded while others failed.

As indicating the progress of the eight-hour movement, it can be said: The General Government has passed an eight-hour law. The same is true of California, Connecticut, Illinois, New Mexico, Pennsylvania, New York and Indiana.

It will be observed that the agitation for a reduction of the hours of labor dates back to 1806—eighty-three years ago. It began with journeymen ship carpenters and calkers, who were required to work fourteen hours a day. The movement was opposed by ship owners, who threatened to take their ships away from New York for repairs if the workingmen persisted in their demand for a reduction of the hours of labor.

It will be observed that the agitation has never ceased from the day it began to the present. The demand for a reduction of hours of labor has occasioned many strikes and has cost many sacrifices on the part of workingmen. They were always opposed by employers, who yielded only to the in-

evitable. The political economist, the philanthropist, the statesman, and possibly the statistician, could profitably investigate the effect of the reduction of the hours of labor from fourteen to ten hours, for practically such has been the result. Instances there are, doubtless, where workingmen are required to work eleven, twelve, thirteen, and in some cases, fourteen hours a day. There are also instances where eight hours meet the requirement, but, as a general rule, ten hours constitute a day's work.

The reduction, therefore, may be said to be four hours a day as a result of agitation.

The labor statistician, may, we think, inquire: What has been the influence of this reduction of the hours of labor upon the workingmen of the United States? What has been its influence upon the industries of the country? Has capital suffered? Have capitalists found the reduction of working hours from fourteen to ten inimical to their interests in any proper sense?

Such questions are practical:

1st. What has been the influence of the reduction of the hours of labor upon the workingmen of the United States?

Labor statisticians deal chiefly in figures, not figures of speech. Still, they are required to deal with facts. Four hours a day wrested from toil, given up to leisure, must of necessity exert a potent influence. The labor statistician could say 4 hours a day for 300 working days equals 1,200 hours—120 days of ten hours each. Here a number of pertinent questions arise:—What influence would so much leisure exert upon the man physically? Does rational rest for the body invigorate it? Capacitate it to perform as much labor in ten hours as was performed in fourteen hours? Is such a theory tenable? It is so asserted, and believed, not only that as much work can be done, but that better work can be done. One hundred and twenty days in a year wrested from toil and handed over to the workingman enables him not only to recuperate his physical energies, but to improve his mind. It affords opportunities for reading and education in various ways; hence, the reduction of the hours of labor exerts a beneficial influence physically and intellectually, and it is safe to say, as a general proposition, that

the reduction of the hours of labor has exerted a highly beneficial influence upon the American workingman.

2d. What has been the influence of the reduction of the hours of labor upon the industries of the country?

In replying to the interrogatory, it should be stated that in every department, production has kept abreast of the demand, while in a great number of instances, production has been in excess of demand, necessitating forced idleness. This being true, it may be affirmed, that in no one instance have the industries of the country been embarrassed by the reduction of the hours of labor. If, therefore, production has been equal to the demand, and in numerous instances, in excess of the demand, the assertion cannot be made, with any show of propriety, that the reduction of the hours of labor has been prejudicial to the rights of capital. It has not suffered. If, in any case, investments in industrial enterprises have not paid fair dividends, or no dividends, or, if they have entailed losses, the cause must be sought for and determined without reference to the reduction of the hours of labor. This being true, capitalists are required to admit that, so far, no wrong has been inflicted upon their rights and interests by the reduction of the hours of labor.

Just here comes into view the workingman in association with the machine. It is always in order to extol the machine. It is called "labor-saving." The machine performs the work, which without it would be performed by men. Who is equal to the task of determining how many men would be required to perform the work now performed by the labor-saving machines in operation in the United States? The question is not practical. It is not seriously propounded. The "labor-saving" machine is here; it has come to stay. It is to be multiplied indefinitely. The inventive genius of the world is aroused, new machines are to come. It is held that they mark in vivid lines the progress of our civilization. Their number and their names are past finding out. They excite admiration. They are themes for orators and poets. We do not object to such things.

But there is a practical view to be taken of the subject, strictly in harmony with the duties of the labor statistician. The machine has the power—first, to displace workingmen, force them into idleness; second, to create new industries, and thereby supply opportunities for employment. The question that forces itself upon the attention of all men at all capable of grasping conditions, is, does labor-saving machinery, by creating new industries, afford opportunities for employment equal to the number of men it displaces?

It may not be in the power of the most industrious and methodical statistician to arrive at conclusions upon such a proposition, for the correctness of which he would be willing to stake his reputation for accuracy. But, investigation would afford a basis for statements worthy of the importance of the subject. He would find, doubtless, a large number of men in enforced idleness—men willing to work but unable to find employment—in common parlance, he would find the "labor market" over stocked with laborers. Having ascertained this fact, the statistician would be in a position to consider causes for this enforced idleness. He might prudently inquire:

1st. Is it owing to labor-saving machinery?

2d. Is it owing to the natural increase of the laboring population?

3d. Is it owing to immigration?

4th. Is it owing to over-production consequent upon a want of foreign markets for the surplus of products?

Such topics, we hold, are within the admitted limits of legitimate inquiry by the various Bureaus of Labor Statistics. Indeed, we hold that they are of supreme importance.

We think the term, "labor-saving machinery" is a misnomer. It does not *save* labor in any proper sense. We admit the difficulty of stating the proposition. For illustration: A piece of work requires the employment of twenty men one day. A machine is introduced requiring the employment of one man, which performs the work in the same time—one day. Nineteen men are, therefore, displaced. The machine is at once proclaimed as "labor-

saving," and becomes immensely popular. In what direction, in what particular has it in any proper sense saved labor? It has forced nineteen men into idleness. Nor has it saved the labor of the one man who operates the machine—he is required to work, as was his wont, before the machine was introduced.

The machine, instead of being "labor-saving," is a money-making and a money-saving machine, and as such it is one of the most important, if indeed it is not the most important factor in the economics of the country, and as such in its relations to labor merits special attention. As an illustration, suppose a machine that displaces nineteen workmen costs \$10,000, and wears out in ten years. Suppose the wages of the men displaced was \$1.50 a day; say money is worth 6 per cent. In that case, the owner of the machine in ten years would be out of pocket \$16,000. The wages of the nineteen men displaced by the machine, in ten years would have amounted to the sum of \$85,500—as a result, in ten years the owner of the machine is the gainer by \$69,500. The machine has performed the labor of twenty men requiring the oversight of one man. It is in order, and the demand partakes of the imperative, for statisticians to approximate, as near as practicable, to what extent machinery opens new avenues for work and thereby affords compensation for the idleness it creates.

Grouping interrogatories, it may be assumed that machinery, the natural increase of population, immigration and over-production, all play conspicuous parts in forcing men into idleness, and here it should be said, that idleness and the ills which it inflicts, are the most serious menace that confronts our institutions and our civilization.

This is not croaking. In it there is no taint of cant. Such subjects are not visionary. On the contrary, men of profound erudition are concentrating upon them all their faculties in the hope of finding a remedy. It is stated by those familiar with the condition of workmen and deeply interested in their welfare, that there are now in the United States 1,000,000 men in forced idleness. We do not vouch for the correctness of the estimate, though it is credited to

Mr. Carrol D. Wright. The number may be too high or too low, but that there is a vast army of idlers, is a fact which is not denied.

It is assumed by the advocates of the eight-hour law, that its adoption would be in the line of solving a threatening problem. They claim that the adoption of the eight-hour system would be highly advantageous to workmen, economically, physically, and morally.

If there are in the country 6,250,000 workmen, of whom 5,000,000 are working ten hours a day, by reducing the hours to eight, an opportunity is at once given for 1,250,000 more men to find employment. We leave out the question of wages, the supreme idea being to afford an opportunity to work for men willing to toil for such wages as they can obtain. Mathematically, the proposition is invulnerable; 5,000,000 men working ten hours a day is 50,000,000 hours, and 6,250,000 men working eight hours a day is 50,000,000 hours. To say that all would go to work if the opportunity was offered, or to enter a denial to such a proposition, is totally foreign to legitimate discussion. It is far better for the country to be in a position to offer men opportunities to earn their living. This being done, there will be ample time to note results. If a man has an opportunity to work and will not, he at once becomes one of the class whom it were wise to watch, but until such an opportunity is offered, nothing could be more cruel than to add to his misfortune the stigma of surveillance.

It is believed by those who advocate the eight-hour system, that it will furnish relief to a vast number of men who are idle because they cannot obtain employment, and if in this they are correct, the effort to reduce the hours of labor is worthy of universal approbation. It should be encouraged.

We have assumed for the sake of illustration, that there are in the country 6,250,000 workmen willing to work; that of these 5,000,000 are at work ten hours a day, and that 1,250,000 are in enforced idleness. We have assumed, as a mathematical fact, if the hours of labor are reduced from ten to eight, the 1,250,000 idle men would have an opportunity for employment. In this proposition the time problem is solved. So far,

the eight-hour movement is not complicated by the question of wages. It does not enter into the discussion anywhere. It is left to be regulated by circumstances. The commanding idea is to obtain employment for the idle—the surplus labor of the country.

Suppose that workmen are receiving an average of \$1.50 a day, and that by reducing the hours of labor from ten to eight, wages are reduced in the same ratio. In that case a man receiving \$1.50 a day would receive but \$1.20 a day, and by giving up 30 cents a day, 1,250,000 idlers are employed. As a result, the same amount, \$7,500,000 a day would be paid out for labor. If it be assumed that a man can live on \$1.20 a day, then we have the fact that employers are not out of pocket a cent. Whatever loss is sustained falls directly upon labor—the workmen of the country.

But suppose that the result should be, as manifestly it ought to be, that the average wages, \$1.50 a day, should be maintained, what would be the result? Simply a gain to labor of \$1,875,000 a day.

It need not be said that the subject is inviting for indefinite exploration and elaboration. With employment at fair wages, the possibilities for workmen to improve physically and morally, become probabilities. Rescued from ceaseless, grinding, exhaustive toil by the reduction of the hours of labor, domestic ties are strengthened, the cottage home of the workman is beautified, and made the abode of contentment, a fit place to rear sovereign citizens who are to shape in coming years the destinies of the Republic.

With a few dollars over and above the absolute necessities of life, there is a fund for the book and the newspaper, something for the church and lecture, for rational amusement.

Under such conditions the restlessness of society, in a great measure, ceases. Employment hushes many alarms. The wealth which labor creates is more equitably distributed, and the statistics which labor bureaus are required to collect and tabulate will bear, as never before, eloquent testimony that our civilization may boast of its triumphs rather than, at present, blush for its glaring defects.

FACTS ABOUT TRUSTS.

In the September *Forum*, 1889, Mr. Charles F. Beach, has a paper, captioned "Facts about Trusts," in which the writer exhibits large admiration for that form of robberies, which he styles a "purely economic question," and upon which "thinking and unthinking men alike, have bestowed an unusual amount of 'attention.'" The singular feature of the trust question, is, that "the people," the "thinking and unthinking men alike," without knowing why, and "without smarting under any specific injury attributable to trusts," have manifested great excitement upon the subject—and this "because the impression is abroad that trusts are, in some way or other, doing a public mischief."

It is doubtless wise to admit, that when a great majority of the people come to the conclusion that anything, no matter what, is "doing a public mischief," they are right. The people are patient, they do not rush to conclusions; the verdict of the people is often too long delayed, but when it comes it is *vox populi vox dei*—from it there is no appeal. So far, the verdict is, that trusts are "doing public mischief."

Mr. Beach appears in the *Forum* as the attorney of the trusts. It would be strange indeed, if he could not find something to commend, or, at least to palliate the distrust of the people. It is seldom that a culprit at the bar is so perfidious that, by searching, something cannot be found to modify the abhorrence of his crime, and the more he can pay, the better by hook or by crook, will his attorney make his case appear. It is not strange, therefore, that Mr. Beach is able to make his clients appear less monstrous than is their due.

Mr. Beach makes several efforts to define trusts, and says they "are a sort of alliance among business men but recently devised, and especially because they are essentially private arrangements, with the organic constitution of which the public has no proper concern" and yet, he says, "the present discontent of the working people of which trust agitation and trade unionism are only symptoms, is perhaps a natural result of the lower prices;" and further, "a trust, let it be at once plainly understood, instead of being

a cause, is a result of lower prices, over production and diminished profits," nevertheless he says, "the public has no proper concern" in such matters. If Mr. Beach should appear again in print he might profitably refer to such matters as properly concern the public—indeed, he might condescend to tell his readers what constitutes "the public." Mr. Beach puts it mildly, when he says "the impression is abroad that trusts are some way or other doing a public mischief." We say he puts it mildly, when he intimates that the term "public mischief" voices the sentiments of the people. "Doing a public mischief" is not the charge brought against pirates and highway robbers, and it is only in these latter days of high Christian civilization, of churches and schools, and intense solicitude to convert the heathen, that new methods of right and left robbery find educated and cultured advocates in magazines, and a subsidized press. In this way an effort is made to show that a "public mischief" is a public blessing, and those who refuse to accept the dictum of Mr. Beach and writers of his class, are characterized as "politicians of the baser sort;" such men, for instance, as United States Senator Sherman, of Ohio.

Fortunately, Mr. Beach becomes lexical, and says:

A trust, then, to begin with a definition of it, and making wide allowance for many differences in detail as between one trust and another, is essentially an agreement among the producers and vendors of a certain sort of merchantable commodity, for their mutual protection and profit in business. It is a wholly selfish arrangement without pretense that philanthropy enters into it at any point. Herein it differs very little from other commercial enterprises. It is not proposed as any part of the trust scheme that it share its economies with the public, and it ought not, therefore, to be judged of as an eleemosynary institution. It is entered into because the parties to the agreement believe that they can in that way largely or entirely eliminate or control competition, maintain the prices of their wares, check over-production and make money more easily than they can without the trust.

In the foregoing we have a definition of the trust, the alliance, the conspiracy, the league, which the people believe is doing "a public mischief." A combination of confessedly selfish men, selfish capitalists, who say: "The public be d-d." It is equipped with wheels, hammers, screws

and pincers. It can grind, crush, squeeze and pinch. It is mercenary to the last degree; is as soulless as a tiger. Words have not the power to express anything more venal than a trust, as defined by Mr. Beach. He says it is "wholly selfish" and "without pretense" of "philanthropy." It prates of "economics" but is destitute of humanities. It crushes "competition." In that regard it spares nothing—age, infirmity, women and children, home, business, hopes and ambitions—all things that interpose as obstacles to the march of the trust are swept away regardless of consequences. The one supreme idea of the men who compose the trust is "to make money more easily than they can without the trust."

The trust being a "wholly selfish arrangement," animated by neither philanthropy nor charity, and having no purpose to share any of its profits with the public, having in view one supreme purpose, to make money "easily," at once begins operations which at every move is a "public mischief," a public wrong, a public infamy. The old adage was that "competition is the life of trade;" the trust, according to Mr. Beach, proposes to "eliminate or control competition." In its chosen field of operations competition disappears, and in so far as the smaller concerns vitalize trade they are killed; they are "eliminated," or controlled but another name for death. The small concern is killed. The "wholly selfish" trust will not tolerate any small industry that stands in its way of making "money more easily." "It is a device," says Mr. Beach, to unite corporations for "wholly selfish" purposes. It is the massing of money to "eliminate competition," and to "maintain prices." The trust grasps the absolute necessities of life—coal, oil, salt, sugar, and the like. It grasps all the salt wells, all the oil wells, all the sugar refineries. It "eliminates competition," it determines production and it fixes prices. "Wholly selfish," without a heart-throb in sympathy with the public, it exercises autocratic power and rides rough shod over the public, and yet, in all of this, Mr. Beach contends "the public has no proper concern."

Mr. Beach, in his efforts to find an excuse for the existence of trusts, and seeking, a

do all attorneys of monopolies, to make labor organizations responsible for whatever is socially or financially demoralizing, says:

It ought not to be overlooked that a potent factor in inducing trusts, has undoubtedly been the various aggressive combinations or trusts of laboring men which now exist, and the concerted action on the part of labor to dictate how the factories are to be run, who are to be employed, and what wages are to be paid.

In the foregoing, we have the writer's best argument for the existence of trusts—the organization of labor, as for instance, the Brotherhood of Locomotive Firemen. Who ever said of that Brotherhood that “it is a wholly selfish arrangement, without pretense that philanthropy enters into it at any point,” as Mr. Beach says of the trust? Who ever said of a Brotherhood of railroad employes, that it did not propose to “share its economics with the public,” and that the Brotherhood was not to be “charged as a charitable institution?” Who does not know that the Brotherhoods are philanthropic, kind, generous and charitable? Who does not know that the public shares in their economics, when they expend millions to bury their dead, and to keep widows and orphans from becoming a public charge? To attempt a comparison between a labor organization and a trust, is like comparing the most orthodox idea of hades with the climate of the arctic zone. Says Mr. Beach:

Prior to the year 1880, to speak generally, and making due allowance for the depression which immediately followed the panic of 1873, manufacturers in this country, in almost all the staple lines, found a market for as much of their product as they could furnish at an adequate profit; but since then, the selling price of almost any one of the staple articles of commerce manufactured in this country, has declined from sixteen and two-thirds to fifty per cent. * * * The shrinkage, therefore, came largely out of the profits.”

Now we are told that since 1880, business has been so deplorably bad, and the “aggressive combinations of laboring men” so formidable, that capitalists could not “make money more easily,” than was the case prior to 1880. In this connection we find the statement that “the rapid increase in the wealth, business and prosperity of the United States during the past ten years is simply marvelous. According to the published figures the total wealth of the country is now \$71,459,000,000, equal to nearly \$1,000 per

capita. This is an increase in ten years of \$18,000,000,000, or forty-two per cent.” This statement, it will be observed, utterly upsets the statements and the superstructure of Mr. Beach. The condition of business since 1880 has given no warrant for the establishment of trusts. The statement is that the wealth of the country has increased at the rate of \$1,800,000,000 a year—\$18,000,000,000 in ten years. Only work creates wealth, and the purpose of the trust, being “wholly selfish,” wholly soulless, destitute of philanthropy and charity, is to rob labor of its rightful share of the wealth it creates; and yet, this organized piracy, finds advocates, who insert their pleadings in the great periodicals of the period.

To show where this enormous wealth, created by labor, goes, it is only required to state that the income of the President of the Standard Oil Trust is \$1,000 an hour—\$16,446 a minute. With every second of time, while the earth moves on its shining circuit around the sun, something more than a quarter of a dollar drops into Mr. Rockefeller's pocket, and thus, the trusts get “the drop” on labor.

Many of these trust-monopoly millionaires, are among the most pious of latter day Pharisees. They fly from the mast-head of their luxurious yacht the “Standard of King Jesus.” They “sand the sugar” and then go in “to prayer.”

Their high ambition is to kill off labor organizations, and with these silenced, the road is clear. Strike the labor organizations dumb, and labor will never advance another inch until the “leaves of the Judgment Book unfold. The existence, and the power of the trusts to do “a public mischief,” depend alone upon working men. In the past they have been hewers of wood and drawers of water. What they will be in the future depends upon organization, intelligence and courage.

THE *Railway Service Gazette* says that “thirty-six Divisions of the Brotherhood of Railway Conductors are now organized, and charters are out for fifteen more new divisions, while all the divisions, now in existence, are increasing in membership with great rapidity.

CURRENCY AND POPULATION.

Under this caption the New York *Tribune* in its issue of January 30, publishes some interesting figures, which at this juncture are specially instructive. The question is, what is the amount of currency in circulation per inhabitant? To answer the question, the method adopted is to add to each year, since 1880, 2 per cent. of births over deaths, and the immigration, officially reported for each year. It is believed that by this method a close approximation to popu-

lation is obtained, and the following is the result:

1881	51,828,329	1886	59,993,340
1882	53,633,867	1887	61,683,328
1883	55,320,283	1888	63,457,423
1884	56,935,483	1889	65,165,186
1885	58,489,938	1890, Jan.	66,016,845

According to the above estimate of population in the United States, the following table shows the circulation per capita on January 1st of each year, the figures being official:

	COIN PER CAPITA.				PAPER PER CAPITA.			
	Gold.	Silver Dollars.	Fractional Silver.	Total.	Legal-tenders.	Legal-tender Certificates.	Bank Notes.	Certificates.
January 1, 1879	2.04	.12	1.42	3.58	5.75	.72	6.52	.44
January 1, 1880	3.60	.34	1.19	5.13	6.35	.20	6.86	.23
July 1, 1880	1.56	.39	1.09	6.04	6.25	.29	6.73	.16
July 1, 1881	6.08	.56	1.02	7.66	6.11	.22	6.71	.11
July 1, 1882	6.68	.59	.99	8.26	5.82	.25	6.57	.09
July 1, 1883	6.24	.64	.95	7.83	5.61	.21	6.30	1.08
July 1, 1884	5.99	.70	.80	7.49	5.38	.21	5.81	1.25
July 1, 1885	5.85	.66	.74	7.25	5.16	.51	5.29	1.73
July 1, 1886	5.98	.87	.77	7.62	5.09	.30	5.08	1.27
July 1, 1887	6.11	.89	.79	7.79	5.16	.14	4.49	1.48
July 1, 1888	6.17	.88	.79	7.84	1.61	.23	3.87	1.89
July 1, 1889	5.77	.83	.79	7.39	1.61	.27	3.18	1.79
November 1, 1889	5.72	.92	.82	7.46	4.82	.19	2.99	1.84
January 1, 1890	5.69	.93	.83	7.45	5.02	.13	2.92	1.86

It is widely asserted that more currency is required, but, says the *Tribune*, "manufacturers are progressing on the whole as they never have progressed before. The farmers have just produced the largest crops ever raised in this country. There is abundant evidence, also, that the volume of outstanding farm mortgages has been diminished in recent years." Be this as it may, those who discuss the currency question intelligently should know the volume in circulation. The foregoing figures will therefore be found valuable.

In the 2,750 languages of the world there are no words in the vocabulary of workmen of the commanding power equal to "organization" and federation. They are the "signs of ideas" which embody right, justice and victory.

COLUMBUS, O., is to have a belt railroad, similar to that around Indianapolis.

THE *Locomotive Engineer* remarks that "slowly but surely the federation of the engine and trainmen of the country is going on, the union is being effected without noise or smoke, and its thoroughness is little known or understood. That Reason shall be elected permanent president, Common Sense secretary, and the Golden Rule adopted as the constitution and by-laws, we sincerely hope. That such an organization will be powerful there is not the least doubt, and, as long as that power is used to aid members of the organization because of the *right* and not because of the *might*, no one can complain—and no just man will." Just so, Brother Hill, to "aid members" the "*might*" must be in *alliance* with the "*right*."

THE demand for more freight cars means more business, more business means more earnings and profits, but does it mean more pay for those who do the work?

THE CARDINAL AND THE EMPEROR.

The Emperor of Germany, who inherited a throne and therewith much of this world's goods and chattels, and the "divine right to rule," has had his attention called to the wrongs heaped upon his *poor* "subjects" by his *rich* subjects, and as he read the accounts his brand new crown, weighing four pounds, emblazoned with diamonds and precious stones, did not set easy on his head. The foolish old time toy gave him no little anxiety, so one day he said:

It is the duty of the state to so regulate the duration and the nature of labor as to ensure the health and morality, and the supply of all the economic wants of the workmen, and to preserve their claims to equality before the law. For the promotion of peace between workmen and their employers, legal measures must be taken towards the establishment of regulations, empowering workmen to appoint delegates, enjoying their confidence, to represent them in the settlement of affairs, these delegates safeguarding the interests of the workmen whom they represent. In all negotiations with the employers or with the government. Such a system would enable the workmen to express their wishes and grievances peacefully and freely, and would give the authorities of the state an opportunity to inform themselves in a very direct way, of the condition of the working people, thus keeping in touch with all their activities, sentiments and impulses.

As might be supposed, old Bismarck, whose policy is expressed by "iron and blood," didn't like Emperor William's cooling notes to workmen; but there is a powerful element in Germany, growing stronger every day, who care no more for a crown than they do for any other bauble, and this fact the Emperor realizes fully, hence his taffied writing of which, to Richard Fleischer, editor of the *Deutsch*. Cardinal Manning says:

SEN.—You ask me what I think of the invitation of the Emperor of Germany to the European powers to meet in conference on the subject of labor and the state of the millions in every country who live by the wages of labor. I think this imperial act is the wisest and worthiest that has proceeded from any sovereign of our time.

The condition of the wage-earning people of every European country is a grave danger to every European state. The hours of labor, the employment of women and children, the scantiness of wages, the uncertainties of employment, the fierce competition fostered by modern political economy and the destruction of domestic life resulting from all these and other kindred causes, have rendered it impossible for men to live a human life.

How can a man who works fifteen or sixteen hours a day live the life of father to his children? How can a woman who is absent from home all day long do the duties of a mother? Domestic life is impossible, yet on the domestic life of the people the whole political order of human society reposes. If the foundation be ruined, what will become of the superstructure?

The Emperor William has, therefore, shown himself to be a true and far-sighted statesman. Believe me always yours, faithfully,

HENRY E. CARDINAL MANNING.

Archbishop of Westminster.

Labor organizations throughout the world are committed to the policy enunciated by Cardinal Manning.

There are localities in the United States where "wage-earning people" are as oppressed and as degraded as can be found in any European country, and were it not for labor organizations the whole body of "wage working people" in the United States would be equally deplorable.

The salvation of workmen lies in organization. With organization compact, intelligent, the emperors, the autocrats, whether in Europe or America, will slide down from their pedestals and confess that they are not different from the rest of the human family.

AND now comes the announcement in the *Mechanical News* that "a western inventor is trying to interest capital in his electrical magic lantern for casting or reflecting advertisements on the dark clouds that often hang low over a city. The inventor claims to have secured contracts from several well known firms for displaying their cards in this manner. If the idea is fully developed, we may expect to see some very startling and grotesque effects." We should say, Just think of it, transforming the clouds into "dead walls" and covering them all over with announcements, such as, for instance: "Cobra Corbin is dead." "He has shaved his last conductor." "Reading stock gone up 50 per cent." "Federation on top; all the organizations of railroad employes have federated," etc.

IN Los Angeles county, California, one ranchman has 47,000 cattle, horses, sheep and hogs. The chances for square meals of beef, mutton and pork for that ranchman are good.

STRIKES IN NEW YORK.

Among other items relating to strikes, as furnished by the chief of the Bureau of Labor Statistics of New York, we have the following:

Gain in wages by strikes, 1888	\$ 359,551
Gain in wages by strikes, 1887	944,632
Gain in wages by strikes, 1886	1,420,885
Wages lost, 1888	1,083,653
Wages lost, 1887	2,013,229
Wages lost, 1886	2,552,554
Cost to labor organizations, 1888	135,357
Cost to labor organizations, 1887	217,069
Cost to labor organizations, 1886	329,080
Loss to employers, 1888	464,230
Loss to employers, 1887	1,102,576
Loss to employers, 1886	1,644,812

The loss and gain of strikes are the items which, as a general proposition, first attract attention; though, perhaps, not the most important things to be considered. The figures in print, it is worth while, we think, to analyze to some extent.

We assume that when a strike results in a gain of wages, it is permanent, the gain continues, whereas the term employed, "wages lost", does not refer to reduction of wages, but rather to a suspension of wages during the progress of the strike. Assuming this to be the correct idea we are prepared to formulate approximations as to results so far as New York is concerned. It will be noticed that the total of "wages gained" in the three years named was \$2,725,068, and "wages lost" \$5,649,436, showing an excess of losses over gains of \$2,924,368. But assuming that the gain in each of the years mentioned was permanent and will continue for a term of ten years, the showing becomes more satisfactory, as follows:

Gain in 1886, \$1,420,885—10 years	\$14,208,850
Gain in 1887, \$944,632—10 years	9,446,320
Gain in 1888, \$359,551—10 years	3,595,551

Total gain in 10 years	\$27,250,721
Total wages lost	5,649,436

Total net gain in 10 years	\$21,601,285
--------------------------------------	--------------

But the chief of the bureau gives figures showing the "cost to labor organizations" for the three years named, the total being \$681,506. If we deduct this from the net gain to labor in ten years, it will leave a remainder to the credit of labor of \$20,919,779.

The aggregate losses of employers for the

three years named amount to \$3,211,718, or \$2,437,718 less than the "wages lost" by the strikers, which was doubtless a source of great satisfaction to them, for employers, who for one cause or another, force their men to strike, are never more happy than when contemplating the sacrifices necessary for workmen to make to gain their rights.

The conclusion arrived at by the chief of the bureau of New York, is that a strike is never a total failure. Strikes educate the public mind, set men to thinking. The literature and logic of strikes have demanded, and are receiving the attention of legislators, and the rights and the wrongs of workmen will yet play a more conspicuous part in the legislation of the country. It is only required that labor organizations shall federate in defense of the right, of justice and fair play. This done, strikes will disappear. But while wrong exists, while employers play autocrat and seek the degradation of workmen, that they may astonish the world by the magnitude of their wealth, strikes will continue. It were as well to issue an edict that men, women and children shall not complain when suffering from the pangs of starvation.

It is reported that "since Austin Corbin accepted the presidency of the Philadelphia & Reading he has expended nearly \$2,000,000 in making improvements which he thought necessary to restore the property to a condition for safe and economical work, and this sum has been taken out of the net earnings of the road. Of the \$10,000,000 of general mortgage bonds set aside for betterments to the property he has not yet sold a dollar's worth." Since Austin Corbin Russianized a portion of Pennsylvania he has made money. In one way and another he has, doubtless, been able to make at least 50 cents a day off of his serfs—say about \$6,500,000 a year. Corbin is in clover, you bet!

WHEN a man contemplates acting the coward, by deserting his principles, or shav-
ing off his whiskers in obedience to the
demand of Austin Corbin, he may read and
profit by Longfellow's advice:

Write on your doors the saying wise and old:
"Be bold! be bold!" and everywhere—"Be bold!
Be not too bold!" Yet better the excess
Than the defect, the more than less.

HELEN CAMPBELL AND HER BOOK.

The question has been asked, Why did Helen Campbell write the book that is exciting wide-spread comment? Helen Campbell answers the question herself, and says:

Yet it is the Anglo-Saxon conviction, owned by English and American in common, and unshaken though one should rise from the dead to arraign it, that what money would not do cannot be done, and when money is rejected and the appeal made for personal consideration of the questions involved, there is impatient and instantaneous rejection of the responsibility. Evolution is supposed to have the matter in charge, and to deal with men in the manner best suited to their needs. If the ancient creed is still held and the worshipper repeats on Sunday, "I believe in one God, the Father, Almighty, maker of heaven and earth," he supplements it on Monday and all other days, till Sunday comes again, with the new version, the creed of to-day, formulated by a man who fights it from hour to hour:

I believe in Father Mud, the Almighty Plastic.

And in Father Dollar, the almighty Drastic.

It is because these men and women must be made to understand: because they must be reached and made to see and know what life may be counted worth living, and how far they are responsible for failure to make better ideals the ideal of every soul nearest them, that the story of the worker must be told over and over again till it has struck home. To seek out all phases of wretchedness and want, and bring them face to face with those who deny that such want is anything but a temporary, passing state, due to a little over production and soon to end, is not a cheerful task, and it is made less so by those who, having never looked for themselves, pronounce all such statements either sensational or the work of a morbid and excited imagination. The majority decline to take time to see for themselves. The few who have done so need no further argument, and are ready to admit that no words can exaggerate, or, indeed, ever really tell in full the real wretchedness that is plain for all who will look. But, even with them, the conviction remains that it is, after all, a temporary state of things, and that all must very shortly come right.

The New York *Standard* in commenting upon the foregoing says:

To tell the story of the worker over and over again till it has struck home. Will such telling ever make it strike home? Is there any real use in the constant repetition of the story of the world's wretchedness? The story has been told over and over and over again, by poet, novelist, historian, and statistician. I have heard it, you have heard it, we all have heard it. We all know there is abundant misery about us. It is rare indeed that any one of us denies it. What we do deny is that we are in any way responsible for it. We say: "I am very sorry, but it really isn't my fault. What can I do about it?" The thing that needs to be said is that it is our fault—my fault, your fault, Helen Campbell's fault, the fault of every one of us.

The thing that needs to be demonstrated is *how* it is our fault. What can we do about it? What *ought* we to do about it?

There is no other way out of the wilderness, but to keep on telling the story. To doubt the final triumph of the right, is to give up the ship and haul down the flag, while the battle is raging—only cowards do that. "Father Mud" and "Father Dollar" are plucky fighters and have their votaries, but "Father Mind" and "Father Duty," "Father Truth" and "Father Justice," will finally win the battle, and don't you forget it.

THE Indianapolis *Journal* says that "the judges of the Supreme Court of Indiana, in commenting on a statement to the effect that two of the lower courts had decided that it was illegal to collect 10 cents extra from a passenger who had failed to purchase a ticket before he took passage on a train, said that there must have been circumstances connected with the transaction out of the ordinary line, as the Supreme Courts of several States had passed on this practice on the part of railroad companies, and in each case decided in favor of the railroad company. This led to inquiry about the matter, and in one case that was alluded to—that of the Fort Wayne, Cincinnati & Louisville Railroad Company—the passenger went to the depot to purchase a ticket and the agent was not at his post. The train came along and the passenger boarded it without a ticket. The conductor, when collecting his fares, demanded 10 cents extra; the passenger refused to pay and was put off. The court gave the passenger damages, and the management has instructed its conductors to stop the practice of collecting this 10 cents extra where a passenger pays cash." Occasionally courts get the common sense idea of law and justice—an indication that the "world do move." After a while, when labor is fully organized and federated, it will move faster,

An English syndicate has purchased 750,000 acres of land in Florida at \$1 per acre. Something for Mr. Henry George to think about.

THE Canada Pacific has recently ordered 10,000 cars to enable it to handle the grain, destined for export, *via* Boston.

Two hundred smelters in Pueblo, Col., struck for the eight-hour day, and won.

The boot and shoe workers of the United States are rapidly forming unions and it is predicted that they will last.

THE American Flint Glass Workers' National Association has a membership of 5,655 and an annual income of \$100,000.

EVERYWHERE, workmen are demanding the eight-hour day. If they were all federated, victory would be certain.

DURING the year 1889, 5,000 miles of railway were constructed in the United States, 753 miles in Canada, and 369 miles in Mexico.

THE true "Labor Day" will be the eight-hour day, and labor united can secure it. Labor divided and wrangling insures defeat.

ELEPHANTS in Africa are killed for their ivory, and the estimate is that 65,000 are slaughtered annually, producing ivory in its raw state valued at \$4,000,000.

THE New Jersey Locomotive plant for the manufacture of locomotives and other machinery, is to be removed to Chicago. "Westward the star of empire," and so forth.

ELECTRICITY instead of sand has been introduced on some of the Pennsylvania railroads to increase the traction power of locomotives, and results have been highly satisfactory.

It is said that when a Cobra is one hundred years old a rare jewel may be found in his head. According to that theory Cobra Corbin's head must have the jewel well advanced.

THE Japs, in the march of Christian civilization, are becoming great beer drinkers. Germany supplies the beer, shipping to the heathen 2,601,237 bottles in 1888, showing an increase over 1887 of 1,720,628 bottles.

IN 1868, twenty-two years ago, the city of Philadelphia enacted an eight-hour law for all departments under the city government. It has been in all these years a dead law, but from this time forth it will be executed to the letter.

THE United States Government from March 1, 1878, to December 1, 1889, purchased 300,727,969 ounces of bullion at a cost of \$287,995,107. Out of this silver, the mint coined 349,938,001 silver dollars, at a profit of \$61,942, 893.

A BILL has been introduced in Congress to repeal the Inter-state Commerce law. If it should require as much time to repeal the law as it did to enact it, the present century will have handed in its checks before such legislation will be consummated.

BROTHER TALMAGE estimates the wealth of King Solomon, the extensively married man, at 680,000,000 pounds in gold and 1,028,000,377 pounds in silver—a grand sum total of \$191,528,006,032. No wonder the Queen of Sheba was astonished.

ROAD MASTER MALLORY, of the Central Pacific Railroad, recently stumbled upon a wild cat's home, where two small kittens were nesting. The mother cat, discarding all ceremony, at once bounced Mr. Mallory and left the imprint of teeth and claws upon his hand and arms, and but for his overcoat, with which he covered his face, the road master would doubtless have lost his eyes.

NEAR Scranton, Pa., 6,000 miners are out of employment, because the coal kings want to reduce stocks and send up prices. By the time work is resumed, the miners will be in a condition to accept reduced prices, and thus the Russianizing programme proceeds. Talk about degradation in Europe, Asia or Africa, old Pennsylvania can show specimens that would make all hell jubilant.

"At every defeat of labor's organized force," says the *Lester*, "the enemies have rejoiced, and eagerly cried, behold a Waterloo. Years roll on, trades' unions multiply, the battle is renewed and again defeated, each defeat followed by reorganization until power and privilege fall and the haughty are brought low." The enemies of labor's organized force calculate upon Waterloos, if organizations fight them single-handed, and their calculations are well founded. But should the time ever come when labor forces are united, the Waterloos will be on the other side, and not till then.

THE Indianapolis *Journal* remarks that "there is said to be an unusual exodus of men, in all departments, from the railroad service at the present time. The reason assigned is the uncertainty of positions in the railroad service. In most cases the men going into other business are among the best in the employ of the roads. Such men watch for a business opening, and, when it is offered, take it without much parleying. Through consolidations and changes of managements it is estimated that fully 25 per cent. of the men in service on Indiana roads have been left out in the cold in the last eighteen months."

THE stockholders of the Reading are still trying to make Cobra Corbin pull his fangs out of that corporation.

Some one remarks that "trainmen who are paid on the mileage basis have made the handsomest earnings this year in their railroad history. Ten months of the year both passenger and freight traffic has been good, and in the freight service there has been hardly a month in which there was not considerable overtime made. Unlike the clerks, the trainmen receive good pay when they work."

JOHN BURNS is reported as saying: "As a trade unionist, my own notion as to the practical outcome of the strike is that all sections of labor must organize themselves into trade unions; after that all trades must federate themselves, and that in the future prompt and concerted action must take the place of the spasmodic and isolated action of the past." That is all there is in it. Organize, federate, and win the battle.

REPORTS have it that Russian officials have decided that the telephone is "dangerous to the state." In Warsaw orders have been given that telephones be removed from all restaurants, coffee-houses, and liquor saloons. Similar orders have been issued in all other large Polish towns. Now it is in order for Austin Corbin, the Czar, to issue a ukase declaring the telephone dangerous in his Russianized dominions in Pennsylvania.

It is stated that "of the eight locomotives which were wrecked in the Conemaugh and Johnstown flood, seven have been rebuilt at the Altoona shops and are again in service. One of the number was so badly used up that it was sent to the scrap heap." It takes mighty good iron and steel to withstand a pleasure dam when it sweeps along. Wonder if it will be rebuilt? Most anything can be done in Pennsylvania where such monsters as Austin Corbin sways his scepter over 35,000 Russianized serfs.

MR. GLADSTONE compliments the men who laid the foundation of the American Republic by saying: "It is not extravagant to say that although there were but two million people in the thirteen American colonies at the time of the American revolt, yet from among these two millions of people there proceeded at that epoch a group of statesmen that might defy the whole history of the world to beat them in any one state and at any one period of time. Such were the consequences of a well-regulated and a masculine freedom." Wonder what the grand old man thinks of our statesmen now?

THERE are complaints from some of the labor organizations, because the federation of railway employes includes only the railway labor associations. It should not require very much thought to convince anyone that the railway federation cannot possibly add to its usefulness or influence, by going outside the railway service.—*Railway Service Gazette*.

Those who favor federation of railway employes are not specially disturbed by the "complaints from some of the labor organizations." It is natural for some people to complain. They are never satisfied, but they seldom arrest the onward march of the armies of progress.

In an issue of the New York *Sunday World* Nell Nelson refers to the locomotive fireman as follows:

Imagine him on his knees before the open pit, his face reddened and his eyes distended by the reflected light and heat of the roaring blast, with a poker fifteen feet long, stirring the fire; the sweat pouring from his face; his hands blistering with heat, and the winter wind cutting his neck and striking pains between his shoulders. Imagine the baskets of ashes and clinders and clinkers that have to be hauled out of the furnace and thrown in the ash-box; the puffs of hot air to be inhaled, accompanied by the impalpable black dust from the soft coal and the choking dust and sparks from the smoke-stack. Imagine the overpowering smell of oil from the well-kept machinery, the rapid motion used in polishing it, and the dangerous thrusting of arms and head in the shadow of moving pistons and flying cogs and wheels that sparkle like steel and work with the easy grace of shuttles; imagine him between these duties hanging with his head and shoulders out the window on the lookout for a broken rail or obstruction in turn, and you have some idea of his hazardous calling.

It is the firemen who build the fires in all the locomotives on this continent—on all continents which transform water into steam and make the "wheels go round." Without the fireman, what of the trains? They would stand still as the rocks.

Among the memoranda found among the private papers of the late John Jacob Astor was one showing that a million dollars of gold coin weighs 3,685 pounds avordupois, with a little sum in multiplication worked out as follows:

3685	
187	
<hr/>	
25795	
25084	
3685	
<hr/>	
2000	6880051344
6000	219
	100 tons.
<hr/>	
8000	
8000	
<hr/>	
9685	
8000	
<hr/>	
1685	219
5	100
<hr/>	
2000	100

"My Dear Waldorf: That's about the size of my pile."

Hence the conclusion that John Jacob Astor was worth \$187,000,000.

HENRY GEORGE is in Australia, where he is lecturing upon the single land tax. Australia was first settled by convicts, and it will be strange if Mr. George does not find the people possessed of peculiar convictions.

BRAZIL got a good ready, and then the Republic was inaugurated. The Emperor and the royal(?) family lost no time in getting away. The throne, the crown and the scepter went down in a heap together. Workingmen in the United States are getting a good ready and when the time comes the scoundrels who grab land, corner food, form trusts and syndicates, and perpetrate robberies under the sanction of law, will relax their grip upon the throats of workingmen. It is the order.

THE Chicago *Herald* remarks:

"Organization," cries number one.
 "Co-operation," shouts another.
 "More greenbacks," says the third.
 "Moral suasion," bellows the fourth.
 "Prohibition," feebly cries the fifth.
 "Too much population," wails the sixth.
 "Eight hours," says the seventh.
 "Ethical culture," says the eighth.
 "Strike," hisses the ninth.
 "Dynamite," whispers the tenth.
 "Over-production," shouts the capitalist.
 "Trust in the Lord," moans the parson.
 And "protection," yells the greatest robber on earth.

And still there are others who exclaim:

"Educate the workingmen."
 "Federate labor organizations."
 "Give labor its just share of the wealth it creates."

"Down with trusts and every other thieving combination."

"And may the devil fly away with the Austin Corbins of the country."

THE Chicago *Rights of Labor* remarks:

The victory of the dock laborers in London ought to teach our American working men a lesson. In fact, it ought to teach them several lessons: first, notwithstanding the perpetual howl against them, there is some efficacy in strikes when they are properly conducted, and when the cause of the strikers is just. Another lesson is that it does not require the "highest order of statesmanship" to conduct a strike, that is if the order of statesmanship is gauged by the salary of the statesman. John Burns is an ordinary workman, who labors three days in the week to support himself, and gives the balance of his time gratis to the working classes; he has just succeeded in winning one of the greatest strikes on record.

We have not the slightest objection to the most florid eulogiums of John Burns, still, it occurs to us, that the pluck and perseverance of the London dock laborers had much to do "in winning one of the greatest strikes on record," for which they should have their fair share of credit. There is just a little too much of glorifying generals and leaders, and not quite enough credit given soldiers and strikers.

SOME one, lamenting the changes incident to the march of civilization Westward, says that "Twenty years ago there roamed over the plains and mountains of the far West nearly 8,000,000 buffalos; to-day there are only about 500 head of these animals in existence. There are but 85 head of wild buffalos, 304 alive in captivity and about 200 under the protection of the Government in the Yellowstone Park." Far greater and more lamentable changes have occurred during the same period in Pennsylvania. Twenty years ago, the Anthracite region of the Keystone State was not Russianized, was not inhabited by famishing serfs and whiskerless railroad peons. Now the regions are ruled over by despot Corbin, and a truly free man is not known—the race is almost totally extinct. Buffalo be durned!

GEORGE E. McNEILL, in a recent address, said:

Four times one are four, but the power of the four ones united is greater than the power of eight ones not united.

A thousand men, separate and distinct as to localities and trades, ask for higher wages, and they are discharged, and that is the end of their effort.

A thousand men ask for higher wages through one man, the agent of their organization, and they are discharged, but that is but the beginning of the fight. A hundred thousand men well organized, with a million dollars in their treasury, would be well received, handsomely treated, and probably receive what they want without a fight.

The principle enunciated by Mr. McNeill is correct, but it does not require a hundred thousand men, well organized, with a million of dollars in their treasury, to achieve a victory over oppression and degradation. Austin Corbin has on the Philadelphia and Reading Railroad 15,000 employés. If they were organized and courageous they could squelch Austin Corbin in an hour. It is not money they need, it is courage; a resolute determination not to be degraded. It would be impossible for Austin Corbin to obtain 15,000 scabs to operate his railroad, unless, indeed, his present employés are of that character. It looks that way. Corbin orders his men, under penalties, to abandon their organizations, and they obey. If all the railroad men in the country were equally abject, their epitaph could be written.

Suppose one of Corbin's men, realizing the deep degradation inflicted by the order to shave off his whiskers, should resent it, and a discharge should follow, and every other employé should realize that the wrong done to one was the concern of every other employé, and the word should ring along all the lines, "Reinstate that man or your trains will stand still." He would be reinstated. Men do not need a million dollars so much as they need courage. Courage to resist oppression and degradation.

MRS. LEONORA M. BARRY.

General Instructor and Director of Woman's Work, Knights of Labor.

Mrs. Leonora M. Barry, the subject of this sketch, is a native of the Emerald Isle, and her birth place was the city of Cork, within sound of the "Bells of Shandon," made famous by Francis Mahoney ("Father Prout"), and she, doubtless, sings with him—

"With deep affection
And recollection
I often think of
Those Shandon bells,
Whose sounds so wild would,
In the days of childhood,
Fling round my cradle
Their magic spells."

Ireland has furnished the United States of America with many noble types of manhood—orators, statesmen, soldiers, and divines—and women, too, of equal worth, and it so happens that it is now the good fortune of the *Locomotive Firemen's Magazine* to speak of one of the latter who has won an enviable renown in a work as philanthropic as has ever challenged the intellectual and spiritual gifts of women since man's inhumanity, ignorance, superstition, and mercenary greed subjected women to wrongs, entailing sufferings, mental and

physical, such as demand the genius of a Milton or a Dante to fitly portray.

Mrs. Barry's maiden name was Kearney, her father being John Kearney, whose ancestors were among the first who worked to redeem the "Shamrock Isle" from a wilderness. Her mother was of English ancestry and of noble lineage, and, though suffering impoverishment through the fickleness of fortune, retained those distinguishing traits of character which survive the wreck of estates and are transmitted as a priceless heritage to children.

When Leonora was but two years old, in 1853, the family emigrated to America, and settled in Pierrepont, St. Lawrence county, N. Y. Here Leonora lived until 1866. Her home was one of rural beauty. There was "the orchard, the meadow, the deep tangled wildwood." There, among the fruit trees and maple groves, the birds sang their sweetest melodies; there the wild flowers bloomed; there bees gathered their luscious store, and the brooks laughed and sang and danced their way to the sea. Amidst such scenes Leonora's childhood and young girlhood were passed. In love with the beauties of nature, no sorrow shaded her pathway, and from the horizon to the zenith no storm cloud lowered betokening sorrow. Nevertheless, a great sorrow was in store for the buoyant, happy girl, and it came. It was the death of her dear mother. It was the first great sorrow. Up to March, 1866, Leonora had been gay, joyous, and as happy as the daisies, the wild flowers and the birds. But all was changed now, a mother's voice was silenced, and the light-hearted girl became a thoughtful, ambitious, self-reliant woman. Her great desire was to teach school. Still she lingered at home until in one short year another Mrs. Kearney came to the home. That settled the question, and in eleven days after the new Mrs. Kearney came, Leonora took her destiny into her own hands, and in a short time entered upon her task of teaching. She had secured a third grade certificate, and at \$5 a week and "boarding round," commenced ascending the ladder of her ambition, in District No. 4, Pierrepont. Just here it is worth while to say—because it illustrates a characteristic of the noble woman, who had determined alone and single-handed to support herself—Miss Kearney began teaching in March, and though not till August, she achieved the distinction of having the most successful school ever taught in the district. Having taught four terms, Miss Kearney's ambition was to teach in a school of a higher grade, but her education was defective. In her younger days, she had attended the village school six weeks, all the rest of her educational equipment had been furnished by her sainted mother. Four terms in a dis-

trict school at \$5 a week did not furnish sufficient surplus to attend the Normal school, at Potsdam, and her father deemed her education sufficient to grace a farmer's home, and declined to invest for her higher training as a teacher. But the farmer, with his pigs and poultry, was not the acme of her ambition as it was of *pater familias* as a consequence the Normal schooling was not secured, nor the father's money.

Then came another departure for our heroine. From the school she sought, and obtained an opportunity to learn the art of dress-making. Here was work in earnest and with needle and thread and scissors Miss Kearney joined the ranks of working women. It was stitch, snip, fit and bast in a word, work. Work is usually prosaic rather than poetic, but is not sufficient! Vapid and humdrum to dissuade cupids from testing the effects of his darts upon susceptible hearts, and as a result, Miss Kearney in 1870, became Mrs. Barry; having married Mr. William E. Barry, a native of the "Gem of the Sea," a musician and composer of note and merit. With Mrs. Barry marriage was not a failure. As wife and mother the blessings of "Love's young dream" were realized—a quiet and happy married life was vouchsafed—but for only comparatively brief period. On April 29th 1880, the husband, after a lingering sickness of two years, was removed by death. This great bereavement, in a few months was followed by the death of a daughter, the eldest of three children. The youngest child was only 13 months old when the father was taken, and for many weeks months the baby suffered from an affliction testing to the fullest extent a mother's devotion. The protracted sufferings of the husband exhausted the savings of years and the widow found herself confronted with the problems that have come to thousands—work, beg or starve. Mrs. Barry was not long in determining her course. Work was accepted with heroic fortitude. The ordeal was severe. A lone woman with two children to support by the work of her hands ought to be, in this high noon of our boasted civilization, something less than a herculean task, but to the eternal discredit of cruel and exacting employers it becomes one of the most doubtful and difficult enterprises a brave woman ever undertook. Mrs. Barry was equal to the emergency, and at once sought and found work in the Pioneer Hosiery Mill, of Amsterdam, N. Y. In this mill she toiled for four years and seven months, and until the fall of 1886.

In preparing this sketch for the *Locomotive Firemen's Magazine*, there is no purpose to indulge in undue laudation. Hitherto, too little has been said of heroic women, who, comprehending the wants

their toiling sisters, go forth on their missions of mercy, weeping, "bearing precious seed," believing that "they shall doubtless come again with rejoicing, bearing their sheaves with them." Their deeds should be known. Their work, their sacrifices, their noble words of encouragement, their inspiring example, should form a much larger part of the literature of labor, than has hitherto been awarded.

Let it be understood that Mrs. Leonora M. Barry, in the Hosiery Mills of Amsterdam, N. Y., discovered that women were underpaid; that young girls working in factories were wanting in self-respect, owing to factory associations, and that all working girls were denied the respect due them by those who did not work. Long before Mrs. Barry ever heard of the Knights of Labor, she was devising schemes whereby those of her sex engaged in factory work might be benefited mentally, morally and physically. Her plans were deemed impractical, and those from whom she sought advice and encouragement treated her views as visionary and laughed at them. Hers was the fate of all reformers. The laughing tribe is numerous.

At this juncture came the Knights of Labor to Amsterdam. Mrs. Barry was cautious and stood aloof from the organization. But when she had informed herself of its aims, she thought she saw in the Order the full realization of her dreams—the fulfillment of her hopes—and on February 12, 1884, she became a Knight of Labor. Mrs. Barry became a member of the great Order of the Knights of Labor because she was in sympathy with its lofty purpose to work and battle for the good of wage-earners of the country—including women—and her determination to remain with the Knights was like that of Ruth when she said to Naomi: "Whither thou goest, I will go; thy people shall be my people, and thy God my God."

Mrs. Barry was not a wall-flower member of the Order. Her membership afforded her opportunities to work, and this purpose was discovered by her sister toilers; and, as a consequence, in a few months after her initiation, she was made Master Workman of Local Assembly 3,636, composed exclusively of women; the first Woman's Local organized west of New York City, having a membership of 980 strong. At the head of such an assembly Mrs. Barry sought and found opportunities to be of service to her sister associates in factory life. Her moral sensibilities revolted at the gross disregard of proper arrangements for the sexes in the factory building, and a sweeping reform was once inaugurated. This done, a class of young girls of the Assembly was formed for instruction. This movement was a success from the first and was productive of lasting benefits.

As might be expected, the brave and aggressive woman represented her Local Assembly in the District Assembly, No. 65, and this District Assembly, sent her as a delegate to the General Assembly of the Order, which convened at Richmond, Va., in 1886. At this General Assembly, Mrs. Barry stood forth, the thoroughly equipped champion of working women. Their condition was her theme, and her burning words aroused the delegates to a sense of its transcendent importance. There was ignorance and degradation to be overcome. The work of education and elevation demanded the largest possible measure of effort on the part of the Order. Thousands of working women throughout the land were pleading for assistance. Men were cruel, heartless, and in numerous instances lustful and corrupting. She painted the picture as she had seen it: haggard, and debasing, and as a result, in Richmond she was appointed to the responsible position of GENERAL INSTRUCTOR AND DIRECTOR OF WOMAN'S WORK of the order of KNIGHTS OF LABOR.

So far, this sketch of Mrs. Barry reads like a romance. We found her a happy, joyous, thoughtless girl, at her home in Pierrepont, St. Lawrence county, New York. We have accompanied her along her pathway of happiness, sorrow, gloom and poverty and found her always hopeful, always self-reliant and courageous, always sympathetic, and devising plans for the improvement of the condition of working women. We have seen her a mere child, taking charge of a school, leaving the home of her childhood to earn her own living. We have seen her young heart crushed with great grief, when the "old arm chair" lost its occupant, and a mother's voice no longer blessed her child. We have seen her a bride at the altar, and again bowed beneath a great bereavement and required to enter the ranks of toilers, to support herself and children, always courageous and self-reliant, always hopeful and determined.

We have seen Mrs. Barry in recognition of her zeal and superior abilities, made General Instructor and Director of Woman's Work of Knights of Labor, an office accepted with a "pang," because it meant the "breaking up of her tenement home and separation from her treasures." But the home was broken up, and the "treasures," her two boys left to the care of others, that the heroic woman might go forth on her mission of love and redemption, to the oppressed of her sex.

In her first report to the order, we hear her say:

Within the jurisdiction of our District Assemblies, starvation and sin are knocking at aye, and have gained entrance at the doors of thousands of the victims of underpaid labor. And the men who have pledged themselves to the assistance of humanity and the abolition of poverty, are so en-

grossed in the pursuit of their own ambitious desires, that upon their ears the wail of woe falls unheeded, and the work of misery and destruction still goes on.

Men! Ye, whose earnings count from \$9 to \$15 a week and upward: cease, in the name of God and humanity, cease your demands and grievances, and give us your assistance for a time to bring some relief to the poor unfortunate, whose week's work of eighty-four hours, brings but \$2.50 or \$3 per week.

Once more we appeal to you, brothers of the Knights of Labor, by your love for the sacred name of mother, by your protecting love and respect for your wives and daughters, to sustain your manly principles, to uphold the dignity of your strong, noble manhood, and assist to uproot the corrupt system that is making slaves—not alone of poverty, but slaves to sin and shame—of those who, by the right of divine parentage, we must call sisters.

Such were the ringing words of Mrs. Barry to the delegates of the order of Knights of Labor. They are brave, clarion-tongued words, worthy of a heroine, worthy of the cause she represents; they are words fitly spoken, "like apples of gold in pictures of silver." It would be well if all working men, no matter under what banner they march, could hear them, and better if they would ponder their import.

In the same report Mrs. Barry gives the enslaving prices at which women work to make clothing for men, and which, to gain coarse and scanty food, subjects wee infants to toil, and says:

To any honest man, I say, when you purchase an overcoat, see to it that the maker got more than 40 cents for making it; when you buy pants, do not touch those that were made for 50 cents per dozen, or vests for 15 cents each, or a shirt for 3, 4 and 6 cents each. * * * An honest man's back is not the place for a dishonestly manufactured article.

Such words are keynotes, and should inspire those who hear them with a determination to emancipate women from the curse which men, more cruel than a Nero, a Tiberius, or a Caligula, visit upon them. We talk glibly of the devastation of a Timour, a Nadir Shaw and an Alexander; there are no bounds to imprecations heaped upon those who steal savages from the jungles of Africa; but Mrs. Barry recites the curses of slavery heaped upon women, productive of poverty and starvation, sin and shame, not in the land of the crescent, not inflicted by turbaned Turks, but in the land of the cross, inflicted by Christian (?) men. God save the mark.

Again in 1888, Mrs. Barry, in her report, gives an account of her travels that embraced the continent, and says:

It has been intimated that the Woman's Department was started on sentiment. Well, if so, it has turned out to be one of the most thoroughly practical departments in the order. * * * Ten thousand organized women to-day look to the Woman's Department for counsel, advice and assistance.

There can be no higher evidence of man's civilization than is shown in his regard for the welfare of women; and a woman's department in all the ranks of organized labor demonstrates the fact, as nothing else could demonstrate it, that the workingmen of

America stand upon a plane of moral and intellectual culture as high as that occupied by those whose supercilious airs indicate that they are "respecters of persons," and therefore a little higher than Jehovah, whom Peter said is "no respecter of persons." But it should be said of Mrs. Barry that in demanding the amelioration of the condition of women, she grasps the whole subject and treats it with profound philosophical acumen. Speaking of reforms demanded, she would have a reduced number of hours of work for women, because:

Long hours, constant toil, confinement, injurious sanitary conditions, uncomfortable home surroundings and lack of proper nourishment, are killing the vital, physical and mental strength so necessary to women, the mothers to whom a nation must look for her strength of manhood and womanhood in future generations.

As this imperfect sketch goes to the printer, the subject of it is doing the work of an evangelist, organizing, instructing and cheering on women-workers to put forth their united energies to better their condition. In every philanthropic enterprise there will be times and occasions when deferred hopes will dampen the ardor of the stoutest hearts; but battles for the right when once begun, though baffled oft, like Tennyson's brook, go on forever.

This *Magazine* wishes Mrs. Barry the realization of her fondest hopes, and that long before her knightly voice is silenced, victory may flash along all the lines of organized labor; a victory for women as well as for men; a victory so crushing to the oppressors of working women that the women, like Miriam and all the women delivered from the hands of Pharaoh, shall take their timbrels and sing, "Labor hath triumphed gloriously over a nefarious gain of oppressors, and working women, emancipated, disenthralled and redeemed, are free."

It is said that Russia, being determined to have a stable government, has just purchased 12,000 horses. Corbin, who has Russianized the anthracite coal regions of Pennsylvania, don't purchase horses, but reduces workmen to the condition of asses and mules. One of these days Corbin's live stock will begin to kick and Corbin will find that once an ass always an ass don't hold true always.

A CANADIAN express agent stole \$2,000 went to New York, squandered his money and then went back to Canada, made his appearance at the old stand and demanded that he should be punished as he deserved. An instance in which courage and conscience were beautifully harmonized.

EUROPEAN parents send children to America by express, and the testimony is that the goods come through O. K.

Why the Boys Don't "Get Thar."

WITH many men a negative sort of reasoning is more certain than to use argument, and with others a club does best. As to which can be used with most certainty of good results with the firemen is a conundrum to your old uncle. If the engineer was to say, "Oh, yes, if your shovel was larger, you might—," and he might mean either one of two things—that if the shovel was only larger you could use up the coal on the tender—or, if you had more brains to mix with the coal, use the shovel oftener and not so much at a time, you would fire evenner and with a little more work on your part, get over the run with less coal and much easier for both. That is one kind of negative reasoning. Your round house foreman might say, "Bill, if you take more pains with the engine first and then brush and polish your carcass, you would have an hour longer to sleep and less work to do before you hook her on to the 3:32 a. m. long-legged kiter." Of course, the round house foreman is a fool. He did the same work twenty-five years ago, and would be glad to give you a boost, but you want to go to a minstrel show or some other place where you can spend fifty cents, and you go on the principle that now's a good time to enjoy life. You can get up to-morrow morning and see to it. To-morrow morning you are just ready to go to bed at 12:40; "the boys" went out and had some beer, a few "stinkadoras" and some poor beef and stale cheese, and when you are called at 2:30 you swear a little—all gentlemen swear—and get down just in time to do necessary work and barely ready to back her out on time. The habit of letting things take care of themselves will be apt to grow on you. Of course, you know better, but it's a fact every time, and as you improve in this way by about three times a week, you don't believe you get careless, but the engineer knows how sleepy you are and he not only has to watch you, but to keep you from getting to sleep, in addition to his signals, water, steam, air, time and the conductor's wants. Of course, it's easy for him—he don't amount to anything any how, and might as well have something to do to keep him from enjoying himself, as to be free to attend to his own business, and whistle or sing to himself, or he might possibly be one of the men, who think of the two or three "cubs" at home, and be hoping all sorts of good for them, just as he strikes a grade and curve and loads the water all O. K. but the steam is missing. Little annoyances like these don't amount to a hill of beans, but, boys, there's a time when any man's patience ceases to be a virtue, and he gets tired of trying to help a man who WON'T help himself. And

so, tired all out, the engineer has to report that he can't very well fire and run the engine, watch the track, time and conductor, and keep a fast asleep fireman in running order, with four sleepers all full and time and mail to make. Now, don't swear about it, and call the engineer "a mean cuss." You know I've stated it fairly, squarely and truthfully, and have left out the "tangle-leg" part of it, for I've seen men come to the round house so dizzy they couldn't walk on a barn door four feet wide. That kind of stuff *may* do and it may not. If you want to get drunk do it some where else than when you have to climb in on a foot board. So many men can hold a gallon and never show it—in their own estimation. An engineer has nothing to do except help such a man draw his salary. Fact.

Then, of course, the kickers come in for their fun, growl, snarl, find fault, fret and fume, snap like a mean dog who got kicked so often that he used to bite his own leg when he couldn't reach anybody else to bite. It makes it pleasant for all hands. It makes everybody love you, and they all want to help you (or go to your funeral). If the train breaks down, gets stalled or into any trouble, swear like the fool you are, fret and fume, curse somebody all the way from the president down to the track-walker, but don't look in the glass, don't offer to help anybody. Of course, the engineer can wallow round in the mud or snow, ice, steam, etc. You have to watch the steam gauge, or read some rot of a dime museum fol de rol. You try to see how little you can oblige anybody. Of course, you can't wear rubber boots in the cab, and you can't crawl under the drivers to set up an eccentric strap; that's what engineers are for and that's what they get paid for, and you were hired to fire. Maintain your dignity if you die in the almshouse. If the engineer should be lame and want a little help, be crosser than an old hen with chickens. Of course he won't remember it. You will get help every time; in short, be ungracious, unpleasant and get fired.

Study? Not much. Only goody-goody boys ever read books. We are going to have a good time after our rest. We don't propose to learn any one thing except to guzzle beer, smoke and chew, spit and swear at, or about, anything that does not please our august self. In short, we propose to play HOG, and get there on that basis.

This, I am sorry to say, is too much of the idea among some of the boys. There are some things in this world that DON'T pay and some that do. I haven't got time to put them all down to-night, for I've done a long day's work and have another one to-morrow, but it pays to tell the truth; to fulfill a promise if it costs a week's pay;

to be obliging and to accommodate every one you can. It pays to say "Thank you," "If you please," "Yes, sir," and "no, sir," and it pays to get all the help you can from "Dead Men's Brains." See next *F. M.* if you don't understand these three words.

Uncle Silas.

Relics of Barbarism.

The *Laster*, as wide awake labor paper as is published anywhere, remarks that "labor has of late years, thanks to its own efforts and organizations, won much in the way of industrial legislation, but there are in many States plenty of laws on the statute books which not only hurt labor but even degrade American manhood. Such a law is that which four tramps, recently arrested at Moberly, in Missouri, have felt. They were put up to public sale and two of the tramps were sold to farmers at two dollars per head. Another went for seventy-five cents; the fourth had no buyer and went to jail. The three who were sold must work for three months. This bonding of men is only a relic of barbarism, but quite to be expected from the State that shelters the Ku Klux and clung to slavery until all hope was gone. The three tramps, we hope, will take a silent leave at their first opportunity." The remarks of the *Laster* are suggestive, and indicate very clearly that civilization in the United States is retrograding. And it becomes worth while to state that in Saxon and Norman times, ten centuries ago, the English peasantry children were sold in Bristol market for exportation. In the time of Edward IV, less than 500 years ago, a statute was enacted that a runaway, or any one who lived idly for three days should be brought before two justices and marked V with a hot iron on the breast, and adjudged the slave of the man who bought him for two years. The purchaser was to take the slave and give him bread and water, or small drink and refuse meat, and cause him to work by beating, chaining, or otherwise; and if, within that space, the slave absented himself for ten days he was to be marked on the forehead or cheek by a hot iron with an S, and be his master's slave forever, and it was lawful to put a ring of iron around his neck, arm or leg. And as late as 1547 a beggar's child could be sold into perpetual slavery. Manifestly, when a tramp can be auctioned off, as in Missouri, we are going backwards in our civilization. A tramp is not necessarily a criminal. He is poor and unfortunate. To arrest him and sell him into slavery is a crime against God and man, heaven and earth, of damning proportions. It makes civilization a monstrous fraud and sham, and to call it "Christian" civilization ought to send a thrill and chill of horror through heaven. But this is done in the closing years of the 19th century, in one of

the States of the American Union. Certainly shame has no blush in Missouri, no is Missouri yet redeemed from Savagery.

As we write word comes from Indianapolis that a poor tramp, seeking for work and no finding it, on a cold night, built his fire in the highway, at a safe distance from buildings. Being ordered away, he was deliberately murdered by a farmer, and his slayer subjected to no more inconvenience than if he had shot and killed a skunk and to show public estimate of such offences press and pulpit are dumb as oyster

Chickens vs. Children.

The *Station Agent* remarks that "the American Society for the Prevention of Cruelty to Animals, of New York City, has written a letter, complaining of the crowded condition of coops containing live chickens carried by express companies to New York City, and calling our attention to the fact that the carrier is liable to a fine of two hundred and fifty dollars for every coop that reaches New York overcrowded. They have been watching the delivery of these coops brought by the different express companies to the markets of New York, and they claim that in many instances there are twice as many chickens in the coops as could possibly be expected to get through in good shape." While this profound solicitude for chickens is reported, the overcrowded tenement houses, where children die by the thousand, create little or no concern at all. Children are not, like chickens regarded as animals, and as a consequence their overcrowded condition receives little attention.

THE *Union*, Philadelphia, says:

Judge Finletter on Monday sentenced Superintendent Sweigard, of the Reading railroad, to a fine of \$1,000 and six months' imprisonment, for maintaining a nuisance in the shape of a fence on each side of the Reading tracks in Richmond, closing up several streets. An effort was made by the counsel for the railroad to have the punishment by fine alone. The Judge replied that it made little difference that corporation whether it owed \$10,000 more or not, but the sentence of imprisonment would be a warning to the management that they were amenable to the law. Of course if the fence is removed Mr. Sweigard will not go to prison, and the case will be taken to the Supreme Court. The sentence was just one, and the only fault we find with the Judge is that he did not send Sweigard to prison and let the matter go to the Supreme Court after he had served his sentence. Then, again, Corbin should have been sent with Sweigard. It would have been a lesson to railroad managements that the people of Philadelphia have some rights that even a railroad company is bound to respect.

The fellow Sweigard, Corbin's supporter, as also Corbin himself, will go to the penitentiary in due time. The people of Philadelphia and of Pennsylvania cannot afford to submit much longer to Corbin's Russianizing rule. It is making the name of the old Keystone State a stench in the nostrils of all half-decent people.

MECHANICAL.

Communications relating to Locomotive Running, Firing and Management, and other mechanical topics, are solicited for this Department.

Contributors are requested to be brief as possible, to write on one side of the paper only, and to forward copy so as to reach the Editor not later than the *tenth day* of each month.

MR. EDITOR:—In April *Magazine*, page 301, Vulcan quotes my reply to Mr. Conkling as to “plunger pump” in which he both agrees and disagrees—he is both right and wrong.

A T. C.’s inquiry is not within my reach at the moment and “Uncle Silas” is quite too busy a man to give time to reference—hence can only reply generally—not having time to make any play on words.

My own view of life is that it is quite too earnest to spend in any waste of time, and my own motive is purely and simply to extend information among a worthy class of men, many of whom have been obliged to earn their bread and butter from boyhood, and have not, in many cases, the advantage of a common school training. Many of these men are earnest in their pursuit of knowledge, and not only try hard to master such problems, but absorb such principles as are given them and extend the application until they thoroughly understand them, as is proved by the letters so frequently coming to my desk, asking me to look over their figures and to correct any mistakes, and *these men*, the firemen and engineers, observe the amenities of life far better than business men do, as a rule, for they seldom send me a letter without sending a stamp for reply. In this way my acquaintance has broadened among them vastly.

Now when such a man asks a question it is my wish to give him all the elements with the utmost conciseness—hence, in the Conkling matter, the inquirer, as I remember it, did not say if the pump was single or double acting; but did not my answer say “so many ups” and “so many downs?” and Mr. C. has no doubt the good sense to understand that if the pump only lifts one way and forces the other that he will get only one-half the quantity of gallons named, or if he doubles the speed he will double the quantity. In this way Vulcan is quite right in his re-explaining, and quite wrong unless he gives me credit for some latitude in the application of the rule. If Mr. Conkling’s pump was a solid piston, Vulcan is right and so am I.

Now, if the question had been put, how much will a solid piston, single acting pump displace at a certain speed per minute? then Vulcan is “dead right;” but when

“Uncle Silas” says thirty ups and thirty downs, he interpolates conditions, as he does not know if the pump was single or double acting, and so leaves it to the sense of the reader. “After this little difference” there is no difference at all, and I’m glad to have Vulcan say “Amen” to “our” sermon.

While writing, you will no doubt excuse my remarks on Dr. Wilson and his long articles.

Force, energy, momentum, speed, inertia are all mixed up, and when he comes to steam and the heat units, he is not the first man I’ve seen all mixed up. On page 308 the Doctor says, “Yet I doubt Joule’s method as being the proper way of arriving at the truth, I think he has the unit too high.” “Assertion is not argument,” nor is the Doctor’s doubting at all convincing to me at least.

Dr. Joule put the standard that “772 foot pounds of mechanical energy was required, or disappeared, or was exerted to make one heat unit,” and Rankine who, more than any man living or dead, stands out pre-eminently as the man who has investigated all these laws tells us clearly that heat and mechanical energy are “mutually convertible” and so on to the end of the chapter. Mr. Joule, in 1843, settled the fact that “772 foot pounds of mechanical energy” disappeared with the production of *each heat unit*, and the Doctor can find it all in “*Philosophical Transactions of 1850.*” The care with which all Mr. Joule’s work was done has received the approval of the most eminent scientists, physicists and investigators, some of whom have gone over the same ground, and after long researches and experiments have not only accepted Mr. Joule’s work, but have emphasized the care and freedom of error in his work. In 1843 some things were not known that are now, and among them is the fact that the difference of latitude is a very slight factor of disturbance in all these physical researches. Mr. Joule, in Manchester, England, and Regnault, in Paris, found but a *slight* difference in the “J” or Joule, or unit “772.” In 1882 Prof. H. A. Rowland, of Johns Hopkins University, Baltimore, took up the mechanical equivalent of heat with the most delicate apparatus that could be constructed and, after long and careful experiments, he gave his results as “778,” including latitude corrections or less than $\frac{1}{100}$ difference from Mr. Joule, who worked thirty-nine to forty years before Prof. Rowland. Now, I have only wished to state these facts to show how easily Dr. W. brushes away from two to three years of patient work in establishing a fact which the Doctor “doubts,” and so clears it away, while men of the highest attainments, who only seek the facts, spend money and time

to corroborate Mr. Joule's work after a lapse of forty years to within $\frac{1}{100}$ of 1. Comment is unnecessary, and while the Doctor can doubt any unit he pleases, and has a perfect right to do so, we must not follow his doubtings until he produces good and sufficient reasons, far beyond his personal doubts and fears.

Precedent has, to an extent, a rational and reliable hold upon our own practice, and it is unsafe to depart from good custom when our object is to make money honestly, or to produce commercial results, and as firemen are expected to run over their iron to make the distance and time by the time table, they will necessarily be careful of the Doctor's varied and curious hypotheses until the Doctor gets 'em at work on the line. Rankine will probably stand the Doctor's criticism—for Rankine was a profound investigator and reasoner, and did not jump at conclusions or even at theories, and when Rankine and Regnault were working the expansion of mercury, in its connection with the first law of thermodynamics and its immediate and commercial application to steam, the one in Glasgow and the other in Paris, without having any correspondence, when their results were given to the public they were exactly nineteen one-millionths ($\frac{1}{10000000}$) of 1 apart, and then when Rankine examined into Regnault's exactly described methods and apparatus, he (Rankine) accepted Regnault's unit, "because of his exceeding accurate methods and better apparatus." Here were two men working on the same line of investigation, in different countries, in different units of measure and weight and in different latitude, yet when the results were converted in either case, the comparison showed a difference almost imperceptible. Practically, it was imperceptible, and yet Rankine speaks of this as "closely approximate."

This may be claimed as a digression. It has only been mentioned in general in order that "our boys" may have a glimpse of the higher life of the men who have laid down the laws of the uses of steam for our guidance, and by which we must profit, and if we do not the fault is ours.

I do not wish to be considering the Doctor in any sense other than that facts are worth piles of assertion. He can doubt, and I respect him for it, and he can twist his momentum into all sorts of fanciful shape, but "de fax am dar."

The Doctor, in his closing paragraph, expresses his ideas: "You must shovel in and burn twelve tons of coal per hour, go back on Rankine's teaching, or say you don't have any locomotives of 681 horse steam power. *I cling to the last horn*" (the italics are mine). There is no reason to go back on Rankine's teaching from the quota-

tions made, for Rankine does not teach what is quoted, and as to horse power we do have plenty of locomotives of 360 horse power on each side, or 720 horse power in all, day by day from the indicator—sometimes even higher than that—not by guess work, or conjecturing one or the other, but abstract fact, measured and weighed—wherever 50,000? what, heat units or pounds, etc., the Doctor has a funny way of figuring. The promiscuous way of using 50,000 is not at all Rankine's idea. The utilized heat varies extremely in various boilers and engines, and with the quality of steam. A locomotive under full sail, with 160 pounds of steam, and an engineer and firemen who mix *brains* into their coal and lever handles, would pull the Doctor's theories out so far apart that he could not get 'em together in a two months' run at forty miles an hour.

The indicator would show the Doctor some very funny things. I'm going to ask a man who knows how to do it, for I've heard him lecture on this thing, to fix up some facts and send them to you to put where they will do the most good, viz: Where the boys will devour them and understand them, and we will find out how much coal it does take and what becomes of it.

Uncle Silas.

SAGINAW, MICH., March 17, 1890.

MR. EDITOR:—I am well pleased to see that my old friend "E. S." is again on deck: he has had a hard time and I know how to sympathize with him, as I too have had a number of ups and downs during the past eighteen months.

Fred Hill says he knows of no rule by which to find how much heat it takes to raise the steam pressure ten pounds. I append a rule that may help him. I also want to call Dr. Wilson's attention to this rule; by it he can see that if it takes one minute to raise the steam pressure ten pounds, it will not take fifteen minutes to raise 150 pounds.

Temperature Degrees.	Electric Force Per Sq. Inch In Pounds.	Volume Cubic Feet.	Temperature Degrees.	Electric Force Per Sq. Inch In Pounds.	Volume Cubic Feet.
212	14.7	1,700	312.2	76	379
221.2	17.5	1,410	332	100	292
260.9	35	767	342.7	115	259
262.2	36	748	349.1	125	240
270.6	41	664	352.1	130	233
280.5	56	500	360.6	145	210
291.7	57	492	371.1	165	187
300.3	64	443	380.6	185	169
301.3	65	437	387.3	200	158

I did not intend to allude to Dr. Wilson again. I stated in my former article that I considered the question of "H. P." merely

a technical one and not worth theorizing over, but the doctor makes such astonishing statements in connection with his theories that I can't let them go unquestioned. He brings Rankine to his aid and then triumphantly cites instances of the amount of coal burned on L. R. & F. S. and M. & L. railways, and imagines he has proved a point, when in reality he has only shown his ignorance of practical engine work and proved that the L. R. & F. S. is a mighty good road to fire on. Now, doctor, if you should demonstrate to me that it required the force of one "H. P." to raise a certain weight out of a well fifty feet deep and I persisted in asserting that it only took one-half "H. P." because the weight really traveled through a distance of 100 feet, as it had to go down before it could come up, you would be justified in calling me a fool, yet in substance this is precisely what you have done. You have treated gravitation as a minus quantity (or rather have not taken it into account at all) when every engineman knows that it is the biggest kind of a plus quantity. If you investigate farther you will find that on the M. & L., where firemen use the enormous quantity of three tons of coal in running 131 miles that it is not "because their attention has not been called to the amount of coal used" (firemen don't often escape having their attention called to those things) but simply because the force of gravitation don't help them as much as it does on the L. R. & F. S. and they have to make more steam to get over the road. Now, I will tell you something that may seem strange to you: Hilly roads, as a rule, will show a smaller percentage of coal consumption than dead level ones. As to your assertion that "if firemen burn more than one-half ton of coal per hour they would have little time to ring the bell or wipe the sweat from their faces," it is all bosh and only exposes your ignorance of the real work most firemen have to do. Now, my dear doctor, I will give you a few examples of something real, and let me tell you I have burnt the amount of coal indicated in these examples and still found time to not only wipe the sweat from my face, but crack a chunk now and then, watch the hind end and trade chewing tobacco with the head shack. I won't include ringing the bell because the aforesaid shack generally did that in exchange for the front end of the seat. Our 18x24 mogul engines with full load of freight, on eastern division, burn on an average ten tons of coal; distance, 116 miles, schedule time, eight hours. I will now call your attention to the fact that there is a vast difference between schedule and actual running time. Now, any fireman who knows this run will guarantee to take a full train the last sixty-six miles of this distance with three tons of coal; this shows that

they have to burn seven tons of coal in running fifty miles schedule time for this fifty miles three hours and twenty-five minutes. On western division 138 miles same class of engines—it is simply impossible to run through with one tank of coal, and I am safe in saying that thirteen tons is the amount used, yet the last forty-eight miles can be run with one and one-half tons of coal; this shows that it takes eleven and one-half tons to run ninety miles schedule time. For these ninety miles six hours and forty minutes in running the last forty-eight miles, they burn about half of the one and one-half tons remaining. In running the first four miles from this point if a train ever got away and run with nothing to check it, if it didn't go in the ditch it would run to the end of the division and have momentum enough when it got there to sink itself in Lake Michigan so deep that it would take a good-sized search warrant to find it. But because it is necessary to check momentum with brakes and make a few stops and keep our fire from dying out we burn the balance of the thirteen tons. Now, doctor, firemen here don't burn coal for fun, nor do they burn so large an amount because they "have not had their attention called to the amount burned." Their attention has been very forcibly called to the amount burned, as many an aching back and tired limb can testify. They burn it simply because they can't help themselves. The engines are overloaded and they are expected to make as good time with their heavy trains as they would with light ones and as long as the engineer is compelled to keep the Jonson bar as close to the oil cans as she will stand in order to *flush* as much steam as possible into the cylinders in an effort to make a heavy train run thirty or forty miles an hour to make up an hour or two that he is behind the card, the fireman has simply got to give him a full head of steam all the time and he can't do it without burning coal. Although the coal consumption here is larger than on a majority of roads, I think the efficiency of the engines will be found to compare favorably with any road in the country.

Again you are altogether too fond of using such expressions as, "I say emphatically that it never has been done," or "it can't be done." Now I'll give you a few figures: A full train over eastern division is thirty-five loads; the cars in this train weigh when empty from 18,000 to 30,000 pounds—it is a low average to put them at 20,000 each this makes a weight of 35x20,000, or 700,000 pounds. The capacity of these cars range from 40,000 to 60,000 pounds, scarcely ever below the former figure, and let me tell you that shippers of lumber and salt are not in the habit of underloading cars; they generally get them just a little heavy so as to be safe, but

I will not take the mean but the lowest figures and put them at 40,000 pounds a piece. This gives us a load in these thirty-five cars of 1,400,000 pounds, which, added to the weight of the cars makes a total of 2,100,000 pounds, or 1,050 tons as the weight of these trains. Now, according to the dynamograph, which you have been gracious enough to admit may be correct, the starting force required for these trains is $48 \times 1050 = 50400$ pounds, quite a margin above 34,020 which you say "they don't have because the drivers would slip long before that point is attained." *Why, suppose they do slip, we'll give her a little sand.* Now I have not taken any special cases but have taken trains just as they are made up and pulled here day after day.

You again say that "because the chemist in his laboratory makes 179 cubic inches of steam from one of water is no proof that it is made in ordinary steam boilers in actual practice." I say that it is positive proof that heat applied to water will make steam in the exact proportion of 179 to one, whether that water is in a chemist's laboratory or a steam boiler. The laws governing the expansive power of steam are as well established as those of gravitation, and you can't overturn them by a mere assertion. If I did not feel that I have already taken up too much valuable space, I could give you a few figures showing the amount of water evaporated by the engines I have been describing, but I will leave it till some future time. Now, don't get the idea in your head that I believe every pound of steam made by a locomotive is used in doing effective work, because I don't. I will now proceed to the dilemma which, by your false train of reasoning, you have created. You have endowed it with three horns, when, in reality, it is a muley. You triumphantly ask firemen which horn they want to take, and think, no doubt, none will have temerity enough to take the middle one and reject Rankine. Yet that is precisely the one I am going to take. I utterly reject Rankine, Dana and all other so-called authorities that express the duty of an engine in foot-pounds of work per pound of coal. Duty should be expressed in foot-pounds of work per pound of steam at a standard or stated pressure, because it is a regular method, representing a substance having a fixed and constant value, while the value of coal is expressed in very variable units. Some boilers will evaporate double the amount of water per pound of coal that others will, some coal contains double the number of thermal units per pound that other coal does, so how can it be used as a standard with any degree of accuracy. Why, the very origin of the term is enough to condemn its accuracy. As to universal application, about the year

1778 Bolton and Watt introduced the term to express the performance of their engines in Cornwall, in cases where they were paid out of the profits resulting from the saving of fuel. Now, Doctor, I am not taking up the cudgel in defense of Watt's definition of H. P., in fact, I will go so far as to say that I do not think his definition expresses the exact truth, and if you can figure out a better definition and prove it correct, no one will accept it quicker than your humble servant, but you can't do it by the use of false formulas or the perversion of actual facts. If you attempt it, I will have to call you down.

Vacuum.

LA GRANDE, OREGON, March 18, 1890.

MR. EDITOR:—The following is a question on combustion and scientific firing for our boys to argue about: The question came up between myself and others as to the best method of firing a very free steaming engine in order to have no popping and at the same time protect her flues. I argued that it is much better for flues in protecting them from cold air to keep such a fire as will fill the fire-box with fire, and run with fire-door on the latch, than it is to close door and fire in such a manner that said fire is burned down so low that it does not fill the box, but simply covers the grates and has not heat enough to heat such cold air as will come through the grates. Of course, some may fire the engine entirely different to either of these methods: for instance, with dampers closed, but it seems to me that even then the injury to the flues would be great, for air *must* come in from the damper or the door to fill the partial vacuum in the fire-box and front end caused by the exhaust; therefore, it seems to me that the fire-box full of burning gas or fire, with the door on the latch, would be the best way to fire.

O. R. and N.

OSKALOOSA, IOWA, March 15, 1890.

MR. EDITOR:—I am only a wiper yet, but I am going in for learning all that is possible for me to understand, and I therefore want to know the "whys and wherefores," and would like to have answers to a few questions:

First—Is it hard on flues and fire-boxes to use the blower if there is a level fire on the grates, and no place for cold air to come through, and rush into the flues?

Second—If a person should break one or both go-ahead eccentric rods or straps, and would take the back-up rods and connect them with top of links and set the eccentrics for forward motion, would it be all right if the back-up rods are the same length as the go-ahead rods and working the engine in full forward gear?

A. A. L.

Valve Motion.

MR. EDITOR:—The few members who attended the regular Lodge meeting of Rochester Lodge, No. 99, on February 14th, had the pleasure of listening to a talk on valve motion by Mr. C. J. Hickey, of Springfield, Ohio. Mr. Hickey, who represents the Springfield Engine Valve and Governor Co., being in the city applying and adjusting one of the "Allen New Era Automatic Cut-off Governors and Patent Valves" to an old style slide valve engine, was invited by our Master, E. E. Pruyn, to give "the boys" a talk on valve motion in general, and the Allen New Era in particular.

Upon the appearance of Mr. Hickey at the Lodge room, the Lodge business was suspended for a short time, and Mr. Hickey, after presenting the Lodge with a beautiful nickel model of the Allen valve, proceeded to explain in words and blackboard figures and diagrams, the old style slide valve. His explanations and demonstrations were plain and clear, and those who saw and heard him had a better and clearer idea of valve motion.

He then proceeded to illustrate and explain the Allen valve, and to compare it with the old style valve, claiming that by the adjustment of the New Era valves and automatic governors to common engines, they are superior to the Corliss or any other type of automatic engine, and effecting a saving in fuel of from 15 per cent to 25 per cent. As to the saving of fuel and steam by the use of this valve, the only example and test in this city of the valve, justifies the claim of the inventor.

Bro. Pruyn, who runs the engine in S. J. Lovcraft's saw and planing mill, was unable to carry, on an average, more than 70 pounds of steam on the boiler. This was not steam enough to develop the required power. Upon the application of the Allen valve to the engine, he is able, with less fuel, to carry from 100 to 110 pounds of steam, and the engine develops equally as much, if not more power. This valve has been adjusted to locomotives with equally as good results. The peculiarities of this valve are, that it is a compound valve that uses a portion of the steam over the second time, converting all waste cavities (side pipes and clearance spaces) to an actual gain instead of an actual loss.

The steam used or deposited in the waste cavities to be used over again relieves exhaust compression, having that much less exhaust to get rid of, which adds to power. The valve is a piston valve, perfectly balanced, nearly frictionless, and so simple and durable that to wear or get out of repair must require long and constant use.

Again, the valve produces an automatic cushion which is said to be a new feature in steam power impossible to be obtained by any other known principle.

Now, if this valve possesses the advantages claimed for it, it becomes an important addition to the mechanical inventions of the day, possessing an economical element of 15 per cent in fuel, and perhaps as great a percentage in its durability and saving of power through its frictionless feature. Its adoption and use must be but a question of time, for in these days of bitter competition and rivalry, the cost of manufacturing and transportation needs to be reduced to its minimum on this line, or else the decapitation of the wage man will follow.

Now, I shall not undertake to say that the Allen valve possesses all the elements claimed for it; but I will say, what every one knows, that a perfectly balanced valve is a thing that the mechanical geniuses have been laboring and studying for a long time. Being a piston valve, working in a piston impervious to steam leak, there is no more chance for the pressure of the valve upon its seat than there is for a downward pressure on the piston head.

We can readily conform to the theory that there is advantage and a gain in filling the side pipes and clearance spaces with enervated steam, which will form an elastic cushion and help the engine over its center. That the relief of exhaust compression must add to power, that an automatic cushion must relieve shock, these are features favorable to any valve.

With the following figure or diagram and brief explanation one can form his own opinion as to its merits or demerits.

The whole figure represents a horizontal section of steam chest, valve cylinder, piston valve, cylinder and piston head with main rod. The various parts are, with the exception of the valve, so obvious that numbering or designating them is useless. 1, 1, 1, 1 represents one half of the cylinder in which the circular double-headed piston valve works steam tight. The only steam pressure on or against the valve is at the ends or heads. 2, 2, Fig. 3, represents a cavity within the valve through which steam flows from one end of the piston cylinder to the opposite end. When the valve is in the position shown, and the piston moving in the direction of the dart, the

valve has moved ahead and closed the forward steam port. It will be observed that when the valve is in this position, the valve cavity, 3, is in communication with each end of the cylinder, and the steam which has driven the piston nearly to the end of the stroke, flows over to the opposite end of the cylinder, and there forming a cushion and taking so much steam from the final exhaust. By this valve cavity arrangement the exhaust is always open; that is, as soon as steam is cut off. The exhaust from one end of the cylinder to the opposite end through the valve cavity, is termed the primitive exhaust, and the exhaust to the atmosphere, the final exhaust.

By advancing the valve in the direction of the dart, the primitive exhaust port is closed and the final exhaust port opened. When the valve has advanced far enough to open the steam port on the opposite end of cylinder it begins to retrace its course, and as soon as the steam port is closed, the primitive port is opened and steam passes over to the opposite end, filling the side pipe and clearance space, and forming a cushion to receive the piston on its return stroke. And so the process goes on alternately, the valve apparently accomplishing what is claimed for it, and possessing the advantages peculiar to its construction. *J. B. Ward.*

ROCHESTER, N. Y.

GALVESTON, TEXAS, March 17th, 1890.

MR. EDITOR:—The 17th of Ireland is at hand, and with it the advance copy for April puts in an appearance and, while the entire country is celebrating the day in honor of the memory of St. Patrick for his good deeds, I will try and celebrate in a more quiet way, and for the benefit of those who have not yet severed their connection with this mundane sphere.

L. L. C. says, "The throw of an eccentric equals twice the width of one steam port with twice the lap of one side of the valve added." This is so palpable an error that the moment my eye rested on it I was induced to seize my pen and commence an article in an entirely different manner from what I had planned and contemplated.

The throw of an eccentric, as has often been stated in these columns, equals twice the distance from the center of axle to eccentric's center, and is *not* governed by either lap or steam port. To show L. L. C. his error in such a manner that he can readily see it, we will take an engine, of 17×24 cylinders, and for an example let the steam ports $1\frac{1}{4}$ inches in width with lap of value $\frac{1}{2}$ inches. According to his reasoning we would here have as the throw of the eccentric $1\frac{1}{4} \times 2 = 2\frac{1}{2} \times \frac{1}{2} \times 2 = 1\frac{1}{2}$, and it would be an eccentric of very small

eccentricity—take out that valve and put in one of $1\frac{1}{4}$ inches lap, and the result would be $1\frac{1}{4} \times 2 = 2\frac{1}{2} \times 1\frac{1}{4} \times 2 = 2\frac{1}{2} = 4\frac{1}{2}$, and the change made in the eccentric, also widening the steam port, would have the same effect. I hope from this L. L. C. will see his error.

What lead is, has been discussed in these pages long ago but as L. L. C. may not have been a student of the mechanical department at the time I will try and sum up the result of the former debate on this subject for his benefit, as also others, who may be placed to the same as himself.

Lead, is the amount of opening the piston has when the piston comes to its end of the stroke or, in other words, when she is on center, and is for the manifold purpose of cushioning the piston, and having steam there ready to exert its influence to stop the piston in the opposite direction.

If an engine had no lead all the piston would reach the end of the stroke with a shock or jar as its speed, impelled by the force from the other end would drive it, or have a tendency to drive it on in that direction, and the connection of rods and pins would be all that would prevent it from going as urged, the consequence would be a jarring strain on every connection from spider to back end of main rod, while the momentum (if single) or the force of the other side, would have to carry it to some little distance before the steam could get into the cylinder to do any good work, and would be like a lazy boy—of much account when it got there, as it would find the piston receding leaving an ever increasing void to be filled, and with so small an opening the steam would be so badly expanded when it got there that its pushing vim would not amount to much.

As to the position of valve when on the forward dead center, it all depends on how much lead you have, and where you place the reverse lever. Place her in the corner—no matter which, if lead is same in both gears—with $\frac{1}{16}$ of an inch lead you will find your forward port open $\frac{1}{16}$ of an inch, with $\frac{1}{8}$ of an inch lead you will have $\frac{1}{8}$ of an inch opening, while if there is no lead at all line of the valve and port will be at the same place, *just ready to open*, while if engine be blind $\frac{1}{16}$ of an inch the port would be covered just $\frac{1}{16}$ of an inch by the lap of the valve.

The position of the piston in cylinder when crank pin is in upper or lower quarter would depend on the length of the main rod, but no matter what length it was the piston would have the

eled *more than the half* of its stroke, which is caused by the angularity of the connecting rod—(some one versed in geometry could give a more lucid explanation than I can)—as a rod one end of which travels in a straight line, and the other in a circle, travels a greater distance in a straight line in going away from it than it does in coming back to it, and the greater the length the less the angularity, and vice versa.

As "Amboy Division" comes MOVING at me again in a way that necessitates an answer, I will quote my saying on that subject in full, and allow all with reasoning power to judge, which of the two is right. In December *Magazine*, 1888 (page 900), you will find it as follows: "The wheel is solid and moves in a *rotary motion* around its axis, the center of the axle, at a perfectly uniform rate of speed, if it were possible that any part of that wheel could be *stopped for a moment* while the balance kept up it speed the wheel would immediately rend itself to pieces. Take a fly wheel of a stationary engine and watch its movement, and see if it stops a moment when it reaches the bottom, and then tell me what difference there is between the *rotary motion* of that wheel and the driving wheel of a locomotive. None whatever. *The bottom stands still* is undoubtedly true of a locomotive driver, or a car truck, or a buggy wheel, either, but it is not a part that comes there and stops, it is merely the *place* in which there is a balancing or equalizing of two transverse motions, namely, rotation and translation, the combining of which is motive power."

Now I challenge "A. D." to produce one sentence in the foregoing, *which is verbatim*, to justify any such remark as will be found credited to him in *March Magazine*, 1890, (page (219)). There is *not one word* which disputes the statement that the bottom is *at rest*, but the entire paragraph was written as an explanation of the mooted question. I did assert and *still maintain* that if it were possible to stop a portion of that wheel in its *rotary motion* while the balance kept up its *speed of rotation*, the wheel would rend itself to pieces, and this is so self-evident that it does not admit of controversy, as, being stationary and moving, are not compatible, they have nothing in common and can not possibly be united because if you introduce motion, fixedness is immediately dispelled, and causes an object to *stop*, and motion is quieted, stopped, no motion exists. How then can you combine them? With this one addition I will leave the subject to the decision of the readers. If the engine in running along should suddenly be *jacked up*, still allowing her engines to work, would "A. D." say the bottom of the wheel was standing still or would he say the

entire periphery of that wheel was moving at the same *speed of rotation*, while the absolute center was the only portion which had no motion? Then just knock the jacks out, and let the engine go on, and tell me *what difference* there is in the *motion of rotation*, and see if my statement is not correct, that it is the equalizing of two transverse motions which causes the *at rest* condition, which I *never did* dispute, but always contended was a mechanical fact.

Long ago a question was HOW TO asked as to how and where to KEY AN key an engine. In answer I, ENGINE. as well as one or two others, gave answers. I maintaining that the center was the proper place to key the back end of main rod, nor was I alone in this *error* as E. J. Rauch, in an article on the subject, advocated the same position, "Vulcan" being the only dissenter, he claiming the quarter as the position; all of this caused me to investigate the subject in all of its conditions, and over a year ago I had reached a solution of the subject, and found that all of us were wrong, and that for the back end of main rod the proper position is the upper forward eighth, as this position presents the least wear. The reason is that just before reaching the center the lead opening admits steam in front of the piston, taking up the lost motion of all connections and causing a pressure of the brasses against the pin; this pressure then is continued until release takes place, which occurs at about 18 inches of the stroke more than at any other place as an engine is worked mostly at a cut-off of from 5 to 9 inches which releases the steam, at from 16 to 18 inches of the stroke, then from that point until just before back center is reached there is no pressure on the pin at all, and then as the lead opening causes a pressure on the pin, the same portion of the pin's surface is under pressure as before, and is continued over the same portion throughout its pressure in the forward stroke as in the back stroke, consequently as 18 inches is three-fourths of the stroke it will be found that the wear on the pin is produced on three-fourths of one-half of its circumference and that it is continually covering the same ground, and also that just after release from the back end of the cylinder the pin will be on upper forward eighth.

Here is also a solution to a question (asked over two years ago by some one whom I have forgotten) as to what would cause the pins to run cool in forward motion, while they would heat in back motion, and which I answered at the time by saying that I did not think it could be attributed to any irregularity. I have had a red board turned on me and, as I found my orders to be made out wrong, I make ad-

knowledge, even though it be a very late day for it. They would run hot as the brasses would be worn to fit a flattening surface, and when reversed, and run in the other direction would be bearing on a new surface, and would be like starting out on a new pin.

Yes "Vulcan" I mean just exactly that cylinder heads have gone the way of the transgressor frequently when running shut off without reversing, and with the old big stacks and extremely short nozzles. If an engine is worked very hard over the top of the hill, and then shut off very suddenly and put in the corner, she will soon have so much dirt and cinders in the cylinders that she will begin to pound terribly, there is only one way then to relieve it, and that is to open her up and exhaust it out; the successful way of running such engines is to *almost* shut them off, then place them in the corner and allow a little steam to be worked for some distance, and then shut off, no danger need then be feared.

Dr. Wilson gives some figures of work done per ton of coal on the L., R. & F. S. Railroad, which is something remarkable, as in my experience of over eleven years with the scoop, I have never been able to hold a candle for such men to fire by, in fact such a statement as a man making 150 miles with a full train of freight, and only consuming $2\frac{1}{2}$ tons of coal comes so near the impossible that I can't help but say that I don't believe it ever could be done; and here on this road the greatest record on coal is about $3\frac{1}{2}$ tons per 100 miles on freight, while it extends from that to 8 and 9 tons per 100 miles, and few engines make it on less than 6 tons; also the passenger run, with 4 cars, using 1,440 pounds of coal, a trifle less than three-fourths of a ton, while here our *best* record is about 54 miles to the ton, and only 3 cars on the run; about 51 miles per ton (with larger engines), with 5 cars on the run. This would seem to indicate bad firing from the doctor's standpoint, but, in fact, it don't indicate any such thing, as some of these runs are fired by men who stay with their engines and burn just as little coal as can be got over the road with, and when the end of the runs are reached there is scarcely enough left to cover the grates, probably a depth of 3 or 4 inches, and these runs are 156 miles, 192 miles, 218 miles and 240 miles, all with coal which is full of sulphur and dirt, and prone to clinker. Now, how is this, if the L., R. & F. S. firemen can make over 100 miles to the ton of coal on passenger, and 60 miles to the ton on freight, it shows something terribly lacking on this road, and not only

this *but every one of the fourteen different roads* I have fired on, as my best record on any road was only 35 miles per ton on 17×24 eight-wheel engine of Blood make and as fast a steamer as ever a man put foot on, and to show that I did not waste fuel I will state that in a run of 100 miles the engine would not pop but fire 1 to 3 times, and this for weeks at a time and the steam kept within 8 pounds popping point all the time; could steam have been kept at a smaller expense in fuel? Let any fireman who knows, answer.

J. L. S., of Bellevue, Ohio, asks: If you have an engine 19×22 inch cylinder and want to change to 18×22 inch, what change will have to be made on engine.

Nothing will have to be changed but the bore of the cylinder, putting on a new pin of 18×22 would be all that is required, or *might* be practicable to put in one-half inch bushing all around, reducing bore 1 inch. As to any one claiming that rods would have to be shortened or wheels changed, they must have queer notions, as you have not changed anything but the diameter of the stroke being the only thing which could affect the length of rods, being left intact.

If the length had been changed it would be necessary to change rods, guides and wheels. The rod would be too long if the change was from 22-inch stroke to 24-inch stroke, the length of pin center from a center too short, and guides too short, the difference required would be—shorten rods 1 inch, lengthen pin center 1 inch, lengthen guides 2 inches; but, as put in question, none of these changes would be required as the stroke is the same, and the wheels would do for any engine, no matter how large or small the cylinder might be where the stroke is the same.

Eccentric Strap

JACKSON, TENN., March 15, 1890.

MR. EDITOR:—Hoping that you will find space to insert a few questions, I venture to propound them through these columns:

First. How to go about cutting an eccentric?

Second. What is the quickest way to set an eccentric while out on the road?

Third. How to find the length of eccentric rods and parallel rods of a mogul engine?

Fourth. How to explain when I am asked about the admission of steam into the cylinders?

Fifth. How to find the heating surface of boiler and area of flues?

Now I hope some of our readers will find disposition and time to answer. *Max*

Review of the April Magazine.

MR. EDITOR:—The advance sheets for April do not show any lack of interest in this department, and we note that our old contributor "A. D." has not yet given up the contest, but has called to his aid a number of imps and mules to prove his points.

In regard to "A. D.'s" article in relation to the movements of the Crosshead, Guide and Pin, as illustrated on page 302 of April Magazine, I am glad to say that I fully agree with him in every detail, and have in the past written on these points, in controverting the idea sometimes entertained, that the crosshead remained stationary during the backward stroke of the piston. I wrote in regard to this point, "that the crosshead never moving ahead so far as the ground is a stake on the ground was concerned, and that it would only stand still if a locomotive was so constructed that its stroke was equal to half of its circumference," just "A. D." says a 6-foot 3-inch stroke on a 4-foot driver with a 12-foot 6-inch tread would act. In this case the pin and crosshead would make all the advance so far as the ground is concerned, in the forward part of the stroke, or first movements, as "A. D." states it; and having done this they have to let it and allow the rest of the machine to come up, for, as viewed from the ground, it would appear as if the first parts were running away from the others; but, as "A. D." shows, when the revolution is completed all parts must be in the same position. Now, being granted that "A. D." is right in this case, will he please allow me to ask him in this article in answer to his second article on page 304, in which he introduces a mule holding back with its proverbial tenacity? Will "A. D." kindly explain the leverage he gets when the pin is at the circumference of the 4-foot driver, and particularly at the time when pin and fulcrum (located by him) occupy the same place, they must once in each revolution at the point between 11 and 12, as shown by the imps dotted line? Also, how he places various points in his extended crank, that has 6-foot 3-inch stroke, with a 4-foot driver? When "A. D." has located these points and figured out his leverage, he will have to make a change in tactics, for even now he is not decided in his opinion on it, it leaves it as a debatable question. I must, as "A. D." state that I have no quarrel with him or any one else, but am trying to raise these questions with fairness and due respect for all who may differ with me.

"E. P. C." asks whether an injector would work with air pressure? As probably no one has tried it and

knows about it practically, we must answer by theory, and this would say No; for whenever an injector gets a quantity of air it will not work as effectively as when properly packed; hence, if air will disturb its action it will probably stop it entirely if no steam is there to aid it. It would appear as if the steam admitted to the injector was condensed by the cold water, thus creating a vacuum, and that the rush of water to fill this, produced the force which operates the injector. Hence, without steam we have no condensation and produce no effect.

"Thomas Reeve" gives some good advice to young firemen, but the first part is of such a nature that only the most heedless of men need be reminded of their importance, and if a man is so indifferent as to neglect them, even good advice will meet with poor returns.

After answering a number of questions "L. L. C." has a few of his own, the first being about lead. Lead is the amount of opening the steam ports have when the crank is on the centers, and is generally greater for high speed than low speed engines. We have four distinct actions for each movement of the piston, three on one side of it and one on the other. First, we have admission of steam up to the point of cut-off, then expansion of the steam to the point of exhaust, then the exhaust; these three actions are on one side of the piston. On the other side we have a portion of steam previously admitted, but which failed to get out of the exhaust, and was shut up in the cylinder. This is compressed, and diagrams of the indicator show that during the last inch of the piston movement it amounts to nearly boiler pressure.

Now we will take "L. L. C.'s" third question and answer it first. Suppose the above piston actions to have taken place while the pin was going over the upper half of its revolution, and the piston going to the front end of cylinder in running ahead. This would bring the engine to its forward dead center. The valve at this time must be moving back, and the front steam port should be line and line, or if there is lead the port should be open the amount of lead. The steam is thus permitted to enter the cylinder just a little before the piston reaches the end of its stroke, and in conjunction with the compressed steam above described, help to bring the piston to a stop without the jar that would result if it were not for this elastic cushion. Another advantage given by lead is, that the steam is ready to follow the piston before it turns, and is thus able to keep up to it and get in its work, which it would not be able to do if the valve had not been opened until the piston was already moving back. Our

younger members (and some of us older ones, too) know that if we want to get in our work in swinging our fair partners in an old-fashioned rope swing, by the old-fashioned process of "running through under them," we must be ready and started to catch our hold before they come along or we will miss our holds and be left behind and laughed at. It is just the same in the movement of the piston, and hence, we have the rule that the faster the speed the more lead. Lead is thus an advantage by helping the compression and stopping the piston, and in having the steam ready and waiting to push the piston in its return movement. With no lead in fast engines there would be an uneven working, but in stopping the piston and in its return stroke, while it would not show so much in slow speed engines.

When the crank pin is on the upper or lower quarter, the piston is not in the center of its stroke, as would naturally be supposed, but will be found more or less back of the center. I say more or less back of the center, the distance being determined by the length of the main rod. With a 7-foot rod and a 2-foot stroke it makes about one inch difference. This is caused by the so-called angularity of the rod, which consists of the fact that while the piston and crosshead move one foot on the guide the pin has moved back far enough to give them room, but has not moved in direct line with them, but off to one side. Perhaps it will be readily understood if we say that when the crosshead is in its center the upper pin would be in front of the quarter point, yet if the rod was taken down and then the strap put on again in the same shape and held over the center of the wheel, the two centers (that is, wheel center and strap center) would coincide.

When the crank pin is on the upper or lower quarter, the piston is not in the center of its stroke, as would naturally be supposed, but will be found more or less back of the center. I say more or less back of the center, the distance being determined by the length of the main rod. With a 7-foot rod and a 2-foot stroke it makes about one inch difference. This is caused by the so-called angularity of the rod, which consists of the fact that while the piston and crosshead move one foot on the guide the pin has moved back far enough to give them room, but has not moved in direct line with them, but off to one side. Perhaps it will be readily understood if we say that when the crosshead is in its center the upper pin would be in front of the quarter point, yet if the rod was taken down and then the strap put on again in the same shape and held over the center of the wheel, the two centers (that is, wheel center and strap center) would coincide.

ing on steam says he can make any figures he pleases.

But he don't choose to make any but that will express facts which will bear honest investigation. I admit that "Dr. Wilson" is a good hand at putting down figures, but he fails to stick to the latter part of his text, and make them "express facts" which will bear honest investigation. For instance the "Dr." is not satisfied with decrying steam, but in order to make it seem still smaller, he would try to make you believe a horse could exert a pull of 600 lbs., or even 1,200 pounds if necessary. I have owned and driven horses in the past, and probably the heaviest one weighed 1,000 lbs., but my favorite roadster weighed but little over 700, and was a fair size horse. In watching them pull a load or start one, I was ever under the impression, that their pull was obtained by their "leaning up against the collar," and thus throwing a part of their weight on that point, but I never for an instant thought it possible that a horse could throw 600 lbs. of weight into the collar, because if they did a 700 lb. horse would have but 100 lbs. on the ground, which would hardly give him hold enough. And what shall we say to the "Dr.'s" statement, that on extra occasions he might get a 1,200 lb. pull out of a horse when it takes a good size one to weigh 1,000 lbs. If the whole weight of the horse were suspended from a rope, would it pull 200 lbs. more than its weight? Are these the facts and the common sense on which the "Dr." bases his theories? Let us hear what our esteemed cotemporary the *National Car and Locomotive Builder* has to say on this point. In a recent number we find the following article:

HOW THE HORSE-POWER UNIT WAS ESTABLISHED.

A valued correspondent writes us: "In a recent number of your journal you give some particulars of how Watt came to establish the weight of 33,000 pounds raised one foot per minute as the unit of a horse power. You say that Watt, in his usual careful way, ascertained what average work the horses in his district could perform, and found that the raising of 22,000 pounds one foot per minute was about the actual horse power, and that he added one-half to that, making the figures 33,000. That this was done and offered as an inducement for people to buy the engines built by his firm. I have heard that story before, but it is myth of the same character as the chestnut gravely told by Smiles that the attention of the boy James Watt was first directed to the potential power of steam by seeing the lid of his mother's kettle raised by the steam from the boiling water.

The true story of how Watt came to use 33,000 foot pounds as the horse-power unit is this: He found that a common speed made by a work horse in British cities was two and a half miles an hour, while pulling with a constant draft of 150 pounds. This you will find to be the equivalent of 33,000 foot pounds. On this basis he adopted the rate of 25 feet per minute as his piston speed, and each 150 pounds of pressure on the piston at this speed was reckoned as a horse power."

The version of the story given by our correspondent of how the horse power unit came to be adopted may be correct, but we see no reason for believing it to be more authentic than the version which we gave. We are aware that Watt found the heavy

horses used for hauling brewers' drays in London were capable of exerting a steady pull of 100 pounds while traveling at the rate of two and a half miles an hour, but that does not represent an ordinary horse power, and Watt was perfectly aware that 100 pounds was about the pull exerted by an ordinary horse. That gives 22,000 foot pounds as the horse-power unit, and we see no reason for supposing that the increase was made to secure business, for with all his inventive genius Watt never failed to avail himself of opportunities for advancing his business interests.

Will the "Dr." please note that 100 pounds is as near a constant pull as a horse can be supposed to pull, and that 150 is a safe limit, and let him cease prating about pulling 600 or 1,200 pounds of pull out of a horse?

The "Dr." has defined horse power as a constant pull of 150 pounds at $2\frac{1}{2}$ miles per hour; this would be equal to 375 mile pounds. A locomotive and train weighing 110 tons meets a resistance of 15 pounds per ton, or 3,000 pounds, while running at 25 miles per hour, or equal to 75,000 mile pounds. A locomotive can easily move at this speed with such a train, and by the simple rule of three this would prove to be horse power, for 75,000 divided by 375 gives 200.

"Dr. Wilson" quotes from "Rankine" and "Dana," all about heat units to be transmuted into horse power, to show that a locomotive could not possibly do the work which they do do, because the heat units are not to be found in the coal. I have a quotation which credits 1 pound of coal with evaporating 10 pounds of water. This is probably a high figure, but it is not near as high as the "Dr's." pull of 600, or even 1,200 pounds.

"Dr. Wilson" gives us several practical examples—something real, as he calls it. He says an engine burns 72 shovelfuls of coal in a trip of 75 miles. Now, if she burns 1,440 pounds of coal she would evaporate 14,400 pounds of water, according to the table referred to. 14,400 pounds of water equal 230 cubic feet, or 1,725 gallons. 230 cubic feet of water are 397,440 cubic inches, and this water would make 75,513 cubic inches of steam, at 130 pounds absolute pressure, allowing that 1 inch of steam will make 190 inches of steam. A flywheel 5 feet 7 inches in diameter would make about 300 revolutions to the minute, or 22,500 in 75 miles. We would thus have 75,513,600 cubic inches of steam to divide among the 22,500 revolutions, or about 3,356 cubic inches for each turn of the wheel. As each of the four ends of the cylinders requires a share of this, we have 839 cubic inches for each end of each cylinder, or enough to fill the 16-inch cylinder, which has an area of 201 square inches, for nearly four inches. This is supposing that every revolution in the 75 miles is made under steam

pressure, which is not a fact on any road. It also leaves out of the calculation the coal used before starting out, which will probably equal one-fourth of that used on the road, and these two items will beyond doubt give us steam enough for a 6-inch cut-off, and any practical railroad man will at once admit that this is amply sufficient to take a train of four coaches at 20 miles per hour over any road. Again, if we have 6 inches steam in the cylinder, at 130 pounds boiler pressure, we will have, say, about 120 pounds initial, with an average of 30 pounds during the stroke. A piston with a surface of 201 at an average pressure of 30 pounds would have 6,030 pounds pressure on its face, which, multiplied by $3\frac{1}{2}$ feet (the length of the double stroke as given by the "Dr."), equals 22,110, and this multiplied by 100 (the number of revolutions at 20 miles per hour) equals 2,211,000, and this multiplied by 2 gives us 4,422,000 foot pounds per minute, and this divided by the standard 33,000, equals 134-horse power. A train weighing 110 tons, with a 40-ton engine, making a total weight of 150 tons, running 20 miles per hour up a 25-foot grade, meets a resistance of 17 pounds per ton, or a total of 2,550 pounds; multiply this by 20 miles, equals 51,000 pound miles. The "Dr's." horses moving at $2\frac{1}{2}$ miles, with a constant pull of 150 pounds, equal 375 pound miles, and as 375 is contained in 51,000 about 136 times, it would take just about that many horses to perform the same amount of work. These figures seem to fit pretty closely, and state the work as figured out and also as accomplished. We have taken the "Dr's." own figures as a starter, and while he wishes us to ignore the water because it is so cheap, yet it is what furnishes us steam, on which we depend for power. The "Dr." has not told us anything about water at all. Will he please find out whether the run is made through without taking water, if so the size of tank and amount left over? I have a vague idea that they will have to take water once on the road, and thus help to prove my assertion that 1,725 gallons have been used up, and converted into steam, for in ordinary practice engineers do not use their tank water for any other purpose. Will the "Dr." please admit that I have been fair in taking this—his most striking instance—instead of taking the other example, where twice as much coal was used, and which would give us about 13 inches of steam in each end of each cylinder?

But it is really useless waste of ink and paper to argue on a matter which can be so easily demonstrated and proven as the force of steam, and to bring an ocular demonstration of it we will not search musty records and surmises, but find our facts in recent tests.

INDICATOR
DIAGRAMS.

Our valued exchange, the *Railroad Gazette*, which is published (weekly) in New York City, and is devoted entirely to railroad news in all its branches, and thus becomes a standard publication to all persons who wish to keep posted as to what is going on in the railroad world, published a set of indicator diagrams, last month, which by their courtesy we are enabled to reproduce. The diagrams were taken by Mr. F. W. Dean, on Old Colony locomotive, No. 148, within the last six months, and come to us as the result of the latest improvements in testing steam pressure, while at work in the cylinder.

These diagrams and table are respectfully submitted, as showing the result of "weighing" the force which the steam exerts in accomplishing its work. A careful study of these figures will do much toward clearing away the fogs which cluster about the action of steam in the cylinders. As stated in the foot note, the upper line represents boiler pressure, and the lower one is atmospheric pressure, or just equal. Now, let us take No. 1 diagram, and imagine that we are standing on the left side of a locomotive, and that the left of the figure represents the front of the cylinder, and the other the back.

The line running across from the upper left to the lower right hand corner shows that just before leaving the front end of the cylinder the pressure rises above boiler pressure, as the point is higher than the upper line, and that from this point the pressure line runs down and comes to a fine point; and then in following the line back to the starting point, we find it runs back nearly straight three-quarters of the distance, and then rises till it reaches the highest point from which we started.

Having traced these lines and found how they vary from the boiler and atmospheric pressure, we can determine with accuracy what power is shown, and in the case of these lines in No. 1, we find we have an average pressure of $50\frac{1}{2}$ in front of piston, and $51\frac{1}{2}$ on the return stroke. Having determined this point, we turn to another column, and find that the drivers were making 168 revolutions per minute, and having the size of the cylinder, we can calculate the horse power as given, 530. You will also note that while No. 1, 2, 6 and 7 were taken when engine was working in $7\frac{1}{2}$ -inch cut-off, No. 3 and 5 were taken while in $4\frac{1}{2}$ -inch cut-off, and the difference in the shape of the figures. Also the difference which a change of speed produces, even when the same cut-off is used as is shown, by comparing No. 1 and 2 with 6 and 7. While 6 and 7 show only from 40.2 to 46.5 effective pressure.

No. 1.

No. 2.

No. 3.

while the former show 50.5 to 53.5, yet the increased speed adds greatly to the horse power, as shown on the same locomotive, as

all these diagrams were taken from the one locomotive under different speeds and cut-offs. When the "Dr." has successfully re-

refuted these silent yet eloquent witnesses against him, we will have more to say in regard to our position, but trust that even he will be convinced that he was wrong, and give up the point.

That even "Drs." can be mistaken sometimes is proven by the following article which is floating about the press:

OLD IDEAS CONCERNING STEAM RAILROADS. "In the archives of the Nurnberg railway at Furth,

which was the first line constructed in Germany, a protest against railways has been found, drawn up by the Royal College of Bavarian Doctors. In it occurs the following passage: Travel in carriages drawn by a locomotive ought to be forbidden in the interest of public health. The rapid movement cannot fail to produce among the passengers the mental affection known as *delirium furiosum*. Even if travelers are willing to incur this risk, the Government should at least protect the public. A single glance at a locomotive passing rapidly is sufficient to cause the same cerebral derangement, consequently it is absolutely necessary to build a fence ten feet in height on each side of the railway."

Now here we have the wise conclusions of a conclave of Doctors, asserting the fact that persons riding or even looking at a train or locomotive would be affected with the *delirium furiosum*, which must be something terrible, if we may judge of the disease by the name, and yet men have seen locomotives, and

NOTE.—The spring of the indicator in each case was 100 pounds to the inch. The horizontal line above the cards is the boiler pressure line.

rode on them, and still survive and live on. Somebody must have been mistaken, and while the "Drs." thought they had a fact, it proved to be the fancy of an excited imagination. Hope that our "Dr. Wilson" has not caught the *delirium furiosum* by the too intense study of horse versus steam power.

SQUARING
THE
CIRCLE.

"Eccentric" seems to be laboring under a mistake, in regard to my explanation of how to account for the difference, between a square piece of paper, cloth, or other material which is two inches on each side and a piece in the shape of a circle two inches in diameter. I laid out a circle on the square piece, and showed that the square piece was larger than the round piece, and tried to explain how the area of the corners could be found, so as to figure it out how much larger the square piece was. I did not say the corners could be placed into the circle, because when we take a square piece, and cut it into a circle having the same diameter as the length of the square's side, we have a complete circle, and those corners over. As the circle is completely filled there is of course no room for the pieces in it.

Vulcan.

MR EDITOR: The April *Magazine* chock full of good stuff is at hand, and as I aint over and above busy, I'll chin in on the boys a half hour. I've read your leading editorial and I can say amen. You have told the truth in the plainest of chin music and if only our boys would stand shoulder to shoulder for right and the truth, cease to be the cat's paw of the second most loathsome thing on earth, a local politician, bury Democrats, Republicans, mugwumps so deep that the angel Gabriel couldn't find them when he blows his horn, these men could elect representative laboring men to the Senate in place of some gutter snipe politician, and have men who would be honest "for the boys"; they could make any officers of state or the United States if they would. But they don't think so—too many of them—so we must let them suffer poverty of pocket as well as of mind. You see I can't put it as you do, but I'm with you.

I've read L. L. C's letter and I'm with him in some of his "giving it up." I wish I could tell him what "lead" was. If means, as he probably knows, that the steam valve is opened "in the lead" "or advance" of the piston arriving at the end of its stroke, or that steam is put into the cylinder "leading the piston," or that the valve opens before the piston comes to the dead centre position, and when he asks what advantage it is to an engine, he opens the door wider than any barn. In a locomotive, it is necessary to have clearance,

and when one of our pet snorters is running up among the 50's lead is necessary the steam can 'get there' to keep her "huzlin," and if there is compression enough she's linked up, the lead is of no use but costs more than it comes to.

When there comes out of some cute fellow's brain a valve that will do what wanted then lead or inordinate compression will all be left out. Lead and lap form a great handle for discussion, and they do amount to much when an indicator is put on by a man that knows how. If I should answer his second question after my own ideas it would be that "entire absence of lead would save the company money." I old steam chewer always has her valve "jammed openin'" when the crank is on the "forward dead center" and the piston is getting along towards the center of cylinder when the crank is on the upper or lower live center depending somewhat on the length of the connecting rod, but why it's that I ain't specially able to whittle out, unless it's because the steam is pushing and the crank is willing to accommodate it.

Some of these questions involve a great deal of head work and book larnin, but ain't up in that kind of goods, but if I want to pull out and make time with mail, one baggage, a smoker and set up two to four Pullmans or Wagners, then I to home after I get the "go."

I used to think I knew all about lap and lead but when I saw a man get on the piston and hook on his jim cracks, and take "steam picters" and then pull open her valves and chests and chip and file and then set the valves by his "jim crack picter" again I never look at the slides or cranks and when he said it was right—and told the superintendent of M. P. to climb in the cab and her go and "she went"—I just made up my mind that lap and lead were gone—and didn't believe my own ears when "barked" squarer'n a pressed brick. When the fireman begun to ask me "what thunder we were doing on the front end" and he had to fire with about four inches less lap on his shovel, I opened her up and soon found we could make more time than general orders allowed—and the superintendent of M. P. was puttin' down big and countin' mile posts until I begun to think "your old uncle was out'n a job" then when we were on the home run, the jim crack man sat down on the right hand side to see how she barked, and watched the water and steam, and said nothing except, "lay her up" I got dizzy, and no don't know nothin', but I can run on a coal than ever, and though I don't know much about steam picters, I'm always glad to see my friend of the "jim crack" for end business, and I'm glad to "hand him" but I can't figger out lap and lead, and

fireman swears that he can run on four quarts of ashes and two pans of coal.

I'm old enough to know something, and I have learned that running an engine with lap and lead played out several years ago on some roads, and I've learned that every man who lugs 'round a box of indicators can't handle an engine to the engineer's benefit, any more than every man can play doctor—and what I do know w'd make a small book with but few leaves in it and what I don't know, and am pretty sure of (that I don't) w'd want about six full unabridged dictionaries, and I aint certain six would be enough to hold what I'm sure that I don't know, but I am certain that an old hand can learn something most every day if he don't get the "know it all" so his neck is stiff, and I'm in for learning something once a day, and I sometimes think I'm an "old fool" certain anyhow that I can't be a young one again very well, and there's a lot I want to know yet.

Bed time, so more next time.

Uncle Silas.

SAGINAW, MICH., March 15, 1890.

MR. EDITOR:—After a long silence I once more make my bow to the readers of the Mechanical Department. The February number is not so well represented as I would like to see it, but this can probably be explained by the fact that the boys are all rushed pretty hard, and can find time for nothing but work. The old reliable "Vulcan" is on deck as usual. I think readers of the Mechanical Department owe him a debt of gratitude for his disinterested efforts in their behalf. All the same I am going to find fault with him for his answer to A. T. Conkling on boiler pressure; he says "we mean to say that every square inch in contact with the steam is subject to a pressure of sixty pounds." Now, I want to know if parts of the boiler *not* in contact with the steam are not also subject to a pressure of sixty pounds per square inch and if not, by what rule he can prove they are not. I always supposed that in computing strain on a boiler, every square inch should enter into the computation. I do not think there will be any serious disturbance in the mechanical world over Dr. Wilson's theories on horse-power. The prevailing method of computing H. P. may, as he says, be all wrong, but that does not alter the fact that a majority of the engines that have always been built on the present basis of computation generally do what their builders say they will do, and that is all that is required of them. After all, the term H. P. is merely a technical one. The real question to be determined in selecting an engine for any class of work is not how many H. P. it will develop, but will it develop power sufficient to do the work required of it. As long as

present methods of calculation answer those requirements with the accuracy they have always done, it makes no difference whether they are right or wrong. I would say to Dr. Wilson that he need have no fear of "any of the boys getting discouraged" over his apparent demolition of the prevalent H. P. theory. The main question that agitates the boys is not how many horse-power she is going to develop, but, "will the 'old girl' keep her tail up till we get 'em over the hill." "Bolivar" wants to know when the spring broke, coming up or going down. This question is rather vague, but I will assume that I know what he means and say that it must have broken in the direction of the strain, as the strain on a spring, in common with everything else that sustains weight, must be in the direction of gravitation. It broke coming down; it would be a mechanical impossibility for it to break when relieved of a portion of the strain upon it, or, as he says, "coming up."

In looking over a file of the *American Machinist* some time ago I came across a device that interested me, and as I think it will be of interest to readers of the Mechanical Department, I will (with your permission) reproduce it. It is well known that water cannot be drafted a greater height than 34 feet, but by means of this device it is claimed water was drafted a height of 37 feet. The suction pipe is connected to pump at "a"; about 25 feet from water line is a "T" with nipple and elbow. A pipe of the same diameter of suction pipe extends to the same height and terminates in a cap; on lower end of suction pipe is a cluck valve. Fill both pipes with water and screw cap on standpipe, "b," air tight; the action of the pump will suck the water out of standpipe and create a vacuum which will sustain the column of water in the suction pipe and enable the pump to draft the water the 37 feet.

Vacuum.

MONTEVIDEO, MINN., March 15, 1890.

MR. EDITOR:—Instantaneous photography may solve the moving wheel problem to some people, but can anyone tell me why the spokes are shown on the bottom of the little wheel which must move several times faster than the large one?

Elder.

The once famous Polish insurgent Ofoisko is dead; aged 60.

EVANSTON, WYO., March 17, 1890.

MR. EDITOR:—I, for the first time, on March 15th, had the pleasure of perusing the *Locomotive Firemen's Magazine*, and although it was an old number of January, 1890, I was greatly interested in its general news and comments, and more particularly so in its mechanical communications. I took notice of one by William E. Lockwood, wherein he quotes a communication to the French Academy of Sciences, by Mr. Rabeuf, in making reply to W. L. Hudson, of Ohio, when he (Hudson) asks the question, "Why does a locomotive slip on a down grade without the use of steam?"

Mr. Rabeuf says, as quoted by Mr. Lockwood: "In this test we had a velocity of the coupled wheels of three hundred and three turns per minute, while the actual rotation was three hundred and sixty turns in the same period. They slid, therefore, on the track, and hence the velocity of translation should have been over seventy-five miles per hour, when, in fact, it was only sixty-two," &c.

Mr. Lockwood then goes on to show from his theory that it was due to what he terms a "centrifugal lift and tangential throw" in lifting the wheels off the rails and allowing that slip.

Now, Mr. Editor, with all due regard to Mr. Lockwood's ingenious explanation, might not this slip down grade without steam be caused by other means; *e. g.*—by atmospheric back pressure in the cylinder reduction ports? Mr. Rabeuf does not give particulars of the grade he used as a test, but I think from the figures he does give that the wheels were 5 ft. 10 in. diameter, therefore 18.3 ft. circuit.

The length of incline was . . . 6,593.59 ft.
And actual distance traveled

by wheel circum. = 5,549.00 ft.

Leaving slip of wheel = 1,043.99 ft.
which equals .16 ft., or nearly 2 in. per ft. of incline; or 2.928 ft., which is nearly 2 11/16" per revolution of wheel.

As the engine, Mr. Rabeuf says, should have a speed of 75 miles per hour, or 110 ft. per second, this can only be gained, without steam on the engine, by the incline having a rise of about 1 ft. in 35 ft., or a fall altogether of about 188 ft. But the engine actually gained a speed of 62 miles per hour.

Now, let us assume the engine's weight at 40 tons, and 8 lb per ton for friction.

Then the work accumulated in the engine in falling 188 ft., taking friction into account, would equal $(40 \times 2000 \times 188) - (40 \times 8 \times 6593.6)$

$\frac{V \times 40 \times 2000}{64 \times 5} = (40 \times 2000 \times 188) - (40 \times 8 \times 6593.6)$

Hence velocity = 102 ft. per second nearly, or nearly 70 miles per hour.

Now, 62 miles per hour is what the engine actually does; 8 miles per hour represents the slip.

Now, 8 miles per hour represents 11.73 per second; or the speed of that portion of work in the engine that is destroyed by slip.

The accumulated work expended is 11.73 ft. per second or 11.73 ft. per second $\times 11.73 \times 40 \times 2000 = 171102.5$ lbs.

Now let us assume the area of piston be 255 sq. in. or an 18 in. cylinder and 1 stroke engine; and let P represent the back pressure of air in the cylinder and reduced parts, then: $255 \times P \times 303$ actual rev. $\times 2 = P \times 309060$ lbs equal pressure on piston causing slip. Now, pressure causing equal work expended in slip.

$P \times 309060 \text{ lbs} = 171102.5 \text{ lbs.}$ Hence $P = \text{lb per sq. in. atmospheric back pressure for both pistons } P = .277 \text{ lb per sq. in. pressure.}$

Now, sir, I think this is only what may be looked for from an engine moving at high speed without steam, and would undoubtedly be sufficient to cause slip of the wheels to the extent alluded to and not only so, but to cause that all take place just when the pistons have greatest command over the crank, which, I think, will coincide with the spots next the crank-pin.

But as I have taken up so much of space—if you should consider these marks worthy of insertion—I had to leave any further remarks for a future or for others. Yours faithfully,

Ernest

Expired Railway Patents.

The following list of railway patents furnished by F. B. Brock, Patent Attorney, Washington, D. C., expired during month of March, 1890, and are now free to be used by anyone, viz:

Car Spring, G. F. Godley.
Car Coupling, A. Pursell.
Changeable Gauge Truck, J. McCauley.
Sanding Device for Locomotives, M. V. Noble.
Railroad Gate, C. S. Currie.
Rail Joint, T. V. Allis.
Railroad Safety Guard, C. Latimer.
Switch, H. S. Deway.
Rail Joint, Anthony & Seabert.
Automatic Signal for Crossings, R. Walker.
Car Brake, J. N. Brush.
Convertible Freight Car, T. Fogg.
Car heater and Ventilator, C. F. Wharf.
Car replacer, J. T. Baxter.

Persons desiring copies of patents, drawings and specifications, can obtain them for fifteen cents by applying to Mr. F. B. Brock, whose address is as given above.

The Baltimore & Ohio has received new sleeping cars from the Pullman Car Company for service between Baltimore and Pittsburgh. The cars have several improvements.

Woman's Department.

EDITED BY IDA A. HARPER.

Letters pertaining to Woman's work, such as education, temperance, home and fireside, and kindred topics, are solicited.

Correspondents are requested to write plainly, on one side of the paper only, and forward their manuscript so as to reach the Editor not later than the tenth day of each month, directing all communications for this Department to

MRS. IDA A. HARPER,
TERRE HAUTE, INDIANA.

THE ANNUAL UPHEAVAL.

When this issue of the *Magazine* reaches our readers, the house-cleaning season will be at hand—a period of mingled delight and vexation to the housekeeper. It is a pleasure to think that the winter's accumulation of dirt and debris is about to be removed; it is an annoyance to observe the many necessities that the bright spring days reveal in the way of wall paper and carpets and curtains and furniture. While we are shut in during the cold weather, the cheerful fire, the cozy warmth and comfort make up for many deficiencies in our surroundings. But when the windows are thrown wide open and the springsunshine comes streaming into the rooms, every defect stands out in bold relief. When we contrast the spot where the stove stood with the rest of the carpet, we are amazed at its faded appearance. When the pictures come down from the walls for their semi-annual cleaning we are astonished at the soiled condition of the paper. The furniture shows the constant use of the winter months. Everywhere is the call for renovating and replenishing.

We feel certain that no expenditure of time and labor will ever make the house presentable, but with this conviction firmly in mind we do the only thing possible under the circumstances, and that is, go to work. And in a few days, or a few weeks, according to the size of the house, a transformation has taken place. The exceeding cheapness of the wall papers has placed them within the reach of all, and the new methods of cleaning have made old paper almost as good as new. Some thought must be given to the selection, warm colors for north rooms, which get no sun, and subdued shades for those on the south side of the house. Neutral tints, with no designs, or those which are blended and indistinct, are most effective in showing off pictures and the various kinds of fancy work with which we decorate our walls. There are some persons, however, who prefer a paper with some design upon it; they consider that it gives a finish to a room and does not require so much adornment. In such cases

avoid set or conventional figures, as they soon grow tiresome and are not in good taste. Select rather graceful vines or mingled leaves and flowers in soft and unobtrusive shades. The pretty moldings, which are such a finish to a room, are inexpensive, and the law allows you to remove them when you go into another house. A vigorous beating and a thorough washing with ammonia and water will renovate a carpet to an astonishing degree, and the cheap and pretty rugs which can be made or bought, may be put where they will do the most good, over worn and faded places. Material of all kinds and prices may be bought for upholstering, and a housewife of skill and cunning can accomplish wonders in covering furniture. Stuff for curtains may be had from ten cents a yard up to any price you choose to pay. For a dollar you can furnish a window with fresh, tasteful, washable draperies that, tied back with a ribbon or falling straight, give a charming finish to a room. The dainty sash curtains of dotted swiss or China silk, strung on a bamboo or brass rod, embellish the home and are within reach of all. Avoid too many fancy articles. The fascination of this work tempts women to use too much of it, and many parlors look like a bazar filled with bric-a-brac for sale. A few things made with taste and skill are much more effective. But more to be desired than any accessories of furnishing is that atmosphere of coolness and freshness and perfect cleanliness which mark alike the good housewife and the refined lady.

One word of warning may be necessary, especially to young housekeepers: Do not commence too early. You are apt to be deceived by the first warm days and, inspired by the desire to have it over with, and with the ambition to get ahead of your neighbors, you buckle on the armor and rush prematurely into the fray. In a short time the sun goes under a cloud and a blizzard comes around the corner and the stoves are all down and the grates closed. The family is wretchedly uncomfortable, and some member is reasonably certain of a spell of sickness. The garret and cellar, the closets and the guest chamber, the parlor even, may be sacrificed to the early and deceptive balminess of the spring days; but do not touch the living rooms until the sun is well on his way to the north, and dampness and chilling winds are unmistakably past. There are many things necessary to a happy and pleasant home, but none are of such vital importance as comfort and healthfulness.

We call especial attention to the letter of Mrs. L. H. in this issue. It contains a suggestion to girls which will be further discussed in some future number of the *Magazine*.

THE woman suffragists are soon to have a hearing before the judiciary committee of the Massachusetts legislature. They will present their arguments in favor of giving to mothers equal rights with the father to the care and custody of their children. One would not suppose there would be any necessity for a great deal of argument upon this question, but it is something which Massachusetts women have never been able to obtain, and the law does not give to the women of more than three or four of the States in the Union.

AMBITION.

Editor Woman's Department:

Be ambitious. By that I do not mean that one shall sit for hours lamenting because he has no money, friends or talent, for that does signify that he is of no account in the world. But to be ambitious is to prize the highest point of mental cultivation.

To lay out some plan in life, and then work both mentally and physically until we succeed in executing it, should, under all circumstances, be our first law with regard to ambition. And our first day's labor should be of that kind by which we gain decision of character.

Let us then always imagine ourselves to be a great, expansive ocean in its depth, its power, and its purity of actions; and not a feeble little streamlet that loses its direction at every petty hindrance, and stops and turns back, and scarchingly creeps around in hope of finding some larger channel through which it may wind its sickly course. But let us not carry the opposite to an extreme; that is, to imagine ourselves a headlong torrent that carries havoc and destruction in its wild career.

How many men and women in the school of life remind us of that meagre little stream. They come to their classes not the least prepared with their lessons—figuratively speaking—and sit, as we may express it, "like a mummy in a museum," waiting for some other member of the class to do their part of the labor. And then, again, we meet other persons who remind us somewhat of the torrent. They are impressed with the idea that they know just a little bit more than their neighbor, and are always seeking some advantage, in a very unkind way, to remind their neighbor of—as they would probably express it—"their ignorance in not knowing such and such a thing." We should never do that. If they wish our assistance, we should give it to them in a kind, cheerful way, and not in a reproachful one; for if they are not ambitious they will not seek knowledge.

I have always felt that there is a road to wealth, honor and usefulness open to us all, and all who have ambition enough may enter upon it, with almost certain prospects of success. But in all our career in life let us remember this one great motto: "Courage is the spice of life."

Kittie Wadden.

P. S.—Observing the article in the *Magazine*, openly denying, as I may express it, the fact of my having written the article entitled, "Kissing Mother," and having been called on to speak in self-defense, I essay to do so.

If that person, whoever he or she may be, is superior to me in years, I must beg to be permitted to tell them that they are sadly mistaken, but if inferior, I will inform them very openly and paternally, that they are entirely wrong.

Strange, indeed, that I, speaking from self-experience, and Rob't Burdette, with whom I would not venture to compete, should labor under the same impressions and express ourselves with such a similarity. No doubt many people in this expansive universe have written on that same subject, for many and happy are the sentiments we can express those two words in, but I am confident such a great personage as Rob't Burdette would never have

expressed his feelings in such unintelligible words as I did. I deem it wholly unnecessary to have this published. If you will but send to me the name and address of the person for I think it is very indecorous to write such pieces as that anonymously for I may impress on that person's mind that there is such a thing as being mistaken.

I am respectfully,

K. Wadden.

KEOKUK, IOWA, March 15, 1890.

WAGONER, INDIAN TERRITORY, March 18, 1890.

Editor Woman's Department:

In looking through the *Magazine*, which I peruse with much interest, I see letters from almost all the states in the Union, so why should I not think that one from the "beautiful Indian territory" would be kindly received. As this is my first appearance before the public, I beg you will deal with me gently, and if it be not asking too much let this appear in your next number. I have only been living in the "Wild West" for two years, yet so dear to my heart has it grown that nothing could induce me leave it and return to the "red hills" of old Georgia, the state where I was born. I am a Cherokee by birth and I must be one at heart also, for I love every foot of the beautiful, broad prairies. The readers of this letter (if it is fortunate enough to have any) will no doubt wonder how the *Magazine* found its way to so remote a corner of the globe. I am not a railroad man, but it is not my fault; if I had not been so unfortunate as to be born a girl, no doubt I would at this very minute be shoveling in the "black diamonds" at every seventh telegraph post on some of these beautiful western roads—the M. K. & T., for instance. No, I am not a railroad, but I have brothers who are, and for that reason I have a very tender spot in my heart for all firemen and engineers. My home stands on a high hill four miles east of the M. K. & T., and one of my greatest pastimes is to sit in the front door and watch the trains, which remind one of huge serpents as they wind in and out among the little hills. As I said before the road is four miles away, and yet, on a bright, clear morning, every box can be counted, but I don't often undertake this task, for it is really distressing, the long trains they pull out here, but no one suffers, I suppose, but the poor fireman, and his work is hard at all times, especially when he has a cranky engineer, which I believe is often the case, but ought not to be. They should ever remember the danger they are constantly in and how much one is dependent on the other, and never let a cross word pass between them, but be, at least while on the engine, as brothers. May God ever bless them and keep them out of danger. Is the wish of

Neosho.

[We welcome our new contributor and hope she will come again and tell us something of life in the Indian territory. —Ed.]

For Woman's Department:

IMMORTALITY.

It was pale moonlight, in a distant land,

As the notes of the nightingale mingled afar

With the minstrel chant of some heavenly band.

When, upon the lake, like the symbol of war,
Came the spirit of death from the House of God.

The vision neared the crystal margin,

And cast a glance to the star-lit sky.

As if to ask aid from the angelic region,

Before it announced that man must die;

For the judgment day and the King is nigh.

The stars sunk away, as the dark clouds o'erspread,
And the earth rose like surges lashed back by the shore.

As the lonely tombs released the spirit dead,

And forth they thronged like an army corps.

Either to merit Heaven or darkness for ever more.

Kitty G. Mangan.

SIoux CITY, IOWA.

For Woman's Department :

WHERE SHALL I BE TO-MORROW ?

Time, in its ever ceaseless flight.

Hath brought to me deep sorrow—

To-day I walk the crowded street—

To-day kind friends I gladly greet—

Where shall I be to-morrow ?

To-day I yield to pleasure's call,

To shield a hidden sorrow,

But ere the morning's dawning light,

My soul may take its upward flight—

Where shall I be to-morrow ?

Softly I tread each measured step,

That bears me on to sorrow,

I ask the question, but in vain,

No answer to the sad refrain,

Where shall I be to-morrow ?

To-day the form so full of life,

To-morrow may be sleeping,

Calm, pale and still in slumberous rest,

With folded hands o'er pulseless breast—

While friends sad watch are keeping.

Mrs. Nettie Bloom.

WEST OAKLAND, CAL.

WASHINGTON, IND., March 20, 1890.

Editor Woman's Department :

Among the many Christmas gifts which I received this year was one I highly value. A book entitled "Holidays in the Country," the author being the well-known and popular writer, "Irene." The book deserves a ready sale, being very interesting, especially to the little folks. "Irene" has long since been acknowledged as a writer of great ability, and for her every success with her little book. I have returned from a very pleasant visit to my much-loved friends, State's Attorney and Mrs. Mundy, Illinois, accompanied by my daughter, Mrs. Albert, and my little son. We were given a reception at Mr. Mundy's elegant home which we can never forget. Mr. Mundy is a general favorite among the good boys, and he and Bro. Almy, of the B. R. T., inspired to give us a surprise. Bro. Baldwin, of B. & L. E., and several members of the B. L. F., were also in the conspiracy, and the result was that great many of the above members and their wives, accompanied by the string band and Professor Marchant, the renowned pianist, made their appearance one evening and we enjoyed one of the pleasantest evenings we ever remembered. We are also indebted to Engineer Baldwin, Mrs. Baldwin and her excellent mother, for the kind manner in which they entertained us at their cozy home. Their little daughter, a beautiful child about one year and nine months old, being quite as sociable as his parents, had the pleasure of meeting Engineer Davis and Fireman, true types of jolly railroad boys. Space forbids us naming all our kind friends, but our visit will long be remembered. A good joke is told on Jerry Albert, a young fireman on the O. & M. road. He, although my son-in-law, I must say is a pretty good fellow. There is a newly married couple who have apartments adjoining the Alberts' rooms and the door between the bedrooms is left unlocked during day time so the ladies can enjoy a social gossip. One night lately the door was left unlocked all night, and about midnight Mrs. Albert roused her sleeping hubby and asked him to replenish the fire. He, with visions of the caller before him, and not only half awake, jumped out of bed, boldly opening what he supposed was the door leading to the kitchen, but which was in reality the door between the bedrooms. By the time he had arrived in the middle of the room he was fully awake, and rushed out frantically, forgetting to even close the door. Mrs. Albert declares he sat fully three quarters of an hour on the bedside, wondering what Wiltz thought of him, and nothing could bribe him back to shut that door. He declares that a stove shall freeze the fire out before he will get up in the small hours to replenish it again. The next morning the meantime went quite out, as Albert could not risk opening another door, and if anyone came to get him riled, just ask him which door he opened.

Mrs. Henry B. Jones.

Editor Woman's Department :

I would like to have caught the expression of Mrs. Harper's eyes when she asked us to give our views as to the best way of managing a husband. I imagine they sparkled with mischief in anticipation of the many and varied replies she would receive. And yet I am in doubt about it. She might have been very much in earnest and I the one who has failed in my duty. I have been married nearly sixteen years, yet the idea of having to *manage* my husband never entered my mind. Perhaps this is due to the fact that he managed himself so well when a young man that when he married he had no bad habits to prevent his becoming a good husband and father. I am certain this is the case, as no one who knows me would ever accuse me of being so easy and good-natured as to be imposed upon without knowing it. I think if girls would do more managing *before* marriage there would be less need of it after. It is every girl's privilege and duty to learn all she can of a young man's disposition and character when she finds herself becoming interested in him, and if his habits and associates prove to be such that she can't feel perfect confidence in and respect for him, she should dismiss him from her presence and mind. If she is not needed at home to comfort and care for the old or young people in the family, let her earn her own living as her taste and ability dictate. Let her show the *trifling* men who think all that is necessary to secure a good wife is to ask for her, that she is independent of them and can maintain herself in such a way as to gain the respect of all good people. She need have no fear that she will not know when the *right* one comes a wooing, and if he never comes, how much better single blessedness than double misery.

I am sure the girls are greatly to blame for the number of shiftless husbands in the world. If they did not show such a readiness to marry the first man who asked them, regardless of what his morals were, they would be forced to see that there must be a reformation before they could ask a pure innocent girl to share their life. Happy day when all young women will feel that it is much more honorable to be self-supporting than to be a mere useless ornament, or a burden on father, or take any kind of a man for a husband in order to be supported. Many silly, novel-reading girls marry inferior men thinking they are really in love, when, if they would examine into their characters, they would know that love is impossible where *respect* is wanting. It is nothing but passion they feel, which dies as speedily as it was born and leaves their lives a wreck.

Oh, I wish I could gather all the girls in my arms and hold them there until I had convinced them of all I feel on this subject, then let them go their several ways, leaving me confident that they would live up to their convictions. Then we might look hopefully for a reformation in the young men. I have seemed to stray far from my subject, but I have not. In my humble opinion, as I said before, the managing should be done before marriage.

As I write I look lovingly around my cozy cottage and wonder if any woman would accuse me of mismanagement because I haven't a piece of upholstered furniture, a Brussels carpet or even a parlor. I could tell her to take her sympathy where it is wanted. I defy the world to produce a happier woman than I have been all my married life. If the husband and father is spared to us the time will come when we will have a fine house and elegant furniture, and I will enjoy them very much; a great deal more than if I had *managed* to get them before we were able to pay for them. This sounds very egotistical, for which please pardon me. My own management is all I know anything about. I know there are thousands of women who have to resort to all sorts of ways to manage their husbands and I pity them from my heart. If their broken hearts and lives could serve as a warning to single women their sufferings would not be entirely in vain.

Mrs. L. H.

CLINTON, ILL.

P. S.—The article entitled, "Kissing Mother," struck me at once as being familiar and I am positive I read it several years since, but in what or by whom written, I would not pretend to say.

Mrs. L. H.

SAFELY HOME.

I am home in Heaven, dear ones,
Oh, so happy and so bright.
There is perfect joy and beauty
In this everlasting life.

All the pain and grief are over.
All the short, dark struggle past;
I am now at peace forever.
Safely home in heaven at last!

Do you shudder as you picture
All the horrors of that hour?
Ah! but Jesus was beside me
To sustain me by His power.

And He came Himself to meet me,
In that way so hard to tread,
And with Jesus' arm to cling to,
Could I have one doubt or dread?

Then you must not grieve so sorely,
For I love you dearly still;
Try to look beyond earth's shadows,
Pray to trust your Father's will.

There is work still waiting for you,
So you must not idly stand;
Do it now, while life remaineth,
You shall rest in Jesus' hand.

When that work is all completed,
He will gently call you home;
Oh! the rapture of that meeting,
Oh, the joy to see you come."

E. M. B., a Fireman's Sister.

HINTON, WEST VIRGINIA, March 14, 1890.

Editor Woman's Department:

I am a dear lover of the *Magazine*; I read it every month and find so many interesting letters from different parts and Lodges that I often wonder why some of the members of No. 236 do not write something. They are all bright, intelligent young men and are worth speaking for if they can't speak for themselves. I am very much in love with Shandy Maguire; if he was single—well, I won't say any more for fear Mrs. Shandy might object. I like the poems of Mrs. Bloom very much, and like Nellie J. Gregg's, shall watch with interest the opinions of our friends on the new subject before the Department; of course, I could not have any voice in the matter, as I have had no experience. Now, I do hope some of our boys will have grit enough to write something and tell where our dear, little, mountain town is, and how No. 236 is progressing. Wishing the *Magazine* and the B. of L. F. all the success imaginable, I am, Most respectfully,
Eva Carol.

[Why did you not write something about the "dear, little mountain town" yourself? It is not necessary to call on the boys to do it.—Ed.]

KEOKUK, IOWA, March 9, 1890.

Editor Woman's Department:

In answer to *Firemen's Magazine* "friend" about a piece which was supposed to have been copied. I do not contradict anyone about the article, which is entitled "Kissing mother." The article was written by Miss Kittie Wadden, a little school girl, and I do say and can prove it, that Miss Kittie did not copy it, for she has never read a Burlington paper in the short course of her life, and she would not stoop to such baseness. It was a composition at school. I can send you several of her compositions which will surpass that one. She is truth, honesty, beauty and nobility itself. To know her is to love her and trust her. She is a very bright, active and ambitious scholar. I do hope this will set Miss Kittie right in the eyes of the *Magazine* readers. As I said before, she composed it herself. I can vouch for that. Let some one get the Burlington paper and compare notes.

In Defense of a Little School Girl.

BRainerd, MINN., March 1, 1890.

Editor Woman's Department:

Having been a reader of the *Firemen's Magazine* for the last two years, and having seen no letter from Brainerd, I concluded to lift the veil and expose our Pine City Lodge, No. 81, B. of L. F. I am not very well acquainted with many of the boys but what I do have the pleasure of knowing are perfect gentlemen. The Lodge has one hundred and ten members, all in good standing, my husband being one of the number. W. J. Bain, as Master, is smart, intelligent, and self-made man, who is not a railroad man now, but was a fireman on the Northern Pacific R. R. a few years ago, and who is now a professional druggist in this town. The eighth annual ball of Pine City Lodge is to be held some time in the near future, but I cannot tell the exact date. I attended their last ball, a year ago, and enjoyed myself very much. In regard to fancy work, I can do any kind. I also do some nice painting. I very much admire the poems of Mrs. Nellie Bloom, Mr. H. B. Jones, and Mr. Shandy Maguire. With best wishes to the Brotherhood.

An Engineer's Wife, Lillian.

OBITUARY.

In affectionate memory of Bro. A. E. Finch, of No. 80, B. R. T., who died December 11th, at San Antonio, Texas, from injuries received November 21st, 1889.

Bro. Finch had just been promoted to conduct the morning he received the fatal injuries, but was given a higher and well merited promotion before the year was out. He was a man of sterling qualities, and a faithful friend of the author's for many years, not only of fine personal appearance, but possessed of those principles which stamp the possessor as a noble man.

Gone to the glorious realms above,
Gone to a land of peace and love;
Gone in manhood's brightest day,
Gone from loving friends away.

Yes, gone, but not forgotten here!
Mourned by friends who held him dear.
Keenly as a dagger's blow
They feel the stroke which laid him low.

Few more honorable than he,
Or better brother, or son could be;
Faithful friend of many years,
For thee fast flow the unchecked tears.

None could know thee but to love,
And full worthy didst thou prove;
Ever lenient to another,
Every man was owned thy brother.

Proud we were to call thee friend,
And deeply grieve thy untimely end;
May we grasp thy hand again
In a home secure from pain;

Hear again thy cherished voice,
With thee at the throne rejoice;
There no pain of parting know
That has grieved us so below.

Farewell, dear friend, and from thy throne
On thy mourning friends look down;
Guide them by thy beckoning hand,
Till they, too, reach that better land.

To the parents bowed by grief,
Heavenly Father, send relief;
Teach the sister how to kneel
In prayer to Thee, her heart to heal.

Grant, that thro' eternity,
They God's glory too may see;
Safely on the other shore,
May we meet to part no more.

Mrs. H. B. Jones

WASHINGTON, DAVIESS COUNTY, IND.

COUNCIL BLUFFS, IOWA, March 20, 1890.

Editor Woman's Department:

In the last copy of the *Magazine* I read a communication from one of the ladies in which she gave some very nice designs for fancy work, and asked for suggestions from some one as to making frames for cabinet pictures. I have here a frame which I think very pretty. Take a piece of cardboard or wire netting, 10 or 11 inches long and 5 inches wide, then cut out of the center (for the face of the picture), a piece diamond in shape: on the back fasten a piece of wire or card board, top and bottom, so as to hold the picture in place, and then cover with any pretty color of plush, and top and bottom, in opposite corners, fasten bows of pretty ribbon. Then fasten ribbon on to hang it up by and you will have a very pretty frame. I saw one covered with electric blue plush and on the corners pink satin ribbon. It was so very pretty that I fell "dead" in love with it.

"How to manage a husband" seems to be the subject that everyone is discussing at present, and I think it a very good one. I once heard a lady say that although she disliked card playing, she had to play cards with her husband to keep him from the gambling houses. It is sad, indeed, that any woman should have to share life with a man who cared so little for her feelings as to compel her to play cards with him or be left alone while he passes away the evenings in a gambling den. Maybe she did not make his home as pleasant and agreeable as it might have been. I do not know, but I think that if a woman tries to make home bright and cheerful, a man, if he has any regard for her at all, will show her his appreciation of it by making home his place of resort in hours of leisure, and his wife his companion.

Stella, a Fireman's Sister.

WHITE HAVEN, PA., March 24, 1890.

Editor Woman's Department:

As I have never seen any communication from the lady friends of Home Lodge, No. 351, I wish to remind our boys that there is one who has not forgotten their *Magazine*. My brother is a member of Home Lodge, No. 351, and takes the *Magazine*, and I enjoy reading it, especially the Woman's Department. I thought I would surprise him by sending my piece of poetry, as I know it would make him feel happy. By giving it space in your columns you will make me feel that I am numbered among the many lady friends of the *Locomotive Firemen's Magazine*.

Respectfully yours,

A. P.

LIFE.

Some people look on the bright side of life,
Others on the dark and dreary;
What makes some people so joyous and bright,
Makes others dejected and weary.

The flowers cannot thrive if not in the light;
Just so with ourselves, we can't be happy and bright
As long as we live in the dark all the time;
We must make our lives happy and full of sunshine.

We ought to all look on the bright side of life.
And make our life cheerful and happy;
And all will be right, we will be happy and bright,
By making those cheerful around us.

Agnes S. Russell.

ELDON, IOWA, March 10, 1890.

Editor Woman's Department:

As I have been a constant reader of the *Firemen's Magazine* four years and have never in that time seen anything concerning Protection Lodge, I thought I would venture to say a few words in its behalf. The boys have a splendid Lodge here in good standing. They are a noble and generous class of men always ready to help a needy brother. I see in the March number several letters written on the way to manage a husband and I, too, think kindness is the best way. When your husband comes home tired, have a kind word to say, make home attractive and pleasant, and most men will prefer a cozy sitting room and a pleasant companion to going down town evenings.

L. E.

ARGENTA, Ark., March 22, 1890.

Editor Woman's Department:

As I have been a constant reader of this *Magazine* for over a year, and have never seen or heard a word about our Three Branch Lodge, No. 304, I have made up my mind to let you all know that she is not like McGinty at all, for McGinty went down and No. 304 is going up grade just as fast as she can, and our No. 304 boys seem to be glad that they are living, especially Bros. Skeggs and J. E. Powers, for they both have bouncing big boys at their homes. Some of our No. 304 boys have moved from the left to the right hand side of their engine lately, and among them are Bros. J. E. Powers, Skeggs and Jim Lynch.

Jessie Constance.

PHILADELPHIA, Pa., March 12, 1890.

Editor Woman's Department:

In the February number of the *Firemen's Magazine* there appears in the Woman's Department a letter dated Cedar Rapids, Ia., December 6, 1889, and signed "Fireman's wife, M. P. C." and in answer to it I would just state for the benefit of the writer that there is in Philadelphia an organized body, known as the Supreme International Council, composed of the wives of both B. of L. E. and B. of L. F., and it is very highly appreciated here, and they have organized several subordinate councils at different places, the charters being issued from the Supreme Council located here. It is an entirely different organization from that which is known as the Ladies' Auxiliary of the B. of L. E. The object of the International Council is unity, and I think it is one of the best methods they could have pursued, for where there is unity, sociability and friendship must reign. I would most heartily recommend that the different societies of the B. of L. F. organize themselves under that head for they will find them most earnest workers of the B. of L. F. There is a letter in the February number of the *Magazine*, under date Philadelphia, December 20, 1889, which I would refer the readers to, and any information will be most gladly given by addressing Supreme International Council, No. 613, North Thirty-third street, Philadelphia. The officers are: Worthy councillor, Mrs. T. B. Jones; worthy vice councillor, Mrs. J. Jamison; worthy secretary, Mrs. S. Boaz; worthy treasurer, Mrs. T. C. Smith; worthy supreme chaplain, Mrs. Shields.

A Fireman's Wife.

SCRANTON, Pa., March 13, 1890.

Editor Woman's Department:

I am only a little girl of 11 years, and as this is my first experience in writing any kind, except friendship letters, you must not expect it to be very good. My mother is dead, and I live with my aunt and uncle, Mr. J. W. Spence. My uncle is a member of Acme Lodge, No. 228, and as he takes the *Magazine* I get to read it. On the evening of February 21st last, Acme Lodge, No. 228, held their fifth annual ball. It was a grand success, and I think every one there had a good time—I did at least. On the same evening a contest for a gold watch between Mr. Arthur Loomis, of the D. & W. Railroad, and Mr. Jack Smith, of the D. & H., came to a close at 12 o'clock sharp. Mr. Loomis won, and I was pleased, as my uncle works on the D. & W. I hope my letter is not so tedious as to be a waste-basket victim, I remain a little friend of the B. of L. F.

Era Heckman.

[Your letter is very nice, and the Woman's Department is glad to be remembered by you.—Ed.]

A WOMAN IN IT.

They talk about a woman's sphere
As though it had a limit;
There's not a place on earth or heaven,
There's not a task to mankind given,
There's not a blessing or a woe,
There's not a whisper, yes or no,
There's not a life, or death, or birth,
That has a feather's weight of worth,
Without a woman in it.

INDUSTRIES.

There are nearly 10,000 women nail-makers in England, and 347 who are blacksmiths.

Two hundred thousand unmarried women and girls are said to be employed in various trades in South London.

The State Industrial School for Girls at Beloit, Kan., has thirty-five pupils and forty-five applications now on file.

Ladilla Ambrose, librarian of the Northwestern University, is the first woman who has held that position. She has just completed her second year of serving there.

Miss Clara McKnight, daughter of Captain H. D. McKnight, of Ironton, Ohio, has passed a satisfactory examination and been admitted as a pension attorney. She is only eighteen years of age.

Cardinal Manning declares himself in favor of working women's trades unions, and trusts that America will soon possess a similar organization to the newly-formed English Women's Labor Union.

Miss E. M. Merrick, a London artist who last year went to Cairo to paint the picture of the Khedive, has now received an order for a portrait of Henry M. Stanley, which the explorer is to present to the Royal Geographical Society.

New York has a woman blacksmith who, with her little kit of tools, goes about doing odd jobs in fitting keys, putting new locks on trunks, putting on fastenings, and attending to the countless other details of household management.

Mrs. Annie Williams, aged thirty-five, has a contract for grading six miles of the Evansville & Richmond railway, and she has thirty teams at work at Elizabethtown, Ind., breaking ground. The contract was originally let to her husband, who is now dead.

Mrs. Bolton Lacy is a fully certificated dentist, who has been practicing for twenty years in Brighton, England. She acquired her skill as assistant to her husband, and after his death was able to carry on his business and support her young family. She is especially successful in persuading timid children to submit cheerfully to needed dental operations.

Miss Harriet Ford, a graduate of the New Haven, Conn., High School, has taken the prize offered by the London edition of the *New York Herald* for the best poem of "Welcome to the Hero of the Hour, Henry M. Stanley." The prize poem will be printed upon satin, and presented to Mr. Stanley on his arrival in England. Miss Ford was the historian of her class in the New Haven High School.

Down in Maine the summer idlers came across three women farmers who have about two hundred acres and make farming pay. They raise all the crops of the general farmer, ride the mowing-machines and reapers, and help in all the work of planting and harvesting. They have a fine apple orchard and raise and can small fruits for the Boston market. They employ and superintend two or three farm laborers, read the *Atlantic Monthly*, and take an interest in temperance and dress-reform. They are in excellent health, like their work, and make a comfortable living.

Rev. O. P. Gifford, of Boston, in a recent sermon on "Woman's Work," is reported as saying: "The great shame of our present civilization is that we do not pay women the same wages that we pay men for the same work equally well performed. This thought should come with special force to the Christian man. It is outrageous for employers to pay women five dollars and pocket the other five dollars, and then chuckle all the way home because they have got a man's work done equally well by a woman for five dollars less than they would have to pay the man. Women are entitled to an equal standing with men in commercial and social life, even as they will stand on an equality before the bar of God."

TEMPERANCE.

Of five hundred men released from the Birmingham, England, work house on a recent holiday, not more than fifty went back sober.

Emerson, in speaking of stimulants, exclaimed: "Tobacco, tobacco, what a rude crowbar is that with which to pry into the delicate tissues of the brain!"

One woman's footsteps may cross the saloon threshold steps noiselessly, but when two hundred thousand cross it there is trembling behind the bar.—*Mrs. O. W. Scott.*

The city of Boston appropriates \$8,524 yearly for the salaries of police matrons. Since more than five thousand women are arrested every year in Boston nine-tenths of them for drunkenness, these matrons have plenty to do.

The children are now in their cradles who will live to see pauperism and drunkenness swept away like the fogs that hang over us for weeks till a strong breeze comes and smites them with the scintillar light, and they are gone.—*Mrs. Livermore.*

Miss Susan B. Anthony, when questioned as to the truth of the report that she would have wine at the banquet celebrating her seventieth birthday replied: "I would as soon have arsenic."

A distinguished Englishman, returning to his own country after a careful study of our American institutions, on being asked what he had seen that was most unlike England, answered: "The wine and dinner tables of the great middle class."

The political strength of the 8,000 liquor dealers of New York City is estimated by one of their own leaders to be not less than 40,000 votes. The same authority says: "In almost every county in the state there is now a liquor dealers' association and we all pledged to vote together."

The National Master-Brewers' Association convened in Cincinnati had these among other equal lofty and inspiring mottoes posted on the wall: "Thou Shalt Love Gambrinus, Thy God, Over All," "Shalt Never Dishonor Him Through Bad Beer," "The German Highway Lies in the Beer-Jug," "The Highest Enjoyment Will Be Found Where Beer and Liquor Do Abound."

The New York *Christian Advocate* of December 1 contains an article on "Real Estate Rented for Liquor Traffic," wherein it is shown that New York city, with its 8,000 saloons, allowing an average width to each of but twenty-five feet, gives a total saloon frontage of thirty-eight miles, and that in neighboring town of ten thousand inhabitants more than a third of a mile is devoted to the traffic.

In a Republican form of government there is no excuse for any resort to violence, but ours is not a Republic in its true sense, half the people being still unrepresented. The highest wisdom would be for women to lay aside every line of reform so until they have been invested with the sovereignty which will enable them to command attention to their wishes. But outraged wives and mothers do not look beyond the wrongs of the hour and cry the cry goes up: "What to me were Italy free, I've not a son." Then let them rise up in the majesty of protest which has never been unheeded when women have sacrificed themselves from motives of patriotism.

Whence derives the State its authority? If from God, then its decrees must conform with the high sense of justice that human thought can compass. If from the individual, then it must conform to the highest sense of justice that is conceived and desired by the human units that compose it. In either construction the women of Missouri were not blameworthy. Their aim was to secure protection to the best interests of their families and the community and by reason of their sex, which certainly involved no violation of either human or Divine law, they were not able to effect this in the manner prescribed by the state. When women are denied legitimate power the only thing that remains for them is to take the law into their own hands.

DOMESTIC.

One quart of sifted flour, well heaped, is one pound.

Two tablespoons of powdered sugar or flour weigh one ounce.

A little pounded ice laid on the back of the neck will allay nausea.

Bathe tired eyes in hot water two or three times a day; it will rest them.

A firmer or more delicate grain is secured in cake by stirring the cake only in one direction.

A wine glass of strong borax water in a pint of raw starch will make collars and cuffs stiff and glossy.

To prevent the smell of cabbage permeating the house while boiling, place on the stove a dish containing vinegar.

New Year's Cookies.—Two cups of sugar, one of butter, one of milk, three eggs and one teaspoonful of baking powder. Flavor with nutmeg, roll thin and sift over with sugar. Bake in a very quick oven.

New Year's Jumbles.—One and one-half cup of white sugar, a scant cup of butter, three eggs, three tablespoonfuls of cream, one small teaspoon of baking powder. Mix with sufficient flour to make a very soft dough; roll them, cut in rings; roll in sugar and bake.

Any sort of dark wood may be freed from all traces of dirt and grease by a good sponging with strong tea, just warm; it will not, however, answer for light, unpolished furniture, as it would stain it. Very old furniture that is becoming worm-eaten may be greatly preserved and improved if some carbolie oil is poured into the wood.

To a certain extent woman's criticism of another woman is all right; but it is being carried to an extreme, and that is all wrong. Men fearlessly criticize each other's work and by that same sign they conquer. Women are over-sensitive upon this point. A little honest criticism now and then, in the right spirit, is exactly what woman's work needs.

Cerealine is a good foundation for many dainty desserts. Heat a pint of milk in a double boiler, add salt and make a thick batter with cerealine. Beat until smooth and light and turn into a square mold to cool. Cut into blocks, roll in crumbs, dip in beaten egg, again in crumbs and fry in hot fat. Eat with butter, sugar and cinnamon, with jelly, or with any sort of a pudding sauce.

A writer in the *Ladies' Home Magazine* has this to say about getting baby to sleep. Let me tell you first of all to see that he is well fed—a half satisfied stomach is a sure enemy to repose. Have him warmly wrapped up, and be sure the feet are warm, not hot or perspiring, while the room should be rather cool and darkened. Their brains and eyes need darkness just as ours do, and what refreshment do we get from sleep with sunshine or lamp-light shining into our faces? Should you use your bed-room for your sitting and sewing-room, be sure that the room is properly aired before baby is put to bed for the night. You can take him into another room, close the register and open the windows and doors for ten minutes or so. The air will be thoroughly changed by that time. You can then close the windows and open the register, and in a short time you can bring the little fellow back into a fresh yet warm room. If this simple rule were oftener observed it would save many a restless night. Having done this, the matter is comparatively easy. If you nurse your baby he will probably fall asleep in your arms; if you feed him, then lay him gently down in his crib. During the winter months have the pillow warmed just enough to take off that unpleasant chill of cold cotton. The chances are he will nestle his little cheek in it and go right to sleep.

SUFFRAGE.

The slums are always against woman suffrage. The devil knows his enemy.—*Mrs. Zerkla G. Wallace.*

The "Women Voters' Ward and City Committee," of Boston, have organized a political party, under the name of "The Independent Women Voters."

We want the ballot, not because we want to plunge into the "dirty pool," but because we want to drain it, fill it up, and plant good seed where it now stagnates.—*Emma Harriman.*

The preparation for and the participation in a ball, to say nothing about giving one, involves more hard work and more publicity than a woman need incur by qualifying herself to vote and voting.—*Col. L. Edwin Dudley.*

We who advocate equality of citizenship between the sexes do not claim a new discovery in politics or ethics. We only ask that the principles upon which our government is based shall have their just and full application to all citizens equally, without distinction being made on account of sex.—*Hon. E. M. Correll.*

The woman's rights movement has reached Madagascar. The *Woman's Standard* notes that a new law in that island "gives a husband the power to chastise his wife with a regulation whip only, and does away with the clubs and dray-stakes entirely."

I think every individual in the country should have a voice in the making of the laws. There is a large and increasing class of women in the country who want the suffrage, and of men who feel that they need women in politics.—*Edward Eggleston, D. D.*

A woman does not give up her wifehood or her motherhood, her graces or her sensibilities, when she becomes a voter. But suffrage will increase woman's self-respect. When she considers these higher questions of general interest, she will become a larger and nobler person.—*Rev. Samuel B. Stewart.*

Doubtless the majority of husbands and wives think alike on most questions; but, in taking the sense of the community, the opinion of two persons ought to count for more than that of one. Whether in politics or religion, no husband can believe for two. Neither, then, can he properly vote for two.—*Alice Stone Blackwell.*

As I grow older I feel assured, year by year, that the granting of suffrage to women will remedy many evils which are now attendant upon popular government, and if we are to despair of that cause we must despair of the final establishment of justice as the controlling power in the political affairs of mankind.—*George F. Hoar.*

At the first election held in Kansas under the woman's municipal suffrage law, the cry went up that the "ignorant black women" of Leavenworth, the largest city of the state, would vote with the saloon and be controlled by the vicious element. Out of nearly seven hundred "ignorant" black women, all but twenty-three voted "For God and Home and Native Land." No amount of intimidation could turn these women from their mother instinct of home protection.

"The hand that rocks the cradle moves the world."

That is beautiful poetry, but it isn't true, for practically it is the *foot* and not the *hand* that rocks the cradle, while the hand is busy with numberless other matters. Then, another trouble is, the world *don't stay in the cradle*; for before you know it, the little fellow kicks out both ways and is on the street, and as "the hand that rocks the cradle" can't control the streets, you should not hold the women responsible for what they can't control. Power must go with responsibility.—*Rev. Anna Shaw.*

The queen of Portugal has been very carefully educated. She is a student of history, delights in mathematics, and is a clever sketcher. She speaks French, Portuguese, English and German. She is said to be beautiful also, and is very popular.

THE MAGAZINE.

Rejected Manuscripts are not returned unless accompanied with required postage.

Subscriptions must begin with the January, April, July or October number, and expire with the year.

Changes of Addresses of subscribers should be reported to us promptly to insure the safe delivery of the Magazine.

Contributors are required in all cases to give their real names, not necessarily for publication, but as a guarantee of good faith.

Subscribers failing to receive their Magazines will please notify us, giving name and location of Agent through whom they subscribed.

THE BROTHERHOOD OF TELEGRAPHERS VS. THE ORDER OF RAILROAD TELEGRAPHERS.

The following letter, written by J. E. Morris, Esq., Grand Secretary and Treasurer of the Brotherhood of Telegraphers, fully explains itself:

BROTHERHOOD OF RAILWAY TELEGRAPHERS.

CHICAGO, ILL., March 15, 1890.

The organ of the O. R. T. on March 1 contains an article under the caption: "Both Sides of the Question," which, after quoting my reply to Mr. Doggett, of Waukesha, Wis., proceeds at length to outpour its wrath upon the Brotherhood of Telegraphers. Unless driven into it I would not have entered into any controversy with the figure head of the O. R. T. but under the circumstances, when myself and motives are attacked in so outrageous a manner, I feel I am justified in showing clearly as I can "both sides of the question" in a little different light from the editor of the *Railway Telegrapher*, or presumably the associate editor, Mr. Thurston. The history of the telegraphers of this country shows many attempts and as many failures to improve the condition of the craft. Organization and united action on the part of certain craftsmen has proved that such action has been materially conducive to the well being of each craftsman, and those who have profited most by such organization are not those who fly such a banner as that of the O. R. T.; the differences I will explain later. The reason the railway telegraphers, or any other craft was organized, was from the fact that they were ill-paid or ill-used, and the object sought was to improve their condition. How? By united action, united protest against their wrongs. It can readily be conceived that a protest from 100 telegraphers on any line of railroad would receive much more consideration on the part of an employer than one or a dozen such from individuals.

When the O. R. T. was organized as a distinctive railroad organization, its constitution strictly prohibiting strikes or entangling alliances, it was just after the disastrous strike of the commercial operators in 1883.

Many men approached on the subject of affiliation would say: "I am in sympathy with you, but I dare not imperil my position. If my superintendent hears of this he'll fire me." To this man the organizer need only read the constitution, and inform him that the superintendent had a copy and approved of the organization. Another would say, what good will it do, you can't demand anything or strike? To those men the organizer only had to smile broadly and say: The constitution can be changed if necessary, and it won't do to antagonize the railroad managers. This would satisfy the man who wanted the right to fight for his rights if necessary, and he would become a member. Thus from its inception the O. R. T. sailed under false colors, and was in fact a fraud. Some railroad managers would not believe that it was a mutual admiration society and made examples of leading members of the Order.

Then what did the O. R. T. do? Did they come to the rescue of their brothers and assist them until other positions could be found for them? No, they did not in any case that I have heard of, but simply left such members to shift for themselves. That is all a matter of history and any O. R. T. man knows it, if he knows the history of the Order. One of the brothers that was active in organizing the Order today is fighting a railroad in the courts with a good show of securing damages for being blacklisted on account of being active in its behalf. Did the "noble Order" help him, or are they helping him now?

Thinking men of the O. R. T., to you I write. Wherein have you been benefitted by this "noble Order"? The only thing advocated by this "N. O." except common moral rectitude, was, except under certain conditions, the abrogation of teaching students. How well that has been lived up to I submit to the Order. An order that dare not offend their bosses, must do as their bosses say, and on many railroads the student thrives in O. R. T. men's offices. Can you wonder that there are many dissatisfied members? Can you wonder that many dropped out? Is it strange that interest in the meetings was lost, and that no longer men would lose a night's rest and ride 75 to 150 miles, and return, to attend meetings? Then these men began to think: who is benefitted by the Order? In an interview with a prominent Chicago telegrapher, the latter said to me: "I'll be — if I can see who is getting any benefit out of it, unless it is Thurston. He's getting \$1,200 a year and expenses, besides his 'rake off' on the printing of the order of which he is a heavy stockholder in the *Railway Telegrapher*. That was not the reason for which the Brotherhood was organized. At the last convention federation was urged strongly by certain Western delegations, but to no effect. Then it was decided by certain members that it was no use to stand by the O. R. T. They promised nothing. They could do nothing. The belief prevailed among many that to do anything of material benefit to improve the condition of the craft, an organization that had some power to act must be brought into existence, and as a result the Brotherhood of Telegraphers was organized. We believe that any organization fostered and encouraged by the railroad companies cannot benefit any one (except as much as any social beneficial order might) but the company itself. You may be sure that the railroad would not encourage any organization that might make a united protest against a reduction of wages or a united demand for a ten per cent. increase, nor one likely to join hands for self protection with the conductors, firemen, switchmen and brakemen. Why? The reason is obvious, yet we reserve to ourselves the right, if we wish, to do all this. The O. R. T. abandons its members who are discharged on account of affiliation with that order. Our constitution says: "The Brotherhood expects every member to do his full duty, according to the terms of his contract with his employer. Any member of the Brotherhood, who having done his duty for his employer, who may be discharged on account of his affiliation with this order, shall receive the support of the order and, so far as possible, be covered from all loss." Yet the Brotherhood is not a striking organization, but we reserve the right if all other resorts fail to strike.

What else can a craft do? If we don't like our positions and protest as individuals, we are quickly informed that if we don't like it to get out; and if we act as a body in such a case, do not we use our rights as men? Any man or set of men that meekly fold their arms to their breast and kiss the rod that smites them, are unworthy the name of men. And the man or set of men that expects to receive favor from a corporation by fawning at its feet, will get what they deserve—kicks. Corporations pay what they have to pay, no more.

Now, to return to the attack upon us by the editor, or assistant editor of the *Railway Telegrapher* and members of the O. R. T. The announcement by the organ of the O. R. T. that they had heard of the organization of the Brotherhood, was accompanied by a slur. Next we hear from J. D. Doggett of Waukesha, Wis., who informs the craft that he is not surprised, inasmuch as a new organization has

been formed, that Messrs. Johnson, Morris and Nellis are actively interested in it. He then immediately states that it is still-born, and charges those gentlemen with starting it for the money there is in it. Mr. Doggett assumes that a body of telegraphers did not organize the Brotherhood. When the contrary is proven to him will he extend the fraternal greeting he promises? Does he judge the officials of the Brotherhood by those of the O. R. T., when he charges the Brotherhood being run for the private gain of a few individuals? You, Mr. D., are probably not posted as to the representations of your organizers. I am informed to the contrary, as I have herein before mentioned. You mistake, my young friend, the officials of the O. R. T. would not allow you to adopt any save the most conservative principles for any affiliation, or action might in some way cut off the revenue whereon they grow fat. Is it not true, Mr. Doggett, that federation was urged from the Cleveland convention?

The O. R. T. never had any line of action, conservative or otherwise, and we deny that our principles will act otherwise than as a good tonic. You say, truly no doubt, our men whine that they dare not join for fear the company will object. Those men we do not want, and those men you allude to as "whipped curs;" standing on the lowest rounds of the railway ladder; too dead to grasp the teachings of the O. R. T.; and as rated lower than the section foreman, we leave under the sheltering fold of the O. R. T. No, Mr. Doggett, we want men and not cowards, and shall get many a good one from the O. R. T. "The putrid remains" we will leave for "Bro." Thurston. And yet after all, Mr. Doggett, you admit you voted for Bro. Johnson at Cleveland. Dare you say why you opposed "Bro." Thurston? To sum up your letter you start on an assumption, and charge all manner of meanness and mercenary motives against your betters. Is it malice or ignorance, or both? C. H. Gates, of Jackson, Mich., writes in the *Railway Telegrapher*, of February 15th, endorsing most of "Bro. Doggett's" views, and charging the alleged officials of the Brotherhood with being chronic kickers of the rule and ruin type. Was there any attempt made on our part, Mr. Gates, to rule the O. R. T.? Was not Mr. Thurston's re-election at the late convention considered assured by the fact that his organizers had "fixed" things all right for him with eastern delegates? Was not the only opposition to Mr. Thurston's re-election from the west, where he was known? Post yourself on the history of the O. R. T. and you will come to a conclusion, that your Grand Chief is a specimen of the rule ruin type, and not those that are dissatisfied with his policy and management. We do offer to the fraternity "an article superior to anything the O. R. T. can offer, and you may be sure that no very great amount of injury is going to befall the O. R. T. because of this departure." Had you the smallest particle of manhood or the least scintilla of the spirit of fraternity you would welcome any organization of telegraphers whose object was the betterment of the condition of the fraternity. Instead of that boldly announce the idea of a possible benefit to yourselves by a comparison with us, and suggest the plan that the O. R. T. men play the part of the "scab" in case of a strike. Do you think the other members of your Order will indorse that plan? We have no doubt of your disposition to play such a part, as very likely you have before. The statement that "any encouragement given the Order increases the possibilities of a strike" is perhaps true in one sense, but although a strike would benefit the element in the O. R. T. like yourself, that would seek to benefit themselves by the despicable action of playing the scab, and inasmuch as on that account you and your like might "encourage" the new Order, we distinctly announce that we want none of your kind in the Brotherhood. The B. of T. is not organized with the expectation of ever striking, but we don't propose to tie our hands against resistance in case of necessity. In reply to the editorial in No. 7 of the *Railway Telegrapher*, we desire to say however much Mr. Doggett thinks he may know, he is mistaken when he asserts that Messrs. Nellis, *et al.*, are on salary, though they may sometime receive a salary, but no more than they can earn at their trade. The initiation fee is not \$5, nor are the dues

\$3 a year. You are free with the figures of the membership. Judged by the membership of divisions that we are familiar with, your figures are about three or four times too large. The charge that we only realized the necessity of a change when we were disappointed in our several desires, is no more true than other of your statements.

We are not trying to paralyze the endeavors of the O. R. T., but to those who want something better we have it to offer.

The B. of T. does not seek to antagonize anyone or anything, except injustice and wrong, but should it become necessary we can and will protect ourselves.
J. E. Morris.

We desire that the Brotherhood of Locomotive Firemen and all readers of the *Magazine* shall know that the Order of Railway Telegraphers is organized on the same basis as the Order of Railway Conductors, and that the Brotherhood of Telegraphers is organized on the basis of the Brotherhood of Railway Conductors and other organizations of railroad employes, which give special prominence to Protection—the protection of their members from wrongs of whatever character inflicted by corporations.

One of the strangest anomalies of the times in which we live is the organization of working men, with the avowed purpose of submitting to such oppressions as corporations may choose to inflict. Such an organization is the Order of Railway Telegraphers, and because it is such an organization is the reason why the Brotherhood of Telegraphers has been established.

It has been seen that owing to the passive, non-resistant character of the Order of railway Telegraphers, corporations have subjected its members to numerous wrongs and indignities, and as the Order was powerless, or, what is vastly more reprehensible, having power, refused to exert it in the interest of its wronged members, a revolt occurred, and a new Order, THE BROTHERHOOD OF TELEGRAPHERS, came into existence.

This new Order has a definite, manly, courageous policy, and will attract to it every manly railroad telegrapher in the country, and the *Firemen's Magazine*, in full sympathy with the movement, wishes the brave men who have organized The Brotherhood of Telegraphers immediate and continued success and will most cheerfully aid it to achieve victories for its members.

The Brotherhood of Telegraphers, it is needless to say, has started out right. It is in alliance with every other organization of railroad employes, that has for its object the improvement of the condition of its members, and as a consequence, will have the sympathy and support of all such organizations, and we feel assured that members of the Firemen's Brotherhood will seek for opportunities to promote its welfare. In due time the Order will join the federated army of railroad organizations, and thus contribute to the invincibility of the federated phalanx.

Bro. J. E. Morris, Grand Secretary and

Treasurer, of the Brotherhood of Telegraphers, can be consulted by letter or otherwise, at 877 Fulton street, Chicago, and all telegraphers who believe in protection should correspond with him. We are satisfied a brighter day is dawning for railroad telegraphers, and that the time is near at hand when the great body of them will hold membership in the Brotherhood of Telegraphers.

LABOR PUBLICATIONS.

A man is not required to boast of old age to assert that he can remember when labor had no representative in all the publications of the country—when there was no labor press. By this we mean to say that there was neither pen nor voice to champion the cause of labor—the interest of workingmen. True, references to labor, to work, to the poor, to the oppressed, the hungry and the naked, have remote dates. Jesus Christ did not hesitate to champion the cause of the poor and denounce the devilishness of the rich who oppressed them, and here and there along the track of centuries, some one has had the courage to assert that workingmen were really human, and were entitled to some consideration, but such things did not amount to much.

The vagary of the "divine right to rule" meant gradation from the throne to the hovel, nor did it matter in the least in what land the toiler lived, whether Christian or pagan, the curse of caste prevailed and the toiler suffered. There was no redemption for him.

We think the statement will not be controverted that the workingmen of the world have always been in the majority, they have always had the physical power to be on top, but being ignorant and unorganized they have always been at the bottom. Ignorance is weakness. Intelligence is strength, and thus it has happened in the history of the world that the few have crushed the many, and the insufferable stigma still exists, that one workingman, more intelligent than another, uses his superior knowledge to oppress his fellow workman; an exhibition of depravity that only hell could furnish a parallel. In old plantation times this human frailty was exhibited in its most cruel phases. A heartless planter, who, like the "unjust Judge," neither "feared God nor regarded man," if he sought to gratify his satanic proclivities, would select a slave to oversee other slaves, in which case the devil was always let loose upon that plantation, and every aristocratic tendency in labor organizations is an exhibition of the same despicable spirit—totally and flagrantly at war with every rational conception of Christianity, of civilization, of divine or human justice; a vulgar display of hostility to every proper conception of

the brotherhood of man and the fatherhood of God; a reproduction in America to the extent possible, of Hindoo caste.

Fortunately, for workingmen and for society, for the glory of God and of advancing civilization, there has come to the rescue in these latter days a Labor press. The "art preservative," the moveable types, backed by courage and intelligence has entered the field, and the world to-day has a labor literature, labor learning, labor science, labor education and erudition. It is a new departure. It is in the nature of a revelation and is producing a revolution. Its lifting power is not to be measured by horse power calculations. Its power is omnipotent. It is a new sun in the sky of Labor. It warms, it vitalizes. It floods the darkest pathway with light. It is a sun that is gradually rising to the zenith, and which is not destined to set, but to increase in effulgence. We cannot catalogue the Labor publications of the period. They are numerous. Many of them are strong, and the weak are growing stronger. Of the number we call attention to the *Railroad Trainmen's Journal*, published at Galesburg, Ill., edited by L. W. Rogers, than whom we would like to know who wields a more vigorous or more courageous and independent pen. We notice with equal satisfaction the *Switchmen's Journal*, under the editorial management of Frank Sweeney, at rooms 77 and 78, Nos. 14 and 16, Pacific Avenue, Chicago. No more fearless writer on labor topics is found under the banner of organized labor. These two publications champion federation, they are the organs of two great brotherhoods of railway employees and their work for the good of their Order and for all orders of workingmen, is simply incalculable. The wider their circulation the better for all organizations of workingmen. We would, if we could, quadruple their circulation in a day. The *Firemen Magazine* wishes them and all other publications that favor federation, labor's ultimate Thule of power, the largest possible success.

While upon the subject we invite special attention to the fact that the *Locomotive Engineer*, of which John A. Hill is editor and which is published at 96 Fulton street New York City, should be in the hands of every locomotive fireman who expects to be promoted to the responsible position of engineer. Bro. Hill knows just what an engineer wants. He has been there himself, and he edits the best educational paper for firemen and engineers in America.

There are other publications devoted to the welfare of workingmen, which advocate protection and federation, and they are accomplishing good. Never in the history of the world has there been such a mighty mustering of the forces of labor. Organiza-

tion is the order; after that federation, then victory. Labor publications are increasing in number and power and influence. Sophistries are exploded, false premises and false conclusions are overturned, chicane and jugglery are exposed. The laborer now attends the lyceums where the modern Aristotles and Platos teach. Philosophy no longer dwells on high beyond the reach of all except the favored few, and the revolution so auspiciously begun, though it may move sometimes with a faltering step, will never take the back track while the printing press remains.

PUNCHING THE RAILROADS.

We have on our table the *Railway Conductor's Journal* for April. In glancing through its pages our attention was arrested at 264—"Editorial," as also the caption of an article, "Pay of Conductors." Manifestly the editor is irate and disgusted. He realizes that the O. R. C. has limbered itself on all occasions for the delectation of railroad corporations, and when conductors, tried and true, became the victims of spotters, and were set adrift with smirched reputations, the O. R. C., like the poor boy at the frolic, had nothing to say. The wrong, the oppression, the insult and injustice, did not concern the O. R. C. It was not built to protest nor to resist. On the contrary, it was built to sneeze when the corporation took snuff; was constructed to "down," "up" or "wig-wag" when the corporation "Simon" gave the word. This is what the O. R. C. *Journal* called getting "near the throne." But the editor of the *Journal* don't like it. He don't like the spotter and detective style of doing business. He don't like the small pay conductors receive, he don't like the intimidation constantly thrown out by the acts of corporations that conductors are thieves, or, that if some are thieves the odium attaches to all. He don't like the proposition that if one conductor receives \$200 a month, and another conductor \$50 a month, the one who received the \$200 a month would be just as likely to steal as the conductor receiving \$50 a month, and to even up with the officials who hold that speculation is as likely to occur when the salary is \$200 a month as when it is \$50 a month, says:

We have in our lives been acquainted with railway officials, who, at a very moderate salary, each year that they held their positions, who were not worth five hundred dollars when they accepted such positions, but in fifteen years, with a large family to look after and many other expenses, either by some one's request or their own, retired with a competency of \$100,000.

Now then, to those who are charging that conductors are thieves, the editor of the *Journal* retorts, "You're another." Such criminations and repriminations don't amount to much, except to show that the

membership of the O. R. C. are becoming intensely disgusted with the progress they are making in reaching "the throne."

It is really amusing to hear the editor of the *Journal* recite what the corporations demand of conductors, and then refer to the fact that passenger conductors are paid only "from \$60 to \$100 a month," and then ask railroad officials if "they have done their whole duty?" To this question the editor wants an answer in a "business-like manner," instead of, "Let them help themselves if they can."

The editorial article in question is valuable because it shows that in the ranks of the O. R. C. are brave men who are not in sympathy with the do-nothing policy of the Order. A moment's reflection will convince them that the Order was established to do nothing in the way of protection for its members, hundreds of whom have been the victims of heartless, conscienceless spotters the vilest creatures that ever assailed the reputations of honest men. These facts are known and the editorial in the *Journal* to which we refer, bristles all over with them.

The O. R. C. began its career by sowing to the wind and it has reaped the whirlwind—it is reaping whereof it sowed—and will continue to harvest indignities as long as it maintains its present policy.

The Brotherhood of Railway Conductors was organized upon the basis of protection, and has achieved splendid results. Railroad officials are quick to estimate men at their worth. They know that a man who hasn't the courage to stand by a brother in distress, when wronged and oppressed, won't do to tie to anywhere, and hence such men are always the victims of degrading orders and impositions.

Manifestly, the editor or the *Journal* is looking for stirring scenes at the twenty-second Grand Division of the Order, which meets in the city of Rochester, N. Y. He says "events may transpire and complications arise before this session may open, that no human eye can see or mind imagine." Such language is ominous. Coming events are casting their shadows before, and it may be that the majority of the delegates will favor protection from spotters and detectives. It may be that they will say, "We have crawled and petitioned long enough. Now we will stand up and make demands." At any rate this *Magazine* would hail with special pleasure such action on the part of the Grand Division as would clearly demonstrate that the O. R. C. was no longer a negative organization, and that it will no longer tolerate wrongs inflicted by spotters, and that it will emblazon upon its banners "PROTECTION," and come into line with other organizations that demand fair pay and fair play.

STANDING BY AGREEMENTS.

Agreements between employer and employé on a railroad system, is not child's play; it is business. It is manly, serious business. Men who violate agreements, as a usual thing, invite serious penalties. The parties to an agreement are bound by every consideration of honor to stand by its terms. There should be no faltering, no dodging, no kicking nor croaking, but strict compliance with its demands. Obligations are mutual. An employer stipulates to pay, the employé to work. An agreement clears the track of complications. The contracting parties know exactly where they stand. Infringements of the contract begets distrust, unrest and dissatisfaction.

Bro. Hill in the April issue of the *Locomotive Engineer* has an article captioned "About Keeping up Pay," which we indorse unqualifiedly. Mr. Hill in his southern ramblings "stepped into the Savannah round house of the Central road of Georgia" and had his attention arrested by an "animated discussion," which disclosed the fact that there was a disposition on the part of engineers to shirk a strict compliance with the terms of an agreement with the road, pronounced "the best agreement with the company of any engineers in the country." Bro. Hill says:

We found that the engineers on this road have the best agreement—for them—with the company, of any engineers in the country; the full text of which is published in another column, under the head of "The Best Agreement in America between a Railroad and Its Engineers." It is interesting reading.

These men receive \$4 per day, Sundays included, whether they work or not; they get twenty-four hours' rest after each trip, and if called to go out before the twenty-four hours are up, get an extra day for going.

They receive twenty-five cents an hour for all delays over schedule time, or twelve hours when running extras.

Hostlers are provided at all terminals.

They receive pay from the time they report for work after laying off—instead of from the time they go out, as on other roads.

With all this advantage over their brother engineers in the same section of country, we never listened to better kickers in our life—perhaps we got into the wrong crowd—we hope we did.

Editor Hill, in his analysis of the situation discovered nothing to kick about—on the contrary, everything in the "agreement" was calculated to secure harmony and efficiency. He says: "The management of the road are satisfied to pay the present rate, and do not want to see a change in the agreement," and adds:

Engineers of the Georgia Central, you are better paid for the work you do than most engineers; be an example to them—deserve that pay. Don't let it be written in the history of the order that you kicked your own wages down. Don't give the officers of the road a chance to regret the agreement or desire a change. Don't forget that, as you receive the highest pay, so had you ought to be the best engineers in America. Don't get it into your heads that other men cannot run there: there are few who can't. Don't kill the goose that lays the golden egg. Don't be unreasonable or unjust—you can not afford it.

There is no mistake about the propriety of such advice. It is solid common sense and if disregarded will make things worse for they could scarcely be improved. The idea is, that men should be able to see good thing and be content. There is no mistake about the fact that all too often men take advantage of an agreement, as Mr. Hill shows, and make themselves so obnoxious that the company becomes disgusted and says: "What's the use of making an agreement with these men?"

Men are entitled to good pay, the more the better; they are entitled to good treatment; and these things secured, the company has a right to expect efficient service cheerfully rendered, and a strict compliance with the rules of the company.

The men do not hesitate to object, in any way to be heard, when the company violates an agreement, and are quick to call on the grievance committee and seek to set matters right. To this there can be no objection. But on the other hand, let the men be equally on the alert to see that they do not violate the agreement. If this is done, very many of the vexations of employés will disappear. When the men live up to their agreement with the company they are thrice armed when they demand of the company a strict compliance on their part with the terms of the agreement.

AN ILLUSTRATED LABOR MAGAZINE.

The *Railroad Trainmen's Journal* is now regularly illustrated magazine, containing in each issue from five to seven engravings made for it by first-class artists. The Magazine contains portraits of President Gompers, of the American Federation of Labor, and of Mrs. Kitty Harris, whose histrionic talent has done so much for the people of New York. Each issue presents illustrations of roads or rolling stock of foreign countries, and other things of equal interest. Read the advertisement elsewhere. Single copies sell for ten cents, but a sample copy is mailed free on receipt of a postcard request sent to the *Railroad Trainmen's Journal*, Galesburg, Ill.

THE *Baker's Journal*, discusses the "Union man" in the following well-baked style:

"Will be a good member of his union.

"He will take a lively interest in all that relate to union business.

"He will attend his meetings regularly.

"He will pay his dues promptly.

"He will not subordinate his trade union to a political party or personal purpose.

"He will not whisper away the character of fellow members.

"He will try to have his union work hand in hand with all other trade unions.

"He will not borrow a labor paper: he will buy one and pay for it like a man.

"But, alas! the true unionist and true man is an over abundant commodity.

"More's the pity."

RETROSPECTIVE.

It is a source of no little satisfaction to know that this *Magazine* has, from time to time, been the avant courier for and against propositions and theories as they appeared to be for or against the interests of labor. We are reminded of this by a paper in the January *Arena*, by Laurence Groveland, in which he says:

Read the pastoral of the Bishops of the Episcopal church, read at the close of their late convention: "It is a fallacy to look upon the labor of men, women and children as a commercial commodity, to be bought and sold as an inanimate and irresponsible thing. The heart and soul of a man cannot be bought or hired for money in any market, and to act as if they were not needed in the world's vast works is un-Christian and unwise."

As far back as January, 1886, we said:

"But labor is not a commodity, it is not an 'article,' it is not a material. Labor is not tangible. It ought not to be called a commodity nor an article. Labor combines muscle and mind, brain and brawn, heart and hand—aye, it is life itself."

And now says the Episcopal Church, "It is a fallacy to look upon the labor of men, women and children as a commercial commodity, to be bought and sold as an inanimate and irresponsible thing."

The Episcopal church is right, and every branch of the church should be equally outspoken. Labor is not a commodity, to be bought and sold in the market like pork or pig iron. There is no such thing as a labor market, unless there is a market where throbbing hearts and immortal souls are sold. It was so in old plantation times and the Corbans are trying to have such a market again.

RAILWAY LIFE INSURANCE.

In the *Railway Service Gazette*, of recent date, we find a letter from J. T. Levensgood, upon "Railway Life Insurance," written by request of the editor of the *Gazette*, who had some misgiving about the method of mutual benefit associations, and, therefore, requested Mr. Levensgood, who is said to be an "experienced insurance man," to give his views on the subject, and to this request Mr. Levensgood responds fully.

So much of Mr. Levensgood's letter as we desire to call special attention to is as follows:

It is an undisputed fact that a house built upon sand cannot stand. So it is with all mutual benefit associations. They are founded upon sand. They prosper to-day; to-morrow they fall. They fall because they are not conducted upon an equitable business principle. They are conducted upon the pass-the-hat-around plan. They have provided no surplus or mortuary fund, out of which they pay claims immediately, without delay. They have got to depend upon the amount the hat brings in, after it has passed around, among the members of the association. When a claim upon the association is presented for settlement, an assessment for the same is made upon each member of the association who is in good standing at that time. It takes some two months or more to collect this assessment, and what is collected thereon from such members as feel disposed to pay their just dues. May the collections be great or small, it is all that the beneficiaries will

receive. When a benefit assessment is sent out, where the death rate is small the members generally pay up promptly, but just as soon as the death claims get a little heavy in any one year, a certain class of members begin to kick and refuse to pay the dollar, that is justly and morally due from them to the mourning widow and orphans, that the deceased member has left behind—left her with the firm belief impressed upon her mind, that the association of which he is a member, the association to which he had paid his honest dollars for the benefit of families of the members who had passed away before him, would pay her so much. Does she receive it? No! Why not? Because a certain number of the members have become dissatisfied. Why? Because the assessments are a few dollars greater this year than they were last. They do not even give their own families a thought. They do not know how soon their families may be in the same positions as the departed member's family is, for whom they have just been called upon by their local secretaries to contribute the small amount due to the mourning widow and orphans. Well do the local secretaries know how difficult it is to collect these dollars from certain members, dollars that ought to be paid with the utmost promptness, because it is a debt of charity that we agreed to pay cheerfully when we became members of the association. There is too much of this, and I know whereof I speak, as I have been local secretary for three of these associations—two of them for twenty years—and there is not a local secretary in the country who has not heard the same remarks made hundreds of times. "I will hand you this to-morrow, next week. Please advance the dollar, and I will hand it to you next pay day." Pay day comes and goes, but the promise made to the local secretary is never thought of again. There is not a local secretary in the country who has ever advanced for such members, but what is out more or less money. I am, to my sorrow.

Neither the *Gazette* nor Mr. Levensgood attach too much consequence to the subject to which the attention of the Brotherhood of Locomotive Firemen was called a number of years ago, and, as we stated in the April number of the *Magazine*, sought the solution of the problem at Atlanta in 1888, and, as we think, with the most satisfactory results. The point we make, and which we think is easily elucidated, is that the objections to mutual benefit associations, urged by Mr. Levensgood, have been entirely overcome by the practical method established by the Firemen's Brotherhood.

On the first day of February of each year, and on the first day of each succeeding quarter of the year, every member of the Order must have paid into the treasury of his lodge the sum of \$5 in advance, \$4 of which is on account of insurance assessments that may occur during the quarter. Now, to make the problem of easy comprehension, we will suppose a brotherhood has 20,000 members. They are required to pay \$5 in advance on the first day of each quarter; that is \$100,000, \$80,000 of which is to pay insurance assessments on policies of \$1,500 each, is in the treasury on the first day of every quarter. That would pay fifty-three policies in that quarter, leaving a remainder on hand of \$500. The payment of \$80,000 a quarter amounts, for the year, to \$320,000, and would pay 213 policies of \$1,500 each, and leaves at the close of the year \$500 in the treasury.

It will be observed that in the Locomotive Firemen's Brotherhood assessments are made in advance. When a death occurs, the money is ready. There is neither delay nor uncertainty, no chances are taken. When a death or disability occurs, there is no passing "the hat around." There are no members to "begin to kick." The secretaries of the lodges are put to no inconvenience. There is no "please advance." The member pays or he is expelled. He does not remain in the Order thirty days, nor thirty minutes. The member chooses between paying and expulsion. The amount demanded of him is not "a debt of charity;" it is simply business—cold, calculating business. It is not a gift or a donation any more in a mutual benefit society than in any other insurance organization. If a member wants to be insured, he pays; if he does not want to be insured, he forthwith goes out; and when out, if he dies in five minutes, the remaining members are not assessed on his account.

It will be observed that the regulations adopted by the Brotherhood of Locomotive Firemen answer all the objections urged by Mr. Levensgood. All of them disappear, and the fact makes the insurance in the Firemen's Brotherhood absolutely safe and secure, and evidently, the very best in the country. It stands forth as a triumph of financial, economic comprehension of conditions and necessities. It solves a most difficult problem, and conspicuously places the Brotherhood of Locomotive Firemen, in the matter of insurance, in advance of all other labor organizations whose laws include mutual insurance.

THE RAILWAY OFFICIALS' AND CONDUCTORS' ACCIDENT ASSOCIATION.

Several inquiries have been received at this office in reference to the standing of the above named Accident Association and among others, one from Livingston, Montana, which it appears was inspired by a certain circular notice issued and conspicuously posted in that locality, warning railway employes, in effect, against insuring in said association on account of its alleged insecurity. The circular purported to expose the weak points of the association and thereby divert the accident insurance of railway employes to other companies.

It appears that similar inquiries with copies of the circular above mentioned were also addressed to the *Engineer's Journal*, and the editor, deeming it his duty to caution the members of that organization against possible imposition, published a verbatim copy of the circular in his May issue and in connection therewith an editorial comment, well calculated to impeach the standing of the association in question. This publi-

cation had the effect of bringing about an investigation, and it affords us pleasure to state that the result triumphantly vindicates the character and standing of the Railway Officials' and Conductors' Accident Association, as will be observed by the following correspondence, a copy of which was filed at this office, and which is self-explanatory.

NEVADA, MO., April 26th, 1900.

Mr. P. M. Arthur, G. C. E., B. of L. E.:

DEAR SIR AND BROTHER: Your last number contained a letter headed "But one of Many," referring to the Railway Officials' and Conductors' Accident Association, which has excited my interest, as it is in the line of some investigations which I have been carrying on for some little time. As I believe it quite a number of locomotive engineers, like myself, are insured in this company, perhaps the result my investigations may be of interest to them as well as to others.

Right here I wish to say that I have been a member of the B. of L. E. and have carried its insurance and paid my assessments thereto for over eight years, and I honestly believe that it is the best assessment life insurance that can be found. But do not regard the R. O. & C. A. A. as a rival to your own B. of L. E. insurance. Ours is a pure life insurance, made by assessment, and pays only death (but death from cause, whether by accident, sickness or any natural cause) and every locomotive engineer should carry it, but we do not insure against injury, unless it results in total disability or death.

I find that from nine to twelve of every thousand die yearly; that one in seven or 145 in a thousand are injured. In the face of such facts as these, the need of indemnity against injury is one that is felt by every railroad man, and especially by men of our own calling, who daily take great risk of life and limb, and whose provision against the day when they are driven by accident to spend weeks and perhaps months upon a bed of injury, with income stopped as its result, is a duty we owe to ourselves and to our dependent families. Hence, I do not regard carrying of accident insurance as a betrayal of our own noble Order, and the protection which it throws around us, and the aid it extends to our families in case of death or disability.

But, now for my investigation. I had seen several of these anonymous circulars, a copy of which I published in your article, and I find that the Post, to whom the letter of the State Auditor of Montana, was addressed, is the special agent of the "Standard Accident Company," of Detroit, an Line Stock Company, who are circulating these circulars only in Montana but all over the country. We aimed ostensibly at the Railway Officials and Conductors' Accident Association, it virtually is an attack against all assessment insurance, our own as well as others.

Having other business in Indianapolis, I made inquiries about the Railway Officials' and Conductors' Accident Association and heard so much in its favor, that I took the bull by the horns, and called at their office, well loaded with questions. I must say that I was surprised and impressed with the spirit of candor and fairness with which inquiries were met and answered. I was permitted to examine their books and records, and I find:

1. That it is an assessment company, like our own.
2. That it does business as an assessment company.
3. That, being an assessment company, of course it has no cash capital.
4. That they do pay a specified sum in case of death or disability, as the face of their policy clearly shows.
5. That since their organization, every claim has been settled in full within thirty days after receipt of proof, and usually within twenty-four hours. They do not take 200 weeks to pay a claim.
6. That no claim has ever been discounted, or promised or contested, and the company has never had a law suit with any of its policy holders or anyone else.

7. That they are abundantly able to meet every claim and demand made upon them. And it may be inferred from the assertion of these anonymous circulars that they charge as much for their insurance as the (so called) solvent stock companies, that this in itself is proof of their conservatism and solvency.

8. That this company has never as yet applied to do business in Montana, hence the circulation of this letter outside of Montana seems a piece of unwarrantable trickery and is designed to blind and mislead wilfully. The R. O. & C. A. A. is, however, doing business in seventeen States, so they showed me.

I feel assured that any railway employé, engineer, fireman, brakeman, or section hand will be treated with equal courtesy as myself, for I find that in the Association every branch of the railway service is represented and taken care of, it forming a sort of natural ground for all to meet upon.

Not being satisfied to rely alone upon the inquiries which I intended to make in Indianapolis, I wrote to a number of persons whom I found had been injured, and who carried insurance with the R. O. & C. A. A., and in every case received assurance of the fair and liberal treatment given by the Company. Here is a sample of the answers I received;

LA FAYETTE, IND., March 15, 1890.

Mr. Richard Ash:

DEAR SIR: As my husband is not able to write, he requests me to do so. My husband was hurt last October 24th, and was insured in the Railway Officials' and Conductors' Accident Association, from which he has received \$10.00 indemnity for every week he has been hurt, and he can recommend this company to any one, and he says that he knows that it will do just what it says. My husband is in a bad shape and we fear that he will not get up again. My husband is a Brotherhood man; belongs to 208, Brotherhood of Locomotive Engineers, Springfield, Ohio. He was running the steam shovel for the L. E. & W. R. R., when he was hurt; he was down by the machine, repairing it when the bank caved in on him: breaking his left leg and also hurting him inwardly, from which he had been confined to his bed ever since. With our best wishes, I close, hoping to hear from you again.

Mrs. John Fry,

64 South Third Street, LaFayette, Ind.

As will be seen, Bro. Fry has received his indemnity of \$10.00 every week since he was hurt, and was still receiving it at the date of this letter, twenty-two weeks afterward; nor was he compelled to wait for it in a lump, but it came to him weekly, when he needed it most, probably. It can be seen what a good assistance this system would be to a man who had been unable to save up against an unlucky day.

In conclusion, I would like to ask every railway man why all the Old Line Stock Companies are fighting this Assessment Association, which is essentially a railway insurance. The reason is plain, it is taking their railroad business away from them, and is wonderfully successful in doing so, and when a man is hurt he usually "squeals." I, for one, am perfectly satisfied, and propose to stand by it, and am not afraid to put my name to back my opinion.

Yours, fraternally,

Richard Ash, Member Division No. 79.

It is evident that the imputations cast upon the Railway Officials' and Conductors' Accident Association were inspired by the agents of rival companies, and the purpose was to injure said association by having it appear that it was not conducted upon safe and prudent business principles.

In this connection we desire to state that we have been personally and intimately acquainted with Mr. L. D. Hibbard, President of the Association, for the past fifteen years and we know him to be an honest, upright and honorable gentleman, and the fact of his being at the head of the association is sufficient guarantee of its stability

and integrity. Mr. Charles T. Brown, who has charge of the mechanical department of the association, is, and has been for a number of years, a member in good standing of the Brotherhood of Locomotive Engineers.

In making this statement we are animated by no other purpose than to see justice done, and this, we are confident, will be appreciated by those who are interested and desire to know the truth in the matter.

A CORRECT VIEW

"A railroad official," says the Indianapolis *Journal* of a recent date, remarked when speaking of the numerous accidents of late, that it was largely due to the mania for cutting down expenses. Salaries are cut down until thousands of good men are leaving the service to go into something more remunerative, and these places are usually filled by young men, some of them not out of their "teens." Especially is this true in telegraph offices. At way stations as soon as a boy gets so he can send a message he is given a position at some small station, where often it is as important to get an order off promptly as at larger ones. A mistake of one word often costs a number of lives and much damage to property. Then, again, men who are careless are not properly punished. He cited a case where, through the forgetfulness of a young operator, who was in the train-dispatcher's office, there was a collision, and three lives were lost, and \$40,000 damage done to equipments. The dispatcher was, of course, discharged. In less than a week he was in the train-dispatcher's office of another important road, and is there now, and boasting that it was a fortunate thing for him, as he is now getting \$15 a month more than he did on the road from which he was discharged. In addition to this there is gradually creeping into the train service a class of men that are reckless and less intelligent than those who have been dropping out. He said that he was satisfied that the time had come when more care should be exercised as to the ability and character of the men who are given responsible positions, or, in fact, employed in any department of railroad service, as carelessness on the part of any employé might lead to loss of life or serious injury."

No more truthful statement upon the subject of the course of many railroad accidents, has made its appearance in print for a decade. Railroad officials have been anxious to reduce wages that they might increase dividends, and with reduced wages, efficiency, integrity and all else that attaches to the safety of trains has been studiously ignored. The public is waking up to such grim facts and confessions are coming forward. The "nobody to blame" dodge is about played out.

THE BROTHERHOOD OF RAILWAY CONDUCTORS AND THE SUPREME COUNCIL OF FEDERATION.

Federation is gaining strength continuously. From the start, there has never appeared in print a logical objection to the federation of the various organizations of railroad employes. There has never appeared anything, having the semblance of argument, showing why federation should not be adopted by such organizations. The facts, the logic, the *rationale*, the wherefore and the reason why, have all been in favor of federation. As a result, the more federation has been discussed, the more firmly has the conclusion been established that federation is the *one thing* needful, the *one thing* desired to solve the vexatious problems forever confronting railroad employes.

In saying this, we are not unmindful of the fact that, here and there, have appeared objections relating to details—minutiae—but never an argument, nor anything approximating an argument, in opposition to federation. Under such circumstances it is not surprising that federation, once begun, has not only held its own, but has moved forward in conquering power.

In this connection, and in demonstration of what we have said, we introduce the following Circular Notice of the International Brotherhood of Railway Conductors:

THE GRAND DIVISION OF THE INTERNATIONAL
BROTHERHOOD OF RAILWAY CONDUCTORS.
OFFICE OF THE GRAND CHIEF.
TERRE HAUTE, IND., MARCH 25, 1890.

To all Subordinate Lodges:

BROTHERS AND BROTHERS—You are hereby officially notified, that in pursuance of the action taken by our First Annual Convention, the Brotherhood of Railway Conductors, through its proper representatives, made application to the Supreme Council of the Federated Orders of Railway Employes, and it gives me pleasure to announce that the said Brotherhood of Railway Conductors has been regularly admitted to said federated body, and now constitutes an important part of said organization, which embraces the Brotherhood of Railway Train Men, the Brotherhood of Locomotive Firemen and the Switchmen's Mutual Aid Association, as well as our own Brotherhood. Official announcement of the foregoing will be made in the official journals of the several organizations. The Brotherhood of Railway Conductors is now in perfect alliance with the best organizations of the times and its success is no longer an open question: all that is required is for each member throughout our jurisdiction to enter vigorously into the campaign that is now going forward and which will end only when the banner of the Brotherhood of Railway Conductors floats in triumph over every railway system in the land. Fraternally yours,

Attest: G. W. HOWARD, G. C. C.
D. J. CARR, G. S. & T.

The federated Brotherhoods, now stand as follows:

THE BROTHERHOOD OF RAILWAY TRAINMEN.

THE BROTHERHOOD OF LOCOMOTIVE FIREMEN.

THE SWITCHMEN'S MUTUAL AID ASSOCIATION.

THE INTERNATIONAL BROTHERHOOD OF RAILWAY CONDUCTORS.

These four Brotherhoods now constitute the SUPREME COUNCIL of the federated orders, which is animated by the *supreme* desire to remove, as far as possible, every obstruction to progress and prosperity, in the pathway of the organizations of railway employes.

THE INTERNATIONAL BROTHERHOOD OF RAILWAY CONDUCTORS, under the leadership of the gallant and far-seeing Col. G. W. Howard, saw that Railway Conductor needed *protection*, something they had never secured, and as a result, the Order has made the most flattering progress. The organization responded to a crying demand and its growth has been equal to the most sanguine expectations of its friends. From the initial movement, to the present, the BROTHERHOOD OF RAILWAY CONDUCTORS has displayed pluck and courage. Opposition has made the more aggressive, developing staying qualities of the highest order.

Everything possible to be done by the older orders in the federated compact, to help on the Brotherhood of Railway Conductors, should be done with a hearty good will, and we are satisfied will be done. The Lodges of all the federated orders should lend a helping hand to build it up and extend its beneficent sway. In this way, this helping one another, this watchful solicitude for each other's welfare, means, when the trials come, victory for the right.

All correspondence should be addressed to G. W. Howard, Grand Chief B. of R. C. 121 South Thirteenth street, Terre Haute, Indiana.

The *Journal of Knights of Labor*, published at Philadelphia, gets off the following:

The railroad monopolies come in for their full share of the cursing which is leveled at monopolies these days. Yet they are not "sinners above Israel." The Standard Oil Company is denounced more vigorously than almost any other one monopoly. Yet, on behalf of the Standard, it can be said with truth that the public get a better article of coal at less than half the price than they would get instead of the Standard, there were some hundred or two competing concerns. Monopolies are bad but they are not bad for the reasons which are advanced so frequently put forward. If we could abolish the monopolies to-morrow, and substitute competition for them, we would find before the end of the week that we had done a foolish thing. Let the monopolies, the trusts and the syndicates grovel; they are teaching the lesson the world must learn. Competition is doomed, and, when monopoly is overthrown, it will be, not to return to competition, but to take further steps in the direction of nationalism.

It is not to be presumed that such utterances reflect the sentiments of any considerable number of Knights of Labor, or of the Grand Master Workman of the Order. If, on the contrary, the *Journal* does reflect the sentiments of the Order of which it is recognized organ, its opposition to Corbin rule is something of an enigma.

THE BROTHERHOOD OF LOCOMOTIVE FIREMEN AND THE WESTERN RAILWAY.

Under all circumstances the Brotherhood of Locomotive Firemen has done its best to solve such problems as have been forced upon its attention. It has not sought to evade nor postpone their solution. It has made no claim to infallibility, but has studiously and conscientiously sought the best way to achieve success and maintain the prestige and dignity of the Order.

Its record is before the world. To say that it presents no imperfections would be equivalent to saying it had been managed by infallible men, but to say that its record exhibits a fair comprehension of needs and of prudent methods to secure them promptly, and in the largest practicable measure, is without an element of bravado. It is simply unadorned fact, and in proof of this we take no little pleasure in introducing the following highly complimentary article from the *Western Railway*, of March 15, published at Denver, by Cy Warman, Esq., than whom no man on the continent is in a better position to know whereof he speaks. Bro. Warman captions his article "Fire Eaters," and says:

Probably no organization of workmen is more highly respected by the management of railroads than the Brotherhood of Locomotive Firemen. Firemen as a class, are sober, intelligent and industrious men; men who are working hard for promotions trying to better their condition and fit themselves for the responsible positions of engineers. The Grand Officers of the B. of L. F. are deserving of much credit for the condition of this brotherhood. Frank P. Sargent, the Grand Master, is a man who commands respect wherever he goes. Eugene V. Debs, Grand Secretary and Treasurer, and editor of the *Firemen's Magazine*, is one of the brightest writers in America to-day. All this being true, we feel safe in guessing that the wild ravings of the little faction of fire-eaters who are striving to annoy Brother Debs in this "neck o' woods" will amount to nothing. The *U. P. Employees Magazine* is sweating blood over the "Supreme Council" which met in Chicago last summer. A delegate to the last convention held at Atlanta in 1887, speaking of the action of the Council said to us a few days ago, "The Supreme Council did exactly what the Convention authorized it to do." The gentleman we refer to is J. W. Hardy, of Salida, Colo., and he ought to know. Our belief is that the little band of firemen who met out west a few weeks ago, tried and condemned the grand officers of the B. of L. F. were all wrong. The one great trouble with labor organizations is that they have too many champions; men who work one day and rest six days out of every seven. The Brotherhood of Locomotive Firemen will look a long time before it finds another Debs. They only come one in a box and there was only one box. The *U. P. Magazine* talks about Debs "playing into the hands of the enemy—the corporations." Employers should try to grow out of the idea of regarding their employees as their enemies. The corporations could not exist without labor, and laborers would have nothing to do without the corporations.

The editor of the *Firemen's Magazine* would have to be something more or something less than human if he were insensible to the exceedingly kind and complimentary allusions to himself which appear in the foregoing article, and were it not for the fact that they have a direct bearing upon the

record made by the Brotherhood of Locomotive Firemen, our modesty might be too severely taxed to permit their reproduction in the *Magazine*. But coming as they do from Denver, penned as they were by a staunch friend of our Brotherhood, and designed as they were to set the Brotherhood right in the eyes of all honest, impartial men, we give our readers the benefit of them, and take this occasion to say to Bro. Warman that he has challenged the largest possible measure of our ability to appreciate a generous act.

We have never lost faith in human nature. We have never doubted the final verdict as to the course pursued by the *Firemen's Magazine*. We have fought for the right only when the alternatives were, fight or run away—only when every interest of the Brotherhood demanded unwavering, unflinching loyalty to the Brotherhood. On the defensive until all honorable men cried shame! But, when gentleness, persuasion, concession and compromise were repaid with insult and wrong, we changed the programme, and results have justified the policy. Our demand has been *peace with equality*, nothing more, nothing less—and the day has dawned—obnoxious laws have disappeared, and the flood tide of fraternal feeling is flowing. Federation has come and it has come with untold blessings. It has come to stay, to grow, to expand. It will be like the banyan tree, and under its ample shade all the railway brotherhoods will yet find shelter and security. The outlook is cheering. We congratulate all the brotherhoods. We would fold every battle-flag and hush to silence every war drum. We realize there is a good day coming. We fancy we can see the streaming lights along the horizon. We welcome with all our heart every inspiring omen.

COMMENTS ON CORBIN.

The trainmen on the Philadelphia & Reading road are said to be considerably exercised over what they call the "whisker order." Nothing has ever happened on the road which has created so much comment, and the trainmen are denouncing the order in unmeasured terms, but it is thought they will obey it. The obnoxious "whisker" order was first sprung on the men about a year ago, and then so much dissatisfaction manifested itself that the officials decided not to enforce it at once.—*Exchange*.

Czar Corbin swears he will have "no hair apparent" in his Russianized kingdom.

Prince Whiskersoff has been charged with the important duty of inspecting the lather used in Czar Corbin's barber shops.

Prince Bonzano, of the Razoroff family, in connection with Grand Duke Shavemoff, will have charge of Czar Corbin's barber shops.

Count Brushiwiski has been imported to act as a Barber Pole on the Philadelphia & Reading, and will be stationed at Bound Brook.

Czar Corbin has issued a ukase, that all dead serfs shall be skinned and their hides tanned for razor strops. Baron Skinemoff will have charge of the business.

Czar Corbin contemplates shaving his serfs by contract, and if possible, by machinery. General Spokeshavemquickski will submit his invention as early as practicable.

Czar Corbin has conferred upon General Baron Buttonyourcoatka, a distinguished Tartaremtipukeldiski, the important duty of inspecting buttons and button-holes on the Reading. The Baron is said to be a severe disciplinarian, and the serfs can expect no mercy from him.

No more important appointment has been made by Czar Corbin than that of Count Moustachio, a distinguished don Cossack, whose duty it will be to scalp such serfs as refuse to be shaved and keep their coats buttoned close to their chins. On great occasions Czar Corbin will appear in public adorned with scalps, well calculated to strike his serfs with wonder and terror.

Throughout Czar Corbin's Russianized dominions there is now great consternation. His serfs are completely terrorized. They are apprehensive of more decrees. What they will be no one seems to know. The blacksmiths are busy, and the fear is that branding will be the next thing in order. It is surmised that the autocrat will brand men, women and children, or command that hair shall disappear entirely. It is possible that only one-half of the head will be shaved, or that the decree will provide for rings in the nose, or an iron band around the neck. Time will tell. That more degrading orders will be issued seems to be a foregone conclusion, and in the meantime workmen of America can contemplate the picture of degradation at their leisure.

To labor organizations, and to thinking workmen, the fact that the question of labor has invaded the church as well as legislative halls, cannot fail of being a source of satisfaction. Cardinal Gibbons, who represents the Roman Catholic Church in America, has recently written a magazine article, in which, among other things, he says:

Labor has its sacred rights, as well as its dignity. Paramount among the rights of the laboring classes is their privilege to organize or to form themselves into societies for their mutual protection and benefit. It is in accordance with natural right that those who have one common interest should unite together for its promotion.

Our modern labor associations are the legitimate successors of the ancient guilds of England.

In our days there is a universal tendency toward organization in every department of trade and business.

In union there is strength in the physical, moral and social world, and just as the power and majesty of our republic is derived from the political union of the several states, so do men clearly perceive that

the healthy combination of human forces in the economic world can accomplish results which could not be effected by any individual efforts.

Throughout the United States and Great Britain there is to-day a continuous network of syndicates and trusts, of companies and partnerships, so that every operation, from the construction of a leviathan steamship to the manufacture of a needle, is controlled by a corporation.

It is well for the church to entertain such views, but whether it does or does not, labor is going to organize, and it is going to federate, and it is going to do away with certain forms of cruel injustice. The struggle is approaching. Having done away with negro slavery, it is not in order to introduce white slavery. It is being done. It is being over-done. The masters are becoming altogether too insolent, too autocratic, too overbearing. They will be wise, if they hesitate. The house is becoming sadly divided against itself. In the United States workmen are going to have three square meals a day, decent houses and decent clothes, and don't you forget it.

EX-SENATOR VAN WYCK is credited with saying that "one hundred thousand English laborers met in Hyde Park, with banners flying, bands playing and free speech as to their wrongs and oppression, with no bayonets in sight, no Pinkertons there. The English Monarchy would not dare insult and invade the rights of Englishmen by importing armed foreigners as a police force. That outrage could only be tolerated in the American Republic. One hundred thousand laboring men struck and met on English soil to deliberate without menace or threats from a power whose navy rides on every sea, and whose flag floats through all the world, but England feared her determined, intelligent toilers, who for centuries have been seeking their rights. The haughty nation yields to her fears what she has stubbornly refused to the dictates of humanity, the pleadings of justice." What is the significance of such statements? Are the London dock laborers more intelligent than American laborers? Is a strike in England to be lauded, and a strike in the United States to be denounced? Is the Government of the United States so much more centralized than that of England, that here despotism can be practiced without revolt? There are in the United States instances of labor wrongs as glaring as those which made the dock laborers strike, and which, if not corrected, will result far more disastrously to society. When the dock laborers struck business was paralyzed. They are said to be the lowest order of English workmen, but when they struck they expanded to proportions of peers of the realm. After a while the common laborer will learn his power and then concessions will be made which may prevent strikes.

CORBIN'S WINE AND WHINE.

Austin Corbin some time since visited "Yurup." He doubtless visited Russia and Turkey, to learn how the Czar and Sultan treat their serfs, and thereby obtain new points to be adopted from time to time in the management of his mine and railroad employes. While abroad, it appears that Romanoff Corbin invested some of his ill-gotten gains in wine, as shown by a Washington special:

AUSTIN CORBIN'S STOLEN WINE.

WASHINGTON, March 22.—Special Agent Whitehead has made a report to the Treasury Department in regard to the complaint of Mr. Austin Corbin of the loss of a portion of wine imported by him while the same was in the public storehouse under Government control. He controverts Mr. Corbin's statement in several important particulars, and speaks of the impossibility of customs officers making a personal inspection of each package imported to see that it meets the terms of the invoice, and in conclusion he resents the imputation that public storehouse officials are given to stealing.

The probability is that Austin Corbin conceived a scheme for robbing the Government. For instance, the knave could have purchased a cask of the capacity of sixty gallons, into which he put thirty gallons. For a small fee a European knave could have been secured to "doctor" the invoice, and arriving in New York, Corbin could show his invoice for "sixty gallons," and show that only "thirty gallons" were in the cask. This done, the knave could claim that a portion of his wine had been stolen by Government employes. If he could carry the scheme through he could make the Government pay him for thirty gallons, upon which he could place a fictitious price, thereby getting his thirty gallons for nothing, and pocketing a nice sum besides. That is Corbin's style. The fraud is of the same character as his doctored reports in regard to anthracite coal, which were exposed, demonstrating that Corbin is a knave.

CAPITALISTIC LITERATURE.

The *Capitalist*, a handsome monthly, edited and owned by Mr. J. E. Ewing, the energetic and successful proprietor of the *Financier*, is one of the latest candidates for public favor in moneyed circles. It is issued in rich and tasteful form, as befits its name, and bears upon its face the promise of success.

The foregoing announcement we clip from an exchange. The *Capitalist* ought to be "handsome," ought to be "issued in rich and tasteful form, as befits its name." Nothing less would be tolerated by capitalists. If its pages were gold leaf the *Capitalist* would be all the more acceptable to the millionaire. The *Capitalist* will talk bonds, stocks, loans, interest, investments and dividends. It will talk of banks and bankers. It will advocate trusts, pools, syndicates, monopolies, and probably, corners. It must be true to its name. It must do this to be "handsome" in the eyes of its patrons. Its contents must be as "rich and tasteful" as

its "form." The *Capitalist* could consistently advocate the importation of Chinese and contract laborers from Europe. Why not? By working cheap, they swell the fortunes of capitalists, help to build the colossal fortunes of those whose greed increases as their fortunes grow. Austin Corbin is a capitalist as well as a culprit. He is a rascal as well as a rich man. There are others of his tribe. The *Capitalist* will never say a word for workingmen; never a word for better wages. Capitalists, as a class, never did. We should like to see a copy of the *Capitalist* just to note how correctly we have diagnosed its infirmities.

WHO ARE THE HEROES?

Let others sing of Bludsoe, Bradley, Guild—
Well they deserve kind memory and a tear—
But he who holds his manhood undefiled,
Loyal to lowly duty, is their peer.

Are there no living heroes? Must men die
To be accounted noble, true, and brave?
Are all the laurel wreaths woven to lie
On pale, unconscious brows, cold in the grave?

Is there no meed of praise to him who stands
True to his humble post, whose eye unclosed
Foresees the danger, and whose faithful hand
Holds free from harm the sacred trust imposed?

To go when duty calls from fireside warm,
To walk the track with ever watchful eye,
To bear the redlight through the driving storm,
Or stand to brakes when sleety crystals fly:

To hold a lever and to watch a gauge;
To set a switch or give a signal true:
To tap a wheel or drive a spike—a sage
Might call these trifles—but do you?

Let one of these be slighted, only one—
These daily duties of ten thousand men—
And somewhere comes the crash, the shriek, the
groan,
Somewhere the roll of death is called again.

I cannot think the smoke of martyrdom
From burning wrecks of human life will rise
The sweetest incense that shall ever come
From off the altars of our sacrifice.

I cannot think that He who said "well done"
Unto the one who in "few things" was true,
Will lightly hold us from sun to sun
We faithful prove in that we have to do.

Give honor to the martyrs—those who fall—
And, falling, have their crown of glory won:
But honor, too, the living heroes, all
Who, living, lay no duty down undone.

All reverence for the dead. Let anthems ring
Above their graves, and peaceful be their rest.
This honest tribute of respect I bring
To every man who does his level best.

Thomas B. Appleget.

Communications should be written on one side of the paper only, and forwarded so as to reach the Editor not later than the *fifteenth day* of each month

Changing the Name of Our Order.

MOOSE JAW, N. W. T., March 17, 1890.

MR. EDITOR:—The discussion still goes on, and I am not yet converted to the change of name. While I admit that our present name does not cover all our membership, as we include hostlers and engineers, and that it is no one's business but our own if we make the change, and the members of the B. of L. E. would not have any reason to kick at the change, but I know that a great number would make capital out of such a change, and some who are not too well disposed towards the B. of L. E. would make it an excuse to widen the breach, and we have had enough of wrangling. If we cannot work together and in harmony, the B. of L. E. and B. of L. F. might as well throw up the sponge as neither one can do much without the other. Can we not afford to do business under our present name and so show to the B. of L. E. that we are not desirous of making strife? It is not my purpose at this writing to review the past as Bro. W. E. Burns has done, though I may refer to past events. Bro. Burns says he is personally acquainted with many good men who have withdrawn. I take it that he means engineers, as he says they joined the radical element of the B. of L. E. in discouraging the new firemen from joining our ranks. If they did, then the B. of L. F. is well rid of them and I am the "young hero" who says "let them go," as they would be nothing but a burden on the B. of L. F. were they to stay. Their principle is not broad enough to allow them to benefit the cause of labor. Bro. Burns says that the life of our Order was threatened by the B. of L. E., and that they could have destroyed the usefulness of our Order in the course of five or six years. Now, Mr. Editor, they could not have done it more effectively than they destroyed the usefulness of the B. of L. E., at least on the C. P. R. R. system in less than five years. I gave facts to prove this in the August, 1889, number of our *Magazine* which have not yet been contradicted, and the ultimatum for the B. of L. E. was, change the obnoxious law or burst. Well, it was changed and a wonderful change is visible in this system. At every B. of L. E. meeting new members are made which goes to show that our members were anxious to join the B. of L. E. when a way was made for them, and I hope the B. of L. E. and B. of L. F. may work in harmony on all railroad systems as they are doing on this one system, then we may soon hope for universal federation. On a recent visit to the eastern country I was more than ever convinced that as a labor organization we could not well afford to change the name of our Order. I met with so many locomotive firemen, non-Brotherhood men. The words of Bro. Harry Walton in Toronto convention came forcibly back to my memory—words which he spoke against raising our insurance from \$1,000 to \$1,500. He said that we would drive a lot of poorly paid firemen out of the Firemen's Brotherhood, and we have done it. Now, as I have before said, I want to see a Firemen's Brotherhood that every white fireman on this continent can afford to hold membership in without injury to himself or family. In short, I believe that there should be a Brotherhood for engineers and one for firemen, and not two rival institutions, and I am still on record as against the change of name. District representation is a matter I would like to see discussed in our *Magazine*. I am now opposed to it for various reasons which I shall not state at this writing.

Yours, for the B. of L. F.,
Chas. Unwin.

MY AMBITION.

Oh I want to write a poem,
Full of ease and grace;
Oh I want to climb the dizzy heights,
That mark the poet's place.

Oh I want to write a poem
With such brilliancy unfurled,
That will cause to pause in wonder,
The critics of the world.

Oh I want to write a poem
That will make the earth resound
With praises of the gifted one,
The poet newly found.

Oh I want to write a poem
In rich ecstasies replete,
With mystic enchanted visions,
So beauteous, soft and sweet.

Oh I want to write a poem
Full of passionate fire,
Enrancing in its verses
As the music of the lyre.

Oh I want to write a poem
Like Edgar Poe or Dante;
At midnight dream I oft have tried,
And I don't see why I can't.

Oh I want to write a poem
That through coming years shall last,
And shall mark for generations
The genius of the past.

Oh I want to write a poem.
But alas the muse has flown.
Ere the variety of poems
That I wish to write is known.

Alas, departing is the muse.
I list as his footsteps fall,
They tinkle on the oaken stair,
Faintly echo through the hall.

I cry, O muse inspire,
Inspire me to write.
He softly says and ne'er looks back,
I'll come again, good night.

BUTLER, IND.

G. L. Plaster.

RATON, N. M., March 20, 1890.

Editor Locomotive Firemen's Magazine:

St. Patrick's night, March 17th, 1890, is one long be remembered by the people of Raton, N. M. as a night that Kit Carson Lodge, No. 257, gave the third annual ball. The hall was elaborately decorated with banners, mottoes and colored lights. Precisely at 9 P. M. the grand march was begun. Bro. Chas. Miller, who also was chairman. A graceful couple was Mr. and Mrs. Miller. The music was furnished by the Santa Fé military band which the best in the country. The kindness of the officials will never be forgotten as they did all in the power to make it a success. Mr. Bruce, our Master Mechanic, was transferred a few days before the dance came off, and sorry the boys are to see him go, for he is a thorough gentleman. Our wish that he has got a better position for he deserves it, he is a good man and the firemen's friend. The ringing hour of midnight, all went to the Dep. hotel where a delicious and bounteous supper was prepared by the proprietor to which all did justice, and as the band was also refreshed and got plenty of steam, we all retraced our steps to the ball room and kept up dancing till all were tired, and all said that it was the best dance of the season. The committees were nearly all tired out, and well they might be. But nothing could tire our Master, who said, this is the night the tallow pots celebrate. Also Bro. Campbell (Oh how sorry I am that I cut rates did not help you. Now Jim don't blush who wore his colors in great shape. Also Bro. Summers, who was in every place and did all in the power to make it a success, and all of the boys, non-Brotherhood as well as Brotherhood, who had taken an active part, deserve great credit. The whole of the entire house was that we should give balls more often. Hoping to meet again at our next, I remain

A. R. Cullen.

I Object!

MR. EDITOR: It is not my wish to criticise the editorial work on the *Locomotive Firemen's Magazine*, for I know it is honestly and faithfully done, and I can speak from some experience of the difficulty of editing to please all. But as a reader, a well wisher, and a worker (as Bro. Debs can verify) for the great number of readers, men and women too, "I object" to the use of the initials p-d—q—in a letter from a person who tells what he would do if his wife flirted.

Swearing is rude, vulgar and LOW in any and all places. Slang is not elevating but degrading. A man may in haste, or excitement, or sudden impulse utter an exclamation, and be reasonably excused, but a man who deliberately writes out letter by letter an oath, a profane saying, or a slangy profane quotation, and that too in the connection with Woman's Department, is morally unfit to associate with any pure and good woman. It is evidently not a matter of lack of knowledge, for the rest of the letter shows that the writer is no fool, although writing in a sort of burlesque. Yet I believe if he has a wife, that he has a kind heart, and I'll bet a year's subscription to the *L. F. M.* that he kisses his wife ten times to his using such language once in her presence, and if he is half what I give him credit for, he never in his life used words of equal import to his slang, profane initials quoted above to his wife directly since he was honored by her association as his wife's.

The habit of such utterances grow with too many to be almost unnoticed. Woman is quite too choice, to tender to be cursed by any man, and I hope her mothers, wives and daughters as well as the expectant wives of "the boys" will all be free from pollution in the future of the pages of such a medium—and that no girl will say "yes" to a man who so disgraces himself as to profane God's name. Such a man is not to be implicitly trusted anywhere. A Yankee Engineer.

TRENTON, March 15, 1890.

MR. EDITOR:—I have just got through reading my March number of our *Magazine*, and must say that it is about the greatest phenomenon of the press. I will wager most anything, from a pick with a handle on, up to that John L. Sullivan could stay in the ring as long against so many adversaries, and do as much hard hitting successfully as seem to have done in our March number. I am pained indeed at the stand Bro. Frank Walton takes in regard to the actions of our grand officers in the federation an accomplished fact instead of a mere talked of, and surely think he is mistaken in ideas as to the "right or wrong" of your action publishing that letter. Did not he know the *Editor of our Magazine* better than to think he would idle and play with his thumbs, while such work was going on? Indeed, I am surprised that you let it pass off so lightly. I had given Bro. Walton credit for a deeper sense of right and justice, as I count him one of our best and most honest members. It comes Bro. Burns, the long headed logical? E. B., with his well-written article, so well calculated to deceive a great many of our boys who don't seem to be "on to" the "wire-pulling" and "log-jacking" of the Chicago and Denver "gangs," practiced at the conventions, especially Philadelphia, to understand just why Bro. B. could "retrospect" and "signs of deterioration and decomposition as to the very life of one of the grandest orders we have ever shone on. Let me ask Bro. B. who it was that tried to their utmost endeavor to wreck our Order, rather than see things go contrary to their will at Philadelphia. What were the signs of disorganization so conspicuous to the eyes of Bro. B. that no one else could see them, unless it were some other person looking through the jaundiced spectacles of old schemes and unrequited hopes, such as so many experienced at Philadelphia. I can assure Bro. B. that we all are anxiously waiting with bated breath the dissection and vivisection promised by the editor of the *Magazine*. Please Bro. B., for the sake of the Order universal, temper the winds of wrath to the shorn condition of the lamb about to be sacrificed. But let me ask you one question

Bro. B.; what would you have the editor of our *Magazine* do? Sit still and take all the insults and abuse heaped upon us by the B. of L. E. et al. without so much as the lifting of a finger of resentment? Or would you not rather see him act the part of a manly man, and take up the cudgels of defense and offense. If necessary, and lay about him right and left until there is not a foe man left worthy of his club or pen? Why cannot the brothers who want to find fault and kick take time to post upon their subject before letting their feet fly, as does Bro. T. P. O., R. and others? Your lines in brackets, Mr. Editor, quoted from Byron contain the whole gist of the matter. Poor Bro. W. S. Carter, of No. 231! It is a shame to impose upon a little fellow in his first attempt at journalism, and leave his "poor helpless form, etc., etc., etc., all of which you were the author." Bro. C. says he has "come to stay." Come to stay, what for—to whine and beg for your favor? It would seem so, but just remember one thing, Bro. C., when you write, "Phillippies (by the way are they related to tarantulas) you must expect some times to be flipped over the ropes. If you voluntarily undertake to carry a mule don't whine if you get kicked through the side of the barn. I am anxious to hear what answer Bro. George DeForrest will make to Bro. Cross's question. As for the editor of our *Magazine* barring anyone out of the columns of our *Magazine* I, for one, do not believe it. If any of the brothers through haste or lack of knowledge of their subject should write an article, which is false or conveys a false impression, it is the editor's place to set it right; that is a part of his duties. I think, and no one of us should be so unjust to him as to take fair, just, wholesome criticism for an "editorial stroke," which leaves us seared and withered upon the sands," etc. As for Bro. Cross, I would say, that the "fiery ordeal" through which he passed was not the scratch of a match to what should have been his for even alluding to the glorious B. of L. F. as a "breeding pen" to the B. of L. E. The idea! Of course, we cannot state exactly under what circumstances all men were raised, but for me I was legally born of woman, and have been raised to man's estate. Never even eat off of the floor, let alone a trough. If Bro. C. would rack his brain for some more fitting term to apply to the B. of L. F. than "breeding pen" he would probably have less time to indulge in hero worship towards Bro. Carter, and have no time to ask such senseless questions as: "Why is not the old *Magazine's* cover good enough?" Why can't the brothers write articles that are full of sound sense and good logic, such as the one written by Bro. A. H. Tucker. I'm sure I wish I could. Shake, Bro. Tucker, you express my ideas exactly. M. P.

I STAND SQUARE ON THE BOOKS.

I ain't much on a speech—I don't hanker for debate. I ain't popular in saloons, and I don't stay out late; And I don't propose to brag a bit about my clothes and my looks— But just bet your bottom dollar, I stand square on the books.

I've been a member of our Brotherhood just five years, to a day. And the collector don't have to hunt me up to make me pay.

I know when pay day's comin', and, happy as the brooks,

I just pay over my five dollars, and stand square on the books.

I give myself no trouble about the new name— Whether it be old or new, we'll get there all the same. But when I joined the Order, I said, "By hooks or crooks,

Whatever else might happen, I'll stand square on the books."

Standing square on the books, that's what seems to me

Should be to every brother the principal idee.

Standing square on the books; then if troubles come, The cupboard won't be empty in the fireman's darkened home.

Spot Cash.

LA GRANDE, OREGON, March 18, 1890.

Editor Locomotive Firemen's Magazine:

The new name is still open for discussion, and as I have done considerable thinking on the subject and had a chance to see and hear considerable, it does not seem out of place for me to give my opinion on the subject. So first let me state that I have seen this question canvassed in lodges, situated in the extreme East and extreme West of this country and have seen both engineers and firemen unite in the opinion that such a change was not necessary. Your reasons for such a change when reduced to the size of a nut shell are first: That the present name does not cover all our members. Second, that it will hold the engineers in our Order, and third that the brakemen changed theirs and why should not we.

Well, the brakemen *did* change their name. Possibly we know why, *probably* we do not; it was done at a secret meeting of their convention. So how much we know about it is simply a guess; then again, circumstances may be entirely different with the brakemen as compared with us, making it policy to make a change that to many of us seems entirely unnecessary in our Order.

You also say it does not cover all our members. Well, let us see what this reason amounts to. Our Order before the great strike numbered between eighteen thousand and twenty thousand, but I am of the opinion that it has *never* numbered the latter figure. Now during the strike from one cause and another we lost *about*, I will say, three thousand men, many of whom were members of both Orders and could not stand the expense during the strike; this reduced the number so that to-day we have *about* seventeen thousand men according to the last quarterly report I heard read in a Chicago lodge. This was before the engineers changed the clause in their constitution, since then you must admit that the accessions to the B. of L. E. at our expense are a number worth notice, for I am positive there were men East who wished to join them who were not able to bear the expense of both Orders—these men of course we lose; with these figures I therefore think that twenty per cent, or one in five is a very fair estimate of the engineers in our Order; of course some lodges in the West where salaries are larger may run over this estimate, but I think the East will cause a balance.

As to hostlers, would not two thousand cover the number in our Order? But, are the engineers, firemen and hostlers the only men in our Order? No sir, they are not. We have men who are in other positions connected with railroading; then a very influential class of men are those who are not at all in the employ of a railroad; it is this class of men who to day occupy many of the Lodge offices and are giving life and energy to more than one-half the dead divisions of our Order, and they are not to be recognized at all. Think you that it is possible to find a name that *will* cover *all* the members of our Order? I think it impossible and as our Order aims to benefit the greater number at the expense of the less and as I have shown by figures that the firemen are by all odds the greater number, then it appears to me the present name is appropriate.

Then again, has anybody considered the cost of a change of name? This, one of the first items every man should consider in any new undertaking, has not even been mentioned? Would from twenty-five to fifty thousand dollars cover it? Well it might, but I am telling you that a change of name will prove a very expensive luxury to the Brotherhood of firemen and a fine little sack full for some contractor. Consider the policies, *Magazine* seals and all other printed paraphernalia connected with the Grand Office and subordinate Lodges, and I think any man who felt the effects of the last strike will say if we have got any money to squander on a new name place it in some department where it will help lighten the expense of some poor devil who is firing an engine for thirty-five or forty dollars per month.

You think it will hold engineers in our Order? Well you made a mistake in thinking so before their constitution was changed. You are making *more* than a mistake now, for any right-minded, thinking

man knows that when he has run an engine for one year his interests are then with engineers, for of what interest to his line of business can a discussion in a firemen's lodge be? and is it not a shame, that because a man *dared* to withdraw from the firemen and join the engineers he must be laughed at, jeered at and insulted as he has been by a class of men who seemed to be writing regardless? think you it has helped matters? It has not; it only serves to disgust one when he sees the underlying thoughts and ideas of many of our brothers. The mean, low lived epithet of "breeding pen" was used some six months ago in connection with our Brotherhood and some of its members acknowledge that they like it. Well, Mr. Editor, it is hard to see anything appropriate in such a comparison, and the brothers might better cease using such language, for it matters not what is said men will still continue to leave the firemen and join the engineers when they are so qualified; it is the natural course of events and instead of sitting down and kicking because men do what they believe to be right, and what we will ourselves do at some future time, it would be much better to go at it and replenish our own ranks, this will appear more necessary when we notice our last quarter's expulsion list coming out in book form. As now I have finished my treatise on the new name and expect to get a good sound drubbing because my ideas are not just like somebody's else. I have also put in a word for the engineer that will course bring down the wrath of God upon me, but if any brother contemplates saying anything to him first remember that many of these self-same terrible engineers were at one time members of our own Brotherhood, and virtually our own brother so that what they have to complain of comes as were from a brother.

Fraternally,
(O. R. & N.)

TORONTO, ONT., March 10, 1890

Editor Firemen's Magazine:

At the regular meeting of Dominion Lodge, No. B. of L. E. held in I. O. O. F. Hall, March 9, 1890 after routine business was over, the lodge had the great pleasure of a visit from Brother F. P. Sarge Grand Master of the Brotherhood, who delivered most interesting address upon matters relating to the welfare of the Order. In the evening Brother Sargent gave us a thorough account of the work of federation. The boys of 67 consider Brother Sargent the right man in the right place, and that the members of Queen City Lodge, No. 232, are the Brotherhood men, and fully appreciate the generous manner adopted by the members in being with on the occasion of Brother Sargent's visit. All wishing Brother Sargent God speed in the good work he is doing, the meeting closed.

Federation

CHICAGO, ILL., March 11

Editor Firemen's Magazine:

I have been a constant reader of your valued publication ever since I have been a member of the organization. In your last issue I find a communication from William R. Stewart, giving a very detailed and graphic account of the fortune which, he lately befall Brother John J. Doyle, secretary of In regard to the truth of his statements I am unable to state. This much I will say, if Brother Doyle fallen heir to a fortune, there is no one more pleased than I. But enough of this. What troubles me is who can the person be that sent you the letter am the only person on the roll of 95 that lays claim to the name of William R. Stuart—not Stewart never have spelled it that way. Is the ashamed of his name, and does he want to hide identity with one of respectability? If this is case, it would have been more to his credit, at least have asked my permission. I certainly think it would be more manly, and to his credit, to assign his own name, if he has one, or keep quiet and think that the party concerned is one without principle, and hope he is not a member of 95.

Fraternally yours,
W. R. Stewart

THE SNOW DRIFT.

In a hollow where the icy blast
 Had laid it once so soft and white,
 When the clouds were chased away at last.
 It lay there sparkling, pure and bright:
 Fit emblem of a spotless birth.
 Unstained, it lay upon the earth.

But the trampling feet of passers-by
 Cast o'er its beauty many a scar;
 And the settling soot from chimneys nigh
 Fell there its purity to mar.
 A south wind's breath, a cloudless dawn,
 A sunny noon—the drift was gone.

To the hollow where the drift had lain,
 Close by the lofty maple trees,
 The refreshing drops of April rain
 Were borne upon the vernal breeze:
 And these with drops of melted snow
 Sank to the sleeping roots below.

It was there in that secluded place,
 'Mid emerald-colored tufts of grass,
 That the violet grew in modest grace—
 A gem that one could scarcely pass.
 Ah, what a change! Where drifts of snow
 Once lay, the smiling flowers grow.

And I think our hearts are like the spot
 Where lay the drift of sparkling snow:
 They were places once where not a blot
 Of wrong was there a stain to show:
 But contact with the sin of earth
 Has stained our purity of birth.

May the blackened snow that chills our hearts
 Be melted by the holy rays
 That the light of sacred truth imparts,
 That through life's ever changing days
 Some weary traveler, bowed with care,
 May pluck the rarest flowers there.

George W. Hall.

STANBERRY, MO.

GALVESTON, Tex., March 20, 1890.

MR. EDITOR:—In perusing the Brotherhood Department of the March issue, I note some things which call for comment and thought throughout an entire Brotherhood.

"N. Y. C." on page 255, gives vent to some expressions which call for investigation, and should be investigated by every member of the Order. One of these is, in speaking of electing delegates to conventions, he says, "By no means send a man who has been there before; instruct him well before he goes, so that he may vote for his Lodge and not for himself at such points, and you may get results satisfactory to the Brotherhood at large."

Oh, how beautiful a convention we would have if each and every Lodge in the Brotherhood would act on this suggestion. The North, South, East, West, Canada and Mexico, all sent with hands tied and eyes blinded by local interest, not allowed to draw conclusions on any subject at all, but go there instructed, sit there throughout the convention and kick, not in an undertone, but in a loud voice for everything the Lodge instructs you on; have no judgment of your own, do not try to draw conclusions from arguments advanced, but close your eyes to all you see and your ears to all you hear, and sit there like a stuffed dummy, and when the time comes jump up like a machine, and declare what your Lodge wants, and that you are going to contend for that until the last lights are put out, and you wend your way homeward. Do not under any circumstances give in, but contend for your instructions as your Lodge is the thing of paramount importance, greater than the Brotherhood, which quickened into life, and which can, for unbecoming conduct, cause it to cease to exist. But no matter, carry the idea of secession and loyalty to state with you, and make the same mistake General R. E. Lee made in the late rebellion. When asked how he intended to go in the event of secession, he said, "I don't know; it depends on how Virginia goes." Had the state of

Virginia cast her lot with the loyal states one of the brightest generals who ever planned a battle would have won fame for himself as commander of the Union Army, for his military tactics would have pushed him to that position, even as it did where he cast his lot. But the state of Virginia seceded and with it R. E. Lee seceded. His fealty to state was so great that his eyes were blinded to the fact that he and his state also owed a prior allegiance to his country, and one which should rank ahead of all considerations of loyalty to state or locality, and through that mistake he went for four years gaining a reputation which might be envied by any aspirant to military fame, and can cause us to say, oh that his eyes had not been blinded that he might have exerted that wonderful military capacity for the right, and live in the memory of the people without the blot of knowing that with all his intelligence and knowledge he had made one fatal mistake.

Send our delegates well instructed and you will be doing the Order the greatest injustice which could be perpetrated on it: for how do we, here in Texas, know exactly the demands for New York, Canada or California? or how do they know what would benefit us most? or how do any of us know what is for the common good of the Brotherhood as an Order? Not as much as many of us might think, I assure you; and the only judicious course is, elect men who keep themselves well posted on the requirements of their localities, and who can place the condition of affairs before the assembled Brotherhood in such a manner that they too can see, and seeing, acknowledge the justice of the claim presented. When you find such a man, one who has comprehensive power enough to decide what is best and what not, and one who can't be cajoled into anything, but who will draw his conclusions from what has been logically shown to be to the interest of the Brotherhood, as an Order, and when that conclusion is reached make up his mind to fight it out on that line, if it takes all summer, just elect him to the office and instruct him as my Lodge instructed me for the Atlanta convention, viz: "You are about to represent us at the convening of the Grand Lodge. In electing you to this position we attest our confidence in your judgment and discretion, and hope you will attend to the duties imposed on you faithfully, drawing your conclusions from arguments advanced, and attending strictly to what you deem is best for the general good of the Brotherhood. In doing this, you will be performing your part faithfully, and rendering the best services for Gulf City Lodge, No. 115, possible to be rendered." These were my instructions. I carried them out to the letter. It was my first convention, and when I arrived on the battle field I soon saw the wisdom of the Lodge in so instructing me, and every delegate who goes otherwise instructed will not be there forty-eight hours until he discovers the mistake of the Lodge giving him such arbitrary instructions.

All Lodges that contemplate sending instructed delegates might do well to get a phonograph and draw up their instructions and prepare the phonograph with them in numerical order and send it to the convention. It would do as well as to send a man with positive instructions, and it could not have its feelings hurt by seeing the dilemma in which it was placed, as a man undoubtedly would.

As to not electing a man who has been there before, I must say that is all bosh. If you have sent a man before who did not have mental calibre enough to take in the requirements of the time and place, by all means make a change; but if on the other hand the past delegate shows a superior ability coupled with integrity and loyalty, an unwavering disposition, and a sense of justice to all, why, I say, every time send him again, and yet again as his services will be better in each succeeding convention, as it requires the major part of the first convention to see what is required of him, and just when his usefulness begins to manifest itself you retire him to the back ground, relegate him to the rear, he loses his power for the general good, and becomes as a dead planet, of no value at all. By all means send the man whose judgment and brotherly feeling point him out as the man most eminently suited to the position, regardless of whether he has or has not been a delegate before, and in so doing

you will be performing the most good to the Brotherhood and paving the way to greater achievements than have marked the past history of the Order.

So much has been said regarding change of name and the invitation is still out to discuss the topic that I am constrained to add my mite to the contribution, and risk being stabbed to death with a ragged pen, and after so being mutilated to death, of being drowned in ink and smothered in paper. Three horrible deaths seem to stare me in the face, according to some correspondents, yet I risk them all, and knowing, as I do, the editor, I am inclined to think that after his criticisms are enumerated, I will still be a mighty healthy corpse. In the first place what are we to benefit by the change of name? I have perused about all that has been said on this topic by correspondents and the able editor, and from all of them put together I fail to see one fraction of an iota of good to accrue from it.

The editor and some correspondents say it does not express a fact as it exists, and we want a name to convey the whole idea, but I don't see what difference any of the proposed names could make in the standing of the Order in their dealings with railway officials.

It is true, we have firemen, hostlers, switch engineers and road engineers in our Order, but how could the change benefit them? Let us begin to argue:

First, Hostlers are usually promoted from firemen, this being the first step in the line of promotion. Assuming that in every lodge 15 per cent. are hostlers, or say 10 per cent.,—in "115" it is greater than either,—how could the change of name benefit them if they went out with a card looking for a situation? It would be no better as Locomotive Men, or Foot-Board, or Locomotive, or Locomotive Engine-men, than as Firemen, for the simple reason that not a solitary road that has so far come under my observation employs hostlers, but under all circumstances they are promoted to the position either in seniority rotation or on account of careful attention to duty. How, then, would the hostler be benefited by change of name? He would have to come down to the *scoop* in his change of place, and would be, in fact, a fireman.

Second, Switch engineers hold the second step in the line of promotion, and I have failed to find a road, in all my travels, where switch engineers are hired; they are always made from the ranks, the same as hostlers, and for the same reasons as given above, could not be materially benefitted by a card containing either of the proposed names, as they, in their change, would also have to bend their backs to the *scoop*—nothing but firemen. How do you suppose the change would benefit me? I am not a fireman here. I have been a hostler and switch engineer for a year and a half, yet if I should leave here to seek employment elsewhere, I would have to begin as a fireman again, and no change of name could create a change in that.

Third, Here comes the article where the shoe pinches. Young runners are engineers; they are no longer firemen; they have ascended the grade of promotion, and are sailing along on the top round of the ladder. Now, would our proposed change of name benefit them any? If so, I fail to see it. But perhaps I am color blind. Let us test my visionary powers. The change of name would express his position, as also the switch engineer's, but I decline to see that it expresses the others'. Hostlers and firemen are not locomotive men, or engine men, or men of the footboard in any sense in which I have ever heard it expressed. The name includes only the men who perform their duties on the footboard, and a fireman has not reached that height yet. He is of the deck; hence his name would be inconsistent, a misnomer. The name would then be expressive of the minority, and would cause jealousy in our own Order, beside coming in direct antagonism with another Order, the B. of L. E.

The engineer would have a name in either of those proposed expressive of his position, but what influence could firemen of the Order, employed on the road, have with a master mechanic in securing that runner a position as an engineer? Would any master mechanic in the length and breadth of the country, consider a fireman competent to judge as to the ability of a man to run an engine?

And would the recommendation of the fireman have much weight with the master mechanic in securing him a position on the footboard? I venture to say the weight would be much less than a ton; and all this is on the side of supposing that firemen would try to exert their influence with the master mechanic to secure their brother such a position; but it is wrong supposition, and with all its defects and lack of influence I suppose that ninety-nine out of every hundred would not do any such thing, but would look with jealous eyes on the newcomer, treat him coldly, and refuse to do anything whatever, or, if they did say anything at all, say it in such a way as to discourage the official from giving him employment as an engineer. The solution of this state of affairs lies in the innate selfishness of the human race. The fireman would look at the newcomer as an interloper. He would argue thusly: "If I do anything for him, and the old man gives him a situation, it just puts me so much behind, besides the B. of L. E. men, who will be employed through their influence, and to sum it all up I will have a hard road of it to ever get anything better than I have got at present." This is human nature, and while I admit that a very small minority are free from this selfishness, I contend that their influence would be so slight that it would not be any benefit to the runner seeking a position on other roads, and all of us would fall under the ban of the B. of L. E., and their influence, exerted against us, would be of no mean proportions, I assure you. And a hard row the runner would have who passed the limit of one year, and did not join the Engineers, and a harder time the second manipulator would have in ascending the grades road-bed and promotion.

As to our being in a better position to take care of our engineers under a new name, I must say I fail to see it in that light; it would depend altogether on the amount of interest the brothers took in the affair. It is fair to assume that nine out of every ten railway officials are aware of the fact that we have many engineers in our ranks, including the great majority of those who have not yet run a year, and we can, if we exert ourselves a little, do just as much for them under our present name as we could with any other we might choose to select. We ought the engineers to render us very material aid in such cases now; but just make a change of name that would imply that we had started an opposition Order—that we sought rivalry and I assure you, all we would get would be rivalry, and from their position they would have the best of the fight every time. What little harmony is now left would be wiped out, and chaos would take its place. I say, by all means allow the name to remain as it is, as we cannot possibly better it, for if we make a change it will not express a whole fact, but will have a narrow suit to the minority, while at present it suits the majority.

Let the engineers go to the Engineers' Order; it is the place for them. The B. of L. E. was organized for the purpose of defending engineers; of elevating their standing morally, socially and financially. It has done a good work, and its usefulness is not passed. It has much yet to do, and do we, with our ideas of protection and charity, now propose to lay obstructions in its way, to impede its march, weaken it by damming up the stream of your blood which is flowing in that direction? Oh, short-sighted bigots! Do you not see a yawning chasm before you toward the brink of which you are rushing with the velocity of a maelstrom? On your eyes to the needs of the time, and port a helm and spread all sail before it is too late, and run away from this fatal error advocated by so many, which seems to be stealing over us, depriving us the power to see, deadening our senses to the danger lurking behind. It is like many a mirage on the Western plains, which holds out the appearance of rest and refreshment; but, poor deluded wretches do not depend on appearances, for when you have been lured away from the well-beaten paths of travel, and have found that no landmarks are in sight to guide your footsteps to some haven of refuge, you will suddenly see the mirage collapse, and find yourself a wanderer on the trackless desert.

surrounded by the bones of others, who, deluded like yourself, found an unmarked resting place far from the paths of civilization, a prey for the beasts of the desert.

Is this a fancy sketch? I have been the victim of the atmospheric mirage, and came near perishing. I do *not* want to be the victim of this mirage in labor circles, for a mirage it is, and nothing else. We contend that we will be benefitted by certain proceedings. How so? We are weakening the position of the engineers when we do this. Do we stop the stream of engineer blood? They wither, and soon become a prey to the monopolies, and where, oh where, is our picture of beauty and comfort which we perceived but a moment ago? Gone, like the mirage! A gentle breeze has suddenly wafted it away, and we find ourselves—the firemen of to-day, the engineers of to-morrow—without protection, in chaos, and that the goal, when reached, was not worth striving for, and all because we ourselves have wrecked it. No! stick to the name you have, and work for it. Try to uproot the erroneous ideas, and cast them away. Live in your *training school*—for that is where you are—the best you can. Be moral, courageous, and just. Accord to all others everything you wish for yourselves, and remember, above all things, that your estimate of a fireman who does not join the Firemen is not a good one. Then try the rule the other way, and how about the engineer who does not join the Engineers? Oh, that's different, is it? I most emphatically say no. And even as we, the firemen of to-day, are to man the engines of to-morrow, so should we, the B. of L. F. of to-day, steer the bark B. of L. E. over the tempestuous seas of the future. It is natural, it is logical, it is the eternal fitness of things. Work in that direction, try to bring about harmony, and remember that your legislation of to-day is your law for to-morrow, be it good or bad, and the power lies with yourselves to make it either. Yours fraternally,

A. J. Schmidt.

RUTH SHOWS THE BABY.

[The following poem has been sent us by Bro. J. A. Hancock, of Gilbert Lodge, No. 210, whose little daughter, five years of age, recites it with fine effect.]

Want to see our baby?

Then walk on your toes.

Boots will hurt a baby

Everybody knows.

Lift the blanket, careful—

Now, what do you think?

That's a real baby.

Soft and warm and pink.

Just look at her fingers.

Cuddled up so sweet.

But the very best things

Are her little feet.

Now, I'll tell you something.

Very, very queer.

God forgot to name her

Fore He sent her here.

He left that to Mamma,

And mamma did to me.

So I'm thinking, thinking

What the name shall be.

No; you shall not name her.

And she shan't be sold:

She is worth a hundred

Million pounds of gold.

We don't want your money.

Not a single bit.

Rather have our baby

Than the whole of it.

Guess you'd better put her

Into grandma's lap.

And go 'way and leave her.

Baby needs a nap.

STANBERRY, Mo., March 11, 1890.

Editor Firemen's Magazine:

It has been some time since I have noticed anything in the *Magazine* from No. 36. There are not many of us here; we have only twenty-five members, and are somewhat scattered, so there are only a few of us to attend to Lodge business, and those few are run almost to death. When they are in, the first thing they do is to comply with nature's demands. As the saying is, "Self-preservation is the first law of nature." I expect our grand officers get terribly vexed at the officers of No. 36 for not being a little more prompt in attending to business. It is not owing to the lack of will power, but to the lack of time. We get only a five hours' rest before they are after us again.

The Omaha & St. Louis Railway Company is doing about the best business of any of the roads leading out of Council Bluffs. Our business is mainly with the C., St. P. & K. C., for St. Paul and Duluth, Minn. We have nine large Baldwin Moguls on our 115-mile division, and they have to double the division every twenty-four hours, and more if they can. Our master mechanic, Mr. J. D. Hunter, has promoted several of the old firemen to the right-hand side during the last six or seven months. The following is a list of the lucky ones: J. J. Smith, H. L. Powell, W. E. Baldwin, S. K. Davidson, C. H. Runyan and Joe Campbell. All are doing well and giving satisfaction.

It appears to me from the hub-bub and hum-drum in the *Magazine*, that some of our members are not satisfied with the Federation of Railway Employes now in existence, especially our Western brothers on the U. P. system. My idea of organizing the different orders in the so-called federation would be to have each lodge of the various orders elect a delegate to the annual meeting of the Supreme Council. This would give the rank and file a chance to say something in regard to this matter. Or, where the three orders have lodges in the same place, let all three meet jointly and elect a delegate, and each bear its share of the expense. According to the present system, it may look to some as a kind of "taxation without representation."

One word for Stanberry's poet, Mr. George Hall. I think his productions very nice. His last, in the March number of the *Magazine*, goes to show that his sympathy is with the railroad men. I am personally acquainted with Mr. Hall, and can say that he is a young man worthy of the respect and esteem of every railroad man in the United States.

Yours fraternally,

Calamity Branch.

STRATFORD, ONT., February 10, 1890.

Editor Firemen's Magazine:

Permit me to announce that Bro. John Jones on New Year's day was married to the accomplished Miss Flora J. Wilson, of this city, and all the members of Avon Lodge, No. 38, wish the bride and groom a prosperous life voyage.

La grippe is quite prevalent here, but it did not prevent the members of Avon Lodge, No. 38, from holding their sixth annual ball and supper in the City Hall Tuesday evening, January 30. The various committees having the affair in charge were equal to any demand and as a consequence, the ball and supper more than realized the highest expectations.

The ball was brilliantly lighted and splendidly decorated, and presented a fairly appearance which it would be difficult to describe. The supper was sumptuous, the viands rich and rare, and the music was such that the happy company never wearied of it.

When all was ready for the giddy whirl, ninety couples responded, and the revelry continued till 3 A. M. The ball received a wealth of compliments from all the guests, and all the generous words that were spoken were well deserved. Where all, who were charged with making preparations for the occasion, did their best, comparisons are not required—and, as all the guests were delighted, nothing occurring to mar their pleasure. Avon Lodge, No. 38, has a right to feel proud of the splendid success achieved.

Fraternally,

38.

Personal.

PHIL C. CRAMER is both Master and Collector of No. 44. He understands his duties and performs them.

H. HAYES, of Smoky City Lodge, No. 219, has entered upon wedded life and is receiving the congratulations of his friends.

J. P. COLLINS fills the offices of Secretary and Receiver for the F. W. Arnold Lodge in a manner to command the hearty approval of the members.

C. M. Doucett, master of Lodge, No. 194, has rare qualities for the position he occupies, and under his administration the Lodge is becoming one of the banner Lodges of the west.

THE Receiver of A. G. Porter Lodge, No. 141, Ft. Wayne, Ind., Bro. W. R. Fredericks, has a record of which any officer might be proud. He is ever prompt and accurate in the discharge of his duties and his word is as good as gold.

At the coming bazaar to be held at Philadelphia, notice of which is given elsewhere, Bro. Harry Walton will hug a greased pig and Bro. J. J. Leahy will give a parachute leap. There will be fun sure.

THE Magazine Agent of Mt. Ouray Lodge, No. 140, Bro. S. W. Seelinger, is in all regards a model officer. His list of subscribers bears eloquent testimony to his ability and fidelity, and we only wish each Lodge in the Order had such an agent.

THE members of Just in Time Lodge, No. 149, are contemplating the purchase of a large ledger for the purpose of keeping a record of the changes in the address of Bros. A. H. Hawley and Charles Cowdrick, the Receiver and Magazine Agent respectively, as the pages of their present one are completely used up.

MORT L. BIXLER, who will be remembered as one of our prominent representatives in the Burlington strike and as a delegate to our Atlanta convention, is now publishing the Oklahoma *Democrat*, a live and enterprising paper at Oklahoma City, I. T. The *Magazine* wishes Bro. Bixler a large subscription list and profitable returns.

EDWIN J. PIERCE, Secretary and Receiver of Kansas City Lodge, No. 74, Argentine, Kan., is entitled to the palm for promptness and dispatch in responding to beneficiary assessments issued by the Grand Lodge. Argentine is 450 miles from Terre Haute, and in just fifty hours after assessment No. 10, levied for the month of March, left the Grand Lodge office, the returns of Bro. Pierce were received by the Grand Lodge. Pretty quick work that.

WE are under special obligations to Bro. and Mrs. W. E. Sullivan, of St. Joseph, Mo., for a thousand courtesies they bestowed upon us during our attendance upon the union meeting held at St. Joe in the latter part of March. In the whole realm of hospitality nothing was left undone to make us feel that we were truly in the hands of our friends. Bro. Sullivan is in heart and soul a brotherhood man and Mrs. Sullivan is none the less ardent in her devotion to the principles of the Order. May all their days be filled with happiness.

THE *Magazine* sends greetings, congratulations and felicitations to Bro. James F. Haugh, Master of Just in Time Lodge, No. 149, of New York City, who we are informed is the happiest man on Third avenue, the reason of his felicity being the presentation of a beautiful baby daughter, March 16. The members of Just in Time Lodge congratulate Bro. Haugh, as also Mrs. Haugh, and devoutly wish the little angel may escape the shafts which make so many homes desolate and that the happy parents may see their child bloom into beautiful womanhood.

THE members of our Order will be gratified to learn that Bro. T. H. Nace, of Trinity Lodge, No. 83, who was incarcerated at the time of the Missouri Pacific strike for alleged complicity in certain violent acts that were committed, has been acquitted and is again a free man. The Atlanta convention appropriated \$200 for the defense of Bro. Nace, and the result of his trial triumphantly vindicates the justice of the action of the delegates. We felicitate Bro. Nace upon his acquittal, and hope he may never again be subjected to such an unfortunate experience.

"A gentleman who deals in diamonds, and wind watches on Santa Fé avenue, in Pueblo, informed our advertising man last week that 'he catered to a better class of trade than the railroad trade.' We would publish his name if we could get it, not because he refused to advertise with us, but to prevent him from getting something he does not want." — *Western Railway.*

By all means get his name and let us help you to prevent him from getting something he does not want." It would do us a heap of good to relieve the "gentleman" (?) of his entire stock of "railroad trade."

THE union meeting held at Charleston, Ill., in April under the auspices of Little Giant Lodge, No. 187, was a thorough success. Grand Master Sargent and Bro. Frank Dupell, of the Grand Lodge office, were in attendance, and report an excellent time and good results. The ladies, with their usual interest in such matters, tendered the boys an elegant "spread" to which ample justice was done. We acknowledge our thanks for a fine variety of cake with the compliments of Mrs. Taylor, Mrs. Monro, Mrs. Wilson and Mrs. Sleeth, of which we were the recipient.

The Grand Master at Brockville, Ontario.

On March 12th, Island City Lodge, No. 68, at Brockville, Ontario, had a grand time, the occasion being the reception of Grand Master F. P. Sargent. Deputation of Firemen received the Grand Master at the depot, and his comfort and enjoyment was the special care of the Lodge while he remained in town.

The Brockville *Daily Times* devotes nearly a column to an account of the entertainment given to the Grand Master. There was music, recitations, speeches, banquet and dancing, and, as a matter of course, the hours sped away unnoticed. The Mayor delivered a welcoming address, and Bro. Sargent made one of his characteristic speeches, and, among other things, said:

"The Brotherhood has been in existence over sixteen years, and during this period has made rapid strides, having now a membership of 19,000. He referred to the members composing the subordinate lodges in Canada, and said they were the finest of men in connection with the Order, and the Island City Lodge, of Brockville, was not one whit behind, but on the contrary one of the banner Lodges in Canada. This was a very high compliment, and what the Grand Master said was only what was true. He ended his speech by saying that he would keep in remembrance his visit to Brockville, also, in a very courteous and complimentary manner he had been treated while here."

The *Times* says, "The meeting was a most successful affair," and closed by singing "God Save the Queen."

The Stevens Point "Kicker."

In the April issue of the *Magazine*, page 316, appears a communication over the signature of "Kicker." In almost every line it contains a vulgar, beastly insult to women—to every fireman's wife, mother, daughter and sister. The communication is a foul blotch upon the fair pages of the *Magazine*. For its appearance there is but one excuse—one compensation—and that is, that the Brotherhood may know that in its ranks is one creature, having, possibly, the shape of a man, but who is as destitute of manly attributes as a skunk. It is difficult to describe such a monstrosity as "Kicker," of Stevens Point, and keep within the boundaries of prudent expression. In this case, we propose to use the vocabulary as the subject deserves. We remand "Kicker" to the domain of beasts of the lowest types. To call him a man, is to insult all the tribes of savages—Digger Indians, Hottentots, vermin eaters, cannibals, or those human beasts Stanley discovered in his march through the dark "continent." The explorer found a tribe of savages, who had never heard the sound of the "church going bell," who had never heard of the one true God nor of His Son. The sunlight of civilization had never fallen athwart their pathway; as a result, their estimation of women was about the same as that of "Kicker," of Stevens Point. The account Stanley gives of the burial of the chief of this tribe of savages, is as follows:

The first proceeding is to divert the course of a stream and in its bed to dig an enormous pit, the bottom of which is then covered with living women. At one end a woman is placed on her hands and knees, and upon her back the dead chief, covered with his beads and other treasures, is seated, being supported on either side by one of his wives, while his second wife sits at his feet.

The earth is then shoveled in on them and all the women are buried alive with the exception of the second wife. To her, custom is more merciful than to her companions, and grants her the privilege of being killed before the huge grave is filled in. This being completed, a number of male slaves—sometimes forty or fifty—are slaughtered and their blood poured over the grave, after which the river is allowed to resume its course.

In the foregoing we have a vivid illustration of the estimate an African savage of the lowest type entertains for women. Says "Kicker," of Stevens Point: "The first morning after we were married I held my pants toward her and said, 'Now, here are the pants. If you want to wear them put them on now or you will never have another chance.' She didn't want to put them on, so I have worn the pants in family matters ever since." It is not probable that when Bambanc and Kasongo, chiefs of Urna, got married they said to their wives, "Now, here are the pants," etc. In this regard, "Kicker," of Stevens Point, may have been more considerate than Kasongo or his father Bambanc, but in the general estimate of woman and her rights, the African savages were well up with the "Kicker."

The reader will not fail to note particularly the pen picture "Kicker" paints of himself the "first morning" after his marriage. There was the bridal chamber, the nuptial couch. The morning sun had baptized the world with light. The "Kicker" had torn himself from the embrace of his bride, was on his feet. The bride lingers; from her downy pillow, with love lit eyes, her face wreathed

in smiles she gazes upon the form of her husband, her protector (?). The curtains are closely drawn, the room is bathed in mellow light. It is a time of unspeakable bliss. At this supreme moment the "Kicker" grabs his pants, holds them aloft with dangling suspenders, and shakes them in the face of the bride and exclaims, "Now here are the pants; if you want to wear them put them on now."

Come, firemen, come with your mothers, wives, daughters and sisters and view the picture. There stands the American Kasongo; there reclines his bride of a day, shrinking, amazed. The pants are held out, the symbol of authority, and the order is "get up, put them on, or forever after hold your peace and be my slave." Could Kasongo, the African savage, have done more? The bride did not put on the pants, and Kasongo, the "Kicker," of Stevens Point, has from that day to the present lorded over his wife. She has been his slave and has been compelled to obey him as a child.

Such a creature as "Kicker" is a matrimonial putrescence, a breathing abomination.

"Kicker" says:

Now it is time the Woman's Department was abolished, and if Mr. Debs don't look out he will be bounced from his position for letting the women run his *Magazine* for him. * * * I hope Mr. Debs will take warning and end the Woman's Department. If he don't I will work against him at the next convention.

The Woman's Department of the *Magazine*, in the first place is the recognition of the rights of women. It is a recognition of the wants of home. It is a department for the expression of woman's thoughts and aspirations. It is a recognition of Otnay's estimate of woman, when he wrote:

"O woman, lovely woman! Nature made thee To temper man; we had been brutes without thee."

But "Kicker," after all the hallowed influences of woman, is still a brute, and were he to die, he would doubtless like to be buried as was Kasongo, the African savage.

Does the Kasongo "Kicker" entertain the idea that the editor of the *Magazine* will be intimidated when the "Kicker" shakes his pants, (all there is of him indicative of manhood) and discontinue the Woman's Department for the gratification of his brutish instincts? Does "Kicker" suppose his threat to "work against" the editor "at the next convention" can have any influence whatever in the make up of the *Magazine*? If so, let "Kicker" understand that he makes a mistake. The editor of the *Magazine* makes no boast of knightly devotion to women, above that of the great body of Brotherhood Firemen. He only claims to be abreast of the foremost in every chivalric estimate of woman's character and blessed influence in the world. He adopts the language of Tom Moore:

"O woman! dear woman! whose form and whose soul

Are the light and the life of each spell we pursue, Whether sunn'd in the tropics, or chill'd at the pole.

If woman be there, there is happiness too."

If there is one redeeming characteristic of our boasted civilization, that claims, more than any other, resounding hallelujahs, it is the elevation of woman from the bondage and degradation of ignorance, superstition and cruelty of savagery, such as

characterizes the vulgar mouthings of "Kicker," of Stevens Point, who unwittingly introduces a comparison between himself and "a neighbor," an exhibition of stupidity on the part of the "Kicker" rarely equalled. And when he says certain things make a "dog laugh," and adds, "I have often laughed," he sinks himself to the level of a dog, and at that level we leave him, though we know of no half-decent dog that would associate with him.

The Woman's Department of the *Magazine* will not be abandoned. The invitation to women to write their views upon topics that interest them will not be withdrawn. Brotherhood Firemen have wives, mothers, daughters and sisters, and sweethearts too; educated, intellectual women, who, while they do not wish to wear "pants" as a symbol of authority, and have an unmitigated contempt for such a cur as "Kicker," will maintain their God-ordained equality with man, by the exhibition of attributes as superior to brute force as brute force is inferior to intellectual culture.

Grand Master Sargent at Belleville, Ontario.

The boys on the border in Canada know how to do things up brilliantly, and the receptions given Grand Master Sargent have been in the nature of ovations. We have on our table the *Daily Ontario*, published at Belleville, giving a graphic account of a banquet tendered Grand Master Sargent, in that city, on the evening of March 10. It was a splendid affair throughout, and under the auspices of Challenge Lodge, No. 66. The banquet was given at the Anglo-American Hotel. Upon the arrival of Grand Master Sargent he was taken in charge by the members of No. 66, who, in honor of his coming, had made the day a holiday. The *Ontario* says: "The Grand Master speaks in the highest terms of the efficiency of the members of the local Lodge, and classes them as second to none in the Dominion." The dining hall of the hotel was brilliantly illuminated. "After supper," says the *Ontario*, "the chairman proposed the good health of 'Our Queen' which was drunk with hearty enthusiasm by all present, after which the toast of the 'President of the United States' was coupled with the name of Grand Master Sargent. He said it afforded him great pleasure to speak of a man with whom he had a personal acquaintance. He had on several occasions met President Harrison in Indiana. If there was one thing that he admired more than another in this distinguished statesman it was his interest in railway employes. Whenever the opportunity afforded he invariably paid a high tribute to the brave men who daily risked their lives on the great iron highways in the discharge of their duty. In his annual message to congress President Harrison recommended that legislation be enacted extending the protection of the railway men. [Applause.] He quoted the number of casualties that yearly fell to the lot of men who were compelled to seek their bread and butter from the great railway companies, and urged that attention be paid to their wants. The speaker said that the relations between Canada and the United States would ever remain friendly. He sincerely trusted that the good fellowship between these two great countries would continue to

grow. [Applause.] There was no doubt that a great many people had come to Canada from the United States which the latter would like very much to get back again (laughter), and he hoped the time was not far distant when the laws of both countries would be so enacted. Although it was his second visit to Canada, it was the first time that he had the pleasure of greeting the brethren of Belleville. Everywhere in the Dominion he had found that friendly hospitality which characterized the English speaking nation the world over."

The speech of the Grand Master was greeted with great applause. A number of responses were made to toasts. Songs were sung, and the banquet passed into history as a dandy.

THE Brotherhood of Railway Conductors is making right along to success. The Q. & C. affair helps it amazingly.

THE federation of all the organizations of railway employes is only a question of time, and not a lot of time either.

Few Lodges in our Order are in better condition than F. W. Arnold, No. 44, located at East St. Louis, Ill. The boys have had their ups and downs, but hard knocks and persistent efforts they have succeeded in building up a Lodge that is a credit to its members as well as the Brotherhood at large.

ANNOUNCEMENT is made that the members of Enterprise Lodge, No. 75, will hold a grand Fair and Bazaar at Institute Hall, on Fortieth street, below Market, Philadelphia, beginning May 10th and ending May 24th. A grand, good time is promised, and a cordial invitation is extended to all members and friends to be in attendance.

THE Order of Railway Conductors meets in its annual session in Rochester, N. Y. on Tuesday May 13th, and there will doubtless be some important changes made. A new Grand Chief is to be elected and if reports are to be relied upon Mr. Wheat will be retired to private life. The "anti-strike" measure will, we predict, be eliminated and the Order placed on a protective basis and in line with other railway employes' organizations. That such may be the outcome of the convention is the ardent wish of every true friend of organized labor.

G. W. LOVEJOY, of Terre Haute, writes a letter to the *Railway Service Gazette* about the interests of the O. R. C., of which Order he was at one time a prominent member, and among other things he says:

There is just one way the O. R. C. can continue to exist, and only one, namely: Get rid of the traitor who obliterates the non-striking clause in their obligations; put themselves in line with other protective orders, endorse the federation scheme, and the O. R. C. will stand. If they don't do this their future is indeed dark, for the time has come when labor must perfect itself, and the B. of R. C. has fully demonstrated its ability to fully protect its members, secure their rights, and prove by deeds what they do. And the advanced thinkers of the O. R. C. are too smart to be caught by such taffy. Deal out lavishly to the desperate gang who cut each other's throats with as little ceremony as a highwayman holds up his victim.

Brother Lovejoy knows what he is talking about and isn't afraid to talk.

We have extended reports of Union meetings held at Sedalia, St. Joe, Buffalo, Corning and Elmira which, owing to lack of space, we have been compelled to omit from this issue.

At least forty communications have been crowded out of this issue of the *Magazine* for the want of space. Enough correspondence and other matter was received during April to make up two full issues and correspondents must therefore not feel disappointed if their communications are among the missing. Give us a little time, and all hands will be accommodated.

The many friends of Bro. Sidney Vaughan, of Dominion Lodge, No. 67, who is now located at Gloster, Miss., will learn with profound regret of the death of his infant child, Albert, aged 13 months of cerebro-spino-meningitis on Monday, March 10th. Only those who have experienced such a trying affliction as the loss of a darling babe can fully appreciate the feelings of the parents. In the presence of such a bereavement mere words, however fitly chosen or tenderly expressed, afford but little consolation and yet Bro. and Mrs. Vaughan may feel and know that many friends mourn with them and would if they but could, share with them the burden of their grief.

UNION MEETINGS.

INDIANAPOLIS, IND.—A grand union meeting will be held at Indianapolis, Ind., on Sunday, May 25th, under the auspices of the B. of L. E., B. of L. F., B. of R. C., B. of R. T. and S. M. A. A. Tomlinson hall has been secured for the occasion and able speakers will be in attendance.

CEDAR RAPIDS, IOWA.—A union meeting will be held at Cedar Rapids, Iowa, on Sunday, May 25th under the auspices of Hawkeye Lodge, No. 27. All members in good standing are invited.

NICKERSON, KAN.—A union meeting and ball will be held at Nickerson, Kan., under the auspices of the B. of L. F. and B. of R. T. on May 28th, and a grand time is expected. All are cordially invited.

CHICAGO, ILL.—A grand union meeting will be held at Chicago, Ill., under the auspices of the B. of R. T. on May 20th, 21st and 22d. The first day's session will be devoted to a union meeting to which members of all the railway employes organizations are invited. On the third day a public meeting will be held for the benefit of the Ladies' Auxiliary. The meetings will be held at Excelsior Hall, Haymarket Building, Madison street near Halstead. The Gault House, Madison and Clinton streets, has been engaged for headquarters at reduced rates. For further information address C. T. Harris, 1197 Fulton street, Chicago, Ill.

Amusements.

The *Daily Advertiser*, of Trinidad, Colo., of February 15th, gives a pleasant account of the first annual ball of Los Animas Lodge, No. 344, B. of L. F. The *Advertiser* says:

"The attractiveness of the scene was heightened by the beautiful and appropriate decorations. On the stage were banners and emblems of the Order, at each end being placed two headlights, the brilliant light from which was thrown on the merry dancers. On the stage was an engine bell, which was used to ring the changes in the programme. Suspended

across the hall over the heads of the dancers were numerous rows of lanterns, alternating in red, white and green, while around the balcony in evergreen letters, was the motto of the Order, 'Charity, Protection, Sobriety, Industry.'"

The ball was given at the Opera House, and was largely attended, and the programme kept the guests on the floor until the sun lighted their pathways home. The ball was in every regard a success.

Addresses Wanted.

CHESTER ROBERT PEASE.—When last heard from was firing from East Saginaw, Mich., to Detroit. He is 36 years of age, has light hair and eyes, is about 6 feet in height and has a small scar over the left eye. His mother, Mrs. E. Pease, 115 Lecouver street, East Los Angeles, Cal., is profoundly anxious to hear from him.

HARRY CARNES.—In 1886 was employed on the A. & P. and G. H. & S. A. Railroads, and in 1887 was employed as passenger conductor from Butte, Mont., to Anaconda. Anyone knowing his whereabouts will please correspond with his brother, Walker S. Carnes, foreman engine No. 7, Buffalo fire department, No. 11 Franklin street, Buffalo, N. Y.

Acknowledgments.

WEST KENNERLY, March 16, 1890.

To the Officers and Members of Boston Lodge, No. 57:

SIRS:—Please accept our heartfelt thanks for your gift to us of our son's picture, and believe us that we shall prize it above anything that could have been sent to us from the Lodge of which he was a member. Also accept thanks for kindness in procuring the insurance, and relieving us of the trouble necessary of obtaining the same. Wishing you God speed, we remain

Yours sincerely,
EDWARD O. CURRIER,
RHODA C. CURRIER.

MAUCH CHUCK, PA., March 4th, 1890.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I have just received through Mr. Chas. Roberts, a draft for fifteen hundred dollars on the policy held by my beloved husband, John F. Meyers. Please accept my heartfelt thanks for the prompt adjustment of the claim. May God bless your Order and let it continue to be a blessing. I sincerely thank the members of Lehigh Lodge, No. 251, for their kindness to me during my troubles. May God in his goodness and mercy prosper your Order, and be the protection of its members throughout the land is my earnest prayer.

MRS. J. F. MEYERS.

ST. PAUL, MINN., March 18, 1890.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I desire to return thanks to you for the draft of fifteen hundred dollars due me on the policy of my husband, George W. Austine. I also wish to thank the members of Lodge No. 320 for their kindness to me during my husband's sickness and at the time of his death and burial, which kindness I shall always appreciate. I also wish to thank the members of Sprague Lodge for their kindness to Mr. Austine during his short stay in Sprague.

MRS. ABBIE C. AUSTINE.

GLENOLDEN, PA., February 22, 1890.

To Delaware Lodge, No. 231, of the B. of L. F.:

DEAR BROTHERS:—I wish to return your Lodge a vote of thanks for your beautiful floral design to my late husband. I had your dove put in a case where it is preserved. I thank you all for your kindness and hope you will all prosper and soon take the right hand seat on your engines. I am a great advocate of the engineer and fireman. You all knew my dear husband and I have two sons who are firemen, one belongs to your noble Order—333, and I think the other one when it is time will join the Delaware Lodge. You have my best wishes.

CAROLINE JAMESON.

RUSTLER JOE.

I stood at eve when the sun went down, by a grave
where a masher lies,
Who quit earth with a fractured head, and a couple
of damaged eyes;
A youth who chewed the head of a cane, a genuine
Eastern dude,
With hair in the middle cleft, and a crystal in one
eye screwed.

And I felt like dancing a highland fling on the sod
that covered his dust.
And longed so greatly to whoop a whoop I really
feared I'd bust;
My brain ran riot with ghoulish glee, and the laugh
from my lips that purred,
With a jim-jam shiver smote the air and kited
around the world!

In the summer when the mountains were with
sweetest flowers enriched,
Joe, the rustler of the diggins, and fair Annie Smith
were hitched—
Slim was Anna as a shadow, or the handle of a hoe;
He was anything but handsome, was old slouchy
Rustler Joe.

But he got the drop on Annie and he won her for a
wife,
And they in a little cabin started forth in married
life.
Sped the months and came a baby, came a squint-
eyed little cuss;
Joe was at the bar imbibing when they told him of
the muss.

He was taking gin and sugar (O, such gin!), and then
and there
Asked he all the boys to join him, just in honor of
his heir;
It had been his great ambition, and he told the bar-
keep so,
That the babe would be a gender fit to bear the
name of Joe.

"Little Joe" they called the kidlet, and he flour-
ished like a rose,
He'd his mother's eyes strabismic, and his father's
blossom nose—
Swift the years sped o'er the trio, years of sorrow
and of joy,
And the boss of all the cottage was the squint-eyed,
darling boy.

Sped the years, and then a rumpus smote the still-
ness of their home,
Down the trail by Annie's cabin chanced an Eastern
dude to roam;
Thrice he came and saw her sitting at the window
with the child,
And he "Ah, there'd" to the baby, and the baby
laughed and smiled.
So at last it grew to know him—Little Joe was nearly
four—
And would call the "dandy feller" as he passed
the open door;
And he ran one day and caught him, and with joy-
ful, childish dance,
Led him in where sat his mother patching Joseph's
Sunday pants.

Then there came the same old chestnut, that the
dudes so long have sung,
Stories of his expectations told he with elastic
tongue;
Harped he on a blissful future, till his breath was
almost gone,
But the fair and gentle Annie didn't seem to grap-
ple on.

Yet she listened, but in silence, while he made his
honeyed play,
Edging slowly to a corner, where an old pick-handle
lay;
Listened to his gilded mouthings, adjectives in
beauty rich,
Yet she jabbed at Joseph's breeches, and she never
missed a stitch.

Pictured her the golden pleasures of the great far
Eastern land,
Costly dresses, flashing jewels, and a prancing four-
in-hand,
Moving in the lofty circles of aristocratic blood—
Whack! Down came the old pick-handle with a
dull and sickening thud!

Then the blows came fast and heavy on his center-
parted hair,
Till his soft and tender brainlet was exposed unto
the air—
Ceased she not her work gymnastic till she scaled
the masher's doom,
And his once neat form lay scattered in confusion
round the room.

Home at eve came Joe the Rustler, trying to sing
"Sweet By-and-bye,"
Stepping to the mangled music, like a stringed
critter, high;
Filled his bosom was with triumph as his home he
drew near,
For he'd beat the haughty barkeep playing freeze-
out for the beer.

At the door he ceased his singing, and he gazed with
awe agape!
On the floor the dude was lying in dilapidated
shape,
And when Annie told the story, 'round her went
the arms of Joe,
And he hugged her in his rapture till she begged
he'd let her go.

That's why I felt like dancing a jig, and whooping
above his dust,
And swelled with exciting, rapturous joy till
really feared I'd bust—
And I felt like bellowing forth these words, like
cyclone's wakening blast:
"One specimen of the American dude has got his
deserts at last."

Captain Jack Crawford, the Poet Scout

BOYS, GO HOME.

Ah! boys, you have gone out from the homestead
into the rush and bustle of life; do you ever think
of the patient mother who is stretching out to you
arms that are powerless to draw you back to your
old home-nest?

No matter though your hair is silver-streaked, a
Dot in the cradle calls you grandpa, you are "the
boys" so long as the mother lives. You are the
children of the old home. Nothing can crowd you
out of your mother's heart. You may have failed
the battle of life, and your manhood may have been
crushed out against the wall of circumstances; you
may have been prosperous; gained wealth and fame;
but mother's love has followed you always. Man
"boy" has not been home for five, ten or twenty
years. And all this time mother has been waiting.
She may be even now saying: "I dreamed of you
last night. Maybe he will drop in for dinner." See
the poor trembling hands prepare some favorite dis-
her for him. Dinner comes and goes, but no John comes
with it. Thus day after day, month after month,
year after year passes, till at last "hope deferred
maketh her heart sick," aye, sick unto death: her
arms are stretched out no longer.

The dim eyes are closed, the gray hair smoothed
over for the last time, and the tired hands are folded
to everlasting rest, and the mother waits no longer
on earth for one who comes not. God grant that you
may not wait in vain for his coming in the Heavenly
home. Once more we say unto you—boys, go home
if only for one day. Let mother know you have not
forgotten her. Her days may be numbered. No
winter may cover her grave with snow.—*Exchange*

GRAND LODGE.

These columns are reserved as the official department of the Grand Lodge.

All Official Documents, including notices of dues and assessments and other notices, reports and statements will be published in this department.

Officers and Members of Subordinate Lodges are requested to note carefully each month the contents of this department.

MAY, 1890.

Assessment Notice for May

OFFICE OF GRAND LODGE, B. OF L. F.
TERRE HAUTE, IND., May 1, 1890.

ASSESSMENT No. 11, \$2.00.

To Receivers of Subordinate Lodges:

DEAR SIRS AND BROTHERS:—You are hereby notified of the death and disability of the following members entitled to all the benefits of the Order, viz:

CLAIM No. 217. Francis Mulheron, of Endeavor Lodge, No. 267, died of Fracture of Skull, August 13, 1889.

CLAIM No. 218. Joseph B. Hills, of Three Branch Lodge, No. 304, was killed by Explosion of Engine, December 30, 1889.

CLAIM No. 219. John J. Hayes, of Mt. Hood Lodge, No. 167, died from injuries received by Railroad Accident, January 4, 1890.

CLAIM No. 220. Julius V. Larson, of Morning Star Lodge, No. 88, died from the effects of Strychnine, January 9, 1890.

CLAIM No. 221. John Johnson, of Chicago Lodge, No. 95, died of Phthisis Pulmonalis, January 12, 1890.

CLAIM No. 222. Peter Donahue, of Bonanza Lodge, No. 194, died of Pneumonia, January 19, 1890.

CLAIM No. 223. William H. Hiff, of Oasis Lodge, No. 66, was killed by Railroad Accident, January 26, 1890.

CLAIM No. 224. Allen M. Rager, of Red River Lodge, No. 8, was killed by being struck by Bridge, February 6, 1890.

CLAIM No. 225. Frank S. Bolmer, of Western Reserve Lodge, No. 248, died of Consumption, February 10, 1890.

CLAIM No. 226. J. B. Goedecker, of Clifton Heights Lodge, No. 268, was killed by Railroad Accident, February 14, 1890.

CLAIM No. 227. Thomas Carney, of Mineral King Lodge, No. 129, died of Gall Stone Colic, February 18, 1890.

CLAIM No. 228. Arthur Alder, of Midland Lodge, No. 147, was declared totally disabled by loss of foot, February 18, 1890.

CLAIM No. 229. Lewis S. Wolfe, of Frisco Lodge, No. 51, died of Congestion of Lungs, February 23, 1890.

CLAIM No. 230. Wm. E. Marine, of Garden City Lodge, No. 50, died of Phthisis Pulmonalis, February 26, 1890.

CLAIM No. 231. C. E. Lovelace, of New Era Lodge, No. 76, was killed by Railroad Accident, March 1, 1890.

CLAIM No. 232. Matt Nilan, of John Hickey Lodge, No. 266, died of Acute Pericarditis, March 5, 1890.

CLAIM No. 233. William A. Stewart, of Pine City Lodge, No. 81, died of Typhoid Fever, March 13, 1890.

CLAIM No. 234. John E. Burke, of Frontier City Lodge, No. 92, died of Pneumonia, March 15, 1890.

CLAIM No. 235. Sherman A. Neely, of Holbrook Lodge, No. 378, died of Pleuro Pneumonia, March 16, 1890.

CLAIM No. 236. William D. McLaren, of Washington Lodge, No. 13, died by being run over by Engine, March 17, 1890.

CLAIM No. 237. Andrew Foran, of Elm City Lodge, No. 284, died of Consumption, March 21, 1890.

CLAIM No. 238. Howard Bachman, of Adopted Daughter Lodge, No. 3, was killed by being struck by Coal Platform, March 25, 1890.

CLAIM No. 239. Frank S. Ewart, of Rochester Lodge, No. 99, died from injuries, received in a Collision, March 26, 1890.

CLAIM No. 240. Harry N. Gray, of West Penn Lodge, No. 392, died of Typhoid Pneumonia, March 30, 1890.

CLAIM No. 241. Christopher Greenwall, of James Donnelly Lodge, No. 350, died of Pneumonia April 8, 1890.

An assessment of Two Dollars (\$2.00) has been levied for the payment of the above claims and you are required to forward said amount for each member, whose name appears on the rolls May 1, 1890, as provided in Section 52 of the Constitution, said remittance to reach the Grand Lodge not later than May 20th, 1890. Any Lodge failing to make returns as above provided will stand suspended from all the benefits of the Order, as per Section 54 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. & T.

Beneficiary Statement.

OFFICE OF GRAND SECRETARY AND TREASURER,
TERRE HAUTE, IND., April 1, 1890.

To Subordinate Lodges:

SIRS AND BROTHERS: The following is a statement of the Beneficiary Fund for the month ending March 31, 1890:

RECEIPTS.

FOR 35 YEARS

THE WEARING QUALITIES OF

BOSS

FILLED WATCH CASES,

Have been submitted to the only practical test, that of everyday wear and tear, and the people who have carried them

In Their Pockets

All these years are the ones who, if they were buying again, would take the money

Out of Their Pockets

And spend it for **BOSS CASES.**

GOOD LOOKING AS GOLD!

STRONGER THAN GOLD!

CHEAPER THAN GOLD!

RAILROAD Patent Square Ventilated Dinner Pail BEST PAIL MADE.

We have many testimonials like the following

BAKER CITY, ORE., March 12, 1890.

Reardon & Ennis:

I received your Patent Ventilated Dinner Pail, and believe far superior to any other Dinner Pail in use, and will to great pleasure in recommending it to railroad men.

Yours truly,
DR. T. N. SNOW
Surgeon

Size of No. 2 Pail is 9½ inches long by 5½ inches by 9½ inches high, when locked up.

TO INTRODUCE THESE PAIRS, UNTIL FURTHER NOTICE we will deliver **ONE NO. 2 VENTILATED PAIL**, boxed and expressage paid, at any express point in the United States, on receipt of P. O. order for one dollar and fifty cents, and for every fifty Pail order received we will refund the money and send the Pail free of expense. Try one.

TO THE SPORTSMAN.

Camp life has a peculiar charm, but, to fully enjoy it, you must be prepared for all kinds of weather. Did you ever catch your rubber coat on a sharp twig or rough rock, and spoil it the first day? Ask any hunter or sportsman who uses a "Fish Brand Slicker," how he likes them. He will tell you it is tent, blanket, and coat, all in one. Light, dry, and warm, and will stand any amount of hard usage. No need of being concerned about the weather. Why do you wait till it rains, when you can be provided for all weather if you buy a "Fish Brand Slicker" now? Don't wait. A day's delay may be the cause of a month's sickness: can you afford to take the risk? Beware of worthless imitations, every garment stamped with the "Fish Brand" Trade Mark. Don't accept any inferior coat when you can have the "Fish Brand Slicker" delivered without extra cost. Particulars and illustrated catalogue free.

tened judiciously commend the rubber foot and hand for their remarkable advantages.

Awarded the highest prizes at every competitive exhibition.

Endorsed and purchased by the U. S. Government.

A treatise of 400 pages with 200 illustrations and copyright formula, SENT FREE.

Fig. 1 is from an instantaneous photograph of a man ascending a ladder; he has two artificial legs substituting his natural ones, which were crushed by a railroad accident and amputated. Fig. 2 exposes his stumps. With his rubber feet he can ascend or descend a ladder, and balance himself on the rungs. He can walk and mingle with persons without betraying his loss; in fact, he is restored to his former self for all practical purposes.

With the old methods of complicated ankle-joints these results could not be so thoroughly attained.

Over 9000 in practical use, scattered in all parts of the world. Many of these have been supplied without presenting themselves to us, simply by sending measurements on a copyright formula which any one can easily fill out. Eminent surgeons and comp-

THE WONDERFUL ROLLER ORGAN.

PLAYS 250 TUNES

Price only

6.00

Takes
the place
of a

PARLOR ORGAN.

music with a powerful sustaining organ tone. It has quick and powerful utterance for dance music, and will carry with distinctness throughout the extent of the largest dancing halls.

It will play a tune as long as desired, without any break, instead of stopping to change the piece, as must be done with organettes. It is beautifully finished, resembling mahogany, decorated with gilt and silver keys, and the cases are beautifully carved. The reeds are organ size, and the volume of tone will fill a hall.

It is a genuine musical instrument, which any one can play without teacher or practice, and which good musicians will recommend.

We are glad also to announce that by means of new automatic machinery, we are enabled to produce music rollers in large numbers so that we can offer them to the public at a price not exceeding the average cost of music-paper.

The price is nothing compared with its intrinsic value. It is equal in every way to a \$25 Music-Box, as far as the quality of the music is concerned, and also in point of construction, finish, and decoration. It will play 250 Tunes with positively no knowledge of either music or time being necessary or needed in the operation.

It is the most simple, perfect, marvellous, instructive, enjoyable, and amusing musical instrument in the world. Send your order and we will send an instrument that will please you. Enclose \$6.00 with this notice and we will send organ at once, all complete. Satisfaction, or money refunded. **AVON SUPPLY CO., Boston, Mass.**

LATEST AND GREATEST MUSICAL WONDER. EXCELLENT IN TONE! UNIQUE IN DESIGN! PERFECTLY SIMPLE IN PRINCIPLE! STRONG IN CONSTRUCTION! DURABLE IN EVERY PART! PERFECT IN EXECUTION! PLAYS ALL THE LATEST MUSIC!

THIS beautiful instrument is the result of many years' experience in the manufacture of organs, and is confidently offered to the public.

This musical marvel uses no paper; but its music is obtained from a roller, furnished with pins similar to those of a music-box. These pins operate upon valve keys, made of hard steel. All the working parts of the instrument are easily accessible, and are made of solid metal, the rollers and

keys being mounted on metal castings. Nothing has been omitted to give this grand instrument its crowning qualities of extreme simplicity and durability.

There is no limit to either kind or quantity of music. It will play Hymns, Popular Airs, Sets of Quadrilles, Polkas, Waltzes, Reels, and Hornpipes, with a clearness and accuracy, and degree of execution which but few performers can equal. A mere child can play it. It has the carrying quality of a large pipe organ, and is the only instrument that will render slow or sacred music, and will carry with distinctness throughout the extent of the largest dancing halls.

The above cut is a correct picture of the music rollers or cylinders that produce the music.

Lodges of the B. of L. F. wishing to procure Regalias will save 20 to 50 per cent. by sending orders to

CELEBRATED

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York. 308 Walnut St., Philadelphia.
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all Railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the outputs have increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

Brotherhood of Locomotive Engineers.

[SEAL.]

CINCINNATI DIVISION, No. 95.

CINCINNATI, OHIO, September 5th, 1899.

This is to Certify, That Brother Chas. T. Brown is a member of this Division, No. 95, B. of L. E., and has been a member of the B. of L. E. for twelve years, and we can recommend him as an upright, honorable and worthy brother.

He has lately connected himself with the Railway Officials' and Conductors' Accident Association, of Indianapolis, Ind., and said Association has no connection whatever with the Order of Railway Conductors, or any other order or society—it being a distinct organization for the purpose of insuring railway employes in the United States, Canada and Mexico, against accidents. Brother Brown has been appointed Special Agent for the United States, Canada and Mexico, for the Mechanical Department of railroads. We feel confident that you will find anything Brother Brown represents to be just what he says.

E. E. McMILLAN, C. E. [SEAL.]
G. BAKER, F. A. E.

INDIANAPOLIS, IND., September 15th, 1899.

TO BROTHER ENGINEERS:—Having been appointed Special Agent for the United States, Canada and Mexico, for the RAILWAY OFFICIALS' AND CONDUCTORS' ACCIDENT ASSOCIATION, of Indianapolis, Ind., for the Mechanical Department of Railroads, and having been informed by reliable authority that some of the principal representatives of other accident companies have circulated the report among Engineers and Firemen that this Association is connected with certain Orders and Societies; on account of such representations, which are untrue in every respect, I publish copy of above letter from Cincinnati Division No. 95, B. of L. E., which will be sufficient without further explanation.

As all business from Mechanical Department of Railroads comes through my agency, I will furnish every Agent a copy of the above letter, and any application given to an Agent who has this letter in his possession may be the same as given to me in person.

Trusting that I may receive a share of your patronage, and will be more than pleased to add your name one and all, to our list of membership, assuring you that I will use every honest and honorable means to secure your patronage. For rates, etc., address

PISO'S CURE FOR

Best Cough Medicine. Recommended by Physicians. Cures where all else fails. Pleasant and agreeable to the taste. Children take it without objection. By druggists.

CONSUMPTION

ALVA'S BRAZILIAN SPECIFIC.

Or Cactus Blood Cure.

What the Mexican National Conductors Say.

We, the undersigned, CONDUCTORS of the MEXICAN NATIONAL RAILWAYS, and members of City of Mexico Division 159, ORDER OF RAILROAD CONDUCTORS, take pleasure in certifying that we have used the herb medicine known as "Cactus Blood Cure," with wonderful success, and we have also known many others to have used it with like result.

Appreciating its value, we cheerfully recommend it to ALL BROTHERS, and others requiring a remedy for the purification of the blood, as the best known; and we guarantee that a trial will convince all of its merit.

H. H. MORAN,
H. H. GREENLEAF,
M. E. EGAN,
C. H. STARR,

Members of Div. 159, Order of Railroad Conductors, City of Mexico.

Parish Priest's Certificate, Certified to by the Archbishop of Mexico.

CELAYA, October 1st, 1889.

I, Parochial Priest and Ecclesiastical Judge of Celaya, State of Guanajuato, hereby certify that I know several people who have been cured by Don Ramon Alva's remedy.

It radically and effectually dispels all impurities in the blood.

FRANCO M. GONGORA,
Parochial Priest and Ecclesiastical Judge of Celaya.

The above signature is that which he uses in all his business, officially and otherwise, and he is an old pupil of mine.

✠ A. P. ARCHBISHOP OF MEXICO.

This medicine has never failed in a single instance to cure the most virulent cases of Scrofula and Contagious Blood Disease.

In cases of diseases which have been treated with mercury by physicians, it requires a few weeks longer to effect a cure, but a perfect cure is absolutely certain in any case, and when once cured, you will find that all traces of mercury have disappeared.

It is perfectly harmless, and is as good for children as for adults.

After you have been cured by it, we ask, as a favor, that you will give your friends the benefit of your experience, by recommending it.

RETAIL PRICE, \$2.00 PER BOTTLE.

PHILADELPHIA, PA.

erations that have no little force. This is the custom of giving free transportation or reduced rates to families of subordinate employes. It is obvious for many forcible reasons, the most amicable relations should exist between the railroad companies and their employes, and that the latter should feel that the companies are disposed in all proper ways to manifest an interest in their general welfare. The compensation of these employes is low, the service exacting and often hazardous, their opportunities to give attention to domestic affairs are very limited, and as a rule, they are dependent almost entirely on their compensation for the support of their families. It is clearly for the interest of these employes to reside at points on their roads convenient to their business, where homesteads can be acquired, and cost of rents and living expenses are moderate. Such locations may often be some distance from points required to be frequently reached by members of their families, such as schools and markets, and it would seem reasonable, and no more than an equitable part of their compensation, for the company to carry the wives and children of its employes free, or at low rates, for fairly necessary purposes. Provision, it would seem, might very properly be made to permit this to be done.

The foregoing, in a vital way, touches the interests of every railroad employe in the country. Nor is it a matter of less importance to railroad companies.

There is no other business in the world, where great interests are so completely given into the hands of employes as the running of railroad trains. This declaration has been made in the *Magazine* before, but it will bear repeating, particularly when the Interstate Commission says: "The compensation of these employes is low, the service exacting and often hazardous." Taking such things into consideration, any law that denies such employes a free ride on the trains they manage is an exhibition of unparalleled mercenariness. It is not to be presumed that Congress ever intended to enact such a law, or believed that the law they did enact could be so construed.

There is not a railroad corporation in the country, managed by men at all qualified to estimate the value of "amicable relations" between their employes and themselves, who do not know that a law which denies them the privilege of granting a pass to an employe, is a monstrous outrage which no man with a well ordered mind would attempt to defend.

If it be true that the Interstate Commerce law can be tortured to mean that a railroad employe cannot be permitted by a railroad corporation to ride free on railroad trains, then every railroad employe in the country should demand of Congress an amendment to the law which shall effectually

wipe out the iniquitous provision at the earliest day possible.

In response to a circular letter addressed to eighty-five leading railway corporations regarding the relations existing between railway corporations and their employes, a variety of information was obtained. The more important question propounded by the Commission was:

"Is an insurance fund or guarantee fund of any sort provided for the employes of your company, on which they have a right to draw in case of sickness or accident or from which payment may be made to their families in case of death?"

To this inquiry twelve corporations responded affirmatively, viz:

Atchison, Topeka & Santa Fé.
Baltimore & Ohio.
Central Vermont.
Chicago, Burlington & Quincy.
Cincinnati, Hamilton & Dayton.
Delaware & Hudson Canal Company.
Grand Trunk Railroad, Canada.
Lehigh Valley Railroad Company.
Northern Pacific.
Pennsylvania Railroad Company.
Philadelphia & Reading.
Pittsburg, Cincinnati & St. Louis.

In the foregoing list, the Atchison, Topeka & Santa Fé, scarcely deserves a place, as its relief extends only to medical and surgical attention, and the corporation does not contribute a cent.

The Central Vermont Railroad Company has an arrangement with an insurance company against accident, but is of little consequence.

The fund on the Cincinnati, Hamilton & Dayton Railroad is created by the employes; the company contributes nothing.

To the relief fund of the Delaware & Hudson Canal Company, the corporation contributes, but it extends only to the medical department.

The relief secured to employes on the Northern Pacific, consists of 50 cents a day during time of disability, and burial expenses in case of death. The corporation contributes nothing to the fund.

The railroads which have no insurance or relief association, are as follows, viz.

Atlantic & Pacific.
Boston & Albany.
Boston & Maine.
Burlington, Cedar Rapids & Northern.
Central Railroad & Banking Company, of Georgia.
Central Railroad Company of New Jersey.
Chesapeake & Ohio.
Chicago & Alton.
Chicago & Atlantic.

Chicago & Eastern Illinois.
 Chicago & Grand Trunk.
 Chicago & Northwestern.
 Chicago, Burlington & Northern.
 Chicago, Milwaukee & St. Paul.
 Chicago, St. Paul & Kansas City.
 Chicago, St. Paul, Minneapolis & Omaha.
 Cincinnati, New Orleans & Texas.
 Cleveland, Cincinnati, Chicago & St. Louis.
 Delaware, Lackawanna & Western.
 Denver & Rio Grande.
 Detroit, Lansing & Northern.
 East Tennessee, Virginia & Georgia.
 Pittsburgh Railroad, Hoosac Tunnel Route.
 Flint & Peré Marquette.
 Georgia Railroad Company.
 Illinois Central.
 Kansas City, Fort Scott & Memphis, and associated companies.
 Kentucky Central.
 Lake Erie & Western.
 Lake Shore & Michigan Southern.
 Little Rock & Memphis.
 Louisville & Nashville.
 Louisville, New Albany & Chicago.
 Louisville, New Orleans & Texas.
 Maine Central.
 Michigan Central.
 Minneapolis & St. Louis.
 Minneapolis, St. Paul & Sault Ste. Marie.
 Missouri, Kansas & Texas.
 Missouri Pacific.
 Mobile & Ohio.
 Nashville, Chattanooga & St. Louis.
 Newport News & Mississippi Valley.
 New York & New England.
 New York, Chicago & St. Louis.
 New York, Lake Erie & Western.
 New York, New Haven & Hartford.
 New York, Ontario & Western.
 New York, Providence & Boston.
 New York, Susquehanna & Western.
 Norfolk & Western.
 Ohio, Indiana & Western.
 Oregon Railway & Navigation Company.
 Pittsburgh & Lake Erie.
 Richmond & Danville.
 Rio Grande Western Railroad.
 Rome, Watertown & Ogdensburg.
 St. Paul, Minneapolis & Manitoba.
 Savannah, Florida & Western.
 Southern Pacific.
 Texas & Pacific.
 Texas Panhandle.
 Toledo, Ann Arbor & North Michigan.
 Union Pacific.
 Utah Central.
 Vandalia.
 Wabash.
 Western & Atlantic.
 Western New York & Pennsylvania.
 West Shore.
 Wheeling & Lake Erie.
 Wisconsin Central.

The foregoing lists are instructive. Of the eighty-six principal railroads of the country, only twelve make any pretensions towards insurance, and of these there are but three where the insurance is to be in any sense compared with that provided by the various Brotherhoods, and which is exclusively under the control of employés.

The corporations which have organized insurance and relief associations contribute little or nothing, and while protesting that they are entirely voluntary, it is well understood that their purpose is to ultimately break down the organizations of employés, as in the case of the Philadelphia & Reading.

This profound solicitude of railroad corporations for the welfare of their employés had its birth in the fact that organizations of the employés were becoming strong and effective, as also protective, and hence the very modern *idea* of corporation *solicitude*, which in its chief aspects is a duplication of the spider's polite invitation to the fly to come into its parlor.

There is much in the report of the Interstate Commerce Commission of interest, and we shall take occasion at an early day to again allude to it, but the fact should not be disguised that the Interstate Commerce law, as it stands, can be tortured to mean that a railroad corporation, if it chooses, may plead the law in justification of withholding a free pass to its employés to ride on its trains, a feature in all regards reprehensible, and which should be eliminated.

BUT let the committee representing the powerful labor union make its appearance at the door of the general manager's office. It is received with marked consideration. No humble petition is now presented. "We demand" is the language of the committee. And this demand is usually promptly granted, or if it cannot be granted, the fullest explanations are given, and the committee is made to feel that it racks the very soul of the manager to be unable to accede to its wishes.—*Railway Service Gazette*.

Well, not always does the general manager come right down, like Crockett's coon. Very large and "powerful labor unions" have often been snubbed in the past, and, acting singly, will be snubbed in the future, and because of these rebukes and repulses numerous strikes have occurred. To prevent these strikes and secure justice without resorting to them, federation of railway employé's organizations has been begun and is going forward. When it is perfected, as it will be, the high-water-mark of good fortune of all concerned will have been reached. "Roll swiftly on, ye wheels of time, and bring the welcome day."

ENGLAND'S cash investments include every field, civilized and savage, throughout the world, and their annual return is estimated at \$1,500,000,000.

THE new Masonic Temple to be erected in Chicago will cost \$2,500,000, and the building will be the finest of the kind in the world.

THE IMPROVEMENT IN RAILWAY MANAGEMENT.

It is not our purpose at this writing to be statistical. We propose to write of moral, rather than physical forces. We have about so much space at our disposal, and shall endeavor to use it to the best advantage practicable.

It must not be regarded as a departure from our plan to state that there are now in operation, in this country, about 160,000 miles of railroads, which, according to estimates, represent an investment of about \$8,000,000,000, of which it is safe to say, \$2,000,000,000 represent water. These roads employ about 1,000,000 persons.

Such figures furnish a basis for theory and for argument. They establish, beyond controversy, the fact that railroading is the most stupendous enterprise of modern times. A century ago the wildest imagination did not so much as touch the outermost rim of the sphere of the established facts of the present.

Necessarily, railroad management began with railroad building and railroad operations. As a consequence, we have had some sort of railroad management since 1830, when there were, in the United States, twenty-three miles of railroad track in operation. The difference in railroad management then and now may not be as the difference between twenty-three miles and 160,000 miles of track. But while the difference is not so wide, it is scarcely less distinctively marked.

Railroad management, as we write of it now, relates to men—not to machines—and in commenting upon such changes as have occurred during seventy years, we shall include employers, as well as employes.

Men of an investigating, analytical disposition will find in the subject which it is our pleasure to discuss, numerous facts of startling significance. As they proceed in their investigations, they will discover that long established theories, relating to mental and moral improvement, gradually, perhaps, suddenly disappear, while others less medieval, come into prominence.

A writer, discussing "what an American philosophy should be," remarks, "If a genuine American philosophy arises, it must

reflect the genius of the people. Now, Yankees are distinguished from most others by their practical observations and invention. They have a pretty clear notion of what a thing is, and, if it is of value, they take steps to secure it." That is to say, realism, not idealism, is to be the basis of the coming school of American philosophy. It is to be fact instead of fancy. The world, and we are not particular about the starting point, has believed that improvement in men's conditions, always came to them from a real or an assumed upper strata of society, that is to say, that what is called the "upper tondom" of society, by some inscrutable influence, improved what it was pleased to denominate the "lower milliondom." That the man in the castle exerted an elevating, sublimating power over the man in the cottage, and this theory has prevailed throughout Christendom, and still numbers its devotees by millions. Trace it back to its fountain head, find the egg from which it was hatched, and it will be found in the same nest with that other egg, from which has come the "divine right to rule" idea, which is not and can never be taught in any American school of philosophy. In this country, one man is just as "divine" as any other man, has the same right, the same prerogatives, the same privileges. That is the fundamental law—the eternal law. It is the "higher law"—the irrevocable law. If it is disregarded, it is because, here in America, men voluntarily abdicate their rights, uncrown themselves and go into voluntary servitude and degradation.

The "divine right to rule" idea, is a disease, worse than small-pox, cholera, yellow fever or the plague, and, strange to say, the man who by inheritance, or by processes known to our much vaunted Christian civilization, gets money, no matter by what method, assumes a sort of a divine right to rule other men who have less money. That there is power in money, goes without saying, but it is not "divine" power, nor does it confer "divine" rights. There is power in official position in authority, but it is not "divine" power, nor "divine" authority—men can fall prostrate before it, men can crawl in its presence, men can cringe and fawn under its frown, but they do not have

to—and here in America such claims to autocratic power meet with robust opposition, but it must be said that, so far, the antiquated error has not been entirely overcome.

There are thousands of our readers, whose familiarity with the history of railroad management in the United States will at once supply all needed testimony to establish the fact that there has been altogether too much of this “divine right to rule” business in conducting the great enterprise, as well as in other enterprises, to carry forward which employes were required to attempt the task of managing themselves, and in doing this, there being a vast multitude of them, their action necessarily involved, to some extent, the management of their employers, and of the railroads.

To the superficial thinker, to a man impregnated with the autocratic divine right to rule or what is about the same, the dollar right to rule, the idea that employes have a right to any voice in the management of a railroad becomes immensely preposterous. But a moment's reflection ought to dissipate the error. The right to manage ought to be in proportion to the investment, and employes on railroads, if merely dollars are considered, invest vastly more than many stockholders. Besides, they invest their health and their lives, and in all matters pertaining to their well-being, ought to have a voice, and to this, on many roads, it has come and is coming, we believe, to be accepted as a right on all roads.

If history is worth the paper and parchment upon which it is written, there is not to be found a single instance demonstrating that the “divine” or dollar right to rule class ever helped the victims of their authority one inch on an upward career. But it can be shown that in every case, where there has been improvement in conditions, the work was begun by those whose surroundings demanded improvement, that the forces set in operation were from beneath, and not from above, and necessarily so, because those on top were satisfied, they lived above the line of agitation, they breathed the pure upper currents. Their homes were on the highlands. The decrees from above were never for the employé to come up,

unless it was in bowed attitudes to pay homage or tribute.

If there has been improvement in the railroad management of the country, which has elevated the employé to a higher plane, it has had its origin in the councils of the employes, not in one instance, nor a dozen, but in every instance. That there has been such improvement, the proof is overwhelming. Who has gained by it? Everybody. In securing fair wages, the employé has been benefitted. Society has gained in peace and prosperity, and the railroad management has gained immensely and indefinitely in the contentment and fidelity of its employes, what toploftical writers call the *esprit de corps* of employes, the animating spirit of the entire force.

It is now about sixteen years since the Brotherhood of Locomotive Firemen was organized and during most of the same period this *Magazine* has watched with ceaseless solicitude the moral and intellectual advancement of railway employes in every department of the service, as also their advancement in skill, and ability to grasp every new invention adopted to facilitate business. Nor has it been unobservant of any method in management which employers have adopted and which have been improvements upon former methods.

It would appear paradoxical to talk of moral growth downwards, and yet, when pride, ostentation and arrogance get a fall, the victim is really *elevated*. The man who yields up a vagary for a fact, who surrenders an error and adopts a truth, whatever he may have thought of himself, or whatever exaltation he may have fancied he occupied, has really achieved a moral excellence to which he had previously been a stranger, and he should be thankful for the change, without regard to the origin of the influences and forces which have brought about the beneficial change.

Who, of all our readers, has seen a supercilious individual, wrapping around him his robes of authority, and saying to others in acts, which speak louder than words, “Stand thou there, I am better than thou,” and has not felt in every fiber of his mental organism that if such an individual could be reduced to the level of common sense,

he would not be greatly elevated, and have a much more rational conception of himself? A great many railroad magnates, during the past sixteen years, have been thus elevated by influences that have been put in operation by railway employés. But in no one instance have employers sacrificed their dignity. There has been no dwarfing force applied. It has simply been the elimination from their education and training, of a brood of vicious errors, and, as a consequence, in coming down, they have really gone up.

It will be admitted, we believe, that an employer who has experienced such a change, has become a vastly better manager, because he is more in sympathy with those he is required, by his position, to manage.

Our purpose is to avoid all appearance of chicanery in argument. Sophistry is not our forté, and we leave to others the triumphs of word jugglery. We hold that the improvement in railroad management began with employés and not with employers. The employé was the first to discover the necessity for the improvements. For illustration, we shall confine, at this writing, our references to the Brotherhood of Locomotive Firemen with which we are identified. The organization was based on the idea of moral, intellectual, social and financial improvement of conditions. For about sixteen years it has gone steadily forward in its chosen field of endeavor. The organization was not suggested by the employers of Locomotive Firemen. Railroad officials rarely, if ever, discover defects, except in employés. Not so with the firemen. They saw the necessity for improvement all along the line. They concluded to educate themselves first, that they might the better point out to others when changes in the management could be introduced with positive advantage. The great public, quick to discover changes for the better, admits the claim put forth by the Brotherhood and applauds the improvement, and railroad officials, stockholders and bondholders, at least those of them who study conditions critically, yield their assent and willingly declare that a vast improvement in railroad management has occurred.

In this connection, let it be distinctly understood, that we claim nothing for the Brotherhood of Locomotive Firemen, in the way of improving the railroad management of the country, that does not attach to the Brotherhoods of Engineers, Conductors, Brakemen and Switchmen. They have all been inspired by the same ambition. All have been studiously trying to educate themselves for the positions they occupy and for higher positions. In the progress of their work, they have been able to point out where wrongs existed and where mistakes were made. They have been capable of presenting their own grievances and of convincing officials, and as a result, the management has improved. And thus the work of improvement has worked upwards until it has touched Presidents, Vice-presidents, General Managers, Master Mechanics, etc. As we have said, we make no allusion to improved machines, better tracks, rails, bridges, etc., but to better men, better management:

We are not Utopians, nor are we looking for the immediate coming of the millenium. Human nature is the same in all ages. It is not more sublimated now than when Noah built the ark, or Pharaoh's slaves built the pyramids, but it is possible to bring the human nature of the employer and the employé into closer and a more friendly alliance by leveling up the one and leveling down the other, and thus move along together toward the point of mutual appreciation and recognition.

Disagreements are still rife, and the revolution is still going forward. What next? We hold that the next thing to be done to perfect railroad management, is for all the Brotherhoods of Railway employés to federate for mutual protection. Their interests are greater than those of any other class connected with the railway service of the country. One illustration must answer our purpose. Suppose employés are receiving as wages what will barely suffice to sustain themselves and their families, and to lay by a few dollars for sickness or old age, and the order comes to reduce their pay 10 per cent. or any other per cent. Instead of reducing the pay of the employés, the demand is made to reduce dividends 1 per cent. or the

half of 1 per cent., and the same with bondholders. The reduction of dividends and interest would cause the rich no inconvenience, while the reduction of wages would cause widespread distress. This would be a proposition upon which federation could act, resist a wrong successfully and impose no burden upon any one. And thus we could go through the list, demonstrating that federation as it would prevent strikes and make arbitration a certainty, the railroad management of the country would be so improved that the world would wonder why it should have been so long delayed. As a clincher, had federation been applied in the incipency of the C. B. & Q. strike, who does not believe that the strike would have been prevented? Had it been prevented the strikers would have saved \$1,200,000 and the road would be to-day \$10,000,000 better off. Federation will prevent such occurrences in the future, and Employers, as well as Employés, should hail with satisfaction the signs of the times which betoken the coming of Federation.

THE GOVERNMENT AND RAILROAD EMPLOYEES.

A movement has been set on foot in the Senate of the United States providing for arbitrating differences and controversies arising between railroad companies and their employés, as will be seen by the following bill:

IN THE SENATE OF THE UNITED STATES.

APRIL 5, 1890.

Mr. Blair introduced the following bill; which was read twice and referred to the Committee on Education and Labor.

A BILL

To provide a method for settling controversies and differences between railroad corporations engaged in interstate and territorial transportation of property or passengers and their employés.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled. That whenever differences or controversies arise between railroad companies engaged in the transportation of property or passengers between two or more states of the United States, between a territory and state, within the territories of the United States, or within the District of Columbia, and the employés of said railroad companies, which differences or controversies may hinder, impede, obstruct, interrupt, or affect such transportation of property or passengers, if, upon the written proposition of either party to the controversy to submit

their differences to arbitration, the other party shall accept the proposition, then and in such event the railroad company is hereby authorized and required to select and appoint one person, and such employé or employés, as the case may be, to select and appoint another person, and the two persons thus selected and appointed to select a third person, all three of whom shall be citizens of the United States and wholly impartial and disinterested in respect to such differences or controversies; and the three persons thus selected and appointed shall be, and they are hereby, created and constituted a board of arbitration, with the duties, powers, and privileges herein-after set forth.

SEC. 2. That the board of arbitration provided for in the first section of this act shall possess all the powers and authority in respect to administering oaths, subpoenaing witnesses and compelling their attendance, preserving order during the sittings of the board, and requiring the production of papers and writings relating alone to the subject under investigation now possessed and belonging to the United States commissioners appointed by the circuit court of the United States; but in no case shall any witnesses be compelled to disclose the secrets or produce the records or proceedings of any labor organization of which he may be an officer or member; and said board of arbitration may appoint a clerk and employ a stenographer, and prescribe all reasonable rules and regulations, not inconsistent with the provisions of this act, looking to the speedy advancement of the differences and controversies submitted to them to a conclusion and determination. Each of said arbitrators shall take an oath to honestly, fairly, and faithfully perform his duties, and that he is not personally interested in the subject-matter in controversy, which oath may be administered by any state or territorial officer authorized to administer oaths. The third person so selected and appointed as aforesaid shall be the president of said board; and any order, finding, conclusion, or award made by a majority of such arbitrators shall be of the same force and effect as if all three of such arbitrators concurred therein or united in making the same.

SEC. 3. That it shall be the duty of said board of arbitration, immediately upon their selection, to organize at the nearest practicable point to the place of the origin of the difficulty or controversy, and to hear and determine the matters of difference which may be submitted to them in writing by all the parties, giving them full opportunity to be heard on oath, in person, and by witnesses, and also granting them the right to be represented by counsel; and after concluding its investigation said board shall publicly announce its award, which, with the findings of fact upon which it is based, shall be reduced to writing and signed by the arbitrators concurring therein, and, together with the testimony taken in the case, shall be filed with the Commissioner of Labor of the United States, who shall make such award public as soon as the same shall have been received by him.

SEC. 4. That it shall be the right of any employés engaged in the controversy to appoint by designation in writing, one or more persons to act for them in the selection of an arbitrator to represent them upon the board of arbitration.

SEC. 5. That each member of said tribunal of arbitration shall receive a compensation of *ten dollars* a day for the time actually employed. That the clerk appointed by said tribunal of arbitration shall receive the same fees and compensation as clerks of United States circuit courts and district courts receive for like services. That the stenographer shall receive as full compensation for his services twenty cents for each folio of an hundred words of testimony taken and reduced to writing before said arbitrators. That United States marshals or other persons serving the process of said tribunal of arbitration shall receive the same fees and compensation for such services as they would receive for like services upon process issued by United States Commissioners. That witnesses attending before said tribunal of arbitration shall receive the same fees as witnesses attending before United States commissioners. That all of said fees and compensation shall be payable by the United States in like manner as fees and compensation are payable in criminal causes under existing laws: *Provided*, That the said tribunal of arbitration shall have power to limit the number of witnesses in each case where fees shall be paid by the United States: *And provided further*. That the fees and compensation of the arbitrators, clerks, stenographers, marshals, and others for service of process, and witnesses under this act shall be examined and certified by the United States district judge of the district in which the arbitration is held before they are presented to the accounting officers of the Treasury Department for settlement, and shall then be subject to the provisions of section eight hundred and forty-six of the revised statutes of the United States; and a sufficient sum of money to pay all expenses under this act and to carry the same into effect is hereby appropriated out of any money in the Treasury not otherwise appropriated: *Provided, however*, That not exceeding one thousand dollars shall be paid out of the Treasury of the United States to defray the expenses of any single arbitration under this act.

SEC. 6. That no strike by such employes shall be ordered or shall be lawful in such case until after the railroads, or the managers thereof, shall have been requested to appoint an arbitrator and to enter into arbitration, as provided in the first section of this act, and shall have failed for five days to comply with such request.

We confess that the bill we print herewith has on its face the appearance of "filling a long felt want." It reads smoothly, if not charmingly. It refers to differences or controversies which "may hinder, impede, obstruct, interrupt or affect transportation of property or passengers," and when such differences or controversies arise "either party" may notify the "other party" and propose "arbitration" when "if" the "other party shall accept the proposition then and in such an event" the bill provides for proceedings, but "if" the

"other party does not accept the proposition, no arbitration is possible under the bill—everything is in *statu quo*."

Those interested in such matters will be interested in the elaborate machinery proposed in the bill to regulate arbitration between railroad companies and their employes. It will be noticed that three persons are to be selected, "wholly impartial and disinterested," and they are to take an oath that they are "not personally interested in the subject matter in controversy." This provision in the bill, assumes, that when the "differences or controversies between railroad companies and the employes" on the one hand, "hinder, impede, obstruct, interrupt, or affect transportation of property or passengers," and on the other hand "affect" the rights of employes, three men are to be found and commissioned as arbitrators who are "wholly impartial and disinterested"—men who are "wholly disinterested" in the matter of the transportation of property or passengers, and "wholly disinterested" in the matter of justice to employes, they are to be men who know nothing of the "differences and controversies," who have no knowledge of the matters in controversy, who were asked if they have any interest whatever in controversies that impede the transportation of property or passengers, must swear that they are "wholly disinterested," and when asked if they have any interest in seeing justice done to railroad employes must take an oath that they are "wholly disinterested" in such matters. These arbitrators, by the provisions of the bill, must swear that they are that sort of citizen that like the professional or ignorant juror they must assert that upon such vital questions they are uninformed to an extent that no opinions have been formed, and that done they can be commissioned and draw their \$10.00 a day and the arbitration machinery can be set in motion.

It will be observed that the questions arbitrate relate to "differences or controversies which may "hinder, impede, obstruct, interrupt or affect the transportation of property or passengers." What are such differences or controversies? Who is authorized to determine the question?

It is worth while, just here, to devote special attention to such questions.

A railroad company, for instance, reduces the wages of its employes 10 per cent., and sets up its inability to pay more. Does such a reduction of wages impede the transportation of property or passengers? Not at all. Wages are reduced, but the trains continue to move. The employes protest, but it does no good, railroad officials will not listen. The employes exhibit unrest under the great injustice, but the transportation of property and passengers is not affected. The employes threaten to strike against the injustice, but under the law, section 6, they cannot strike, at least a strike will not be lawful, "until after the railroads, or the managers thereof shall have been requested to appoint an arbitrator and to enter into arbitration and shall have failed for five days to comply with such request."

We think it safe to say, that after the order of such a reduction, it would require at least a month for the employes of a railroad system to present their protests to the railroad company, at the expiration of which time the request is made for arbitration. Admit that the company accepts the "proposition" to arbitrate; we incline to the opinion, that in one way and another a month will be required to reach a conclusion. Thus two months have gone by under the reduction of wages.

We now go back to the time the arbitrators are chosen, and the court is in session. Witnesses are subpoenaed, papers demanded, etc. The company has its regular attorney on hand, usually the best the country affords. The employes are required to match him in ability, if they can, without reference to expense.

The employes set up that by the reduction in their wages they are inadequately paid. The railroad company comes forward with voluminous statistics and statements showing that their road is losing money, or is unable to pay dividends, and that the reduction in wages was an absolute necessity. The figures are submitted to the arbitrators, they are sworn to as correct by the President, Vice President, General Manager, Auditor or book keeper. The arbitrators, in all probability, will accept them as true.

The employes will come forward and show that the cut of 10 per cent. in their wages is a great injustice, and they will swear to it as for instance:

Engineers \$4.00 a day, cut 10 per cent. Reduced to \$3.60 per day.

Firemen \$2.00 a day, cut 10 per cent. Reduced to \$1.80 per day.

Conductors \$3.00 a day, cut 10 per cent. Reduced to \$2.70 per day.

Brakemen \$2.00 a day, cut 10 per cent. Reduced to \$1.80 per day.

Switchmen \$2.00 a day, cut 10 per cent. Reduced to \$1.80 per day.

With such figures before them, is it probable, that three men, totally unfamiliar, having no interest whatever in the questions submitted to them, and having the sworn testimony of the railroad officials that the reduction, as we have stated it, or less, is unavoidable, would render a verdict in favor of the employes, and restore to them their wages? Possibly the per cent. of reduction might be modified, but we assume that in ninety-nine cases out of a hundred the employes would be defeated; whereas, in ninety-nine cases out of a hundred, with employes organized and federated they would win a victory, or what is better, the cut in wages would never have been made.

But cuts in wages are only one of the numerous grievances which from time to time are brought forward by railroad employes. Take, for instance, the discharge of faithful employes to gratify the enmity of some underling, as was the case not long since on the Erie; a case so flagrantly unjust and almost unprecedented as to arouse the opposition of almost every man in the train service on the road. The men, engineers, were promptly reinstated by the prompt and resolute action of the Grievance Committee of the B. of L. E., who knew if they were not reinstated the men in the train service on the road would quit work. But had a law contemplated by the bill we herewith print been in operation, before a strike could have been ordered, the whole affair would have been submitted to arbitration, in which case it is exceedingly doubtful if justice would have been done the outraged engineers.

In the case cited, what would have been

the relative positions of the parties to the controversy had arbitration been ordered? The officers of the Erie would have claimed the right, in the interest of efficient work on the part of engineers and the safety of passengers transported, to have the engineers on the road undergo a rigid examination to test their qualifications. On the face of such a claim the intention of the officials would be likely to have the approval of the arbitrators.

The engineers protest, because the examination proposed is unusual, unnecessary, embarrassing, and demanded, not for the good of the service, but to place men, by long service proven to be qualified for their positions, in embarrassing positions. Now, then, what is there to arbitrate? Absolutely nothing. Competent men have been, after long and faithful service, discharged, simply because they refused a certain form of examination: when to prove their qualifications they willingly referred to years of efficient service.

Under the bill we print, the employés of the Erie could not lawfully have quit work to force the Erie officials to do justice to the discharged men until they had proposed arbitration, and waited five days to ascertain if the officials accepted the proposition.

It will be noticed that the bill in question imposes no restrictions upon railroad companies, whatever. They can reduce wages, discharge employés, blacklist them, treat them arrogantly and disrespectfully without penalty of any kind, but when employés would resent such outrages by a strike, they must give the company notice of their intention, and propose arbitration. Then they must wait five days for the company to decide, when, if the company does not accept the proposition to arbitrate, a strike may be ordered. As a consequence, under such circumstances the hands of the employés are completely tied, and redress for wrongs rendered practically impossible.

If the bill contemplated equal justice to employer and employé it would have placed them on equality. It would have provided that wages should not be reduced until the railroad companies had submitted to employés a proposition to arbitrate, and that employés should not be discharged without

the same proceeding. It does nothing of the kind. It is unfair, one-sided and unjust and as such ought to be opposed by every railroad employé in the land.

THE SUPREME COURT OF THE UNITED STATES DECIDES THE CO-EMPLOYE QUESTION.

The following editorial article recently appeared in the *Chicago Tribune*:

The United States Supreme Court has announced by a majority vote its approval of the doctrine that damages cannot be recovered by an employé from a railroad company or other employer for injuries which result from the negligent act of a fellow employé. For some time this question has been agitated in the courts, and the rulings on it have been in conflict. In the Eastern and Southern States the courts have held strictly to the old English doctrine which gave an employer exemption from liability where one employé was injured through the carelessness or incompetency of another, but in the Western States the Judges have tried to modify the rule by holding that it applied only to employés that belonged to the same class, and not where one was employed in a different line of duty or work. Thus two brakemen might be classed as co-employés, but it was denied that such was the case in respect to a conductor and a brakeman or a switchman and a brakeman. A few years ago the Federal Supreme Court was about equally divided on the question, but it now gives its sanction to the old doctrine as upheld by the Eastern and Southern courts.

It is not likely that the decision of the Supreme Court will end the controversy, but much more probable that the State Legislatures will be called upon to enact legislation which will justify all the courts in changing the old doctrine. Such legislation has been had in England in recent years, and in some of the States in this country. The Legislature of Massachusetts has adopted an act modifying the old doctrine and affirming that persons are co-employés only when engaged in the same work and not merely because they are in the employ of the same person or company. The old theory was that an employé took all the risks which ordinarily belong to the business, including the carelessness of those in the same employment, and that as he had the opportunity to know their habits, conduct and capacity, he could guard himself against the neglect. This may be true in many kinds of business where workmen are immediately associated together, but it is not easy to see how it applies to the thousands of scattered employés of a railroad company. Trainmen may be injured in consequence of the negligent acts of switchmen, bridge tenders, track-walkers, train dispatchers or telegraph operators—employés not associated with them on the same line of duty and against whom they had no special opportunity to protect themselves. It is the employer alone who is in a situation to detect

guard against, or punish the negligence of any and all employes. The old rule may be fair enough in most occupations, but it does not meet the requirements of justice in the railroad service where the life of an employé may depend on the discipline which a railroad company maintains over a second employé with whom the first is never brought in personal contact and against whom he cannot protect himself at all.

It would seem that a railroad employé is entitled to as much protection to life and limb as a passenger apart from the unavoidable risks of his occupation. A conductor or a brakeman may have as little ability as a passenger to guard himself from the negligence of a switchman or a drunken engineer, and the one may be as dependent as the other for safety on the discipline enforced and the care exercised by the company. The old doctrine as to co-employes does not apply fairly in the railroad service and it ought to be changed by legislation.

We reproduce the foregoing article in full, because it states the case fully, and in a way that the average reader is enabled to grasp the subject intelligently.

It will be observed that the Supreme Court of the United States adheres to the "old English doctrine which gave an employer exemption from liability when one employé was injured through carelessness or incompetency of another."

It appears from the *Tribune* article that at one time the Supreme Court was about equally divided in opinion upon this important question. Such a division was not creditable to the court. To hold that an employé can obtain no redress for injuries because a co-employé was careless or incompetent, is an indication of gross incompetency, to use no harsher term, on the part of the judges; and the more critically the subject is examined and analyzed the more glaring the outrage upon justice appears. The decision of the Supreme Court of the United States brings into haggard prominence the fact that the higher a poor man goes in search of justice the less are his chances for obtaining it; that in this country the march of the judicial mind is to serve corporations and permit those who serve corporations and permit those who suffer by their acts to seek redress in vain.

The fact is of easy demonstration that the men who secure positions on the Supreme bench are men who have been corporation lawyers, trained in finding law constructions and decisions favorable for the rich and in derogation of the rights of the people, and especially of poor people. As a result,

when such lawyers put on their autocratic silk gowns as Supreme Judges they are fully equipped to quote English law, or any other law whereby the corporation can be sustained and their victims crushed, and it appears that this judicial aristocratic idea is steadily gaining ground in the United States, until, we apprehend, the prevailing idea is that a humming bird in the grasp of a "funnel-shaped" cyclone cloud, stands quite as good a chance of escaping alive as a railroad employé has to secure justice at the hands of the Supreme Court of the United States.

It will be observed that there is no limit to the "co-employé" proposition. It covers pretty near everything. It is an all-protecting shield for the corporation, while death fairly riots in the ranks of the employes. A happier idea never struck a corporation, and the Supreme Court of the United States plays it for all it is worth.

Look at this "co-employé" dodge, this "old English doctrine," and observe its sweep. In the first place, let it be understood of the million of railroad employes, not one of them is consulted as to the employment of a co-employé. An employé may be deaf, color-blind, a drunkard, a knave; careless and incompetent, notoriously unfit for any position, but no "co-employé" is consulted, or has a right to offer an objection, but in addition to all other perils is compelled to accept those which result from incompetency. He accepts conditions because he cannot change nor modify them, and is maimed or killed. The corporation goes into court and pleads negligence or incompetency on the part of an employé, and escapes every penalty.

Imagine a competent, faithful employé, who has been maimed, in court demanding some compensation for injuries received while in the service of a railroad corporation. Imagine the maimed employé minus a leg, or an arm, or an eye; a cripple for life, to be supported by friends or to be consigned to the poor house. He is on the stand giving his testimony. He was crushed in a collision, the result of the incompetency of, say, a train dispatcher. There are no doubts about the fact. The corporation does not deny it; on the contrary admits the incompetency of the dispatcher—admits

that the collision resulted from his incompetency.

The President of the corporation, or the General Manager takes the stand and is questioned something after the following manner:

Q. Did you employ A., the telegraph dispatcher, whose incompetency brought about the collision by which the plaintiff in this case was injured?

A. I did.

Q. Was any co-employé of the corporation consulted?

A. No.

Q. You assumed the entire responsibility of employing the incompetent dispatcher?

A. Yes.

Q. Did the collision occur because the train dispatcher was negligent or incompetent?

A. I suppose it did.

There are no exaggerations in the forgoing. The case as stated goes to the jury. The judge instructs in favor of the plaintiff, the maimed employé, who went down in the wreck.

The corporation appeals. It has its paid attorneys. It keeps on appealing until the case reaches that august tribunal, the Supreme Court of the United States, and then the decisions of the lower courts are reversed, and the "old English doctrine" is established, that a maimed employé has no rights which the court is bound to respect; that the maimed, crippled or killed employé, having accepted employment on a railroad, though competent and faithful himself, is subject to all the penalties resulting from the negligence or incompetency of every co-employé, though in the selection of the incompetent man he had no voice whatever. And this is now the law of the land as determined by a majority of the Supreme Court of the United States; a decision that will make corporations chuckle, while it is notice to employées that they can go down to death with less consideration than attaches to swine or any other animal.

The silk gowned judges who receive \$10,000 a year for such displays of legal knowledge, will be caressed and fêted by corporation magnates, and will dine with the President, and will be accorded great distinction, while thousands of maimed men will do the best they can to keep out of the poor house, and the widows and the orphans will fare worse than the widow

whom Christ speaks of as having appealed to an "unjust judge" to "avenge her of her adversary." That judge "neither feared God nor regarded man," still he was head and shoulders above the Judges of the United States Supreme Court, who, in the face of overwhelming testimony, adopt the "old English doctrine," and decide against cripples, widows and orphans and in favor of corporations.

The trouble is that these Supreme Judges are in office for life, and as they are able to take special care of themselves, and look closely to their digestion, temperature and respiration, first-class funerals do not occur frequently in their ranks. Trained as corporation lawyers, now-a-days, having little or no sympathy with the people, the real aristocratic feature of our governmental system, there is no hope for the people except in a storm of opposition to a policy of injustice and wrong unparalleled for its infamy, unless it can be found in the proceedings of the monster, Lord George Jeffreys, who, as Lord Chancellor of England, earned an eternity of odium, and may have been the author of that "old English doctrine" for which the Supreme Court of the United States appears to be specially fond.

ACCOUNTS have it that the Buddhists of Burmah spare no expense in beautifying the temples of their gods, and in proof of this a description of a new vane of a pagoda at Rangoon, is given as follows:

The vane is about three by one-and-a-half feet broad, and thickly crusted with precious stones and lovely fans of the red Burmese gold. One rub alone is worth 6,000 rupees, and there are several hundred rubies alone on this beautiful thing. At the tip of the iron rod on which works the vane is richly carved and perforated gold ornament called the Sembo. It is somewhat egg-shaped and a foot in height, tipped by an enormous diamond encircled by many smaller ones, crusted on like barnacles. All over this exquisite oval object are similar clumps of diamonds, no other stones being used for this part.

After all, it is difficult to define a distinction between pagan and christian in the matter of decorating temples of worship. The pagan idea is, that such things please their gods, just what the christian idea is when they lavish their wealth upon temples of worship, may be a little more difficult to ascertain.

THE ILLINOIS STEEL CO. AND ITS CLUB HOUSE.

Elsewhere in this issue of the *Magazine* will be found a communication signed, Myron S. Perrigo, Joliet, Illinois, in which he seeks to show that in an article published in the March number of this *Magazine*, page 198, serious injustice was done the Steel Company by the writer thereof, and he proceeds to set matters right.

Our recollection is, that some one of our correspondents sent in a marked copy of a paper, containing some account of the Steel Company's splendid donation, in which it was said that, "*the efforts of the company to care for the welfare and enjoyment of their operatives are highly appreciated.*"

What was said about the money investment of the Steel Company's \$50,000 was correct; that 6 per cent. or \$3,000 on the investment was about right, is not denied, but in addition, Mr. Perrigo says, the Steel Company pays \$4,500, making the donation to the employes \$7,500 a year—equal to \$3.75 for each employé. The Steel Company, therefore receives no dividends in cash, from its investment, but on the contrary is annually out of pocket \$7,500.

The Illinois Steel Company is entitled to the foregoing statement, and had our information included the facts as set forth by Mr. Perrigo, they would have been included in the article published in the March *Magazine*.

That part of the information in our possession at the time, and which we reproduce now and italicize, was what more particularly interested us, "*the efforts of the company to care for the welfare and enjoyment of their operatives.*" When a workingman is fairly paid for his work, he does not ask for the "*efforts*" of any one to "*care*" for his "*welfare*" and "*enjoyments.*" He is a free man, ought to be independent and self respectful and self reliant, and if he possesses such traits of character he will not submit to the coddling and nursing of corporations or any other employer. This corporation talk about *caring* for his *welfare* and his *enjoyment* he will spurn. Why, in God's name, upon any principle known to American citizenship, may not operatives make efforts "to care for the welfare and enjoy-

ment" of employers? When a workingman accepts the oversight of an employer, in any matter not connected with his work, he sacrifices his manhood, his independence, his self respect; he begins to ask permission to live, he begins to crawl, he degrades himself, and if he has a wife and children, he drags them down with him. He lowers the standard of citizenship. He accepts favors that he cannot return and for which he can offer no manly compensation and thereby enters the ranks of mendicancy, and his employer, say what he may, knows that he is a fly caught and held in his net. This the Illinois Steel Company knows, and its club-house investment, was made upon that principle. And here is the proof of it unwittingly given by Mr. Perrigo. He says:

"The company however does hope to profit by the enterprise." Aye, always the hope of profits animates the corporation, directly or indirectly, the profits are to be secured from the pockets of "their operatives," just as the spider, when he sung his lullaby song to the fly, hoped to banquet on him. But how does the Illinois Steel Company "hope to profit" off of their operatives? Mr. Perrigo tells, as follows:

"It hopes to have healthier men, happier men, and men leading lives more nearly akin to that which is man's birthright."

In the foregoing, we have developed the height and depth, the width and breadth, of the *efforts* of the Illinois Steel Company "to care for the welfare and enjoyment of their operatives." The Steel Company at the outside, gives \$7,500 to 2,000 "operatives," \$3.75 a head, or for 300 working days one and a quarter cents a day.

Now for the *profits*. The company "hopes to have healthier men"—men of more muscle, more strength, more endurance, with this additional strength, the Steel Company reasons shrewdly. It says, doubtless, "with added strength, a man is worth, ten cents a day more, therefore by expending on our men \$3.75 a year, in the aggregate \$7,500, we shall get back \$60,000, a clear profit of \$52,500. Mr. Perrigo says: "The company, however, does hope to profit by the enterprise. It hopes to have healthier men," and we have indicated that ten cents a day is a prudent estimate of what a healthier

man could earn, more than if he were not "healthier." But it will be noticed that Mr. Perrigo nowhere intimates that the "healthier" men are to receive "healthier" pay, not a bit of it. The "healthier man" can take his profits in free baths, free dumb-bell exercise, free ten pins, etc., while the Steel Company will coin these felicities into cash, and riot in all the luxuries of wealth. But, says Mr. Perrigo, "In fact, it (the Steel Company) hopes to get a return in just such ways as the writer of the article in question (the *March Magazine* article) would not like to admit."

The Illinois Steel Company hopes to make "profits" by investing \$7,500 a year for the "welfare and enjoyment of their operatives." The men are to be "healthier" and therefore able to earn more; we say, ten cents a day, and say for 300 working days \$30.00. The company expends for his "welfare and enjoyment" \$3.75, net profit per man of \$26.25, and for 2,000 men \$52,500. But suppose the healthier men earns only five cents a day more, then the Steel Company would pocket \$26,250 a year. Did a spider ever sing such a Patti song to any fly?

But says Mr. Perrigo, the Steel Company's operatives are to be "happier men." That is to say, if they are "healthier" they will have better appetites, better digestion, stronger hearts to force the red currents of life through their veins; they will sleep sounder, can do more and better work, earn more for the Steel Company, and therefore will be "happier." A beautiful picture. Mr. Perrigo does not intimate that the President, Directors and Stockholders have ever addressed their operatives, about as follows:

"Operatives, the club house has been of incalculable advantage to you, physically. Under our policy you have been taught to bathe and keep clean, your appetite has improved; you are healthier and stronger; you can do more and better work, and we now propose to advance your wages ten per cent." That would be likely to make "their operatives happier men." But as there would be no *profits* to the Steel Company, the address is postponed indefinitely.

But, Mr. Perrigo says the Steel Company want their operatives to "lead lives more

nearly akin to that which is their birthright." Well, by all the gods in a heap, what sort of lives were the 2,000 men leading before the Steel Company took them in hand. The American's birthright is, "life, liberty and the pursuit of happiness." The American's birthright is independence. The American who appreciates his birthright will scorn the paternalism of corporations. He will permit no man to determine for him his food, drink, apparel, amusements or anything else. If a workingman he will not crawl in the presence of any other man. He will scorn dictation in all matters relating to himself or his family. He will honestly earn his wages and spend them as he pleases, and when he fails to see that such things are his "birthright" he has started on the down hill race to degradation.

THE announcement is made that a Georgian has invented a method for railroad trains to pass on a single track by going over instead of through each other, and the following description of the way the invention works, is given:

One train acts as a trestle, the cars being much lower than the ordinary ones, and very heavy. The engine is a portable drawbridge, which can be lowered, the rails on it fitting to the track rails with a flared flange. Rails run along the top of the other cars, forming a continuous track. The rear car is provided with another drawbridge, lowered like the one in front.

"When the two trains are to pass, one remains stationary, with the front and rear drawbridge lowered, and the other approaches at full speed, runs up the front drawbridge, along the track on top, and down the rear drawbridge. The bridge train then raises its drawbridge and steams off in the opposite direction.

"All things are possible mit Got," said a Dutch judge when he decided that a man bit his own nose off.

ONE of the results of opening Africa to civilization will be the extermination of the elephant—already 65,000 of the animals are slaughtered for their tusks and the product is estimated at \$850,000. The elephant, like the American buffalo is too valuable to live.

JOHN PALMER, of Union City, Michigan is named as the inventor of the baggage check system.

Dead Men's Brains.

AWAY back in the boyhood days of my own life, when the realities of active life had not been faced, and all was of the summer gold tint of a happy boyhood home, under the protection of dear, loving parents—both of whom have gone to their rest—it became my Saturday's holiday task to aid an old gentleman, who was moving from one boarding-place to another, to change his possessions from one to the other place.

Among his moveables were two small, but solid trunks, which aroused my curiosity and called for more strength than was mine; and the old gentleman, when asked what made the trunks so heavy, answered, "dead man's brains," and this only increased the curiosity already quite active enough. Subsequently access was had to the trunks, and many happy hours were spent in culling from the "dead men's brains" the material which has, to some considerable extent, influenced my own life, its purposes, and to much of an extent, the results.

But our firemen may ask, why is all this of interest to us? It may be; every man has an ambition to be something or nothing, and whether this ambition is voluntary or involuntary, frequently the latter, for if any man declares he has not an ambition, then he has involuntarily an ambition—for no man can stand still; if he does not go forward, then he does, as a plain matter of fact, go backward, for he must gain or lose; it is impossible to stand on any pivot, you must and do gain or lose; it is against natural law, hence impossible; then each man must have an ambition. It is easy to be nothing at all; *anybody* can do that, and there are quite too many in the trade now, too many who are satisfied to be and remain anywhere in the procession, so long as he gets his pay Saturday night, but he never "looks up," either with his eyes or mentally; he does not wish to be on the upper floor, because it is not his nature, and so we will leave him and his class on the ground-floor, wishing for them the result we do not dare to hope for, for the nearest to nothing on the face of the earth is a man or woman who has no ambition to climb higher in the scale or to better their position in life.

Happily most men are uneasy, and also a large majority of them *love work*; hence it is easy to stimulate a man who loves to work and who has a little factor of unrest in his composition. Ambition may not be, according to Webster, but it is really a state of discontent with matters as they are, and a disposition to be in a better condition. Then the question of "how to get there" becomes the point to be considered and acted upon.

The "know how," as the darkey concisely stated it, is the important point, and the man who knows how to do a thing is not by any means the best man to do it unless he also has other, and as essential requisites, and many a man who can fire equal to any man forgets that he has elements of uncertainty in his make up which keeps him from promotion, and many a man on the right hand side of the cab never gets further up, because there are elements of uncertainty in his make up or in his conduct that makes him an uncertain factor, a man into whose hands it never would do to put the control of men; and in all this I do not refer, in the case of the fireman or the engineer, to liquor or drink, but to the general make up, the peculiar features of his disposition; and a man who can study and remedy his personal defects is on the high road to prosperity. Now, if a man has even a spark of ambition, and has the moral courage and the manly self-denial to say, I won't drink another time, I won't carry any more "jags," I won't swear "cuss words" again, and I will be on hand five minutes earlier and climb over the old girl (for what fireman doesn't call his machine his girl or his beauty?) and see that everything is right at the first, and other as important points. Reform, with a big R, then that man is elected by a large majority to go in and win some of the laurels of success that are open to all. But here comes up one of the enemies of all men—impatience. No sooner does a man start off on a new tack than about the second day he expects a pat on the back, or some recognition, and that is his first blunder; don't expect it; don't look for it; don't want it; shut up like a clam; mind your own business with a death-grip determination; stick to it; hug it; sleep with it; wake up with it; and bear in mind, when a man starts out to be somebody and something he may expect the last resort weapon of the bully, the slouch and the "ne'er do well," viz.: sarcasm the sneer but it won't hurt you, for as soon as you prove your right to a possible improvement, it is queer how many friends you will have, and how much time they will spend on a lift if you ask them to show you something.

So soon as a man shows the disposition to learn something, he can get all the help he requires or asks for, and it happens to be a fact that the men who know the most are always willing and able to instruct others, and will do so pleasantly, while the men who really know the least affect to know much more than they do, and are full of secrets and "personal" methods.

There is no royal road to knowledge, it is a rocky, winding path, lots of sharp corners and thorns, and if you stub your toe some one else can't bear the pain; as in euchre.

you not only can, but must "go it alone," and so few men ever realize what an hour means, or what a dollar means. An hour of solid work each night will learn a man all he can know for ordinary purposes of Figures or Grammar in six months, because if a man gets an Arithmetic and begins on it he will in six months get so interested that he will "get her open another notch," and then when he finds what an hour an evening will do he will use three or four of them a week, and then, its the old rule, get a man or woman to thinking for themselves, and they don't need any more stimulus.

You can learn History, Grammar, Algebra, Geometry, Logarithms, and a lot more in the same time you whine, and smoke, and drink, and fool away the hours that should be made to make you more of a man, and if you get to going in this direction you will watch your boys and "steer them", and you will get acquainted with the girl you courted a few years ago and find out that she's a better wife than you are husband in many cases, and finally, the boys will look you up, and then you can exercise your influence for good on them in return, and get one or more of them started on the same line, and your own boy will get interested, and you will be looking out for him. Give the boy a chance to be something; don't stand in his way.

Now, just a confidential hint, don't tell your wife or best girl. If the locomotive engineers and firemen of the United States should follow this programme for five years faithfully, honestly, and would do only *one-half* as faithful service as they do for the railroad company they work for, Austin Corbin and his swaggard never could put into effect the brutal orders they now carry into effect, nor any man who is really a thief and a robber, but in the executive management of a property, would never dare to insult men who were posted and in thorough sympathy with each other.

You don't believe it? You have a right to your, and I to my opinions. Study cause and effect, reason, look out for the possible reasons for certain moves, and you will find in THINKING that men who cultivate the faculty of thinking are the men who are most dangerous, most determined, best poised, always ready, and in all cases they control others, according to their thinking superiority *over the other* only.

If a man only will, he can occupy almost any position he chooses, honestly and honorably, and he can do it in the hours that he usually wastes if he will, and it surely cannot be out of place to add, that the man who seeks first, God's blessing and help, and next, to be something, can as surely accomplish his wish as he is devoted to it and true to his purpose, and if a man has something else to look up to, he is certain to suc-

ceed better if he only puts a selfish purpose on the whole.

But actually, I have become so earnest in my subject as to forget the "dead men's brains. Any man can have access to books. Good books are invaluable. If you don't know what books to read, ask somebody that does know. You can get help by asking; and there are 'hoards' of books not in every community that would be free given to the firemen's associations if they were sought out and asked for. Spend one evening a week in searching for books; lots of 'em can be had if the object is stated. Go at it boys; get a vote, then go at it earnest. Take them and then take care of them. You can get additions to your libraries if you will. Hunt them up; they are there; *then study them. Learn one thing a day, that makes 156, if you study three times a week, and when you have learned 156 things you will kick yourself because you didn't do it before, and then you will "r-o-o-t" for the rest.*

If you once get interested thoroughly in it you won't rest; it will show itself, and you will begin to "pick up." Digest it; the company will find out something has happened; of course they must increase your pay, but don't forget the record-book; the figures are there, and so is all our records; another book, good and bad, indifferent; all, the final result in either case is lost saved. But the man that *knows how* is likely to quit the foot-board for something else, and to succeed. Now boys, pack your tender as full as she will carry; don't throw any coal over, but examine and handle every lump, and the more "dead men's brains" you cull over and pick up the more good stuff you will put under your skirts into good live brains, and you and your children will get the benefit.

Now, for a matter of fact story, and then we will rest. Eight years ago, not over seventy miles from New York City, one fine May morning an engine was being taken out of the round house for her regular trip seventy-three miles out and back. The "fixins" for indicating had been put on her the night before, and a man far more widely known now than he was then, quietly smoking and waiting for the "make up" before he got on. The engineer was a man of unusually pleasant moods, but the morning he was cranky as an old hen. He did it is not known, but in coming to the table he ran across the table and put his pipe "cocked" on a stub track on the other side of the table. Here was a pretty kettle of fish. The engineer commenced to swear very volubly. The yard master came and confusion existed. The quiet man came up and said a few words to the yard master; men flew one way and the other, and then he called Mr. Engineer down

the ground and talked to him about one minute. Nobody else knew what was said for sometime, but the way that pilot was leveled and things were put into trim was a caution. The train was made up and went off. Now, let the engineer talk after his return: "You can kick me a week and can't hurt me." "What did he say?" Told me the truth." "Well, did that hurt you?" "Did you hear about the eel that was skinned, and got used to it?" This was all that we fellows got for about a week, until the new engineer took us into his confidence and told the whole story, in about the following: "When he called me out of that cab I expected he wanted another man put on; but he began quietly, and just skinned me by saying; 'If you are going to stay at the foot-board end of "121" to-day and I've to go on the pilot I want you to do a little better than this. Now, my friend, you know better than this kind of a circus. If you are mad, why don't you go home and rest? I can't risk my neck out on a pilot end with a crazy man. Now, either tell me you will or you won't. If you will, climb up, and stay there; if you won't, go home and stay there.' So you see he didn't let me say one word, and I climbed back, feeling as though I'd been spanked. At the end of the trip out he cleaned up his indicator and then washed up and put on usual clothes, and said to me, 'Come, let's find dinner.' While at dinner he told me how to run her home, and then told me that 'I knew enough, but was a careless fellow, or that I didn't care, and that a man of my capacity ought to be careful, and if I could be trusted there was no need of choking off engineers' pay, &c."

These facts the writer is knowing to. The sequel is: That engineer went home and told his wife. She told him she was thankful he didn't break his neck or get discharged, and he found that his wife knew of his faults, and so he began then, in 1881, to be something. After two years he climbed on a fast night mail, then to Assistant Division, and then, in 1885, his old friend who skinned him, sent him a letter to a manufacturing concern, and he is now chief engineer with \$50 a week. He don't swear or smoke; owns his own house—all paid for, and he is not careless in anything. He studies his hour a night, and the last evening I spent at his house his wife was a girl again over old times.

Climb as high as you can. The man who studies and works for knowledge cannot be robbed of it, and it is his fault if he don't combine valuable qualities with a personal independence—dangerous to demagogues but safe for honest purposes.

Uncle Silas.

THE people of New South Wales and Queensland are building rabbit-proof fences, and already 887 miles have been completed.

Men Who Succeed, and Why.

ONE of the best known and most respected writers has well said, that a person who desires some calling in the business of life that shall insure him, or her, a certainty of success, may with safety apply themselves to one of the three paramount callings of providing food, shelter or clothing for the human family, and if this be well done, success is sure.

And this is right. But there are other issues which when correctly viewed are as important, and really are at the bottom of and control either of the items mentioned,—in fact, all of them,—as well as the numberless important ramifications which are so intimately connected with each one and all these absolute necessities as to be absolutely inseparable from them, that we purpose to bring it to the attention of the young men, particularly, as it is to them that we must look for future improvements and economies which must go to make up the grand total that is to keep the millions of workmen busy, and to maintain the pre-eminence of American manufactures of every kind, and extend in many ways, so as to utilize the immensity of the natural resources of the United States, which to-day are little more than generally known—and in doing this, to furnish food, clothing and shelter.

The new factor we shall introduce is one of the most essential importance and of the most absolute necessity—it is *thinking men*. There are too many people who follow on in the old and beaten track, not because they do not think, but for the reason that they do not train themselves to thinking, and as a consequence they do their work in an imitative way,—much as a parrot or monkey imitates the sounds or actions which happen to strike his fancy,—and as a natural result they never accomplish anything new, because it is easier to follow than lead; and in too many cases the young man prefers a pleasant social evening rather than a quiet wrestle with some mechanical, chemical, metallurgical or economical problem, which as he turns it over and over gives new combinations, and consequently new difficulties to overcome, and also trains him for a higher position in life, or business, by the cultivation of those faculties that enable him to combat successfully with the most important processes in connection with the great business interests in which millions of capital are invested and hundreds of thousands of workmen employed. And in hundreds of different channels the capital is *always* looking for men who can concentrate upon some one point and perfect it; or solve the question at issue, and thus gain by some new combination and application, either time, facility, cost in trans-

portation or production, or in some other way where a rich reward is sure if only the plan is thoroughly practical and applicable; and the man who has mastered his preference for idling away his evenings and leisure hours, has accomplished one important step towards becoming a thinking man. Workmen with a practical view of life and some mechanical training, have, if they only realized it, a vast advantage in this open race, and they now have no good excuse for not joining in the race: the valuable scientific and technical papers, magazines and books can be had, to make any man who *will* read thoroughly conversant with all that goes on, for less money than many men pay for drink and tobacco, so that no increase of their expenses need follow; and in less time, if good use is made of it, than most men idle away in profitless discussions or lounging about places which they would be better for avoiding.

The habit of spending one hour each evening in reading or thinking, or in sketching, soon becomes a fascinating occupation, and the man who does this soon becomes more interested in his daily tasks, and of more value to his employer. The first few steps taken, it is comparatively easy to mount, one by one, if the effort is continued, to a position which would at first have appeared visionary; and the habit formed in this process makes any man vastly more important to whatever interest he may attach himself.

There are so many notable instances of precisely this class of men in our own country, that there is no need of particularizing any. Any man of ten or twenty years' observation can count them in his own vicinity; and if the real history of the first step was known, some problem presented itself, and the application of the mind to a proper solution of that one problem, perhaps insignificant in comparison with subsequent ones, had such an influence that the person became a thinking man in the broadest sense of the term, and followed on as new problems came to him, solving each one easier than before.

But there are difficulties and discouragements, and they are frequent, and the man who attempts this line of work must confine himself to the perfection of each idea, or he will become a nuisance instead of a success. And here is where the man who can handle tools has a great advantage; he can see difficulties and can plan to avoid them, and if not so prolific in number, he will produce tangible results in a way that will win him all the aid he needs, and his reputation is soon established for finishing as he goes on; while the man who is not a practical one will perhaps conceive some idea and partially adapt means of producing the desired result, and then the

man of tools and experience must complete the working out of the idea by re-invention and re-adapting, so that the finished machine is only like the original in the fact that both embody the same idea.

There are so many channels in which broad avenues are open that there is plenty of room for all.

The food problem is as yet but little attempted. In clothing we can only quote Mr. Atkinson, who says: "If one-seventh of the cotton lands of the state of Georgia were as well cultivated as some few plantations have been, then that one-seventh of the cotton lands of Georgia would produce the whole crop of six million bales of American cotton;" and leave us with ten millions of acres of land to raise food or clothing from or upon; and the same may be said of shelter. With such possibilities as this before us,—and the figures are actually true,—then what does exist for men who will cultivate their perceptive faculties, habits of application, and the exercise of continuity and concentration, and by so doing not only benefit themselves, but the human race as a whole.

The motto of the beautiful art of shorthand is, "To save time is to lengthen life." Perhaps too many never consider how much time they waste, or how the utilization of time now wasted would largely increase the number of men who succeed and leave enduring works behind them.

Thomas Pray, Jr.

AIR BRAKE PRACTICE.

We have on our table, from the press of the *Locomotive Engineer*, 96 Fulton street, New York, a copy of J. E. Phelan's, *Air Brake Practice*. The author is an honorary member of the B. of L. E., a member of the Railway Master Mechanics' Association, and division superintendent on the Northern Pacific railroad. A practical locomotive engineer, and a thorough and intelligent investigator of locomotive appliances, Mr. Phelan is just the man to discuss the Air Brake in a way to be of the greatest possible benefit to those who are required to handle it. The author says:

"The author has written entirely from the outside, as a runner and shop man—and has endeavored to make the subjects clear to men in the same walks of life."

That this has been accomplished there is convincing proof on every page, and the elaborate engravings of the brake, which accompany the work, are valuable aids in elucidating the mysteries of the invention the great value of which is nowhere questioned. Mr. Phelan's work is admirably arranged and the intelligent engineer ought to experience little difficulty in mastering the subject in all of its details.

MECHANICAL.

Communications relating to Locomotive Running, Firing and Management, and other mechanical topics, are solicited for this Department.

Contributors are requested to be brief as possible, to write on one side of the paper only, and to forward copy so as to reach the Editor not later than the tenth day of each month.

Boston, May 7, 1890.

Editor *Firemen's Magazine*:

DEAR SIR:—In compliance with my promise to send you an actual diagram from one of my locomotives, and the figures from actual fact, I enclose a cut made at exact size by the American Bank Note Company to my order, from the original diagram, and in this diagram the error of indicator spring, (a very important factor) has been corrected.

The diagram was taken from a 20"×24" cylinder; wheel, 50" diam.; speed, 107:65 revolutions per minute, or almost sixteen miles an hour on a twelve mile grade of six to sixty-two feet per mile, and is one of over twenty that were taken in the forty minutes we were raising the grade. The load was twenty-six full box cars—coal, grain and lumber, with over twenty tons in each of nineteen cars, and from seventeen to eighteen tons in each of the others.

The object was to test an engine that had some changes in her valves and motions, with the usual diversity of opinion. The M. M. of that section ordered a train made up of the heaviest cars to be found in a yard, and we backed in and began our pull." The M. M. made seventy-two miles with her—indicators on each side. Such are the general terms of the cards being taken.

The questions that I promised your columns are actual horse-power, pounds of water and steam per horse-power per hour,

and per hour and minute, all of which you will find below. If my own time had permitted it was my intention to have given you one of the fast passenger engines, but it has been impossible, and this has been delayed to the last moment for June number, if, indeed, it is in time.

A is the line of boiler pressure. B is the atmospheric line of the instrument. C C is clearance in volume of cylinder from piston head to the valve face. D is an arbitrary point on the expansion line from which the pounds of water per hour, &c., are figured, and is located clearly, so that any one can figure it. The whole diagram is exactly a reproduction of the original by mechanical means, and is elegantly done, and your readers can measure it or compute it, the scale being 80 pounds to one inch vertically.

The indicated horse-power of this side is . . . 373:84

The indicated horse-power of other side is . . . 376:42

Call indicated horse-power of both sides . . . 747:68

or double that of the smallest side cards.

Then we have a case of actual power of

747:68 horse-power under above conditions from the M. M's. report on the company's books.

Computing by Rankine's data (the most reliable of any known) at the point D we have 20277:3 pounds of water used for one hour in the doing of the above amount of horse-power, 747:68, or, 27:12 pounds of water for each horse-power each hour, or 346:288 pounds of water evaporated each minute to give 747:68 horse-power. This practically answers your whole question, so far as my part of the contract goes. But as my records show the evaporation of the boiler at about that horse-power to be 6:125 pounds of water with one pound of coal we will add one more factor, viz: That locomotive, at that horse power and under those conditions, requires 56:536 pounds of coal each minute to pull that load up the grade named, in the time and at the rate given. From this data much more can be had, if only your readers will figure it out.

These diagrams have a different appear-

ance from those in your May number. These are from a heavy load at slow rate of speed. Those in May are a high rate of speed, and probably no correction is given on the indicator spring. But in general work few locomotives are running that will show 27 pounds of water per horse-power, with load corrected for error of indicator spring and clearance volume fully added. Regretting the demands on my time are so great as to prevent my doing more in this line and trusting this may please you, I am with best wishes,

Thos. Pray, Jr.

SAGINAW, MICH., April 22, 1890.

MR. EDITOR:—I see by May advance sheets that I have made a statement that don't look well in print, viz: "Heat applied to water will produce steam in the exact proportion of 179 to 1, whether that water is in a chemist's laboratory or a steam boiler." This statement conveys a different impression to the mind of a reader than I intended it should. The statement should read like this, viz: The same degree of heat that produces steam in the proportion of 179 to 1 in the chemist's laboratory will produce like results in a steam boiler. I am not responsible for the cluck valve on bottom of suction pipe in the description of device for drafting water thirty-seven feet. I never saw a cluck valve, it should be check valve. Now, here is a good *modern* rule for determining the horse-power generated in any kind of a boiler when running. First, notice how long it will take to evaporate one inch of water in the glass gauge; divide this into 60, which gives the number of inches evaporated in one hour. Second, multiply the average diameter where evaporation took place, by the length of the boiler in inches. This multiplied by the number of inches evaporated, and the product divided by 1728, gives the number of cubic feet of water evaporated in one hour; one cubic foot of water evaporated is allowed for one horse-power, also a pump or injector should deliver one cubic foot of water per horse-power per hour, and an engine uses one-third of a cubic foot of water per horse-power. Example: A boiler 5 feet in diameter and 20 feet long evaporates one inch of water in five minutes, how many horse-power are generated?

Length of boiler 240 inches,	240
Diameter, 60 inches,	60
1 inch evaporated in 5 minutes. 5) 60	14,400
	12
	12
	1728) 172800
	100 H. P.

This boiler is generating steam enough for a 300 horse-power engine. N. B.—Dr. Wilson's coal cuts no figure, the amount of water evaporated determines the horse-power.

"L. L. C." had some questions and an-

swers in the April *Magazine* which the length of my article prevented me from noticing. I see "E. S." has disposed of them properly. "L. L. C." gives a definition of direct and indirect working engine that I have never seen before. I never saw the terms applied to an engine in any other sense than "Vulcan has used them in *Magazine*. Will "L. L. C." please say where he got his authority for using them in this sense he did? One definition may be as good as the other, but I don't like the idea of having the locomotive transformed into a direct motion engine when I have been educated to believe it was indirect.

The rule for finding the throw of an eccentric given by "Vulcan" and "E. S." is correct, but here is one that is more simple and equally correct. The throw of an eccentric equals the difference between the heavy and light sides. Thus, measure from axle to outside of eccentric; if it measures eight inches on heavy side and three inches on light side the eccentric has a five inch throw.

I was much interested in the indicator diagrams shown by "Vulcan." They are the first ones I ever saw that were taken from a locomotive, and are good for the boys to study. I don't like the looks of those cards, and I'll tell you what I think of the matter with them. The admission corner is rounded too much, especially in cards 5, 6 and 7, showing that the port is uncovered too late in the stroke. The steam line is too much from admission to point of cut-off, showing that the opening for admission of steam is insufficient, and steam is withdrawn. The point of cut-off is not well enough defined, showing that the valve does not close quick enough. What does "Vulcan" think about them? I would think the 148 ought to have her valves doctor'd especially if she was to be run at high speed. I have some cards taken from large Corliss, and if interest enough is shown in these matters, will publish them.

I fully agree with "Vulcan" that an injector would not work with air pressure but not for the same reasons. The reason the admission of air ruins the working of an injector is because the air enters somewhere in the suction end and destroys the vacuum which it is necessary to have to raise the water to the action of the steam. Now, an air pressure from the boiler would create a vacuum in a suction pipe just as well as a steam pressure, but when this pressure came in contact with the water it would never carry it farther than the check valve, or, out through the waste pipe. Because it could not condense the water, thus imparting its velocity to the decreased body (as between water and air) it would be against 120, therefore no result. As "Vulcan" has conceded that condensation is

play an important part in the working of an injector, it would now be in order for him to admit that Roper's explanation is correct, which explanation, as reproduced by me, he rejected in *Magazine* for June, 1888.

Vacuum.

MR. EDITOR:—The advance sheets of the Mechanical Department are at hand, and we gladly notice that the department is gradually but surely gaining favor with the readers and writers of our membership, as is evinced by the constantly augmenting number of communications which are sent in every month, and the deeper undercurrent of study which they manifest is taking hold of all classes who are in any manner connected with the locomotive department of the various roads, for some of our correspondents frankly admit that they have just commenced to climb from the lowest step of the ladder, while many others who have reached the top still find that there are greater heights of knowledge to be reached, and they are not so far above their fellow-workmen but that the discussion of subjects pertaining to their business still proves interesting to them and instructive to others.

PUMP DIS- PLACEMENT.

"Uncle Silas" says that I am both right and wrong in my correction of his former article on the displacement of a pump plunger, and as that is a rather startling announcement, I have carefully read his explanation of the matter, and find that "Uncle Silas" is so far right that if you assume a double stroke pump, his answer is correct; but as I looked at the matter from a locomotive standpoint, and as our correspondents ever mean locomotive, even when they say engine, I answered with that understanding, and as I have never seen or heard of a double action pump being employed as a boiler feeder of a locomotive, I, as a matter of course, could not allow the statement to pass unchallenged, as it might in the future produce erroneous impressions. It was with the same idea—of saving a waste of valuable time—that I wanted to stop the spread of an error endorsed by so eminent an authority on mechanics as our valued friend "Uncle Silas," for while he was careful to specify "up stroke and down stroke," others might not be so careful to read and understand the proposition as intended by our "Uncle."

DR. WILSON REVIEWED.

Our "Uncle" then goes for Dr. Wilson in great style, and gives quotations from Joule and Regnault corroborated by Prof. H. A. Rowland, which utterly controvert the false reasoning which the doctor has erected on a few extracts, taken with a view of "twisting" the sense to suit the arguments, or rather the statements, of the

doctor, for as "Uncle" says, all assertions of the doctor to the contrary, "de fax am dar," and I am pleased to have "Uncle Silas" refer to the lessons which might be learned from the indicator, as I have been at particular pains to obtain a set of cuts of indicator diagrams, which are published in the *May Magazine*, not so much for the sake of convincing the doctor as to disabuse the minds of some who might take "words full of sound and fury signifying nothing" to mean something. As the diagrams illustrated show some very recent tests, it is to be presumed that they will be better evidence of what steam is doing for us than the most emphatic assertions of the doctor to the contrary. In this connection let me say that I was highly delighted to read "Uncle's" dialect letter, in which he credits the indicator man with being able to adjust the valve motion by a simple following out of the suggestions, a study of the diagrams made to him, and am really glad to find one "old timer" who believes that theory and practice are not antagonistic, but harmonic, and that the best practice will in reality be the one indicated by theory as correct. I have ever held that it was a poor theory, or a poor practice, either, that did not show itself in the coal hole to the benefit of the company or the "boy" with the scoop.

"VACUUM" "Vacuum" gives some tables in regard to heat units to raise steam, and calls attention

DR. WILSON.

to them to prove that the doctor was at fault when he made his assertions about the length of time it would take to get up steam, and then he comes down to hard-pan in the shape of personal experience, and seems to doubt the statement made that any fireman could get over the road with the small amount of coal as stated by the doctor, but if "Vacuum" will take notice, even that small amount can be figured out to be enough, if figures are arranged for it. "Vacuum" then proceeds to tell us of some of his coal shoveling which somewhat surprises me, old hand at the work that I am. He says that their 18x24-inch moguls consume about 10 tons of coal in a trip of 116 miles, and that on the other division it takes as much as 13 tons to make 138 miles. This so far exceeds anything in the line of coal burning that I ever saw, that I stand aghast and amazed to think that "Vacuum" should have any time to trade and chew tobacco, wipe sweat, or do any of the other things which are in the line of work, and then have life enough left in him to tell us about his daily job. Please do not think that I am poking fun at you. Brother "Vacuum," in these remarks, for in all my service in firing I have never supposed that the amount of coal as stated was ever burned by one man in one day. Our division is nearly 50 miles long, and we

make a round trip for a day, and during the trip we use about 4 to 6 tons of anthracite, thus averaging not over 5 tons, and our trains will average about the same weight as theirs—say 1,200 tons one way and 800 tons the other way. Some of our boys think that they have to work hard, but I think that they would not like to have a job in Michigan at any price. I like to hear of the state of affairs in the different sections of the country, and think if we were better posted in regard to them in other sections, we would rather bear the ills we have than fly to others we know not of. But you will pardon the digression from the subject, for I do not imagine that there is a man at the scoop who wants to throw one shovelful of coal more than is needed to keep up the steam pressure to the maximum point, and I suppose that "Vacuum" is no exception to this rule. In regard to the amount of weight in a train, the power used in moving it, the amount of water used up into steam, and the proper way of getting at the power by the amount of steam, instead of heat units, "Vacuum" will see that he fully concurs with me in my opinions as expressed in the *May Magazine*. I hope that the facts poked at the doctor will be enough to satisfy him, and that it will not be necessary to prolong this controversy to any greater extent.

AIR TO THE FIRE. The admission of air to a fire is a point which "O. R. & N." wishes to have discussed, in order to find out which would be the easier on the flues, to admit air through the fire or over it. As the engine is supposed to be a free steamer, the air admitted is presumably that which is to keep her from popping, and is in reality not needed for combustion; this being the case, it would seem to be the best policy to admit the air above the fire, and thus save the fire from being worked, while the air will be heated enough in its passage through the fire box to not injuriously affect the flues; if admitted through a thin fire it would be cold air, too, and would have to be warmed up before it got to the flues, the same as the other.

COLD AIR IN FIRE BOXES. "A. A. L.," who says he is only a wiper yet, but wishes to learn all he can, puts several questions, and in answer I will say that I cannot see how flues could be injured to any greater extent by air drawn in by the blower than they would if the exhaust did the work, provided all other things were the same.

BROKEN ECCENTRIC STRAPS. If the go-ahead eccentric rods or straps were broken, the back-up rods could be used to connect to the top of the links, provided that they were of the same length, and the eccentric cams were shifted to the forward motion position; but probably the

most practical way to manage a case of this kind would be to simply change the eccentric rods of the back motion to the opposite forward motion, and not shift the cams at all, and as the cams should be of a size, the change should not affect any part of the machine, except to the extent of being obliged to work her in the corner.

LEARNING ABOUT VALVE MOTION. J. B. Ward tells us of the benefit which the members of his Lodge derived from listening to a lecture on valve motion, illustrated by drawings on the blackboard, and says that they got a better idea of the subject than they ever had before. The necessity for a more intimate acquaintance with this somewhat mysterious part of the grand machine by which we earn our bread and butter, seems to be felt, and attempts have of late been made to enable those who desire to study its different aspects, and thus to become thorough masters of the subject. Our friend J. A. H. has gotten up a large model of valve motion, for lodge purposes, and there are several smaller and less expensive models which commend themselves by their simplicity and low price; so that no one now lacks a full understanding of the matter if they feel inclined to know.

THROW OF ECCENTRIC STRAP. That lively fellow, "Eccentric Strap," thought that he could celebrate St. Patrick by giving us a lecture on mechanics, and he has certainly made a more lasting celebration than he could have gotten in any other way. "E. S." goes for "L. L. C." because the latter says that "the throw of an eccentric equals twice the width of one steam lap with twice the lap of one side of the valve added," and says it is an error; but this is true in general, it is equally true that in some cases it is as "L. L. C." stated it, for if we turn to our "Fornepage 582," we will find that the elevated railroad has some engines with 5-8 inch steam ports and 5-8 inch outside lap, so that the travel of her valve is just twice the combined length of those parts, or 2 1/2 inches. The rule, however, does not hold good on any other class of locomotives, and is therefore no guide, as other dimensions besides the size of the ports and the lap have to be considered in fixing the travel of the valve, which is of course determined by the throw of the eccentric. As we agree so fully on lead, position of valve, and position of piston in the cylinder, it leaves nothing to say on these points.

WHEEL QUESTION. In regard to the wheel question which has been pending some time, and which "A. A. L." has still a mind to keep before the reader in spite of the fact that he has repeatedly failed to answer points at issue, for fear to do so would decide the question against

him, I can only say that if "E. S." cannot bring conviction to him, it will be no use to try any one else; but the point so ably put in the last article by "E. S." has been advanced before and elicited no reply from "A. D."

KEYING
A LOCOMOTIVE
sion we had in these pages a few months ago in regard to the proper place the main-pin of a locomotive should occupy when it was being keyed up, and I very well remember that I seemed to be singularly alone in advocating the quarter position as the best one, and I allowed the matter to drop at that time simply because it was a thing that could not be settled by argument. I have ever been of the opinion that the place to key at was when the pin was in such a position that it pressed the point of its least wear parallel to the rod, for as this has to turn in the brasses without binding, it will assuredly allow the smaller diameters to pass freely. The point, then, to decide was, at which period in the revolution of the pin is it subject to the most wear, and I found that in this, as well as most other things, there were two sides to the question, for when the subject was talked of among our round-house men, who are ever at work with brasses, the prevailing opinion was, that the pin ever had its largest diameter parallel to a line drawn from the center of the axle to the center of the pin, and I was assured that they ever calipered at that point to get the largest place on the pin; but, strange to say, a short time after, in helping one of these same men reduce the brasses of a locomotive, we found, by very carefully made and repeated measurements, that the rule did not hold good in that case, for the pin was largest at about the point indicated by "E. S." but I did not yet feel that it would do to proclaim it as a universal rule, even if it had the support of reason and common sense, and was awaiting further developments. It would certainly seem as if the pin would wear away more at the dead-centers, while subject to the severe strain brought upon it at that time by the admission of steam at full pressure, and that this wear would continue around the pin in an ever decreasing degree as the pressure is diminished, until the steam is exhausted, when of course the strain and the wear would be reduced to the minimum point. I am therefore ready to meet "E. S." half way, and agree with him on fixing the point at the upper forward eighth or the lower back eighth, if this will be satisfactory to "E. S."

RUNNING HOT
IN
BACK GEAR.
The admitted wear of the pin when going in forward motion, being changed when run the other way, will no doubt account for the phenomenon of run-

ning hot when running in back motion only occasionally, but our boys on the L. do not seem to have much trouble with their machines, which are run in both directions. I suppose "there is nothing like getting used to things," as the eel is said to have remarked when he was being skinned. On our road we never pull a train when running backwards, and do very little of it, except when going for trains at the foot of the hill, so that we have not had any serious trouble on that account, and have thus not paid as much attention to the matter as it may be necessary to give it in some sections, where from force of circumstances it may have to be done frequently.

CYLINDER
HEADS
BREAKING.
While we have no reason to doubt the statement that our friend makes, it does seem a little strange that such should be a fact, for if a broken cylinder was to result every time a locomotive is shut off in a hurry, we should have a great many more heads to repair. Nor do I yet see how the dirt and cinders (strangely perverse as they are to get into places where they are not wanted) could by any means overcome the obstacles in their way, and get into the cylinder to do the damage charged to them. As I view the action of the piston while running in this condition, I find that its action is ever to expel whatever it succeeds in drawing from the steam-chest or pipes up the stack, and not to draw anything in from the side, as would be the case if the motion were reversed. Will our friend "please give us a reason for the faith that is within him?"

FIRING WITH
VERY LITTLE
FUEL.
"E. S." then ventures to express a mild astonishment at some of the "Doctor's" figures on fuel used by some of his firemen, and frankly admits that he could not "hold a candle" to any such men in firing, and then he gives us the benefit of his largely varied experience in firing for fourteen different railroads, which is a greater number than most of us can brag of; my own experience in this line being limited to but one road, which I have served nearly thirteen years; nearly ten of which were put in, in a laudable effort to furnish steam for other men to use up; but as I have given some idea of our "hard coal firing" in a part of this article I will not go into our style of work again at this time; but if the subject should prove of sufficient interest, I may at some other time give an article on "hard coal firing."

While "E. S." admits that he never got over any road with the very small quantity as stated by the "Doctor," I find a large difference between his figures, and the amount used by our friends in Michigan, and also that the amount used on his road does average at about the same per 100 miles as it

does here, and that there is therefore not so much of a difference between the South-west and the East as there is between the latter and the North. As our division is nearly all down hill one way, and up the other, we have to let her "pop" some of the time, but our general practice is to have them do as little of it as possible, for every pound of steam blown away requires a certain amount of heat to replace it, and this of course means more fuel for the company and more work for the men.

NO CHANGES
INVOLVED
BY A CHANGE
OF DIAMETER.

There seems to be no difference of opinion on the questions asked by "J. L. S.," about changing any other parts when the diameter of the cylinder is changed, and the verdict is that there is no change required in any of the other working parts of the machinery.

CHANGING
SIZE OF
WHEELS.

While on the subject of changing the size of parts I wish to have the opinion of our correspondents on the point whether a change in the size of wheels would necessitate the changing of any other parts of the running gear of a locomotive?

CUTTING AN
ECCENTRIC

"Max" asks some questions, the first one being a rather odd one: "How to cut an eccentric?" A few experiments in this line have established the fact, that the quickest way to cut an eccentric, was to run it without a proper amount of oil, but as this is not a very satisfactory way, on account of the objections to it which the managers of most roads have, and the penalties which they inflict on the "cutter," it is to be assumed that this is not what "Max" wanted to know, but that he probably wished to have some information about the method of constructing an eccentric, which I find is not as generally understood as may be supposed. An eccentric cam in the first place is turned up in the lathe to a true circle as any other wheel, and if it were to be attached to the axle with the centre by which it was turned, coincident with the centre of the axle, it would have no throw and would not be able to communicate any motion to the rods attached, and it is only by fastening the turned up true wheel to the axle, with its centre out from the centre of the axle, that we obtain any motion, and the amount of this motion does not depend on the size of the eccentric, but is determined by the distance which the centres are apart; the so-called throw of the eccentric being equal to twice the distance that the centres are apart.

SETTING
ECCENTRICS.

A slipped eccentric can be set by a number of methods, but one of the quickest ways is to set one by the other one, which is done as follows: Place the locomotive on

the dead centre on the slipped side; let us for the sake of clearness say right side and use forward centre. The piston having reached the front end of the cylinder, must now be forced toward the other end, and the valve must be open to the amount of lead which she may have, no matter which way she is to be moved. By this it will be evident that the valve should occupy the same position, no matter where the reverse was placed, and if say, the forward motion were slipped, a mark made on the valve stem when in back-gear, should occupy the same position when in forward gear, and if it does not, the eccentric must be moved until the marks for both motions are alike. Another way is to place the locomotive in the same position as before, and after carefully blocking her to prevent moving, give her a little steam, and then by slowly turning the slipped cam until the steam issues from the front cylinder-cocks, which should be left open for that purpose. As this would prove that steam was then being admitted to the cylinder by the valve, the presumption would follow that she was nearly right.

LENGTH
OF ECCENTRICS
AND OF
SIDE RODS.

The length of the eccentric rods should equal the distance as measured from the centre of the axle to the centre of the lower rocker-arm when the arms are in a perpendicular position; of course a part of this distance is covered by the strap and the link, and so much of it as is made up by this will have to be taken from the rods.

As a matter of course it is evident that the side or parallel rods of a locomotive ought to be equal in length to the distance from centre to centre of the wheels which they connect or couple, and as the wheels of locomotives differ, so of course must the length of the rods.

HOW TO
EXPLAIN THE
ACTION
OF STEAM.

The admission of steam to the cylinders is not so intricate an operation as many seem to imagine, but from the fact that it is not possible to watch the steam in its rapid passage through the steam-chest, the valve and the cylinder, many a man has been promoted to running, who, if asked how the steam acted could not have explained it to the inquirer, even if he had an idea of how it did act, which some, after years of service on the footboard were frank enough to admit they did not. The use of sectional models which seems to be on the increase, will do much to help the earnest student, and in the meantime I would suggest that "Max" has appended to the ends of his arms a ready combination, with the like of which I was able to demonstrate the action of steam. When asked once upon a time to explain, I spread the fingers of my left

hand, and told my querist to please imagine the cracks between the fingers to represent the two steam-ports with the middle one to represent the exhaust-port; then with the other hand formed a bow, the hollow of which I said was to represent the exhaust cavity of the valve, while the end of the fingers and the ball of the wrist formed the edges of the valve, with the fore-arm acting as a convenient substitute for the valve-stem. I then moved my improvised valve back and forth, opening and closing the ports to the steam and the exhaust, as nearly as I could in exact counterpart of the real machine. With this rude contrivance I was able to show that I knew what the steam was expected to do, and how it did it.

TO FIND THE HEATING SURFACE.

To find the heating surface of a boiler it is necessary to multiply the length by the height of the plates which form the sides and top of the fire-box, and to this the area of the flues must be added; this is found by multiplying the inside diameter by the decimal figure 3.1416 to find the circumference, and then this figure will have to be multiplied by the length of the flues, and the final sum reduced to square measure; if the circumference has been taken in inches, the length must also be taken in inches, and the final product divided by 144 to bring it to square feet; the area of one flue having been found, it must be multiplied by the total number of flues in the boiler to get the total, and when the flue area, is added to the fire-box surface, we have the total heating surface of the boiler.

BOILER PRESSURE.

I rise to explain that I meant the whole inside surface of the boiler was subject to the action of the steam, and did not intend to be understood as saying that the part of the boiler below the water-line had to strain on it, as our friend "Vacuum" has apparently understood me. It is only a few months ago that this question was discussed, and at that time I stated that every part of the boiler was subject to the steam-pressure, and that the part below the water-line had to carry the weight of the super-incumbent water in addition to the regular steam-pressure. If, as it seems, my language in the last article lacked perspicuity, I owe my readers and "Vacuum" an apology, for my aim has ever been to make my articles plain in style as I possibly could, and if I did not succeed in this I hope that I shall be pardoned.

PUMP SECTION.

There has been a long accepted rule that water would not rise higher than about 34 feet by the pressure of the air outside of the pump; for this is in reality the power which makes the water rise in the pump-

barrel, when by the action of the plunger the air is removed out of the barrel; such being the case it is not clear to me how the addition of another pipe can make water come up higher than natural laws have determined. Some stress is laid on the fact of a vacuum, (not a Saginaw "Vacuum") being formed in the extra pipe, but it would seem to me that this would have a tendency to draw the water to it, instead of to the main pipe, nevertheless as the "American Machinist" is good authority on mechanics, we will have to accept it as a fact and await further developments.

THE VEXED WHEEL QUESTION.

Our "Elder" deserves a medal or special mention at least for the perspicacity, which enabled him to notice what had not been seen and commented on by any one else, namely that the spokes in the small wheel of "A. D.'s" bicycle, which are moving at a greater speed than the upper spokes of the large wheel, are caught and reproduced by the camera, and we would respectfully refer the query to "A. D." for an answer.

SLIPPING OF WHEELS WITHOUT STEAM.

"Evanston" who has just formed an acquaintance with the *Magazine*, writes to give an explanation of wheels slipping when running down hill without the use of steam, and while he can not agree with our friend "Lockwood" in his fine spun theory on the effect of the "centrifugal lift and tangential throw," he has a theory of his own about it being caused by a certain "atmospheric back pressure in the cylinder reduction ports." I honestly confess that I do not know what is meant by the "reduction port," or to ascribe it to a mistake of the printer in making reduction, out of what may have been intended for eduction, but in either case I cannot see where the back-pressure necessary to slip the wheels is to come from; for according to our observation with locomotives running under these conditions is, that the only action of air is to retard instead of accelerating the motion of the piston, for when we are running down our hills, (of which we have a goodly number) we always find our machines holding back against the train, and being pushed along by it, nor does this seem strange when the facts are examined. When running down hill here, we place the reverse lever in the corner, and thus give the valve full travel; now after passing the forward dead centre the valve remains open on the forward steam-port, and the piston acts as the piston of an air pump in drawing the air in the steam-chest and the pipes out, and on the return to force them up the stack. I fail to see where at any point of the stroke we have anything but resistance to a free movement, and it was with the object of diminishing

this resistance, that many of the roads are now equipping their locomotives with the so-called "relief valve," which is attached to the steam-chest and opens at every stroke at the suction of the piston to admit air, which at the return stroke is forced up the stack. Within the past three months I have run a number of our locomotives furnished with these valves, and while watching the stream of sparks thrown up out of the stack with every cylinder full of air, I have received a very vivid object lesson on the subject of valve action, which is also corroborated by our firemen, who say that the new valves are a nuisance, so far as the fire and fuel is concerned, for they keep working the fire almost as much by the air they expel, as it is done by the steam, and if we run very fast the pop and safety valves hardly suffice to get rid of the steam produced by this constant fanning of the fire.

Vulcan.

PINE PLAINS, N. Y., April 1, 1890.

MR. EDITOR:—I will make an attempt to answer "L. E. C's" questions in April number.

1st. "Lead" is the width of the opening of the steam ports at the beginning of the stroke of the piston. On the steam side of the valve it is called outside lead; on the exhaust side inside lead. The advantage of the lead, is to have preadmission of steam in the cylinder before the piston has reached the end of its stroke, this causes the preadmitted steam to act as an elastic cushion in front of the piston and absorbs the momentum of the reciprocating parts at that instant, and also causes the smooth working of the engine at high speed and greatly reduces the wear and tear of the working gear.

2d. The entire absence of lead would cause a jar and pounding in the cylinders and would wear the working gear more than if it had the required amount of lead.

3d. When the engine is on the forward dead center the valve is just opening the front steam port.

The last of "L. E. C's" questions is beyond my depth, so I will leave it for the more knowing ones to answer. If I have made any mistakes in trying to answer these questions, I will be very much obliged to have them corrected.

Harry E. Pulver.

ALLEGHENY CITY, May 7, 1890.

MR. EDITOR:—I will ask some of the "boys" a question: Suppose you break an arch bar of a tender truck, how would you repair it so as to take your train to the terminal station?

I would like to hear of some records of fast time made by some of the brothers.

Buckeye.

Review of the Reviewers.

Being absent on business, and looking about for a location, I had neither time nor opportunity to write anything for the May number of the *Magazine*. And as "Vulcan" was being pushed to the wall and had begun to whine, I see from the advance sheets of the May number that several others have set in after me anxious to get my scalp; but if they do get it they will have a bootless trophy, for they won't get hair enough to swing it to their girdles. But it is not taken yet.

I will now resume where I left off. I did not think "Vulcan" would feel himself so hard pressed as to abandon fair and honest criticism and resort to a conglomeration of misrepresentation. After stating that I "had given another instalment on steam vs. horsepower," he said I "had given nothing new in calculating horsepower differing from Watt." Then why do you let it trouble you so much? Ever since I commenced writing you have devoted about as much space to me as you have to all the other writers in the Mechanical Department.

"Vulcan" says my "rule would have to be changed for every variation of speed, while Watt's rule furnishes a constant factor." Let us look at this a moment and see how sharp "Vulcan" is. Watt's 33,000 is his constant factor for a minute's work, 150 is a constant factor for a constant pull. Now, if your piston speed is 400 feet, you use 400 as a factor in estimating your horsepower; now, let the piston speed be 800, do you do the same amount of work as when the speed was 400? No, you claim to do double the work. Then what change do you make in your formula? Put 800 in the place of 400, but let the 400 remain and take for your divisor one-half of 33,000 and it gives you the same result as if you had used 800 as a factor.

Now, take 150 as a constant factor, speed 220, and it gives the foot pounds for a minute's work for horses of the Watt's standard. Then take the speed 440 feet, as with the engine twice the work is done, and as with the engine you can get the proper result by using the factor 440, or retaining 220 and taking one-half of 150; therefore a one-eyed man can see there is no constant factor in either, only as custom uses it. Watt's in his estimate of horsepower used one minute as the unit of time; but the most of the estimates now in mechanics take one second as the unit of time, which is one step in advance towards a constant pull.

Next we find "Vulcan" saying that Doctor Wilson don't "act fair towards steam." I would be ashamed to act unfair to as little a thing as steam. I have given it credit for all it is worth, and more too, as I shall prove by your own standard authors before I close this article. "Vulcan" says I "admitted a

pressure on the piston of over 34,000 pounds as a constant pull." I never admitted nor said any such a thing. Neither "Vulcan" nor any other man can find any such admission in any of my writings. What I said was this: All I could find as a starting force was 34,020 pounds of steam pressure in the cylinder, and that you could never have that after starting (this engine is 19"x24"), afterwards I said you did not have that much even to start on, and the only proof that will refute what I have said, is to apply a force against the wrist pin until the wheel slips. If that demonstration shows more than 34,000 pounds, sixteen ounces to the pound, not "dinagraph" measure, but actual weight or tension, then I will surrender the point. "Vulcan" don't seem to know the difference between a starting pull and a constant pull after starting. Yet he tells us the dinagraph makes the starting pull 48 pounds to the ton, and when going 2½ miles per hour the pull is about 3 pounds per ton and at 5 mile speed about 6 pounds per ton, and before you can get 5 miles on your run he has a speed of 50 miles and a pull of 12 pounds per ton.

Now, "Vulcan," it is in order that you stand up and explain through the columns of the Magazine at what point of the speed between starting and 2½ miles, you change from 48 pounds to start, to a pull of 3 pounds and then from this point does your force gradually increase to 12 pounds which accelerates your speed to fifty miles at the fifth mile, or does it keep bobbing up and down? This you must explain or give up the "dinagraph." I mean business.

Again, "Vulcan" says, I "wish the horses credited with every foot they move the train, while the piston speed is all the credit steam should have." Must we believe that "Vulcan," the critic, the exponent and champion of firemen, of the laws of mechanics, is so grossly ignorant of so simple a law to make the above statement when the rule at this point is so plain that any one ought to know it without books if he has a thimbleful of common sense? And now, for his benefit, I will quote the rule so that he may not again expose his ignorance. Rule: Multiply the force in pounds by the space passed over in feet, the product will be foot pounds of work. Now, if you can apply steam along the track or rail, you can so credit it, but if you can only use it in the cylinder against the piston head, you must be content with the distance the piston moves. It is a pity that steam has to be confined to such narrow limits; you cannot even estimate its force on the wrist pin, because this goes a little over three feet while the piston goes two. Therefore, instead of being "so unfair as to need no further comment," I have been so fair that it can't be controverted, and is in accord with all authorities on the subject, "Vulcan" excepted.

AMOUNT
OF
STEAM.

"Vulcan" says, "what I have written on the subject of the amount of steam made and used does not require any argument to refute;" an easy way to dispose of a knotty subject, but it is "Vulcan's" style, for he is minus any arguments unless somebody has told him. And he claims the amount of steam and mean effective pressure have been determined frequently and with great accuracy." I admit it has been frequently determined, but let us see with what accuracy. All your rule-makers for calculating horsepower of engines, during last year determined that you must have two-thirds boiler pressure, average throughout the stroke, in the cylinder; and "Vulcan," two or three months ago, with the infallible "indicator" accurately determined it to be considerably more than two-thirds, and it was as accurately weighed and measured as medicine is weighed on the apothecary's scales. But now in the May number of the Magazine "Vulcan" comes to the front with flying colors, and a great parade of diagrams and says it has been recently accurately determined by the infallible "indicator," and *mirabile dictu*, they find only 50½ at one end of cylinder and 51½ at the other, boiler pressure 151 pounds. How the mighty has fallen in a few months from two-thirds and more to one-third, a long step towards the truth. Please have that "indicator" determine accurately some more times. It is the best one I ever heard of. If the apothecary weighed his medicines with such accuracy, the undertaker's business would soon be on a big boom. It requires no further argument to confirm my infidelity in the indicator, for it has not left "Vulcan" steam enough to blow the whistle. Now, "Vulcan," if you don't blow the whistle pretty soon I will have to blow it for you. If I gulped down as you do, what everybody writes about steam, what it does, how much is made and used, without investigation by at least the rule of common sense, I would not have had anything to say on the subject. There is nothing very astonishing in the statement that a train pulled 20 miles per hour, takes only one-eighth as much power (steam) as it would to pull it 2½ miles per hour. However, it does make a pretty strong case stated that way. But I stated it a little differently, yet that is about the size of it, and very easily explained with a "dinagraph."

Yes, I was led to make a few MOMENTUM. casual remarks about momentum, but it is not the subject under discussion and there is considerable momentum in a locomotive when it is running 20 or more miles per hour, but not much in the steam. Momentum is what "Vulcan" depends on to take him up all the grades, and he says that is what took

"Fireman" up the hill, and Fred Taylor's cogitations converted him to embrace momentum. And "Uncle Silas" mixes it with his steam and finds it a very important factor. And if it was not for momentum you would get your train about as far with steam as a paper wad gets from the muzzle of a shot gun when driven out with a charge of powder.

QUOTATIONS AND THEIR VALUE "Dr. Wilson quotes from Rankine and Dana all about heat units to be transmitted into horsepower to show that a locomotive could not possibly do the work which they do, because the heat units are not found in the coal. *Let me say here once for all, I am not discussing the LOCOMOTIVE, it is STEAM. I have never denied what locomotives are doing. My position is that you don't use the amount of STEAM that is claimed, and from "Vulcan's" own statement in May Magazine, the "indicator" only shows half as much steam as it did when I commenced writing. Hadn't I better write some more? Again, my statement that a horse could exert a force or pull of 600 pounds, or perhaps some could exert a pull of 1,200 pounds, seems to stick in "Vulcan's" gullet so that he can neither get it up nor down. I thought I made this plain enough for a child to understand; so I will recapitulate some remarks. Five men are considered equal to one horse either in pulling or carrying a load. The load for a soldier is estimated at 30 pounds, not that he can only lift thirty pounds, but carry it all day. Then "Vulcan" is as weak in body as he is in mind if he cannot pull 120 pounds; you may harness yourself up in any way you desire, throw your body forward and stick your toes in the ground similarly to a horse in the act of a heavy pull, and if you are honest you will admit that men not weighing more than 175 pounds can pull to make a tension on a rope of 240 pounds, only 65 pounds over their own weight. Now, a horse is said to be equal to five men, then multiply 240 by 5 and you will have what a horse ought to do, and not a very large horse at that. I presume that it will be necessary to tell "Vulcan" that this force or pull is to continue only for a very short time, one or two seconds, not all day. Can you swallow it now, fixed up in a capsule?*

Mr. "Vulcan," I have a problem for you to solve, viz: Take a drive wheel 5'-6" diameter, cylinder 18"x24", wrist pin one foot from the center of the driver, and perpendicular over the axle, how many pounds pushing against the piston acting through the driving rod on the wrist pin, will make a pull on the link behind the tender, of 1,000 pounds tension? Then turn the wheel half around, placing the wrist pin perpendicularly beneath the axle, in this position the pin is between the axle and the

rail, then how many pounds of push against the piston will give a pull of 1,000 pounds tension on the link behind the tender?

Please solve the above and explain the method of solution in next number of *Magazine*.

Now, we will receive "Vulcan's benediction": "While we cannot help admiring the courage with which the doctor has attacked almost all the laws of mechanical philosophy, we fail to find that he has seriously wounded any of them, for his arguments were generally founded on wrong premises," etc. If so, you ought to have had an easy time to refute them, but so far you have only objected to some points, skipped others and referred some to intelligent firemen, others to well informed mechanics, but have refuted nothing yourself, by sound argument and logical reasoning; and referring to authors with whom I disagree on certain points don't help you unless you can explain what they say in a different light from what I see it. These things you have not done. Therefore I must claim that every point I have made still stands out in bold relief, and will be accepted by the thousand and only rejected by the tens, who are wedded to their old opinions, though convinced against their will, hold their old opinions still.

Here I will give "Vulcan" a little rest give him time to hunt up the answers to the various questions I have asked him, but in his haste has passed them by unnoticed. I presume he thought it good policy, the less said the better. Now, "Vulcan," when you get the answers all up in good shape *blow the whistle*, if you have steam enough.

Now, for a few moments I will pay my respects to Fred J. Hill, the only fair man of all my critics, for he alone is not ashamed to sign his name to what he has written; the I will turn my attention to the bushwhackers who are skulking behind an "incognito." Mr. Hill, in the *March Magazine*, says he was struck by L. A. Wilson's question, "How much steam is used in a 10"x16" engine?" It may be consoling for him to know that he is not the first man who has been struck by L. A. Wilson's questions, although the sometimes hit pretty hard, as the truth generally does. Yet he need not be astonished if he will do as I told him, lay down what said by the rule of common sense, and he will find it to fill the measure. The trouble with you all is you calculate you have the utmost possible amount of steam that can be made from all the water you take in your tanks and then claim you use and utilize it all in your engine, but Rankine says the efficiency of steam lies between the limit of $\frac{1}{100}$ and $\frac{1}{10}$ in ordinary cases (Rankine's Applied Mechanics, page 630). If it lies between those limits, let us take a mean between them, which is $\frac{1}{100}$. Now, take $\frac{1}{100}$

of what you claim and see how much more you have for efficiency (to produce effect) than I said you *might* have; get this impressed on your mind then you can look at steam, how it acts, and learn wisdom. Because you *think* a 12'x3' boiler can convert more than 10 barrels of water into efficient steam is no proof. "Uncle Silas" says Rankine does not teach what I quoted and that there is no need going back on Rankine. "Vacuum" says he will take the second horn and go back on Rankine. "When Doctors disagree students can do (think, believe) as they please."

Here I will call "U. S." to a halt. Get Rankine's Applied Mechanics, turn to page 630, and here you will find just what I quoted, whether Rankine teaches it or not. And as an "open confession is good for the soul," I will admit that I did not do Rankine justice in my last article, for I only quoted a part of what he said, which led to a wrong conclusion, but I will try and atone for it in this by making sufficient quotations to make his meaning comprehensible. Rankine is your ideal, "*Who more than any man living or dead stands out pre-eminently as THE man who has investigated all these laws:*" "*a profound investigator and reasoner, and did not jump at conclusions or even at theories.*" (Italics mine.) Now fur yure bennyfit I will cote sum more fax. Rankine says, "the duty of an engine is the work performed by a given quantity of fuel such as one pound." "The duty of a pound of coal varies in different classes of engines from about 100,000 to 1,900,000 foot pounds. These are extreme results as respects wastefulness on the one hand and economy on the other." "In good, ordinary engines the duty varies from 200,000 to 700,000. Our best engines are only yielding an efficiency of from about $\frac{1}{10}$ to $\frac{1}{5}$." "Furnace and boiler $\frac{1}{10}$." "Steam $\frac{1}{5}$." Again he says, "The efficiency of the steam lies between the limits of $\frac{1}{100}$ and $\frac{1}{5}$ in extreme cases, and $\frac{1}{100}$ and $\frac{1}{5}$ in ordinary cases." Pretty wide margins. Here Rankine investigates the fuel, furnace and boiler, steam, engine, and the efficiency of the steam, everything except the water and a match to light the fire. These you can have "ad libitum." Now I am sure Rankine won't object to a plain common sense interpretation of what he has written, even if all the "incogs" do. Then let us take the boiler and engine, or locomotive, or the machine ready for work, whatever you may call it, and here is the interpretation: Taking his average in good ordinary engines one pound of coal gives 450,000 f-o-o-t p-o-u-n-d-s of work. Of course this is to heat and boil the water to generate the steam. The product of the furnace and boiler is $\frac{1}{5}$ of what? Of the average 450,000 foot pounds of force from the coal. Then $450,000 \times \frac{1}{5} = 270,000$ foot pounds of force

from the boiler. And you get $\frac{1}{10}$ of this in steam. Hence $270,000 \times \frac{1}{10} = 54,000$ foot pounds of force in steam. Next step is to get the steam to the engine (or cylinder). And here he says, "The best engines only yield in efficiency about $\frac{1}{4}$ to $\frac{1}{5}$," let us take an average $\frac{1}{4}$, and $\frac{1}{4}$ of 54,000 is 6,000 foot pounds of work from the steam generated by one pound of coal. (Italics mine.) But the average efficiency of steam in extreme cases is $\frac{1}{100}$ and in ordinary cases $\frac{1}{100}$. You perceive the average of extreme cases and best engines are very close together, but for ordinary cases it is much lower.

Let us now make a common sense application of all this, and for this purpose we will take one of "Eccentric Strap's" engines where he burns 8 tons of coal in 100 miles run. He failed to give the time, therefore we say 8 hours, one ton of coal per hour or $33\frac{1}{3}$ pounds per minute. Now multiply the foot pounds of steam force obtained from one pound of coal by the number of pounds of coal burned in one minute, and you have the foot pounds of work for the steam for one minute; thus, $6,000 \times 33\frac{1}{3} = 200,000$ foot pounds of work. This reduced to horse power, Watt's standard, is $200,000 \div 33,000 = 6.06$ horsepower for steam. Do you want anything plainer or more simple? Yet I don't presume "U. S." can see it because it is so small, and he has his brains, coal, force, energy, momentum, speed, inertia and steam all mixed up together, and thinks it is all steam. He reminds me of the man who let his little finger ride his thumb too often; he thought everybody was mixed but himself. So with "U. S." He says I am not the first man he has seen all mixed up. It is but a fair inference to suppose that he looked into his mirror before he saw me.

Now, "U. S.," "fax am stubborn things," and you should not go back on your "profound investigator and reasoner," because "de fax" I have been writing lie almost parallel with Rankine; the only divergence is I said you *might* have a little more steam than he gives you. Therefore, when you knock me out, you knock out your "pre-eminent man, living or dead," and I will have better company than all the "incogs." Yes, I believe you with regard to the indicator. Indeed, I think it would show me some *very funny* things. I think it would be about as funny as a sleight-of-hand performer pulling a tape-worm out of your ear. And I hope the indicator makers will pardon me for truth's sake, if I knock out their business.

Now, "U. S.," if you know anybody that knows more about steam than Rankine (stick to the text, steam and nothing else) trot him out and let him place his "fax" where they will do the most good." For "fax am what I ar lookin' fur," but don't bring any more "incogs" into the ring for they are generally small potatoes, any way.

Now, "U. S.," how far apart do you think you can pull my theories, since they lie so nearly parallel with your greatest "investigator?" "Vulcan and most of you claim to make steam very much faster while running than when standing still. Now, "U. S.," I charge you with a practical, common sense demonstration of it. While standing make your fire, get your water boiling, and when the steam gauge shows ten pounds, then note the time carefully until the gauge shows 150 pounds steam pressure; after this point is settled then with ten pounds of steam take your locomotive on the road (in lead) keep such fire as you do while hauling a load, and note the time it takes to reach the 150 pound notch. This will practically demonstrate how fast you can make steam, with one locomotive at least. This experiment will not require an "indicator," and if you practically can make steam faster than I have said, I will allow you that much more for use, provided Rankine is willing. When you have clearly demonstrated this, report through the *Magazine*, for we will all be anxious to know the "fax."

Now, one or two problems and "U. S." can stand aside.

Take your 720 horse locomotive with its load—you may say how many tons in locomotive and load—and when you run 20 miles per hour, *what is the momentum of that train?* Don't get momentum mixed up with anything else, and give your solution that we may all understand it.

Next, what is the inertia of the train? Explain it as a factor in a moving train. Give the inertia pure and unadulterated. Please answer through the *Magazine* at your earliest convenience.

"Vacuum," Dr. Wilson's theory of horsepower relates to the steam more than to engines and locomotives. Look at it from that standpoint. Then in another article in the May *Magazine* he calls my attention to a rule, as he calls it, and says, "by it he can see that *if* (italics mine) it takes one minute to raise the steam pressure ten pounds, it will *not* take fifteen minutes to raise 150 pounds." I can't see any rule, he has appended a table of figures, etc. Neither this table of figures nor "Vacuum" says you can raise 10 pounds of steam pressure in one minute, but he says *if*, etc. Had he told us he could raise 10 pounds of steam pressure in one minute without an *if*, and that the first 10 pounds, then I would say you could raise to 150 in less than 15 minutes; and had he said without an *if*, that he could raise the last 10 pounds in the 150 in one minute, I would say he could not raise from one to 150 in fifteen minutes.

But if you can raise your steam pressure from 140 to 150 (which is my proposition) in one minute, then you can keep up a supply of 10 pounds per minute, provided you

do not let it fall much below 140. Next "Vacuum" lets himself out on good and bad roads to fire on. As I am not discussing roads, I pass this by. Then, for want of argument, he calls me a fool, and as fools are generally lacking in the upper story, it is a very plain reason why he signs himself "Vacuum." And the reason he gives for calling me a fool is, because he says I treat gravity as a minus quantity, or rather do not take it into account at all. I *confess* my ignorance. I was writing on the question of steam and did not know that gravity was steam. Please give me one of your rules for estimating horsepower of your locomotive where gravity is used as a factor in the estimate. If gravity helps pull the train, please give a rule for estimating how much for you can get from it. Then we will subtract that from the whole force of the locomotive and a part at least of the remainder you credit to steam. Please solve the problem of gravity and give the solution through the columns of the *Magazine*. It will be a profitable lesson for us all. Now, as you have volunteered into this fight, don't do like "Vacuum," pass this by in silence, or I will "eat you down."

Again, "Vacuum" says, "you are too fond of using such expressions as 'I say emphatically that it never has been done, or can't be done.'" I don't feel myself under any obligations to consult a "Vacuum" as to what expressions I shall use. And I do admit the correctness of the "dinagrap" if it shows the pull to be on the link behind the tender and that pull 16 ounces to 1 pound. Now he make up his train of 1,600 tons which he multiplied by 48, this he says gives or requires 50,400 pounds pull for starter, and shows quite a margin above 30,200 (so it is), which "you say they do have because the drivers would slip before that point is reached." Here he thinks a little sand will help him out. I can have all the sand on the sea shore if I will get it himself for what I care. He says I have not taken any special cases, but he has taken trains just as they are made up and pulled every day. The size or weight of trains that are hauled every day or any day I have never disputed, I know very large trains are hauled very often, for I have seen them moving along.

But here is the "Vacuum" in starting a train. Your cars all have draw-heads with spring attachments, then they are connected together with links several inches long, and when you start a heavy train, you put it in the slack, consequently the train is not started at the same moment.

Now, let us see how you do start a heavy train, and how much force it takes "dinagrap" measure and "Vulcan" philosophy. For illustration let us say the whole train of 35 cars are started with one turn of the

drive-wheels (but it takes nearer two), during this time the ports are open four times, twice on each cylinder; and let us start with one wrist pin perpendicularly over the axle, the other will be on a dead centre, here you *may* have the full force of one cylinder, with a full lever, and this is the greatest force you can have, and it may remain constant, as I have already proven. Now, we will divide the train into four sections, and say that one section is started with every quarter turn of the drive-wheel. Let the first section comprise the locomotive and eight cars, which we will say is 300 tons, then each of the other sections will contain nine cars of 270 tons. Now throw open your throttle, make one quarter turn and the first section is started, and requires $300 \times 48 = 14,400$ pounds pull, and this keeps going while the second section is starting, but being started only requires $300 \times 3 = 900$ pounds to keep it going, and the second section requires $270 \times 48 = 12,960$ pounds and the whole force to get this section started is, $12,960 + 900 = 13,860$ pounds of pull and in the third quarter turn of the wheel starts the third section which again requires 12,960 pounds, but the first two sections of 570 tons that are already in motion only require $570 \times 3 = 1,710$ pounds to keep them going, then the whole pull in the third quarter is $12,960 + 1,710 = 14,670$ pounds, and we have three-quarters of the load 840 tons started; and to keep this moving requires $840 \times 3 = 2,520$. Now we come to the last quarter of the turn of the wheel, also to the fourth and last section which requires a pull of 12,960 pounds and the whole force used at this point is $12,960 + 2,520 = 15,480$ pounds pull, the greatest force that is required to start the whole train. Quite a margin between that and 34,020, and now the whole force to carry it along at two and one-half miles per hour is 3,330 pounds. Now, take "Vulcan's" puny little ponies that can only pull 100 pounds and it won't take 34 of them to out-pull your big locomotive. If this is not correct the "dinagraph" and "Vulcan" are responsible, not I. But as the train moves off, *listen, hark*, how the poor, old locomotive grunts and groans to make a pull equal to 34 of "Vulcan's" 100 pound pulling ponies, and which horn will you take now?

Here is another problem for you: If your trains were rigidly fastened together without links or springs as though it was one continuous car on so many wheels, could you start it with your locomotive? Did you ever start such a load? Answer, or be called down.

"Vacuum" is not deep enough under conviction, for me to undertake to convert him to my views on horsepower or any thing else. Besides nature abhors a "Vacuum," so I shall wait until she fills him up with a little common sense.

AMOUNT
OF
COAL.

"Eccentric Strap" makes some very sensible remarks about the amount of coal used in running locomotives. As to the impossibility of running a full load freight train 150 miles with two and one-half tons of coal, I can't say; I made the statements as they were given me. And yet this and "E. S.'s" eight or nine tons to the 100 miles, are within Rankine's extremes 100,000 and 1,900,000, which is one to nineteen, and but little outside of good ordinary, 200,000 to 700,000, one to three and a half, my statement and "E. S." about one to five. And this difference may nearly all be in the quality of the coal. I asked some firemen on those roads I named, to tell me the amount of coal they used, I took the statements and used them, and I don't believe the gentlemen I asked would knowingly make a wrong statement.

I have long held the idea that steam had credit for much more than it deserved, or, in other words, that there was not near as much steam made and utilized as is claimed for it. This I believe I have demonstrated from a common sense stand point, by a logical train of reasoning. And in this present article I have quoted from Rankine, what he says on the whole subject from the fuel to the work, set the machine up (he left it scattered all around), put it to work, and by a fair and logical interpretation of what he says, show very clearly that the amount of steam that can be made and utilized is far less than I said it might be from a common sense stand point. Yet it is sufficient to keep the machinery of the world moving.

And when "Vulcan," "Uncle Silas" and "Vacuum" solve those problems I propounded, correctly, and report them, and try practically what I have asked, and report truly, it will not be necessary for me to offer any further argument, for I will be vindicated, and the truths I have taught will shine out as the noon-day sun. If they refuse to solve the problems and report they have given up the contest. It matters not what twaddle they may write, to kick up a dust to cover their retreat, I shall wait and watch to see that they answer correctly.

L. A. Wilson.

Russell, Kansas.

—♦—
DAGUS MINES, PA., May 8, 1890.

MR. EDITOR:—Hoping you will find space to insert a few questions, would like to ask the following:

1st. Does the valve admit steam to the cylinder as soon when cut off at half stroke, as when worked in full motion?

2d. Does the piston travel faster in the front end of the cylinder than it does in the back, if so please give the reason. Now I trust some of the readers will feel disposed to answer.

Jack.

The Imp Jacked Up.

MR. EDITOR:—The imp of the cylinder is experimenting with the "jacked up" problem. Stationary himself, he is trying to overcome resistance by means of a belt.

His lever in Fig. 3 is A, F and P, is at

the middle of it. His backward foot-push of 50 amounts to nothing as the jacks are immovable. His hand push of 50 has the *disadvantage* of leverage and counts 25 at A. Note that lever is third class, fulcrum at the center, and the *motive* power 25 again—bu

it is not loco-motion, for he stays in his place. Draw the dotted circle again for the jacked up driver or fly wheel.

Now in Fig. 4, without repeating the details, his lever is second class, but his balance of power from the inequality of its parts, is just the same, 25 to overcome resistance.

Be particular to note that in a "jacked up driver, or a fly wheel, no power is applied to the lever or wheel through the frame, but always at the pin. The frame in these cases is stationary, as the rail is in Fig. 1 and. The fulcrum is furnished by the stationary part.

But suppose R. and the Imp should!

stronger than the "Jacks." Then A would be the fulcrum and the belt would take the place of the rail, the resistance of the jacks would be overcome by the surplus of 25 at the pin, or in other words the engine is no longer stationary, but is a locomotive. The wheel is no longer a fly-wheel, but a driver with a rail on top, and every movement explained in figures 1 and 2 last month. This explanation covers all engines pulling themselves by a fixed cable or sprocket chain. Now do not quarrel with the Imp for showing so plainly the difference between a locomotive and a stationary engine. It is not his patent. He has good backing. Let me quote some of it from the *Magazine*.

In December, 1886, "Vulcan" says: "The engine ceases to be an engine and becomes a locomotive, a machine capable of moving from place to place." "They both develop power, but what a difference between a stationary engine which is confined to a limited space, and the locomotive which

flies away with the speed of the wind." the Imp is merely illustrating what "Vulcan" said three years ago, and proving that the real difference is in the location of the fulcrum. In an engine it is at centre. In a locomotive at circumference.

Amboy Division

VALPARAISO, IND., April 8, 1890

MR. EDITOR:—Will some of the mechanical contributors give me an answer to the following questions, viz:

If you have an engine having an 18 by 12 inch cylinder, five foot drivers with $\frac{1}{8}$ inch lead and $\frac{1}{4}$ inch lap and the best speed it could make was at the rate of 50 revolutions per minute, what can be done to make it turn at the rate of 51 or 52 revolutions per minute?

There is quite an argument about this. Some say give her more lead and some say give her less lead. I would like to have the correct answer.

M. J. H.

Evolution of the Locomotive.

In 1884 George DeHaven, Esq., then the General Advertising Agent of the Pennsylvania Railroad Company, at Philadelphia, had prepared an illustrated pamphlet of thirty-six pages. This matter and the illustrations were completed, a few proofs were taken but as a work for the purposes for which it was prepared it was never issued. From page four I quote. The matter in italics is inserted by the writer in the proper order of dates. This book was entitled "*Crossing the Alleghenies in 1784-1884.*"

It is a fact, however, that the Alleghenies are there, have been for some time, and until one hundred years ago, were a hard road to travel. And these few pages are for the purpose of illustrating in a condensed manner how the crossing has been reduced from a laborious undertaking to an easy, comfortable, and enjoyable ride by rail.

As the progress of the capture of steam and its utilization for locomotion may not be uninteresting in this connection, a few items are given. In 1571 Jerome Carden published a work mentioning the useful application of the expansive power of steam.

1602 to 1649 wooden tracks were used at the coal mines in England.

1656 Marquis of Worcester experimented on steam engine for elevating water at Vauxhall.

1680 *Sir Isaac Newton's steam carriage.*

1680 Pepin (the alleged inventor of the safety valve) made similar experiments as those of the Marquis of Worcester in 1656.

1710 Newcomen & Cowley constructed an engine.

1718 Savary, a Cornish miner, constructed a steam engine to pump water from a mine.

1763 Cugnot, a Frenchman, constructed a model of a steam engine which he exhibited to the Marquis de Saxe.

1770 Cugnot's steam carriage.

1770 James Watt succeeded in bringing it (the steam engine) to something like perfection.

1784 Cugnot patented the locomotive engine.

1784 Murdock, Cugnot's assistant, made a working model locomotive, which is now in the patent museum at South Kensington, London.

1784 Wm. Symington (English) conceived the idea of propelling land carriages by steam.

1786 Wm. Symington completed a model of same.

1786 Mr. Murdock made a high pressure engine which was successfully used for propelling vehicles with three wheels on a common road.

1786 Oliver Evans applied to the Pennsylvania Legislature for a steam carriage.

1786 Thomas Allen suggested a plan for conveying goods without the aid of horses by means of a vehicle with cogged wheels running upon cogged rails.

1789 *Darwin wrote in the "Botanical Garden" "Soon shall thy arm, unconquered steam afar, draw the slow barge, or drive the rapid car."*

1790 *Red's steam carriage.*

1795 John Fitch conceived the idea of a railroad car, embracing all the essential requisites of the modern railway car, with a flange on the rim, just as we have it now, for keeping the wheel on the track. The model was found after his death.

1798 Apollus Kinsley, of Hartford, Conn., made and propelled a steam engine through the streets of that city.

1802 *Richard Trevethick's locomotive. Trevethick was a pupil of Murdock, (1784), and Murdock an assistant to Cugnot, (1770.)*

1804 Richard Trevethick, foreman of a tin mine in Cornwall, constructed a locomotive. On its trial it drew after it on the Merthyr Tydail railroad, in Wales, several wagons loaded with ten tons of bar iron at the rate of five miles an hour. The stack was built of bricks, the same as an ordinary chimney, and perched on a high wooden frame work. The cylinder was upright, the piston working downward, and every revolution of the wheels produced a jerking motion and clanging noise.

1811 *Benkingsop's locomotive spur wheel and rack-rail. See illustration Locomotive Engineers' Journal, May, 1890, pages 375 and 376.*

1812, *Blackett made a series of experiments which proved that the expedient of the rack-rail was unnecessary.*

1812-13 Col. John Stevens, a locomotive.

1813 Mr. Brunton, of Derbyshire, constructed a curious machine, in which the steam power was applied to two legs extended, behind which by grooved ends took firm hold upon the ground.

L. Elbert Watkins, Esq., Engineer of Property to the Smithsonian Institute, Washington, D. C., has old engravings showing this appliance of Mr. Brunton.

1813. William Healy's "Puffing Billy" was used at Wylam collieries, Newcastle-on-Tyne. It was what was called a "Grasshopper" engine, and was worked continuously until 1862. See *Locomotive Engineers' Journal*, May, 1890, page 376.

1814 George Stephenson built one locomotive after another, improving on each until he constructed the "Rocket," which took a premium of £500 offered by the Liverpool and Manchester Railroad Company, 1829. See *Locomotive Engineers' Journal*, May, 1890, page 376.

1829 Francis and E. M. Shields built the "Western Star."

1829, Peter Cooper made experiments with a small engine called "Tom Thumb," in Baltimore.

1829, Foster, Rastrick & Co., England, built the "Stourbridge Lion." It made its first trip between Hinsdale and Carbondale, Pa.

1830 E. L. Miller built the "Best Friend," which made its first trip on the South Carolina Railroad, in November of that year.

1831, *The Camden & Amboy Railroad Company imported the "John Bull."* This locomotive was at the Chicago Exposition, 1883, and under steam. She is now the property of the Smithsonian Institute, having been presented to it by the Pennsylvania Railroad.

1831, The American Steam Carriage Company made a trial of their first engine (weight three and a half tons) over the New Castle and Frenchtown Railroad.

1831, Mathew Baldwin completed the "Old Ironsides," which made its first trip on the Germantown and Norristown railroad.

Further progress in the perfection, thus far attained, of the locomotive, may, no doubt, be had of the Baldwin Locomotive works, which up to May 1st, 1884, had completed their 7,280th engine.

William E. Lockwood.

Reply to May Questions.

MR. EDITOR:—"Vulcan" says: "Will 'A. D.' kindly explain what leverage he gets when the pin is at the circumference of the 4-foot driver?" etc. "Vulcan" has evidently missed this sentence, in the article on page 304 to which he refers: "Changing the pin * * * clear out to the tire if you wish, you will see that the Imp has the same surplus for a forward movement in Fig. 1 as in 2." If "Vulcan" will turn to page 304, and imagine the pin to be at the tire in both Fig. 1 and Fig. 2, I will amplify thus: In Fig. 1 his forward or hand push has the advantage of leverage and he counts it as 100, as it is twice as far from the fulcrum as the center, where he is pushing 50 with his feet; that leaves him a balance of 50 in favor of a forward movement. In Fig. 2 his forward or foot push is direct against R and he counts it as 50; his backward hand push is against the rail at fulcrum, and he counts it nothing. This leaves him the same balance of 50 in favor of a forward movement. Again "Vulcan" asks me how I figure the leverage when the pin is on "an extended crank," that is beyond the tire. If he will turn to page 304 and locate P in Fig. 1 a radius above where it is, and P in Fig. 2 a radius below where it is, that is the crank pin the same distance outside the tire that it is now inside, I will say: In Fig. 1 his forward push has the advantage of leverage and he counts it 125, giving him a balance of 75 in favor of a forward movement. In Fig. 2 his foot push forward is 50 against R, and his backward hand push, on opposite side of fulcrum but with short end of lever, counts as 25 forward at C, thus leaving him 75 in favor of forward movement. I thank "Vulcan" for his courteous inquiry, and I hope he sees I do not have to "make a change in tactics." "Only give

the Imp a chance, study his experiment carefully, and just as surely as he moves that mule, etc."

I wish to be courteous to "Eccentric Strap," but he should either be more careful in the use of terms, or more candid in correcting them. How can I reach a man who says, "the bottom" of "a driver" is "not a part" but "merely the place"? In August, 1888, "Ash Hoe" said, speaking of a wheel moving on a track, "the bottom remains stationary for a moment." In December, 1888, "E. C." quoted "Ash Hoe" and said, "Now, all this is dead wrong, in fact the veriest folly," and now he challenges "A. D." to produce one sentence to justify a reference made to that article. I can not pursue that matter further. I apologize to "E. C." as the shortest way out.

"Elder" asks "why the spokes are shown on the bottom of the little wheel which must move several times faster than the larger one?" The answer would be that the bottom of the little wheel being at rest would not be moving at all.

Amboy Division.

LONG PINE, NEBRASKA, May 6, 1890.

MR. EDITOR:—1. In answer to "L. L. C." in April Magazine, p. 303, I would say that lead is the opening a valve has when the engine is on either center; the advantage derived from it is, that it forms a steam cushion which reduces the jar and shock that would otherwise result from the sudden change in motion, and it also helps the engine on the return stroke by having the space in front of piston filled with steam as soon as the piston reverses its motion.

2. As locomotives and other engines are now built and proportioned for lead, if none were given the valve it would cause an engine to pound and ride hard, more especially at high speed, there being no steam cushion in end of cylinder to receive the momentum of the rapidly revolving machinery.

3. Valve will stand open the amount of lead it has.

4. Piston will stand back of center in cylinder, caused by the angularity of the main rod.

In answer to "J. L. S.," April Magazine, p. 304, I do not see as any change would be necessary except in having new valve proportioned to steam ports for the smaller cylinder.

"L. A. Wilson" in April Magazine, p. 308: In comparing the coal mileage made by firemen on L. R. & Ft. S. and M. & L. Railways, he does not state if the M. & L. engines pull the same number of cars, and use the same quality of coal as that furnished the L. R. & Ft. S. engines, and also fails to state the number of stops trains on each road have to make; difference in speed is

nearly four miles greater, per hour, on M. & L.

I think that he must be writing more from theory than practice, as he would certainly know, if he had the practical experience that there is a vast difference in the amount of work a fireman has to do on a 14"x24" engine pulling the same train and making four miles per hour greater time, than when on a 16"x22" engine. He also says that to "burn half ton of coal per hour gives a fireman but little time to ring the bell and wipe the sweat off his face." Here on the F. E. & M. V. Railway, Middle Division, between Norfolk and Long Pine, 133 miles, passenger engine, 17"x24", number of cars pulled seven, no hills to climb, time used five hours, mileage to ton of coal used thirty miles. On freight 17"x24", engines time on the average, eleven hours, average to ton of coal used twenty-two miles, twelve and thirteen tons of coal for a trip is no unusual thing, and still we find time to ring the bell and not only wipe our faces but wash them as well.

Very probably if "L. A. W." had ever had any experience as a fireman he would not be quite so ready to say as he does, "That he thinks the discrepancy between mileage made to coal on M. & L. and L. R. & Ft. S. engines is due to the fact that the M. & L. firemen have not had their attention called to the amount of coal they use." As a general rule firemen with but very few exceptions do the very best they can under the circumstances, they would certainly be very foolish to shovel any more coal than was actually needed, as "L. A. W." would seem to imply that they were doing. Would like to hear from some of the firemen on the L. R. & Ft. S. and M. & L. in regard to this.

At various times there have been articles in the *Magazine* regarding the nosing around or wee-wabing of the engine on the track, but do not remember as I ever saw any explanation given as to the cause of it. Nearly all the engines here are troubled in that way and have found by actual experience that it is mostly caused by the unequal cutting off of steam, the reason for which seems very plain to me, as it is certain that if the right side is cutting off the strongest it has a tendency when that side is exerting its full power to pull the front of the engine to the right, when the left cylinder takes up the work, the engine being released from the strain will certainly spring back to its center line of motion, and beyond being helped to do so by the left cylinder. Hope some of the more able writers will give their opinion as to my theory. Am always much interested in the Mechanical Department, especially the articles from "E. C." As this is my first attempt will stop for this time.

F. E. & M. V.

KANSAS CITY, MISSOURI, April 4, 1890.

MR. EDITOR:—Having noticed several articles in the Mechanical Department about locomotive driving wheels slipping without the use of steam, I will venture to express my thoughts on the subject. If this is a fact and the cause can be ascertained, there is a good chance for some one to get up an invention for locomotives to run without the use of steam. As I have had quite a number of years experience, I am unable to believe that such is the case. It is hard to slip driving wheels while running at a high rate of speed even with a full head of steam; what should cause them to slip without the use of steam? I have seen them slip, but not the way "W. L." explains. My experience is with a track where grass and weeds were so high that the engine would be going at the rate of thirty miles per hour, and the drivers would almost be at a stand still. This was caused by an extremely bad rail, but the drivers slipping at the rate of fifty miles per hour and the engine only going thirty miles per hour is to my opinion an impossibility. One might imagine the drivers are slipping when they are not. I would not believe my own eyes on such an impossibility. There is only one way to prove this, and that is by an indicator being attached to the driving journal.

Yours truly,

Balance Valve.

MR. EDITOR:—Reading some of the questions asked in the Mechanical Department of April number, and never having written to you before, I am prompted to submit to the readers a few of the problems over which I have been puzzling lately, and do not want it thought that I copy them from a book or paper, for they simply arise while comparing the relation one part bears to another.

1st. How can it be told when one side of an engine is working against the other?

2nd. Would the lengthening of an eccentric rod have the same effect on the exhaust as the lengthening of a valve rod? If not, what makes the difference?

3d. If an eccentric should slip an inch back from its true position on the shaft, what different effect would it have on the distribution of the steam than if it had slipped an inch forward?

4th. If main crankpin was on the dead center on left side, where would you place the reverse lever in order to put the valve on the center of the seat on the right side, and where for the left side?

5th. On starting an engine with left main crankpin on lower quarter, and lever thrown full forward, in what direction would each piston and each valve start to travel, and at the start which port would

each valve have open and about how wide? Name the position of the eccentrics.

6th. If steam issued from forward and back cylinder-cocks, after crankpin had passed dead center, what would it indicate was wrong?

7th. If steam issued from back cylinder-cock too late what would it indicate was wrong?

8th. If the lap on a valve was increased would it cause an increase or decrease of lead opening when the lever was hooked near the center?

9th. When an engine is equipped with relief valves on the steam-chest does the cylinder get air tight from the same source, when running ahead in the back motion as when in the forward motion?

Would like to hear a few questions on the "Westinghouse Air Brake," which I find a very interesting study.

Carboy.

NEVADA, MISSOURI, May 7, 1890.

MR. EDITOR: As my name has not yet appeared in the columns of the *Magazine* I will peep forth through the columns of the Mechanical Department, and answer the question asked by "J. L. S.," page 304, April number, to the best of my knowledge, and if I am wrong, I hope some one will promptly correct me.

The question is: "If you have an engine having 19 by 22 inch cylinders and you wish to change to 18 by 22 inch cylinders, what change will have to be made in the engine?" All that is necessary is to bush them with a bushing one-half inch thick which will make them 18 by 22 inches. Changing the diameter of your cylinder will not have any effect on the rods or wheels. But on the other hand if you were to change the stroke of your engine from 19 by 22 to 19 by 24 inches then the crank-pins would have to be set one inch farther from the centre of the wheels and you would have to get new cylinders two inches longer, or if you wish to shorten the length of the stroke the crank-pins would have to be set nearer the centre of the wheels and the cylinders would have to be shorter.

R. L. G.

LYNDONVILLE, VT., May 8, 1890.

MR. EDITOR: I notice in May *Magazine* correspondence in regard to engines slipping on a down grade when not working steam. An engine on this division was reported for this same trouble; the engineer gave his reasons, which proved true, that the back journal was sprung caused by slipping and catching quick; this idea was laughed at by officials. Another man was put on to run her. She slipped just the same; she was taken to the shops and it was found that she was out of tram and by turning the journal and giving her new pins, she was again ready for the road. The

new pins would not have been necessary if she had been taken in when when first reported.

Fraternally yours,

Henry Wright.

Expired Railway Patents.

The following list of railway patents, furnished by F. B. Brock, Patent Attorney Washington, D. C., expired during the month of April, 1890, and are now free to be used by anyone, viz.:

Loading and unloading baggage and freight cars. O. C. Brown.

Safety platform. H. E. Marchand.

Unloading flat cars. G. S. Caldwell.

Crossing gate. J. B. Powell.

Speed regulator. G. W. Parker.

Car seat. R. J. La Mothe.

Railroad frog. W. B. Atkinson.

Switch. J. R. Adams.

Brake for coal cars. D. Wetzel.

Railway scale platform. C. C. Warren.

Watering column for tanks. J. N. Pouze.

Car axle. R. N. Allen.

Dumping car. T. Bootsman.

Electric signal. Digney, Lartigue and Forest.

Persons desiring copies of patents, drawings and specifications, can obtain the same for fifteen cents, by applying to Mr. Brock whose address is as given above.

Helps to the Study of the Locomotive.

During the past month the literature of the country has been enriched by the appearance, from the press of Messrs. John Wiley & Sons, of New York City of the new and revised edition of our friend Anglin's well known book on "Locomotive Running and Management," and as Mr. Sinclair has "passed through the mill" himself, he knows what he is writing about, and is without endowed with the faculty of plain speech by which he is able to make his meaning clear to the most obtuse intellect. I can and do therefore unhesitatingly endorse the book as the best and most practical treatise on the subject, as it is the result of years of careful observation, while at work with and among locomotives as fireman, engineer and round-house foreman. The book can be obtained direct from the publisher or from Bro. Wm. Weiler, of Port Morris, N. J., mail prepaid at the publisher's price of \$2.

Bro. Weiler has also prepared a model of the locomotive link motion, by means of which the position of the piston, the link, the valve and the eccentric can be watched and determined at every point of the stroke. Any one who thoroughly understands the model will find no difficulty in comprehending the same parts on a larger scale. The model is a modified form of the engine model illustrated on page 490, July *Magazine* for 1888, having been specially altered to embrace the shifting link of our ordinary practice and is neatly made of brass of a convenient size to handle and examine. The model will be sent free of all express charges to any point east of the Mississippi for the sum of \$4, a copy of Sinclair's and a model for \$5. The members of any Lodge who will get up a club of 15 subscribers for the book and send it with the regular price (\$2 each) will receive a model, and have the whole delivered to their express office, free of charge.

Bro. Weiler has also such facilities as enable him to furnish drawing instruments at very moderate prices and has already sent a number of sets to different parts of the country and all have given satisfaction. There is a wide range in the price, but a good set can be had from \$2.50 to \$4.00, but of course the price can be increased to any amount set at the figures given will, however, be found amply sufficient for ordinary use.

Our readers will do well to correspond with Bro. Weiler if they want further information, or desire to get any of these articles. Bro. Weiler's full address is Wm. Weiler, Box 25, Port Morris, N. J.

Woman's Department.

EDITED BY IDA A. HARPER.

Letters pertaining to Woman's work, such as education, temperance, home and fireside, and kindred topics, are solicited.

Correspondents are requested to write plainly, on one side of the paper only, and forward their manuscript so as to reach the Editor not later than the tenth day of each month, directing all communications for this Department to

MRS. IDA A. HARPER,
TERRE HAUTE, INDIANA.

WITH OUR CORRESPONDENTS.

Church in the morning, dinner with a friend, a lady physician, and immediately after her carriage came to the door to take her on a round of professional visits and I hurried home to confront a desk piled with work. Such is life with business women, a glimpse of social pleasure now and then but always preceded and followed by extra labor and later hours that no time may be lost. Such an existence has its drawbacks and its compensations, but it is not the intention to discuss them now.

My work this afternoon has had its aesthetic side, for I have been sitting by a low south window, shaded by a blooming crab apple tree whose fragrance is wafted into the room by every flitting zephyr. The catbirds and robins are building their nests with a calm disdain of a flock of noisy, scolding sparrows and an ignorance of a big Maltese, who is watching their movements with a greedy look that bodes no good. The blue sky bends down over a beautiful world to-day, clad in robes of soft and tender green and decked with a wealth of pink and white blossoms. There is nothing to recall the sleet and snow of winter, when we wondered if the sunshine would ever come again, nothing to suggest the scorching heat that will wither and blast the delicate verdure in a few short months. Only the dewy freshness of early spring, the world's Easter festival that puts hope and brightness into every heart and makes life seem very sweet and desirable.

Drinking in its beauty and enjoying every moment of it, I have opened the drawer of my desk that is sacred to the *Magazine* and taken therefrom fifty letters for the Woman's Department, received during the month of April! While I have been reading these letters and preparing them for the publisher, my fancy has wandered, as it always does, to the many different homes from which these missives came. When I take out the pin which frequently holds the sheets together and stick it woman-fashion in my dress, I

wonder how the writer looked and what she thought as she fastened the pages upon which she had transcribed her thoughts and feelings. In my mind's eye I can picture these homes, most of them, I should judge, modest but comfortable, bright, cheerful and filled with the spirit of contentment. It has been a source of great pleasure to me and I am sure to our thousands of readers to notice the sweet and womanly feeling that pervades most of these letters. There is occasionally one that shows the writer to be unhappily married and longing for relief. Such cases awaken our deepest sympathies and we long to extend help and consolation, but in these matters we cannot go to our friends with offers of assistance as we can in all other kinds of sorrow and distress. There is a sacredness about domestic troubles upon which even the closest friends cannot intrude, but each woman must be left to bear them as best she may, sustained only by the consciousness that in spirit her friends are extending to her a full measure of sympathy and appreciation.

But most of our letters are bright and cheery and breathe an atmosphere of home life that is very lovely and acceptable. They present pictures of busy, careful housewives, sending their husbands away with a bountiful lunch pail and an affectionate good by; looking well to the ways of their household and children; snatching a bit of recreation now and then; indulging their ambition occasionally to revel in fancy work or read a good book or write a letter to the *Magazine*; through all the day's cares and pleasures a shadow of anxiety for the husband and father flying down the long track; and the daily prayer of thanksgiving at his safe return. Such is the simple story that has been told by these letters all the years that they have been coming to the *Magazine*. Some of the writers seem like old acquaintances and there is always a warm welcome for a new friend. Many of the letters are very meritorious, some of them show much undeveloped talent, about others is a dash and spirit, a disposition to speak one's mind in emphatic language, a spice of independence that are very refreshing. There is no doubt but that this interchange of ideas, this mental attrition is beneficial to all. It opens new lines of thought, it lifts both writers and readers out of the monotony of the daily routine of life and affords a bond of sympathy among the thousands of families of the great Brotherhood that could never be formed in any other manner. There is certainly a mutual appreciation of what has been done by all who have in any way contributed to the interest and success of the Woman's Department, and we trust the same cordial and pleasant relations that have distinguished the past may continue undisturbed.

A PERUSAL of this month's *Magazine* will perhaps suggest to our readers why we published the letter of "Kicker" in the April *Magazine*. It was worth the space we gave it when it is considered that in the brief space of one month it called out fifty replies heartily approving the Woman's Department and expressing the utmost confidence and esteem for Mr. Debs. Only one solitary letter was received indorsing the sentiments of "Kicker." That was from some man in Ellis, Kansas, who had not the courage to sign his name and so it went under the table. We shall omit all miscellany in order to make room for these letters. They cover the ground so fully there seems nothing to be added. Unfortunately a freak like "Kicker" does occasionally manage to flourish but the species is rare and we will hope that in time it may cease to exist. We commend our lady correspondents for their spirited answers and we thank the gentlemen for their manly and courageous indorsement of the Woman's Department and its best and strongest friend, Eugene V. Debs.

On page 447 of the May *Magazine* will be found the "Brotherhood's" reply to "The Stevens Point Kicker." It speaks for itself and could not be improved by comment. It strikes us that "Kicker" has been most thoroughly kicked.

A LETTER addressed to Mr. Geo. D. Ballard, Pavonia Station, Jersey City, N. J., has been returned unopened. The writer would like his address.

COLUMBUS, O., April 12 1890.

Editor Woman's Department:

Mr. "Kicker" I read your letter in this month's number and appreciated it very much. You are afraid the *Magazine* will spoil your wife. Aint you afraid it will hurt your morals. Well, you have none to hurt. Your money you spend on other women, while your wife is a slave at home. You are worse than a thief, for they will take nothing more than valuables, while you steal a woman's heart then trample it under your feet, and say she is not your equal. Was your mother your equal? She surely worked hard to raise you. Did she teach you the lesson you now practice? According to your letter, women's rights are to remain at home always and if we talk at all it must be about our neighbors. I can't find anything to say about mine.

And you are going to work against Mr. Debs at the next convention? I am afraid you will hurt him. Your talk won't have as much effect as a bee-sting. I hope the Brotherhood hasn't the misfortune to have many members like you, for you are not only a disgrace to the Order, but a disgrace to humanity, and I am very sorry to know that any woman has to live with such a brute. You say the women that belong to societies "would make a dog laugh," that you "have often laughed." Girls should be very careful when picking a husband not to mistake a dog for a man for there are a great many at large.

My husband indorses every word I say, and says he would like to touch the rope that would hang you to the first lamp post. Why didn't you give your real name? Were you afraid that the people would play "white cap" on you at Steven's Point?

Well I will close for this time, with best wishes for the Brotherhood in general.

Allona J. L.

MILLERVILLE, CAL., April 15, 1890.

Editor Woman's Department:

Please, may I step in? Thanks, I don't wish a seat, prefer standing; for I've come to kick. Yes, I think I have the necessary requirements in size: have a good sized under-standing, tip the beam at one hundred and forty-seven, and it requires five feet eight inches of the tape to measure my height; and, now please show me the one who writes under the nom de plume of "Kicker," and I'll perform that arduous task of introducing my *pedis* to him, regardless of all formality or ceremony.

I'm no fireman's wife or locomotive engineer's wife, as my husband gave up his position on the U. P. five years ago, and returned to California, to wed "the girl he left behind;" and as she was a real estate owner, he has been engaged in farming since, but runs a field engine every summer.

My husband is not in favor of abolishing the Woman's Department, by any means, and I notice he turns invariably to that Department first. He advocates woman's rights, considerably, and says: "He considers his wife his equal, as any sane man should, and that Mr. Debs should pick 'Kicker' as pieces in one of those sweet, scorching little notes of his, and that he needn't fear his kick in the Convention, for his bark is worse than his bite."

Kicker says "women shouldn't flirt, but men can enjoy that privilege." It is a poor rule that doesn't work both ways, and if the women don't flirt, who would the men have to flirt with. I presume with another man and that would make a dog laugh. Please don't think I'm a flirter, for I detest such either in man or woman. And here let me narrate a little incident. A gentleman friend of mine attended a masquerade ball and being small in stature and a trim figure disguised as a lady; he was offered two dollars and a half for a kiss by a married man, but the disguised lady replied, "That she would accept after they unmasked," but lo! and behold he wouldn't accept the kiss then, free gratis, but was willing to pay the two and a half, if he would not tell his wife. That showed his little qualities.

Can such sentiments as "Kicker" sets forth issue from a man's heart? No, consequently he has only force pump for that organ and I'll venture to say he is devoid of brains, that his cranium is filled with a conglomerated mass of vanity, pomp, self conceit and braggadocio, highly flavored with the essence of musk; and what a fit subject he would be for the medical students to examine.

He places woman lower than Austin Corbin does his slaves. He attributes the Johnstown disaster to woman's ruling, but, sir, if she had been the possessor of the Conemaugh dam, there wouldn't have been any flood.

Managing husbands is a subject that cannot be exhausted and many of us will fail to do the subject justice. Love, kindness and esteem go a long way towards soothing and healing the tired body, the weary brain and the discouraged heart of the one we have taken "for better or worse." I often consult my husband about the household department for his wish is mine, and he often does the same about outside affairs for each strives to please the other. Hark! I hear "Kicker" remark: "That poor deluded fool is tied to his wife's apron string. Fals sir, "Kicker" says, "my wife," but means my slave how utterly ridiculous for one to make those words synonymous.

I feel justified in kicking such an insignificant piece of humanity, for our beloved Editor has kindly lent him to us for a foot ball; and I should wonder, but she has made a sad mistake and will be the accessory of murder, for by the time he receives all the kicks from the sisters and as many from the men, his slave will not recognize in him her "Love and master," for his body will be ready for his grave or cremation.

Should "Kicker" have the audacity to send his name into any lodge, club or society now, and his identification be known, many would be barred from casting a vote simply for the want of black balls or cubes.

I'd advise him to see that the April number was sent to the round house and guard it as he would caged hyena, for I feel tempted to tear his letter out

and burn it in effigy: but as my husband prizes his *Magazines* so highly, and preserves every one, I'll have to resist such wicked temptation, but I've inclosed his letter in a frame of pencil hieroglyphics, for I feel that such can't be on a pure white page.

I am one, who likes to be independent of my husband's pocket book and esteems it quite an honor to be called on, when another horse is to be purchased or some other live stock or vehicle. Though I fail to give "Kicker" the "tongue lashing," he deserves, if he will step into school room I'll soon settle his "hash," for I can wield the rod, but not the broom only as it should be used; so you will readily see that my vocation is training the young generation the way to shoot. I was a "school ma'am" before married and have been in the school room from six to eight months every year since the minister "united two hearts as one."

Now listen to that impudent fellow again saying, "I'm supporting my husband." I reiterate, false again, sir. We both work and are not ashamed to own it, and furthermore I can make a decent batch of bread, make a calico dress I'm not ashamed to wear, and even make the soap to wash it with.

If I have degraded myself in the eyes of the sisters or lost their esteem, by my honest confessions (for honest confessions are good for the soul) I beg of them to be lenient with me and pass me by silently, but not with utter contempt, because I was raised to work, and still cling to my early training and advocate work for man or woman.

But I must close, for I see the editor glancing towards the waste basket, so I'll take the hint feeling that I've already laid myself liable to a *scorcher*.

I hope to come again, but not with such hostility.
E. E. S.

[We should say that it is the June *Magazine* "Kicker" would want to take to the round house, or somewhere so that his wife might not see it; although the reading of the replies to "Kicker" would perhaps be the only pleasure the poor woman has had for many a day. Let us hear from our correspondent again.—Ed.]

YOUNGSTOWN, OHIO, April 3, 1890.

Editor Woman's Department:

I have been trying to get my thoughts together for some time to express my views on managing a husband.

As I have just read "Kicker's" letter in the April number, it seems as if I could not write fast enough. I wonder if "Kicker" loved his wife before marriage? If he did not think her his equal, why, in the name of goodness, did he drag her down to his level? If she was good enough to marry, she is still good enough to be treated as a *white* woman at least. I can imagine her, a poor, broken down woman, with the care of numerous children, and no sympathy or help from him who promised at God's altar to love, honor and protect. How can he have the heart to flirt with other women with that vow registered in Heaven?

My husband and I have had some arguments on the woman's rights question. He thinks they ought to vote, while I cannot see it in that way, for I think that "the hand that rocks the cradle rules the world." But when I hear such men as "Kicker" express their views, then I would like to vote him a public whipping.

If he can find pleasure and rest in other women's company, how much more ought he to find it in the company of her who has borne so much for him. She is the one that needs some recreation; but I suppose "Kicker" imagines his wife has no "back," "brains" or "nerves," and that she is sometimes driven to the verge of despair, and she thinks her mind will give way under her trials, I suppose never enters his head. His poor self takes all his time and attention. I can sincerely thank God for a loving husband, who thinks I am his equal in all things, and treats me as such. In my eight years of married life, I have not had occasion to manage my husband. But please do not think that I consider him perfect—we all have our faults; "there is none perfect"—no.

not one." But we have so much love and respect for each other that we can bear with one another's infirmities.

Mahoning Lodge is on the right track, and doing nicely. Wishing abundant success to our beloved *Magazine*. I am yours,
Buckeye.

[Rev. Annie Shaw says if children always stayed in the cradle it would be well enough to use the argument referred to in this letter, but when they get out into the world the mother's hand should have some power to remove the temptations from their path.—Ed.]

COLUMBUS, OHIO, May 2, 1890.

Editor Woman's Department:

I have been a constant reader of your valuable *Magazine* from infancy. The fireman who brought it to our home first has long since crossed over to the right side of the engine, and grown fat. I often look for something from No. 9. I think I have only seen two short letters in all the time I have been reading the book. I don't know why; there is plenty of good material here, and it should be in use, and I don't know any better employment for a few leisure hours for railroaders' mothers, wives, sisters and daughters. No. 9 are all number one boys, and in a flourishing condition. Just now they are preparing for a ball in the near future. We have a railroad meeting every Sabbath afternoon at 4 o'clock, at the Railroad Chapel, Union Depot. When no one else is there to talk or lead the meeting, Bro. Wagner leads with ease and great pleasure. He never gets left, and is never at a loss what to say to them. There are many railroad men who attend with families. Everybody is welcome, and they have very happy meetings. We also have railroad meeting once a week, at some railroader's home. Will you tell me if there is a lodge for ladies in Columbus, Ohio? I have never heard of one. I will bid you adieu, wishing the *Magazine* long life. I remain yours,
Engineer's Sister.

[Will some one give the desired information?—Ed.]

SALIDA, CHAFFEE Co., Colorado, April 17, 1890.

Editor Woman's Department:

For nearly two years past I have been an interested reader of your *Magazine*, and I have never seen an article from any resident of Salida, am prompted to write in the interest of Mount Ouray Lodge, No. 140, of which Lodge my brother is a member. I am blessed with seven brothers and three sisters, the youngest boy, one of the rank of noble men, who risks his health and life on the rail. Until coming to Salida, about two years since, in order to be with my brother, my acquaintance with men employed on the railroad was very limited, but my interest in them and sympathy for them has become thoroughly aroused. You, better than most persons, know the noble, sacrificing character most of them possess, especially the engineers, who seem to be exposed to the greater dangers and whose responsibility can not be estimated.

Possibly you have readers who know but little of our glorious State of Centennial birth, and it may be of interest to hear something from one living among the grandeurs of the Rocky Mountains. Words can but feebly express the sublimity of many parts of the State.

Within a radius of fifty miles of Salida the variety of scenery is wonderful. The peaks of lofty mountains, manny capped with perpetual snow, always in view. The "Grand Cañon of the Arkansas," seven miles long, with its perpendicular heights of granite from 2,000 to 2,627 feet above the banks of the river, lies just this side of Cañon City, about forty miles nearer the mouth of the river than does Salida. The "Royal Gorge" marks the narrowest part of the cañon, over which is built an iron suspension bridge. The celebrated "Marshall Pass," reached by way of "Poncha Pass," only a few miles away, to

me seems to afford one of the most wonderful examples of engineering skill in the way of railroad construction. The D. & R. G. winds like a serpent, from base to summit, over what would seem unsurmountable barriers of nature, to an altitude of 10,856 feet above sea level. The scenery from Salida to the summit of the Pass attains that of sublimity in the superlative degree.

As the altitude grows greater the view is less obstructed and the observer sees the most perfect of Sierras, the snow-crowned spires of the Sangre de Cristo Range, Grand old Mt. Ouray, in honor of which Salida Lodge, No. 140, received its name, stands like a rigid sentinel over the awful silence beneath. Four lines of road are to be seen at once, and the tourist can scarcely comprehend the truth that he has but a short time since passed over the line of rails below. The atmosphere becomes so rare as the gradual ascent is made, that many persons suffer difficulty in respiration, and feel a sense of relief as the descent of the western slope is made. As I have never been farther west than the little town of Sargent, at the base of the western slope, can say nothing of scenery beyond from personal observation, but it has been said the Black Cañon of the Gunnison River, between Gunnison City and Grand Junction, affords the most awe inspiring scenery on the D. & R. G. line. The cañon receives its name from the shades of darkness in which it is enfolded. Its length is fourteen miles, its walls, in many places of red sand-stone, reaching a height of from 2,000 to 2,500 feet. From the crevices cedars, shrubs, etc., grow in abundance.

My brother's "run" is over "Marshall Pass" and the sense of relief I experience when I hear his engineer open the engine whistle for "home again," cannot be appreciated, save only by those having dear ones on the road.

Brother does not know I have written this communication, and should you deem it worthy a space in your *Magazine*, I shall wait anxiously to see whether he recognizes its author. Hoping the effort to represent "Mount Ouray Lodge" in the "*Firemen's Magazine*" will be kindly met with, I remain,

The friend of the railroad man.

Fireman's Sister.

[Come again.—Ed.]

WARASH, April 7, 1890.

Editor Woman's Department:

I have been reading the *Magazine* with growing interest, and more especially the Woman's Department, which I think is grand. I quite enjoy myself with it and whenever I feel lonesome I will pick it up and in it I often see something that has been written by a sensitive heart, and white to day doing likewise, behold, what did I see but the "Kicker's" letter, saying that the men need no management. Well, perhaps not, but I think quite a number of men became good men through the kind management of their loving wives. But as far as the woman's needing to be managed that is unnecessary, they all know their place. I am a fireman's wife and I have never tried to manage my husband nor did he ever try to manage me. My idea is this, when a man is a noble man management will not be necessary. We have no use for it between us, and we get along just as nice as any young couple can. We have never quarreled or ever had a cross word together. I would hate to think that my husband thought I was trying to manage him, and I would hate to know that he was trying to manage me. Wives, be your husband's companion, not his master, and keep your heart clear, so that when he returns he can tenderly find trust in it and rest, stand by his side in sorrow, in trouble, grief or joy. Be his guardian angel, watch over him, care for him as you would your child and show him through love and kindness, that you care for no one else but him, and that your love for him is true. Keep no secrets from him, and if this is done, I think our husbands will never side in with the "Kicker" and throw kisses at some silly girls that perhaps are anxiously waiting for the iron horse that rushes by them, nor will they take them to theatres at the other end of the road.

But the idea of the "Kicker" saying the women

must be kept down, that the world is going to run. I wish he had considered before he had spoken thus I think, only for the women the world would be nothing. I wish that some of us could see this world without them for about a year or two. He I would not be far from missing my guess that the men would be all on their knees, praying for women with the "Kicker" among them, perhaps the first. Well, I would like to get one of his photos, for I must be, indeed, what he has signed himself to be, a "Kicker." I may be somewhat queer, but a-b spoke of clubs, saying that they get away with some of the women, for my part I never cared for clubs or societies of any kind although I think that the ladies have just as much right to organize them as the men and I have seen some that were carried out nicely, and the women could enjoy themselves just splendid. But as far as seeing a dog laugh at me I never have. Another subject the "Kicker" mentions was this, that the women were always talking of their neighbors. Well, because some do it, there is no sign that it includes all. That is a bad habit I would like to advise those to love their neighbors as they love themselves and there will never be any talk. Let us tell the "Kicker" what a woman can do. She can laugh with her lips—make a man think she is the merriest cricket in the world, while her eyes are full of unshed tears and her heart beating as if it would burst. She can quiet a mad with one or two reassuring pats, when a man might almost knock the life out of it, give it a whole bottle of soothing syrup, and it would still be open eye aggressive and cross. I still could give him no examples where a man is no good at all. Still I say keep them down, the world is going to run on, not the men are not to be managed.

But the idea of the "Kicker" interfering with the Woman's Department? Now, sisters, if we don't keep him down he might succeed, but by warning the Editor to take heed or he will cause him to lose his position. I think he will never lay awake for have heard my husband speak so highly of Mr. Debs that he is to be honored and esteemed greatly. Now, I am generally plain spoken and believing giving honor where honor is due and I agree with all who choose to honor Mr. Debs, and as far as the "Kicker" working against him at the next convention, if Mr. Debs does not end the Woman's Department I think that Mr. Debs will more gladly end it instead of ending it. But let the "Kicker" take the step that he claims he will, he might get a trip, so he had better watch himself, for my husband said that he will black-ball him at his next convention if he dares to take the step. I only say that all the women will try and give the "Kicker" his dues, or some might take his part and perhaps send him, with his letter to the World's Fair, to hear the footsteps of my husband, so wishing the boys of the R. & L. F. success, I remain

A Fireman's Wife.

Amos

WHILE IT RAINED.

While it rained I lay and listened

In my little snow white bed.

To the rain so gently falling

On the roof above my head.

And the rain thus softly falling

Slowly from the leaden skies

Like the tears that fall so sadly

From a weeping woman's eyes.

Gave new life unto the flowers

And the trees do greener grow.

As the tears that fall like showers

Give the eyes a brighter glow.

And the heart seems higher lifted.

From the burdens it has known.

As the sun when clouds are rifted

Comes to greet the rising morn.

Still the rain is falling, falling

With a calm continuous sound:

Making little rippling rivulets

In the fissures in the ground.

Just as tears that fall so often

Through the years of calm and strife.

Make lines on cheek and forehead

And shorten each one's life.

Amos

PRINCETON, MO., April 2, 1890.

Editor Woman's Department:

I have been a reader of the *Magazine* a number of years, my husband being a fireman when I married him. He has been an engineer now for several years but still takes the *Magazine* and I am always glad when it comes. I have thought I would like to write to the Woman's Department, on a number of subjects they have discussed, but have been too bashful. But now I am *thoroughly* aroused. I have just read the article from "Kicker" in the April number, and I am *indignant*. Some man may have written it just for *fun* in order to stir the women up, but if the man that wrote it *meant* it and those are his *honest* sentiments he *must* be a dog. He says in his article that some of the women's doings are "enough to make a dog laugh and he has laughed many times." I do not know hardly how to express my contempt for him. He is the quintessence of selfishness. I don't suppose he is willing to let his poor wife admit she has a soul of her own. Poor thing; what a pity she did not know him better when she married him, and do as a girl did I heard of once. Her lord and master asked her the same question about the pants and, she being a good, strong, buxom girl, got up and gathered him and threw him out of the window, just to let him know that if she did *not* wear the pants she was able to take care of herself and not be imposed upon. The story goes that he came around and came up stairs, a meeker if not a wiser man. He says he never saw a woman that was his equal. I do not doubt it, a woman would blush to entertain such sentiments as his. He blames the women because Cleveland was not re-elected. The strikes, Johnstown flood and the gripple *all* come from the women having a little too much prominence. How *unreasonable* and *idiotic* he talks. But then how could any one like him talk any different? When God created man and woman I do not think he put any better material in Adam's brain than he did in Eve's, and if by nature she is endowed with just as good intellect as man, why should not her opinions be respected the same as man's?

I would like to draw a pen picture of this "Kicker." He is low in stature as well as mind, and heavy set; his self-esteem is *very heavy*, so much so that with it and his mule bump, which is situated right above it in the cranium, according to Phrenologists, his head is pulled back and his chin is in the air; he has an impudent swagger or a Bantam strut, wears showy clothes and a loud watch chain, stands on street corners with other loafers and makes coarse and vulgar remarks about ladies as they pass. In short, a creature that all *gentlemen* despise; and his poor, little wife; I can imagine her a poor, faded, washed-out, patient, enduring little soul, that trembles when this "monarch of all he surveys" comes home, ready to do all she can for his comfort, though she knows she will not get any thanks for it. *That is what he feeds her for*, she is his property. I suppose the first thing this reptile did when they were married was to crush all spirit out of her and get her in perfect subjection to his will, so he would have his own way ever after. It is a good thing for the little "Kicker" that he did not get some women I know. I am surprised that he is a railroad man. I did not know there could be so mean a one.

If there is a class of men that I admire and respect it is the railroad men. They are free-hearted, honest, brave and tender hearted, ready to help distress and suffering. Of course there are exceptions. But the great majority are *true men*, loving and indulgent husbands and fathers, men that love and honor their wives and are proud of them, work for them willingly, give them their checks and are very well satisfied with the way they settle the bills and manage things generally. A good many of the railroad women carry the pocket book, but my husband and I have our own pocket books. If mine gets empty before pay day all I have to do is ask for more, and always get more than I ask for, too.

Now, this little *specimen* has *dared* to threaten to work against Mr. Debs. Ha! ha! ha! It makes me laugh to think of it. His little influence would not be felt if he *went* to the convention, which I very much doubt, for I do not believe his Lodge thinks

enough of him to send him. Should he go, they will have to use a microscope to find him among so many MEN. And *last but not least*, he need not take the trouble to wave his hands or throw kisses to the girls, for they will make fun of him and say, "There goes *short and dirty*," or "There is that little, *sneaky* off man again."

Now, dear Editor, if you think this too long, I am sorry; but I do feel a good deal better for expressing my opinion of the "Kicker," and if all the women that read his article feel as I did, he will be punished sure enough, before we get through with him.

Mrs. W. M.

[How does "Kicker" feel by this time? —Ed.]

LONDON, ONT., March 28, 1890.

Editor Woman's Department:

The Editor of the Woman's Department is to be congratulated, I think, on the improvement the correspondents are showing under her very able generalship. The letters in the March *Magazine* are more interesting than they have been for some time, as the ladies are writing apparently for the women readers, and not just to praise up the members of any particular Lodge, of which subject they knew I like myself next to nothing.

The subject of managing a husband is receiving quite a bit of attention, just now, for I have seen several letters in different papers lately, giving recipes to those wives who need them on that subject. For myself, I do not think one can follow any given rule, for each will be different in disposition, and every wife will have to study her own husband and manage him accordingly. But it is safe to say that if both have a fair share of common sense and take a proper interest in their home, they will help manage each other and come out all right. No woman will expect her husband to be amiable and tractable if he is neglected and not treated considerably.

Mate's letter, I thought very good and her anecdote of the man carrying umbrellas for his wife reminded me of a little incident that I noticed in one of the stores in this city a very short time ago. A big, burly man, and a little, frightened, looking woman, were buying gent's furnishings for his lordship. He gave the clerk who served him a bill, and when the change was brought back it was handed to the woman, who turned and gave it to her husband, all but a twenty-five cent piece. "I'll keep this," she said, with a nervous, little laugh. But he stood there, with his great big hand stretched out, looking like a "Death's head at a feast," and she dropped that quarter of a dollar in with the rest of the change, and never opened her lips. Now, how could one manage a man like that? I felt so sorry for the woman, and such a hate for the man that I could have dressed him down myself, with a hearty, good will. Any man who could make his wife feel so mean as that woman felt is not fit to have a wife. But this case shows very plainly that some men will not be managed, any more than "Mate's" friend would have her husband manage her. For myself, I think married people get on best when they think less of managing and more of helping each other.

I saw a chair the other day, which is very pretty, and so cheap, that any one could have one like it. This one was a common kitchen chair, painted a pretty shade of green. A piece of crimson felt was cut, about one half an inch smaller than the seat, pinked out all around, and nailed on with brass headed nails, and a piece of the same across the top of the back. That was all, but it looked very nice, for a bedroom chair. I agree with Mrs. Harper about the women reading daily papers. As soon as I get the tea over and my boy to bed I go for the paper, a good, conservative one, too, and read through it. Then one can converse without feeling stupid on account of not being well informed on the subjects under discussion.

I hope I have not taken too much space for my first letter and that it is not long enough to weary you. With best wishes for the *Magazine* I will say good night.

Fireman's Wife, Vic.

[Let us hear from you again. —Ed.]

STANHOPE, April 7, 1890.

Editor Woman's Department:

In the January number of the *Magazine* you ask the ladies to write their advice on managing husbands. I have read several of their letters and I don't think there can be much more said on that subject except to the one who signs his name "Kicker," and I think he ought to be managed quite differently. I think the name "Kicker" is quite appropriate for the subject he takes, for I never saw a mule or ass yet that was not a kicker. He compares himself to a dog in his own writing. He says the women's doings would make "a dog laugh and he has often laughed." I don't think that such a man, if you can call him a man, is worthy of a wife, for I think by his talk his wife is nothing more than a slave for him, and I thought slavery was done away with. He says since the women's rights had a convention at Washington there have been so many punishments sent on us. He spoke of the Johnstown flood and la grippe. Now, if I had such a husband as he is I don't know but I would as soon be would have gone with the Johnstown flood or la grippe for I don't think it would be a very pleasant life to live with such a man. As for flirting I never did believe in much of that on either side but if this man thinks it is all right to flirt or take a girl to a dance or a theatre why perhaps it is, if he can find one that would stoop so low as to go with him, but for my part I think she would be very small. Now, I think his wife ought to have a little privilege as well as himself but perhaps she thinks more of herself than to be flirting with other men. With best wishes to the Brotherhood men I sign my name

A. C. C., a Fireman's Wife.

ATLANTA, GA., April 10, 1890.

Editor Woman's Department:

I will not enter into the discussion of managing husbands because I have not had enough experience. But this I will say, I do not know which one has managed so far. I see where one lady says she is a dressmaker and clothes herself and children but does not know how to sew buttons on her husband's clothes. Now, I am not a dressmaker, but I do my own plain sewing and I can truly say I can sew the buttons on my husband's clothes. I suppose he would grumble if I did not.

Now, I am "going" for Mr. "Kicker" without gloves. Do you think Mr. Debs cares anything about the votes of such men as "Kicker"? Mr. "Kicker," don't you sometimes wish there weren't any women? Wouldn't it be glorious if there were no women to consider themselves your equals? Wouldn't it be nice for you to do your own washing, ironing and cooking, besides cleaning up the house and sewing on buttons and making and mending, and numerous other little things which are "fun and pleasure" for your wife? Why, Mr. "Kicker," my husband brings me the *Magazine* before he looks at it and tells me to read it and tell him what is in it. Wouldn't you like to talk to him? If I had been your wife I would have put the "pants on," I think. You also say no woman is your "equal." Mr. "Kicker," you may get some of the men after you, for my husband considers me his equal, and therefore I think I am your "equal" too. Wasn't your mother equal to you? Hadn't you rather hear women talk "poetry and politics" than talk about their neighbors? Suppose the ladies in your neighborhood gathered together and talked about you, how would you like it? You say ladies' "clubs and societies" would make "a dog laugh to see their doings; I have often laughed." Do you mean that you were the dog that laughed? If so, I think your wife is your superior. You say that "at the other end of the road we take our best girl to a dance or the theater." But you think your "wife has no need for such pleasures, her housework and her children are fun enough for her."

Now, Mr. "Kicker," if I was your wife when you got sick and any attention was needed, I would tell you to go get your "best girl" to wait on you, my "housework and children" were "fun enough" and work enough too. Don't say "women believe everything a man tells them," for you say no woman

is your equal and we know we are. I pity the woman who believes everything you tell her. I imagine I can see your wife now, a pale, sad, broken hearted looking woman. If I were she and ever did see your letter I would sue for divorce and let you get your "best girl." Many good wishes for the Woman's Department comes from the heart of

Mrs. A. A. M.

[That's the way to talk.—Ed.]

WELLINGTON, KAN., April 4, 1890.

Editor Woman's Department:

I have been a constant reader of your *Magazine* for the last two years, and I think it something pretty nice. It is very interesting to me, especially the Woman's Department. I generally get the *Magazine* while my husband is out on the road. Well, I sit down and read it a little while and take so much comfort in it. For this Mr. "Kicker," as he calls himself, to try to get away with the Woman's Department, I should call him Corbin, and if I, for one, were his wife I would expect him to order me to have my head shaved, that is, if I would be subject to his tyranny. I don't think I would be such a man as he is—he is simply no man. I should hate to have anyone think so little of me as I do of this unknown "Kicker." I have a good, kind husband who manages me and I him without any dispute whatever. I do my own housework, sewing, caring for my children when he is gone. When home he helps me, so will any man who loves his wife. I have written more than I intended. Although I have said very much about Mr. "Kicker," I will leave him to the rest of the sisters. I pity him. I remain

A Fireman's Wife.

DERRY, PA., April 28, 1890.

Editor Woman's Department:

"The truest characters of Ignorance, are vanity, pride, and arrogance."

In the April number of the *Magazine*, and in the Woman's Department we find a letter from a person signing himself "Kicker," and calling himself "man," who has blundered so egregiously that cannot refrain from at least trying to set him right. How anyone in this enlightened age can be so ignorant as "Kicker," must always remain a mystery. His first and greatest mistake is in designating himself a "man." We know that he is a something, a nature never endowed with enough reasoning faculties to have kept him out of an Insane Asylum, his case had been investigated. But as to his belittling a "man,"—well, if he is one then I am glad that I am a woman for I should certainly dislike to talk "Kicker" by the hand and call him "brother." Another startling display of his weak intellect, that he is really married to one of those poor insignificant creatures—a woman. A woman who is not his equal, but an inferior being to whom he has entrusted the daily welfare and immortal interests of his children. But just here, were it possible for his disordered mind to grasp a plain statement of fact, I might enlighten him as to the way the time spent by us wives while our firemen are "straining backs, brains, nerves," or "throwing kisses at girls." In his sublime ignorance he fondly imagines the meek wife sitting at home patiently repairing the torn and buttonless over-clothes, when no one is he out of sight than she has donned her "best" and her gala-day commences. First, there is a ternoout outing with numberless little attentions and politenesses from men to whom she is in no way insignificant; later a cosy little lunch with old admirer, and later still a pleasant lecture in evening with some one who enjoys having given a pleasure. But after all, "where ignorance is bliss 'tis folly to be wise," and I have often laughed at a "dog," as Mr. "Kicker" does, to think how we men were deceived. Then too, this paragon of decency actually wrote to the Woman's Department thus encouraging a thing he wishes to see "abolished." But all this is superfluous, and worse than wasted on the poor man "who might go crazy if he had not been idiotic from the earliest hour of infancy, and so to his deserved fate, I leave him.

[Adieu, Mr. McGinty.—Ed.]

ST. PAUL, MINN., March 8, 1890.

Editor Woman's Department:

I am much interested in the *Magazine*, and see some excellent letters in it about how to manage a husband. I do not find any trouble in managing mine, do not know whether I manage him, or he me. At any rate we get along well and are happy-go-lucky all day long.

I want to give young mothers a little of my idea how to handle children. I have often heard mothers say, "I can't do anything with that boy or girl." Now I think that is all nonsense. I do not think there ever was a child born so headstrong but that he could be trained if he was but taken in time. I think the time to commence is when in the crib, when they are young and tender. It is easy to bend a young tree but if you wait till it gets old there is no bend to it. Mothers should first of all practice patience, for patience lies at the root of all pleasures as well as of all powers. Do not give them a slap for every little thing they do, that is wrong. But talk to them and try and make them mind without being punished. And if you promise them a whipping give it to them good and hard so that they will remember it a while. Never go back on what you promise them, be it good or bad. Then they will understand that you mean what you say. Teach them to be polite at home as well as in company.

Train your children at home so that you can be proud of them in company and not ashamed. Keep your children in your own yard and do not let them wander over your neighbor. Don't say you haven't time to spend an afternoon in taking the children for a ride or walk. Always take time to take care of the children so that they are not neglected. I have often heard mothers say, "My baby is always cross on washday." Now, I think the reason of this is that they are neglected on washday, and the consequence is that they worry and fret all day. I am a young mother myself but I have found out that taking my time to tend and clean the children I am saving time, for I always see to the baby first and then I have no trouble in doing my work. I train my children from the first not to be held, for I think they are just as well off in the crib or the chair, if they are not ailing. I have often been told that I was blessed with good babies. I lay a deal of that to the training they get.

Now a word to Mr. "Kicker." As for women being all the men tell them, I for one don't think means all he says in the *Magazine*. But he thinks the *Magazine* too dull, so he thought he would start the excitement and hear what the women would say for themselves. Possibly I may be deceived but I don't think that a man with such principles is likely to be called a member of the B. of L. F.

Well, I will not dwell long on this subject, but I think that some of the sisters will give him what he deserves. As this is my first attempt to write for the *Magazine*, I will close. *A Fireman's Wife, Mollie.*

This is a very sensible and excellent letter.—Ed.]

CLINTON, IOWA, March 31, 1890.

Editor Woman's Department:

I am laughing. (Nothing unusual. I hear some say.) If you won't tell Nora Bull I'll tell you it caused my merriment.

Her letter she tells us wives to come with noiseless steps and nestle on a foot stool at the side of our husband, and gaze into his face, while he looks into the deep, tender eyes, which to him are so still and make like, so like the stars. I want to know how a woman can do this when she has snapping black eyes that wouldn't remind any one of a saint and no never goes with a noiseless tread but skips through the house more like a hurricane. I am very much afraid I am left out, for I know I never remind a husband of a saint, although he might value me as much as carrots fine. (not carrots.)

I can't like foot stools. Besides I haven't got any. I have a number of comfortable rockers which I find my lofty ideas better. I never want to get any low, for I have heard so much said about getting kicked while down. Another lady wants us to ladies' talk. I thought I had been doing so.

She did not pick on me in particular. I don't know that it is hardly fair to pick her letter to pieces, but I want to and she may mine if she wishes to.

She wants us to tell about washing and ironing, putting up lunches and house work in general. Now that I don't want to do. I do my own work, but when I write letters or visit I don't want to wash, iron and bake. My little girl said to me to-day, "I called you twice, the second time made twice." If I do my work, then rehearse it to somebody, that would be twice and the second time would make it twice. See? I think once enough. I do well to do that, not because I am lazy, but because I am so tired most of the time. "Born so?" you ask. Yes, and am not rested yet.

I know how the lady from Texas does so much work. She gets up with the birds. When I was a little girl my mother would say while I was in bed she knew there would be no wagon run over me, so she let me sleep until I had my nap and was ready to get up, and I find I don't improve on that point for it takes me a long time some mornings to get ready to get up.

I wish I could think of something mean enough to say to that old "Kicker" from Stevens Point. I think he is a vulgar person, I won't say a man, for if he had been, he would not have written that very coarse letter. He needn't have signed himself "Kicker," for we should have known that was what he was or words to that effect.

He may be a gentleman doing it for a joke just to hear us spiteful creatures rave. I hope he will never appear in the *Magazine* again and I do hope he won't appear to me to-night in my dreams. I have pictured him in my mind as a double fisted cowboy with a lasso, ready to lasso us one by one as we happen in sight. I am not going to Stevens Point very soon. I wonder if they are all steel bears at that place. Please do not find fault with me or my letter. I do not find fault with yours. t

Hastily written.

Kittie B.

P. S.—That taffy was not candid you gave me in speaking of my letter. R. B. will do without a recipe. K. B.

EVANSVILLE, IND., April 18, 1890.

Editor Woman's Department:

Many thanks, Kind Editor, for admitting me. I should like to answer "Flo's" request for a recipe of a cheap white cake: $\frac{1}{2}$ cup of butter, 1 cup of sugar, $\frac{1}{2}$ cup of milk, $1\frac{1}{2}$ cups of flour, 3 whites of eggs 2 scant teaspoons baking powder. Bake in a pan about $10 \times 1\frac{1}{2}$ in., 40 minutes, in a moderate oven. This makes a small cake, I have tested it. I have a splendid one which is larger, if you like you may have it "Flo." If Mrs. Editor does not object to too much correspondence from the same parties.

I want to thank the "Little Lady" in Michigan (I think it is) for her description of an ornament made of broom sticks and wooden bowl. I am making one for papers, am going to put the moles on with furniture tacks, paint it cherry and then varnish. Now I would like to ask a question: I'm making a pin-cushion, it is composed of velvet and wool material, am painting a spray of daisies on the velvet, but what shall I put around it? Would a gold tinsel cord or lace do? The velvet is a light gray and the wool is a bluish gray.

I want to grasp the hand of "One Who is not Ashamed to Work." If girls only knew it was far more honorable to work than to depend on some one else for every thing they want, to be obliged to go to Pa, Ma, Brother or Sister who is battling with the world to earn their bread and butter, while they, perhaps, are wasting their time in what they call society. If the so-called society thinks less of one for working, the sooner the young lady discovers such friends the better. I am sure no sensible man would think less of his wife or sister who would have the grit and independence in her composition to help him in life's struggles. "It is not wealth, nor rank, nor state, but grit up and git that makes men great."

Alpha.

[A gentleman desires this correspondent's name. If she wishes him to have it she will please send it to me.—Ed.]

THE DREAM CHILD.

TO MY SISTER.

A mother slept, and in that sleep
She saw such beautiful visions round;
Like in a fairy palace fair vines did creep,
Blue waters murmured with gentle sound.

The soft winds sobbed and sighed;
But lightest music floated on the air,
And in sweet cadence seemed to chide
That aught save joy and peace should e'er be there.

To the snowy couch on which the mother lay,
A babe form came, and nestled, too;
And when the stars were greeting day,
The mother cried, "Can this be true?"

Is this my child, whom I thought dead?
Ah! yes, dear God, it is none other!"
And folding the babe to her heart, she said:
"Now, thou shalt tell me of thy sweet brother:

Of 'the little man,' who, though not yet three,
His smiles and ways made all days bright,
Who went with thee, one day, from me,
Leaving me naught but starless night.

"You answer not and only smile—
Fade from my view, and only seem!
What! Gone again, my lovely child?"
The soft music ceased—'twas but a dream!

But ere the mother waked, angel voices sang:
"Grieve not, sad mother; far from pain and strife,
Thy babes sleep sweetly," And still the voices rang,
"Not death, but change, and Eternal Life."

And now, in waking hours, the mother hears
In the whisperings of the leaves, "No pain, no strife,"
Ah! if aught *can* comfort, this does, and cheers:
"Not death, but change, and Eternal Life."

Mary F. Wilder.

CHICAGO, ILL.

[Mrs. Wilder promises the Woman's Department "Old Mexico and the Mexicans," an article she is preparing, that describes the trip from which she has just returned. We shall look for it with interest. -Ed.]

SPRINGFIELD, ILL., April 7, 1890.

Editor Woman's Department:

This is in reply to "Kicker," Stevens Point, whose letter appeared in the April number of the *Firemen's Magazine*.

MR. KICKER—Having read your letter in the April *Magazine*, in reply would like to say a few words, which, I hope, may cause you to *think*, and they will, if you have any brains. Your letter tells me that your wife is your superior, both physically and mentally, and that you know it, are afraid of, and angered by it. This shows that you are poorly sexed—something less than a man. No man could write such a letter. I know a man who voices your sentiments exactly. He is a dried-up, withered, ex grass-widower, but has now a lovely wife and two smart children. His nine-year-old boy says of him, "Papa ain't right." Your children will live to think the same if they do not say it, of you.

My husband is just like your neighbor. In regard to his wages and staying home evenings. We have been married three years, and I have never asked him for his wages nor to stay at home with me. And I don't try to "boss" him. He treats me as his equal in every respect, and is a good type of perfect manhood.

I feel more than sorry for the Lodge you will represent at the next convention. And I do so hope that you will change your mind about "bouncing" Mr. Debs, as he seems to know his business there ought, and would be hard to replace.

All the trash about flirting amounts to nothing, as no one cares anything about it.

There is just one thing more. If you are not ashamed of your name, nor of your letter, please sign your full name the next time you write.

Respectfully,

Mrs. F. Magers.

ASHLAND, KAN., March 31, 1890.

Editor Woman's Department:

I date this March 31. It is by mistake I do so, for it is "April Fool" or "All Fool's" day. In consequence I only hope this weak attempt at expressing a few of my ideas that have lain dormant since last January's issue of this interesting budget of knowledge, called the "*Firemen's Magazine*," will not be spurned from sight and consigned to—perhaps its proper fate—the flames. I have perused with unparalleled interest each succeeding *Magazine* and twice in response to the request to send in best methods of husband managing, I have started an expression of my method, but concluding that all men are not alike and that man is a very complicated piece of household adornment, I, as did Nora Bull, ejaculated from the dictates of my better reasoning, "Make yourself worthy of his love: make *virtue* the price of your favor, and if he be a *man* he needs no managing." I heartily endorse each sentiment emanating from the pen of Nora Bull. I am a pedagogue; trying to lead young, untutored minds into higher realms of intellectual blessedness; trying to mold their young hearts and sow such seeds of morality as will develop the uncultured, ever-ready-to-receive mental faculty and furnish material for the upbuilding of character, the chief aim of education. I love the little ones and am led to sanction the words of him who said, "There is nothing on earth half as holy as the innocent heart of a child." Again substantiating Dickens, I would add, "While I teach them the wonders of knowledge, they teach me the goodness of God."

I doubt if I ever would give up the glorious work, for I love and honor the profession, if it were not for a certain "fireman." Still I am in no great hurry, and often doubt his inclination to take me for better or for worse, after reading letters written by such loving hearts and devoted minds. He will, I am sure, think himself not quite safe in my care, and will seek among some of the fair young ladies whose words appear in the *Magazine*. Be that as it may, I am not going to worry nor waste time, paper, or the ink in bemoaning my evident fate. What I wish to refer to is the letter written by "Kicker" and published in the April number.

I was looking through the interesting *Magazine* when my eye met with the "Kicker's" unworthy article. Well may he subscribe himself as "Kicker," and *well*, too, would it have been if one other of extraordinary kicking capacity were to quietly come up and disturb his equilibrium by giving him, as Victor Hugo says, "A rearward shock of sinister resonance." My blood actually boiled up and up as I read on to the end of such a repetition of insults heaped upon injuries. I laid the book down and determined to fight if need be for "Woman's Rights." I do not wish the inference gleaned that I belong to Belva Lockwood's party. Not at all; but I do most ardently sustain woman's proper rights as regards "home" and society.

Pardon the length of this letter. I vow to no never trespass again upon your generous patience, but I *must* speak whenever such idiotic statements are brought under my mortal vision. May heaven help his poor deluded soul and shower much mercy upon him, for he has no mercy for himself. If Mr. Debs allows such a depraved character to exert the least possible influence in regard to prohibiting the "Woman's Department," which I for one would miss more than tongue can tell, he is surely not the man we all think him to be.

And you, vile profligate of a kicker, a mere semblance of man; devoid of the first rudiments of manhood—*dare* to assert that no woman is *your* equal. You are unworthy the respect of a dog to say nothing of the regard of a noble, true and upright woman. You have portrayed yourself upon the minds of the readers of the *Magazine* as a brute with not a single manly instinct. 'Tis well for you that your name did not appear at the conclusion of the product of such a flabby brain. You were ashamed to let the public know that you are such a vile piece of humanity. Your infamous letter is a disgrace to the issue and I am sure it will be resented by more than one. School teaching is more preferable with a thousand times more difficulties attached

to the teacher's life, than a marriage with such a demoralized image of mortality. I cannot call him a *man* for nothing exists in his "make-up" worthy the name *man*. All the respect ever entertained for him must have left the heart of the unfortunate bride when accosted by such unalloyed rudeness she morning following the wedding. My heart aches for such a one. I firmly believe I would have found that wretch hand and foot while he slept, and then with a whip, warranted for five years, I would have convinced my unworthy husband (it seems like mockery to call such a man "*husband*") of the amazing revelation that I did not need his dusty pants in order to assert my individual privileges. For once in his dissolute career he should at least be managed. He recognizes himself as a "*dog*" in his own statements and I will prefix the adjective "*bull*" and have it in its proper wording.

Every woman to be an entertaining companion as well as co-worker for her husband should keep herself well posted concerning the "body politic" and current affairs, both domestic and foreign. It is much pleasanter for my father and many an evening has been delightfully spent in exchanging ideas and knowledge gleaned from such newspapers as the *Inter Ocean*, St. Louis *Globe Democrat*, and New York *Tribune*. I take pleasure in following the Congressional proceedings; in acquainting myself with foreign affairs and expanding my intellect, giving me wider scope for conversation of an enlightening character. I despise "gossip-mongers" and they, with the "Kicker," should at once be banished to Don Pedro's lonely habitation, but he does not suffer—I repeat the statement—instead I would ship the "Kicker" with his gossipers to Siberia to endure all the tortures of the Russian inquisition. If the poor, miserable "Kicker" would strain his heart-strings more, and his ignorant brain less, to the advancement of other's discomfiture, his wife would be a happier woman. Whoever she may be, she is *your* superior, detestable "Kicker," and is worthy of a *man*, not of a friend for a husband.

If all the "firemen" are in any way like yourself I pray to heaven to deliver me from ever marrying one, but I am sure you are alone in your mean, vile, iniquitous opinion of *woman*. If there is anything that causes me to fly into a frenzied rage it is to hear *women* slandered. I care not if this somewhat terse and decidedly uncomplimentary expression of ideas advanced by one who honors and respects an exemplary man but who could witness the destruction of such abject monsters (angelic in their own narrow mind) without one feeling of sorrow, but stay thine axe, executioner, spare him yet a little while; he may yet see his error and turn and live like a *man*. Spare him a little longer. I say I care not if this is not published. I have conveyed my thoughts to the editors anyway and will retire. With love to the ladies, I am a friend for aye. Miss Ella Hinde.

[Well, good by "Kicker," this surely finishes you. We trust our spirited correspondent will let us hear from her again. Her "Fireman" apparently does run some risk but these independent women usually make very good wives, although they require some "managing." Belva Lockwood has no party and has never in any way been identified with the organization of woman suffragists.—Ed.]

GRAND RAPIDS, MICH., April 22, 1890.

Editor Woman's Department:

I see in the April number an article from Stevens Point signed "Kicker," which I should think would make the writer hate himself to death when he sees it in print. Now, in the name of decency and of the B. of L. F., I for one want to know if we have any more such worthless whelps in our Order. If so I hope they will not make as big fools of themselves as "Kicker" did. I bet he is a kicker by name and nature. I hope the lodge where he belongs won't be guilty of sending such a man to the next Convention. Hoping to see some of the bright writers of the Woman's Department let loose on this fellow.

G. W. Dotley.

DENVER, COLOR., April 11, 1890.

Editor Woman's Department:

I have been a constant reader of the *Magazine* for three years, and I have never read anything to equal the "Kicker" in the April number. I suppose every woman who has read it will say, "How I pity that man's wife!" Well, so do I, but that man must not think because he has found one woman who believes everything he tells her that other women are the same. I suppose he thinks if he had the *Magazine* sent to his house his wife might find a few moments' enjoyment reading it while he is taking his best girl to some ball or dance at the other end of the road. "Kicker's" wife was good enough for him to go with when she was his best girl, but now that she is not quite as pretty as she used to be she can stay at home. But what has made her so? Who but him? While he is taking his best girl out for a stroll his wife is at home half sick and worn out for the want of a few moments' rest, taking care of his sick children. He thinks there is no woman his equal. Why, a monkey is far above his equal. He says there was no such doings when his mother was living. Did he have a mother? He is nothing more than a freak of nature. In his own letter he puts himself down with a dog. He shouldn't give himself away like that. "Kicker" thinks his neighbor a fool. He would think more of his neighbor if he would stay at home and give "Kicker" a chance to take his wife out for a stroll.

When my husband goes to some ball or lecture I am the one who goes with him, and he buys me presents, and when pay day comes we pay all our bills together, and what is left we spend together. And whenever I go anywhere I am the one who tells him. I don't leave it to some of my friends to tell him for me. I don't manage my husband, for I think him big enough to manage himself; but I always stay at home when he is there, and if I have my hair done in the latest fashion I don't commence to say before he gets to the gate. "Now, don't spoil my hair!" We have but one child, and when I expect my husband home I always keep him looking as nice as I can. I do all my own work.

Well, I hope Mr. Debs will pay no attention to "Kicker," for he is so mean his own shadow won't follow him.

I remain a fireman's wife.

Mrs. A. Johnson.

[There doesn't seem to be much left of "Kicker."—Ed.]

DAVENPORT, IOWA, March 31, 1890.

Editor Woman's Department:

I am not a fireman's wife, but the sister of one and the daughter of an engineer, so I am going to take the liberty to write to your *Magazine*. I have read and enjoyed the *Magazine* for over a year, particularly the Woman's Department, but I don't think anything I ever read stirred me up as much as did the article in this month's number, signed "Kicker." Is there a person calling himself a *man* capable of thinking, let alone writing, such a letter as he did? I wouldn't have believed it if I hadn't read it myself. And do you know I thought it was a joke at first, but now I have come to the conclusion that it must be a being gifted merely with the power of speech (not any thinking to speak of though), but in other respects little higher than the lower animals. What say you, Firemen's wives and sisters? The "Kicker's" poor wife must be the most miserable woman alive. He says, "At the other end of the road he sometimes takes his best girl to a dance or theatre, but if his wife dared to do any flirting he would leave her." Well, you have all read it, no doubt, and know what he said. I don't think his wife ever gets out of doors, probably hasn't got a decent dress to her name, for such a person as he is, is most likely stingy. And he also says he has his *Magazine* sent to the round house so his wife can't read it and be spoiled thereby. Poor soul, she probably don't get time to read anything or if she had would have left him long ago, for such a *brute* as he is, isn't fit to speak to, let alone live with a woman. I am making this awfully long but I am so excited over that letter that I could write all night.

Belie,

TO MRS. H. B. JONES, WASHINGTON, IND.

CHICAGO, April 2, 1890

Dear Mrs. Jones, in simple rhyme,
My hearty thanks I send you,
For singing me such lays sublime.
May heaven's joys attend you.
There's nothing like a little praise
To stimulate a poet,
It keeps his bosom all ablaze.
And well, dear friend, you know it.

Your latest poem I have read
With honest exultation;
I dreamt of it one night in bed,
Until intoxication
Enslaved my senses like champagne,
Then funny thrills came o'er me,
Fond fancies filled my foolish brain,
And danced in glee before me.

I'd like to call you "darling," but
Our cooling days are over;
Old fools like us wry figures cut
In Love's delightful clover;
And yet, our hearts are just as young
As in long days departed,
When happy songs we hourly sung,
And kept ourselves lightly hearted.

Oh! happy days forever fled,
When youth's high hopes were burning.
Alas! they're numbered with the dead,
And o'er them I keep mourning,
Except at times like this, when sparks
Will flash from out the embers,
And off we go on courting larks,
Old cranks in life's Septembers!

Some thin-skinned fools, with faces long,
May take offense when reading
Our thoughtless lines of joyous song,
But, all their frowns unheeding,
We'll sing away like mating birds
In spring's delightful weather,
And breathe our thoughts in simple words,
And chorus off together.

Your husband and my darling wife
May with more spleen than nice sense
Object, but we'll avoid all strife,
And claim poetic license;
It hides a multitude of sins,
Grammatical and others,
It crucifies pugnacious twins,
And scorns prolific mothers.

Once more accept my thanks sincere
For many a friendly token.
And, madam, I'll through life revere
Your words so kindly spoken;
They'll stimulate me o'er the ills
Of life's distasteful byway,
And nerve me with ambitious thrills
To gain its glorious highway.

Shandy Maguire.

[As this is a little private matter between
Mr. Maguire and Mrs. Jones the editor re-
frains.]

DUNSMUIR, CAL., April 2, 1890.

Editor Woman's Department:

Sunday while reading over your *Magazine* I thought I would just try and write you a few lines, never seeing anything in from 312. Now they deserve to be spoken of. They are a fine lot of fellows, all of them. They have 25 members in their Lodge, all in good standing. They have a fine library here, and a lovely road to run over, laying aside the slides, but then this winter has been very severe. I could tell about the boys being blocked on the road for weeks in the snow but it would take too much time and this is the first time I have come to visit you. There is only one fireman here that is a married man. I am not a fireman's wife but I am and always will be a fireman's friend. A good true husband can manage himself, I think. No one could speak better on this subject than "Daisy," in last month's book. I remain,

A Fireman's Friend.

Editor Woman's Department:

I am a member of the B. of L. F. and addressing communication to this department of our *Magazine* is a new adventure. I am not ashamed to count the articles contributed by the fire-boys' friends combining wives, sisters and mothers, (and especially the sisters) have proven very interesting beyond a doubt. It all our brothers' wives would take consideration the views so ardently expressed "How to manage a husband," they would have cause to say to their unmarried friends: "Never marry a railroad man." I only speak from observation but that observation has imbued me with spirit of endorsement for all that has been said relative to the management of husbands, with one exception, that exemplification from "Kicker," living from Stevens Point. Is he a man? Can he be a member of the B. of L. F.? I fear it is true, he says he has his *Magazine* sent to the round house so his wife will not be spoiled by reading it. But oh! The pomposity of the man is something wonderful! Listen to this quotation, from his manuscript: "If Mr. Debs don't look out he will bounce from his position for letting the woman run his *Magazine* for him. I hope Mr. Debs take warning and end the Woman's Department he don't, I will work against him at the next convention."

I had the honor of meeting Brother Debs' Union meeting in Elmira, N. Y., April 6th, for the first time since I have been a member of the B. of L. F., and if "Kicker" had been an eye witness the cordial greeting extended to our worthy Officer from the five hundred delegates present assertion of using his influence to oust "Mr. D" from his position, (unless he is a beast as his wife would indicate,) would humiliate him so completely that he would feel like going with "McGill" to the bottom of the sea. A man that will denounce defenseless women in the vile terms "Kicker" when their object is to beautify and make pleasant, is a coward.

But I might as well close, for I would fill whole space allotted to Woman's Department nouncing "Kicker" and then not be half through in retaliation I was going to sign myself "Endor" but for the benefit of "Kicker," so he can take revenge on a man instead of the weaker sex, I sign myself the Woman's Department's friend. I well wisher for crowning success in the future.

Yours fraternally,

T. A. Ogden

[Thanks, Brother Ogden. You must judge whether "Kicker" is a man. We certainly decline to receive him into the ranks of women.—Ed.]

DENVER, COLO., March 29, 1890.

Editor Woman's Department:

The April number of the B. of L. F. *Magazine* reached me all right and glad I was to see it, brings joy with its face. Now I am going to write a few lines in regard to Mr. "Kicker." If you allow me a little room in the precious book, I say it is time the Woman's Department be abolished, it is very near time for him to be abolished for that is the heart of the B. of L. F. *Magazine* think the "Kicker" will get bounced before Debs does. It is too bad about this "Kicker" not have to be managed, but says it is the woman who do. Well, if he only knew how to behave self half as well as the women who write to Woman's Department he would be all O. K. I told her to wear the pants she ought to have him she was about as capable of wearing the pants. Yes, such as the "Kicker" strain their brains on the road but furnish little more home use. While a good wife is working all trying to save a few nickles and up all with the children the "Kicker" is at the other end of the road, out with his best girl, spending she saves. I hope the "Kicker" will think twice before he tries to do up Mr. Debs. Wishing the *Magazine* a grand success I will bid you all a happy night.

Yours Respectfully,

G. B.

FORT WAYNE, IND., April 4, 1890.

Editor Woman's Department:

I am a constant reader of the *Magazine* and must say the letter in April number, "The Wife's Smile," is the best I have ever seen yet.

Every one writes, about the good and nice husbands but what about the careless ones? I should like to have a method for managing a husband of this kind.

He will come in off of the road tired of course—he won't talk to any one, and if you talk to him he won't answer; if you have made or bought anything nice, he won't look at it and if he will, he will only say it is horrible.

He will go away, after each meal and never come home until the next and maybe not then. He drinks some but seldom to excess; he will play cards and spend quite a bit of money which could be spent to splendid advantage in a home; he plays in saloons and goes to other's homes where cards and drinking are allowed, because it is not allowed at home, where a young child is being raised, to fight in the battle of life, either for good or bad; and where good is trying to be kept in front of it.

Some will tell me to let him play at home and learn to play with him, then he will stay at home.

But that I can never do, for I think a home should be something different from the cold and wicked world.

Now, can a wife be expected to never be cross. When he will come home at 5 or 6, when he left right after breakfast and she has cooked and worked all morning to get him a nice dinner. Will go away after supper until bed time (or later). She never knows when to cook, for fear he will not come.

You will say, always meet him with a kiss and make home pleasant. He has never come or gone without a kiss.

Now, if there is a remedy in this world for such a husband I should like to have it for I am perfectly heart-sick, at having a husband and never seeing him more than two hours out of twenty-four. And to find that coaxing and kindness can win nothing, as that is the only method used yet.

You also say "If he ask you to go out with him always go." Supposing he never asks you and if you ask him to go he won't go. I have found "marriage to be a complete failure" for me so far.

He is not the worst of husbands and when he is good, oh! he is awful good and no one is happier than I am when he is.

If husbands could only realize the joy they give their wives by a little sacrificing of some of their evil habits they surely would do it. *May.*

[This is a sad case and there are many like it. The Editor can offer no remedy but patience, hoping love and kindness may at last win. Perhaps some of our readers can suggest relief.—Ed.]

ELKHART, IND., April 4, 1890.

Editor Woman's Department:

I must say I took a hearty laugh after reading the "Kicker's" letter. If for one do not believe there ever was such a crank as he pretends to be, and fancy I see him looking anxiously for the next *Magazine* to see if any of the ladies would take the trouble to rake him over. I know just how to take a man that talks like that, for I have one to deal with. He means just the reverse of what he says, and I'll bet the "Kicker" thinks the *Woman's Department* the most interesting part of the *Magazine*. I am anxious to know what other ladies think of his letter.

R. B. should not stir her taffy while cooking, and it will not sugar.

Will some one please tell me how and what to cook for a man that will not eat either milk or butter? *A. P., A Fireman's Wife.*

[If the writer of this letter will read this month's *Magazine* she will know what the ladies think of "Kicker."—Ed.]

LOS ANGELES, CAL., April 7, 1890.

Editor Woman's Department:

While perusing the April number of the *Magazine*, I came to an article signed by "Kicker" in which he endeavors to tell the readers of the *Magazine* how he manages his wife. Now let me say to "Kicker," I don't think he has good sense, or he has written that letter just to hear what somebody else has to say. Let me inform him that these days are not "slavery days," but that his wife is just as good as he is and in my estimation a great deal better. He also says Mr. Debs had better end the *Woman's Department* and that if he don't he will work against him at the next convention. I can't see what harm such a poor imbecile as he, could do anybody. He also tells how he would leave his wife if he caught her flirting with any body, and at the same time tells how he flirts with the young girls and takes them to parties, etc., etc. Now, Mr. "Kicker," let me tell you right here that you ought not to be allowed to live in a decent community and if you lived where I do you wouldn't be allowed to associate with me nor anybody if I could prevent it. I can't express myself as I want to on paper but I think if I had you here I could express myself more forcibly. I also am not afraid or ashamed to sign my name to this, my feeble attempt at an answer. Yours respectfully,

W. T. Curl.

[If Bro. Curl ever comes into personal contact with "Kicker" we hope he will express himself as "forcibly" as possible, in the name of the *Woman's Department*.—Ed.]

ASPEN, COLO., April 7, 1890.

Editor Woman's Department:

I am always interested in any magazine that helps housekeepers. I have two children, my husband and myself to work for. I like my house and children to look neat and tidy and want myself to look so well that my husband will not be ashamed of me. I find it very difficult to do all this and do my sewing, washing, and keep the table well filled. Now it is easy enough to tell one how things should be done but I wish some one would tell me how it is to be done. I am not afraid of work nor ashamed to work. I would much rather work for some one than have them work for me. I can paint some in crayon or oil paints, can embroider, make zephyr flowers, sew, knit, wash, iron. In fact do most any kind of work. The trouble is I can't get time to do anything but my housework and take care of the children. Now if any of the sisters can tell me how to manage my work so I won't be obliged to hire help once in a while, I will be thankful.

In regard to managing my husband, I think he manages himself very well. He works very hard and never complains at anything I do, or do not do, and I am so glad to see him come home alive and well that I never think of cross words.

Hoping to receive some information I will close.

A Fireman's Wife.

[We hope our readers will give some attention to this letter. Ed.]

SOUTH KAUKAUNA, WIS., April 12, 1890.

Editor Woman's Department:

Being a constant reader of the *Firemen's Magazine* I have been anxiously looking forward for a few lines from John Hickey Lodge, No. 296. As I fail to see them I ask permission to say a few words. There is a thriving lodge here, all good, sober and industrious men. There are quite a number of the boys who expect to be promoted this spring, among them are Bros. M. Purdy, Chas. Daley, B. Grey, T. Daley, J. O'Rourke and several others. Bro. M. O'Donnell is back to our town again and by the way he smiles on one of our young ladies. Although Mart has red hair he takes well with the girls. Bro. B. Grey, if rumors are true, has decided to lay aside the bachelor garments and don those of Benedict. Do so, Bart, and see if you can't get the rest started, they seem to be very slow about it. Wishing the Brotherhood all the success they deserve, I remain,

A Fireman's Sister.

For Woman's Department:

A TRIBUTE.

Charles W. Cox, an engineer, running on the California Pacific Division of S. P. R. R., met with a sad and terrible death near Davisville, Cal., on January 21, 1890; the accident that occurred, and by which he lost his life, was due to a washout. The following lines are composed for and respectfully dedicated to Mrs. C. W. Cox, who has the heartfelt sympathy of the writer in her recent bereavement.

As I stood beside my loved one,
And clasped his cold, white hand,
And heard the sad wail of sorrow,
From the broken household band,
I asked myself the question:
Shall we meet again some day
In that land of joy, celestial,
Where all tears are wiped away?

As I stood beside my loved one,
Who had met such a terrible fate,
My soul was filled with deep anguish—
I thought my heart would break;
And I clasped his hand still closer,
While my heart thus throbbled with pain,
For I seemed to hear his last "good bye,"
With its sorrowful, sad refrain.

How little I dreamed, that evening,
When his last farewell was said,
That when next I should hear from my darling
He would be lying cold, silent and dead;
That his lips no more would give greeting—
That his faithful heart would be stilled;
Oh! God! was there ever such a home-coming?
Yet life, for some wise purpose thus willed.

Alas! alas! that life's shadows,
Should cast o'er my happiness a blight,
Crushing hopes, shrouding day-dreams in darkness—

As sad as the mantle of night;
Then chide me not for the tears now falling,
For the one so dear to my heart,
While over and over again I ask the question,
How can I live my life from him apart?

Fond parents are silently weeping,
For the loss of a son, ever dear,
A brother and sister are grieving
For him who no longer comes near;
Yes, we miss, sadly miss from the home-circle,
The one who so often sat there,
And our tear drops with sorrow are laden,
As we gaze on that one "vacant chair."

God help me to bear my sorrow,
And lighten my burden of woe,
May my faith in His love never falter,
As o'er life's pathway I journeying go;
Though my way is encompassed in darkness,
This shall be my soul's fervent prayer,
That I may meet my dear one in heaven—
In that home so transcendently fair.

Mrs. Nellie Bloom.

WEST OAKLAND, CAL., April 20, 1890.

PORRERO DIAZ, MEXICO, March 31, 1890.

Editor Woman's Department:

Thanks awfully for printing my letter. You have lifted a great load off my mind and have aided me considerably as I have sent the *Magazine* to my best girl and of course had the letter from Mexico plainly marked and I know she will think lots more of me now that I am corresponding with a great and good *Magazine*. I know she thinks lots of writers for one came very near taking her away from me once. But I must tell you something about Mexico and No. 38 and quit talking about my betters. I'm going to send this to her also.

No. 38 is doing well, has not added any new members, but all the boys seem to take a pride in seeing who can do the most good and although we have no lady friends to give us good advice yet we are an awfully good set of boys.

If we only had a few lady friends to help us decorate our hall and add a few finishing touches such as only women can we would be content.

The climate of Mexico is beautiful, very seldom any one gets sick. The nights are always cool and when one gets a good night's sleep he does not mind the heat of the day, and then it seldom gets higher than 90 and the heat is not felt like it is in the North.

This road runs most of the way through mountainous country and there are but two towns of any size; Monclova and Paris.

The town of Paris is quite a manufacturing town and there are several large cotton mills there and they ship a good deal of cloth from there to other places in Mexico. The country around Paris is noted for raising grapes and in fact all kind of fruit.

The chief industry of this part of the country is mining and stock ranches. A great deal of fine stock is being shipped from the states.

Vegetation around here is very scarce as it seldom rains more than three or four times a year and the soil is very hard and rocky. But Mexico, I think can beat the world for cactus and wild flowers. I gathered at one time thirty-six different varieties of cactus and some of them were beautiful. In April and May the mountains are covered with wild flowers and a kind of moss that the Mexicans never dies. I had some on my engine for six months and when I put it in water it became about two hours as green and fresh as ever.

The Mexicans as a class are very ignorant and do not forget that the United States thrashed them once. This feeling however exists only with the poorer class, the wealthy are always very generous and polite, but, sad for us boys, they keep the daughters out of sight.

A young man when asking to take a young lady to the opera or ball always includes her father and mother in the invitation and if he does any coming before marriage he does it in the presence of and ma; I for one don't like it that way.

Some of the readers of the *Magazine* will no doubt be surprised to here that the name of corn in Mexican language is mice and a rope is called *Carty*. The language is hard to learn for one who often means several different things and a great many of their words sound almost exactly alike. Most of the boys have picked up enough however to be able to get along and make their wants known.

We have very few pleasures, for how can a boy enjoy themselves without ladies?

We go hunting and fishing when off duty and most always have good luck for Mexicans never hunt nor fish, they are too lazy.

We have a meeting most every Sunday where we spend a few hours and then proceed to make runs as only railroad men can when together. Then some one will say something about Mexico and then everybody goes home—no, not home, to their room.

How sweet the name of home sounds to me, has been many a long year since I bid my good mother good bye. I little thought then it would for the last time and I would never see her on earth.

Be good to your mother, boys, for when mother gone, home is home no longer but just a place to live.

I notice in the *Magazine* of April a good many letters on "How to Manage a Husband." Now I don't interest me at all. I am working for the No. 38 and the question satisfactorily answered "How to get a Wife" would help 38 ever so much. If some kind lady tell us how he asked and how he acted?

I am spoken for but I was one of the lucky ones. I only had to say "yes, sir," and the business was over. "I don't intend to send this to her."

But I promised to go and see the new bridge across the Rio Grande which will soon be completed. I must say good bye. Will meet you in

Sabine.

[We do not think our correspondent needs any assistance. Thanks for his interesting letter. — Ed.]

THE O. & M. SETTLEMENT.

President Barnard Meets the Supreme Council and Makes Required Concessions.

The Strength of Federation for the Organizations Embraced in the Supreme Council, as also the B. of L. E. Triumphantly Demonstrated.

During the month of March, the Engineers and Firemen, members of the B. of L. E. and B. of L. F., employed on the Ohio & Mississippi Railroad, had certain important grievances, which they formulated and presented to Mr. J. F. Barnard, the President of the O. & M. system. President Barnard was willing to make certain concessions to the Engineers, but declined to consider the proposition relating to seniority, and some other demands of vital interest. He would agree to give Firemen 50 per cent. of the Engineers' wages, which it was found would result in a reduction of the wages of the Firemen, and this President Barnard would do for his men as employes, absolutely refusing to treat with his employes as members of organizations, and as unqualifiedly refusing to recognize or discuss any matters of grievance with any representatives of such organizations.

At this juncture Grand Chief Arthur of the B. of L. E., and Grand Master Sargent, of the B. of L. F. sought an interview with President Barnard, and were informed by that gentleman, that he did not recognize organizations, and must be permitted to manage his own business without their interference.

Messrs. Arthur and Sargent, thereupon directed the committees representing the Engineers and Firemen, to see the men of their organizations, and have them by a vote determine what further action they would take. The committees promptly carried out the instructions, and the men voted to strike if their organizations were not recognized by President Barnard and their grievances settled.

Grand Chief P. M. Arthur, of the B. of L. E., was promptly notified of the determina-

tion of the Engineers, and immediately, Grand Master Sargent of the B. of L. F. and President of the SUPREME COUNCIL of the Federated Orders, received the following telegram from Grand Chief Arthur:

CLEVELAND, OHIO, May 9, 1890.

Frank P. Sargent:

Engineers have voted to stop. Convene your Council. P. M. ARTHUR.

Following this telegram, President Sargent convened the Supreme Council at Cincinnati on Tuesday, May 13th, and a full representation of the orders composing the Council was present, viz:

B. of R. C., B. of R. T., S. M. A. A. and B. of L. F.

Chairman W. N. Cox, of the B. of L. E. grievance committee, was authorized by Grand Chief Arthur to represent the B. of L. E. and to abide by the decisions of the Supreme Council, as follows:

CLEVELAND, OHIO, May 10, 1890.

Mr. F. P. Sargent:

DEAR SIR AND BROTHER:—Your telegram received. I have written to Brother Cox this morning telling him to abide by the decision of your Supreme Council, so that it will not be necessary for me to be in Cincinnati on that occasion. Whatever your Council decides to do the engineers are with you according to their votes.

I hope, however, if the Council decides to have the men stop that Mr. Barnard, upon receiving your notice, will come to his senses and realize the necessity of recognizing labor organizations. If your Council decides to make an issue and Mr. Barnard accepts of it, I hope the men will fight it out to the bitter end. He may, when he finds the men are determined, yield, which I hope he will do for the good of all concerned.

Fraternally yours.

P. M. ARTHUR, G. C. E.

As soon as the Supreme Council convened, the grievances of the men were submitted, examined and endorsed, and thereupon the following communication was forwarded to President Barnard:

CINCINNATI, OHIO, May 13, 1890.

John F. Barnard, Esq., President and General Manager O. & M. Ry., Cincinnati, Ohio.

DEAR SIR:—On Tuesday, May 6th, you were waited upon by Grand Chief Arthur, representing the Brotherhood of Locomotive Engineers, and Grand Master F. P. Sargent, representing the Brotherhood of Locomotive Firemen, whose mission it was to bring about a satisfactory settlement of the grievances of the engineers and firemen employed upon the O. & M. Railway, of which you are the President. The grievances had been presented to the company by a committee of engineers and firemen, and every honorable effort on their part put forth to effect a satisfactory adjustment before calling upon Messrs. Arthur and Sargent. While according these gentlemen an audience, you positively refused to recognize them officially or make a settlement with them as representatives of the organizations of which they are the executive heads. Therefore no settlement could be effected, as the engineers and firemen refused to treat with you as employes, preferring to stand by their organizations.

The grievances were then placed in the hands of the Supreme Council of the United Orders of Railway Employes, which embraces the Brotherhood of Locomotive Firemen, Brotherhood of Railway Conductors, Brotherhood of Railroad Trainmen and the Switchmen's Mutual Aid Association. This Council has carefully inquired into all the details of the case as presented to them and has decided that the en-

gineers and firemen are asking nothing more than is justly due them from the O. & M. company; and, furthermore, that the past record of the Brotherhoods of Engineers and Firemen warranted you in meeting and treating with their executive officers as is done by other railroad corporations, and your refusing to do so has placed the grievances of your enginemen before this Council, and it becomes a general grievance in which all engineers, firemen, conductors, brakemen and switchmen are alike interested.

Therefore, in the name of the Supreme Council of the United Orders of Railway Employes, we ask an audience with you at the earliest possible moment, when we will be prepared to lay before you our proposition for the purpose of effecting a settlement and avoiding trouble on your lines. We will await your reply, which you will send by the committee that presents this communication.

Yours very truly,

[Attest.] F. P. SARGENT, *President*.

W. A. SHEAHAN, *Secretary*.

Approved,

S. E. WILKINSON,

P. H. MORRISSEY,

G. W. HOWARD,

G. W. LOVEJOY,

C. T. MOORE,

JOHN DOWNEY,

JOHN A. HALL,

W. A. SEMSROTT,

J. J. HANNAHAN,

EUGENE V. DEBS.

President Barnard replied to the foregoing communication as follows:

OHIO & MISSISSIPPI RAILWAY CO.,

PRESIDENT'S OFFICE,

CINCINNATI, May 13, 1890.

F. P. Sargent, Esq., Cincinnati:

DEAR SIR,—I have your communication of this date, and can give you an audience this afternoon at 2:30.

Yours truly,

J. F. BARNARD, *President*.

The committee appointed by the Supreme Council to confer with President Barnard, consisted of the Chief Executives of the several organizations composing the Council, viz:

F. P. Sargent, G. M., B. of L. F., and President Supreme Council.

S. E. Wilkinson, G. M., B. of R. T.

John Downey, V. G. M. and acting G. M., S. M. A. A.

G. W. Howard, G. C., B. of R. C.

The committee met President Barnard, and as a result of the deliberations the following schedule of wages, and adjustment of other matters named therein was adopted:

SCHEDULE OF WAGES TO BE PAID ENGINEERS AND FIREMEN ON THE OHIO & MISSISSIPPI RAILWAY.

ARTICLE 1. The rate for passenger engineers shall be three and two-eighths (\$3.25) cents per mile; the rate for freight engineers shall be four (4) cents per mile for four wheel and six wheel connected engines; and four and one-fourth (4.25) cents per mile for consolidated engines. In all cases where freight trains turn at Cochran and Vincennes there shall be an allowance of twenty (20) miles as an extra basis of pay, and local rate with twenty (20) miles added shall be paid for the train known as the Lebanon Coal train, to any point where it may run.

The firemen of road engines to be paid fifty-four (54) per cent of the rate of wages paid to their engineers.

ARTICLE 2. The rate of local or way freight engineers shall be five (5) cents per mile actual mileage on the main line, and four and one-half (4.5) cents per mile on the Springfield Division and Louisville Branch.

ARTICLE 3. Switching engineers on the Springfield Division shall be paid two dollars and fifty cents (\$2.50) per day's work, twelve hours or less to constitute a day's work.

ARTICLE 4. Engineers running between Water Junction and Jeffersonville shall be paid three dollars and twenty-five cents (\$3.25) per day's work, twelve hours or less to constitute a day's work.

All other rates not specified in these articles to remain as heretofore.

ARTICLE 5. When, after being called for train-terminal points, engineers are delayed two hours or more, they shall be paid thirty-five (35) cents per hour for the whole time delayed, less thirty (30) minutes; if delayed less than two hours, no allowance to be made.

ARTICLE 6. Engineers and firemen dead heading over the road under orders, shall be paid two cents per mile for distance travelled.

ARTICLE 7. Switching engineers and firemen having regular engines shall not be held off to go work to extra men.

ARTICLE 8. Engineers called from duty on company's business shall be paid three dollars and fifty cents (\$3.50) per day and expenses, and firemen one dollar and eighty cents (\$1.80) per day and expenses.

ARTICLE 9. Promoted firemen to be eligible to full pay of freight engineer after one year's service as engineer; and, when promoted, to be paid three cents per mile for the first six months, and two and one-half (2.5) cents per mile for the second six months.

ARTICLE 10. If any engineer or fireman shall be suspended or discharged, he shall be entitled to a fair and impartial hearing with the privilege of calling witnesses to testify on his behalf; and, if he be exonerated, shall be reinstated and paid for time lost; such hearing and investigation shall be held within ten days from date of such suspension or discharge unless insuperable difficulties prevent, being intended that he shall have a hearing at the earliest reasonable, practicable date.

ARTICLE 11. Fines shall not be imposed upon engineers for loss or breakage of tools, or damage rolling stock, or for killing live stock.

ARTICLE 12. Right to regular engines or runs shall be governed by seniority and capacity in road service on respective divisions, provided record otherwise good.

ARTICLE 13. The list of extra men shall not be increased by the addition of new men as long as extra men can do the work and make reasonable wages. A monthly statement from the payroll of wages made by extra men shall govern such cases.

ARTICLE 14. A copy of these articles shall be placed in the hands of the Master of Rolling Stock Superintendent and Train Masters for reference.

ARTICLE 15. The above to be acted upon in good faith on the part of the O. & M. Railway Company and its engineers and firemen. Thirty days not of a desire to change the main features of the schedule of wages shall be given by either party, sitting it, to provide ample time for careful consideration and conference about the subjects submitted.

Ohio & Mississippi Railway Company, by

(Signed), J. F. BARNARD,

(Signed), W. N. COX, *President*.

(Signed), For the B. of L. F.

JAS. GABRIEL,

For the B. of L. F.

The action of the committee was promptly submitted to the Supreme Council, and was unanimously approved by that body, also, by the employes, whose interests were directly involved.

In the foregoing brief account of the settlement brought about, between the Brotherhoods of Engineers and Firemen and the O. & M. it will be observed that President Barnard not only recognized the organization named, but the Supreme Council as well, fact, the settlement secured was made

through and by the Supreme Council. During the deliberations, incident to the settlement, Brother W. N. Cox representing the B. of L. E. and Brother J. Gabriel, representing the B. of L. F. were highly efficient.

President Barnard, of the O. & M., is to be complimented for the promptness of his concessions. He saw with a business eye becoming a man in his responsible position, that some old things have passed away, and that in the adjustment of wages and other matters relating to the welfare of employes, he could, without the loss of dignity, confer with representatives of his employes, he himself being the representative of the stockholders and the bondholders of the road.

So far as federation is concerned, it would be difficult to imagine conditions more completely demonstrating its power for good, and the management of the affair, is a triumph for the SUPREME COUNCIL, which ought to receive from all the Orders of railway employes the highest commendation.

There are other grievances complained of by employes on the O. & M. system, which in due time and in proper order will be submitted to Mr. Barnard, and the indications are that they will be satisfactorily adjusted, President Barnard simply desiring time to adjust matters so as to bring all his trainmen and yardmen into satisfactory relations with the great interests he represents.

PITTSBURG YARDMEN.

Their Grievances Amicably Adjusted and a Strike Averted.

By the S. M. A. A., Supported by the Supreme Council of the Federated Orders of Railway Employes.

For some time prior to April 3d, there had existed in the ranks of switchmen and other yard men employed in the yards of the various railroads centering at Pittsburg, some fourteen in number, a number of grievances more or less serious, and which threatened widespread trouble in the affairs of said roads, and it was deemed of great importance to avert, if possible such troubles.

On April 3d, the yard men of the various roads, through their committee, submitted a bill of grievances to the Superintendents and General Managers of the roads, which was for four days totally ignored.

At this juncture, Mr. John Downey, Vice Grand Master of the S. M. A. A., and acting Grand Master of that Order, in the absence of Grand Master Sweeney, who was in California, arrived in Pittsburg, and succeeded in obtaining an interview with two of the officials of the roads involved.

At this interview, acting Grand Master Downey, of the S. M. A. A., plainly stated the facts in connection with the grievances, and just what the companies interested

might expect if an issue was made. He represented to the officials that the S. M. A. A., the body that he represented, was one of the Orders of the federated bodies of railway employes, and that the Supreme Council of that federated body would convene in Pittsburg, and would, as exigencies might require, take part in the deliberations necessary to effect a settlement of the grievances submitted.

After said interview, the various committees called on their respective Superintendents and General Managers, and received an answer to all the articles embodied in their bill of grievances. The answers were submitted to the Supreme Council, and ratified, and the General Managers notified of the action of that body.

It should be stated in this connection that it required nearly the entire month of April to conduct the negotiations between the yard men and the railroad officials, and that the SUPREME COUNCIL of the Federated Orders did not convene in Pittsburg until April 29th, and after two days' deliberation, the settlement was ratified resulting in an average advance of 17 per cent. in the wages of all the men.

At an immense meeting held in Pittsburg May 1st, addressed by members of the Supreme Council, the action of that body was enthusiastically and unanimously indorsed by the railroad employes interested, by a standing vote.

The course pursued by acting Grand Master Downey, of the S. M. A. A., was in the highest degree prudent. He exhibited a full comprehension of the situation, and by his firmness and diplomatic skill, his energy and watchfulness, earned the sobriquet of "Little Giant," which expresses in some measure his capacities to deal with and solve vexatious problems. In his arduous work he was ably seconded by Bro. Frank Hawley, of Lodge No. 62, S. M. A. A., who was ceaseless in his exertions to bring about a settlement conducive to the welfare of the yard men.

In closing this notice it is eminently due to the SUPREME COUNCIL to say that it promptly responds when any of the Federated Orders have grievances which they are unable to adjust, and in this instance, it is universally conceded that a strike would have occurred but for the wisdom of its deliberations.

M. E. INGALLS, Esq., President of the Big Four system, goes to Europe on business and pleasure, and for the present it is understood that further consolidations with that system will cease. It now embraces the original C. I. St. L. & C. (Big Four), the Bee Line, the Cairo, Vincennes & Chicago, the White Water, the Ohio, Indiana & Western and the Cincinnati, Wabash & Michigan.

THE ENGINEERS' JOURNAL AND FEDERATION.

The question of Federation is at last discussed pro and con in the B. of L. E. *Journal*. The discussion began in the April issue of the *Journal* by the appearance of an editorial article, and in the May issue we find another article—captioned "Justice"—in which the editor states that the purpose of his writing is to "appease the minds of the members," and "also the public." Such a statement makes it proper to inquire, Why this necessity to "appease" the members of the B. of L. E. and "also the public?" What has gone wrong in the B. of L. E. that makes it necessary for the editor to indulge in *appeasing* statements? The answer is easy. The Grand Chief of the B. of L. E. had made himself prominent as an opponent of federation, but, notwithstanding this fact, the great body of the B. of L. E., through a majority of its delegates at the Denver convention, took the initial steps to secure federation with other Orders of railway employes. This action stands monumental of the wisdom and justice of the great majority of the delegates at the Denver convention.

In view of such facts, the B. of L. E. *Journal* deems it prudent to "appease the minds of its members," pacify them, allay their growing hostility to a policy in conflict with the progressive spirit of the times.

In performing this work of appeasing the minds of the members of the B. of L. E., the *Journal* recites the troubles on the Queen & Crescent Railroad in January, 1890. The history of that affair speaks, trumpet-tongued, in favor of federation. It proves everything claimed for federation, and is absolutely conclusive. We reproduce verbatim the *Journal's* account of it:

The Queen & Crescent is one of the largest systems in the south, extending from Cincinnati, Ohio, to New Orleans and Shreveport, La. It embraces 1,159 miles of road in Ohio, Kentucky, Tennessee, Alabama, Mississippi and Louisiana. At the time of the adjustment of the grievances on the Q. & C. there was not a single lodge of brakemen, not a single lodge of switchmen, and only one lodge of firemen on the entire system of 1,159 miles of road. The federated body in vogue at that time, had a membership of probably seventy men on the entire system. The Q. & C. is well organized on this system. The B. of L. E. maintain the following Divisions: Numbers 35, 36, 198, 230, 281, 333, 426, and 436. Thus it will be observed that the Q. & C. officials were opposed by the twenty-eight discharged Conductors and about seventy members of the federated body then in vogue. On the arrival of Grand Chief, P. M. Arthur, at Cincinnati, and after consultation with Messrs. Howard, Sargent and Wilkinson, he learned, to his surprise, that while they had been in session with the employes for several days, no effort had been made by either of the Conductors. He, therefore, instructed Mr. Howard to seek an audience with the General Manager and endeavor to effect a settlement of the grievances of his members. After having conferred with the President and General Manager, he failed to adjust the Conductors' grievances. Mr. Arthur then advised that as Mr. Sargent was President of the Supreme Council, that he address a letter to the officials, seeking an audience. To this

note there was appended the names of the FOUR GRAND OFFICERS present. (Italics and capitals ours.—Ed. *Magazine*.)

When this note was presented to the President of the Q. & C. and he observed the signatures, he granted the request. As soon as the formalities had been observed, Mr. Schiff addressed Mr. Arthur, desiring to know if the engineers of his system had joined *forces with the discharged Conductors*. On being informed by Mr. Arthur that they had, Mr. Schiff consented *at once to arbitrate*. (Italics ours.—Ed. *Magazine*.) In presenting this case to the members of our Brotherhood, we can, with equal propriety with those put forth by others, claim that the engineers alone induced the Queen & Crescent officers to arbitrate the grievances of their discharged Conductors. "Honor be to honor due."

In another place, says the article, from which we have quoted:

After several interviews between the management and the employes the case was referred to a board of arbitration composed of three of the most respectful citizens of Cincinnati; they rendered a verdict that the Queen & Crescent Company should either restore the discharged conductors to their former positions on the road or pay them three months pay each, at \$80 per month.

Now we submit that it is scarcely within the range of possibility to present a stronger case vindicating the wisdom, justice and power of federation. It is eminently worthy of exhaustive analysis. We cheerfully engage in the task.

First. There were "twenty-eight discharged conductors," members of a young and growing Order, whose watchword was *protection*. The Order was numerically weak, but right in principle and courageous in action. It would not tamely submit to a wrong.

Second. What was the wrong? It was that the conductors had been discharged because they were members of an organization that proposed to protect its members.

Third. The wrong was of a character that touched the central, pivotal, fundamental principles of the Brotherhood of Locomotive Engineers, of the Brotherhood of Railway Trainmen and the Association of Switchmen, and as a legitimate consequence vitally interested all of these Orders.

Fourth. From the first, be it said, to the splendid renown of the Engineers on the Q. & C., they proposed to utilize the strength and influence to succor the wrong and the wronged.

Fifth. We have the glowing fact, organization or no organization, the men were profoundly in sympathy with the wronged and outraged conductors, and were ready to a man, to stand by them in the struggle for the right, and in this they exhibited the splendid traits of manhood that all courageous men admire.

Sixth. The officials stood ready to take advantage of the weakness of their unorganized employes. They would not listen to their grievances, nor recognize them. They would not redress any wrong inflicted upon the conductors. Discharged because they belonged to an order having for its

corner stone "protection," they felicitated themselves that no power could compel them to change their policy.

Seventh. At this supreme juncture Grand Chief P. M. Arthur, of the great Brotherhood of Locomotive Engineers appears on the scene. The divisions he numbers, called for him. He responds. Now look at it. We beg the special attention of the reader. Grand Chief Arthur *"advised, that as Mr. Sargent was President of the Supreme Council, that he address a letter to the officials seeking an audience. To this note there was appended the names of the four Grand Officers present."* What names were appended to the "note" addressed to the officials by "Mr. Sargent, President of the Supreme Council" of the Federated Orders?

Grand Chief P. M. Arthur, B. of L. E.

Grand Master F. P. Sargent, B. of L. F.

Grand Chief G. W. Howard, B. of R. C.

Grand Master S. E. Wilkerson, B. of R. T.

For the time being, at least, Mr. Arthur acted with the *Federated Orders*, and, in a very important sense, with the SUPREME COUNCIL. There stands the record—Federation on the Q. & C. was accomplished, and the moment it was accomplished, victory was won and the right triumphed.

Eighth. Who denies the superior strength of the B. of L. E. on the Q. & C.? Not one. Who envies them their strength and influence everywhere? No one. Who questions the fact that the Engineers were potent in securing justice to the wronged Conductors on the Q. & C.? We never heard an intimation to the contrary. We feel a just pride in the action of Divisions 35, 95, 198, 230, 281, 363, 426 and 436, on the Q. & C. They are made up of brave men, and all honor is due them for their uncompromising devotion to manhood and principle. They stood by the outraged conductors, and contributed the full measure of their strength to redress their wrongs. Their action was manly, fraternal, heroic and chivalric. There are some things connected with the action of these Divisions which in an exceptional manner entitle them to more than an ordinary share of grateful remembrance. Disregarding all pettifogging objections, they federated. Recognizing the full measure of the wrong inflicted upon the discharged conductors, they required their Grand Chief to participate in the efforts of the weaker Orders on the system, to secure justice, and Mr. P. M. Arthur may well afford to boast of results.

When any one feels disposed to protest against federation, they should read the account of the splendid victory achieved on the Q. & C.

England, within a brief period, has invested \$60,000,000 in American breweries; a happy business.

TWO GREAT SPEECHES.

The speeches of Hon. Daniel W. Voorhees, of Indiana, and Hon. Isaac M. Jordan, of Ohio, in defense of Marshall Lafferty, formerly conductor on the Ohio & Mississippi railway, have been prepared in pamphlet form and can be had by enclosing fifty cents to Marshall Lafferty, conductor E. & T. H. R. R., Evansville, Ind.

Mr. Lafferty was arrested at the instigation of the General Passenger Agent for alleged irregularities in his duties—, he was tried by jury and acquitted. Mr. Lafferty has now brought suit against the O. & M. company in the sum of \$100,000 for damages.

The speeches of Messrs. Voorhees and Jordan are among the greatest ever delivered before a jury and are worth ten times the price asked for them. Anyone having fifty cents to spare will get his money's worth, besides helping a worthy conductor, Marshall Lafferty, in his struggle to secure what is justly his due.

THE SUPREME COUNCIL OF THE UNITED ORDERS OF RAILWAY EMPLOYEES.

The Supreme Council of the United Orders of Railway Employees meets at Chicago in annual session, on Monday, June 16, 1890. It will be in many regards, an important session. Questions of grave import will be submitted and discussed. Quite likely, members of the B. of L. F. will have propositions to submit, and they will be welcome, and will receive due consideration. The Supreme Council is animated by a desire to perfect federation on a line that shall secure the largest possible benefits to the Federated Orders, and all matters relating to the consummation of an end so desirable will command earnest attention.

THE German papers report that at the recent election in that country, the Socialists polled 1,457,328 votes, and a workingman's paper remarks that when the workmen of the United States poll that many votes "they will be listened to." The workmen of the United States poll more votes than did the German Socialists, but not for workingmen's candidates. Workingmen make no nominations, they have no candidates, they throw away their votes on candidates of parties, who, when elected, have the faculty of forgetting their pledges.

It is stated that the employees on the Pennsylvania railroad last year contributed to the "Relief fund" \$377,461.19, and the company contributed \$70,160.29—total \$447,621.48. The amount paid out for relief was \$343,569.36. Such figures are worth looking at. It will be seen that the employees contributed all that was paid out and \$33,991.83 more than was paid out.

THE O. R. C. CONVENTION.

Protection Adopted by an Overwhelming Majority.

*E. E. Clark, Esq., Late Grand Senior Conductor,
Elected Grand Chief of the Order*

We have for several days held back going to press for the sole purpose of obtaining the latest possible reliable information relating to the action of the Convention of the Order of Railway Conductors in session at Rochester, upon what is termed the "strike clause" of its Constitution, as also to learn the name of the fortunate member who had won the position of Grand Chief. The wires have amply rewarded our patience and we are able to announce to our readers that the O. R. C. in the matter of seeking redress for wrongs done its members, is now in line with all the great Orders of railroad employes. The O. R. C. has been in existence twenty-two years, but in the matter of protection started out upon an error; never did an Order seek more assiduously to secure justice to its members by a mistaken conception of obligation and duty. It sought to conciliate corporations by yielding to their demands and though ceaselessly repulsed, it still held on to the old methods. Its officers did not comprehend that new ideas and new forces had come to the front, and that a new dispensation had dawned. It was because of this fact that the Brotherhood of Railway Conductors, under the leadership of Grand Chief G. W. Howard, came into existence and now has thoroughly organized more than sixty Lodges, and though in its very infancy, has been instrumental in winning a number of notable victories for its members, which have given it a national reputation. The splendid triumphs of the B. of R. C., we doubt not, exerted a beneficial influence upon the members of the O. R. C., but the rapid growth of the B. of R. C., indicates that in the ranks of the conductors of the country there was deep seated unrest, and a determination to redeem the calling from accumulating stigmas; as a consequence they enlisted under the banner of the B. of R. C., an organization that has demonstrated its comprehension of the needs of railroad employes, and realizing that in these times of colossal corporate power simple organization would not answer the demand, at the earliest practical day came into line under the laws of the federated Orders. While we most heartily felicitate the O. R. C. upon its emancipation from a mistake imbedded in its Constitution, and wish it a successful career in demonstrating to the world the wisdom of its action and most cordially give it the right hand of fellowship, as an organization that in the future will *strike* when all other means of redress fail, we shall

not abate in the least our zeal in promoting the success of the B. of R. C. It started right and with chivalric courage has upheld the right. It comprehended the necessity for an Order of railway conductors in full accord with other orders of railway employes, and the organization now commands universal respect.

At this writing we are not advised as to the course the reconstructed O. R. C. will pursue in regard to federation, but whatever may be its action, we do not hesitate to say that it has done a glorious work and having taken a wise step we do not doubt others will follow in the same direction. There are now two orders of railway conductors in existence. It will be for them to determine their future relations, and it may be possible that in the not distant future, consolidation will occur. We have faith in the wisdom of the great body of railway employes. Demonstration follows demonstration in such rapid succession that a man must be steeped in misanthropy to doubt the triumph of the right. Where there is a will there is a way, and we are satisfied the conductors will find it.

We take this occasion to congratulate E. E. Clark, Esq., late Grand Senior Conductor upon his elevation to the chief executive office of his Order. His advancement has been rapid, showing that his brother conductors have faith in his abilities to manage affairs, and to say that we wish him success in the performance of his arduous duties, but feebly expresses our felicitations.

We cannot afford to close this hasty résumé of topics suggested by the action of the conductors' convention, without wishing Bro. Wheaton, in his retirement, the peace and serenity which should come to all after years of hard work. There is still a demand for active, energetic men out of office, and should Bro. Wheaton desire to continue in the battle and in the storm, we shall hope his equipments may be such as to win victories, or, at any rate, to hold his own.

A CIRCULAR from Angus Sinclair, Esq., Secretary, announces that the next annual convention of the American Railway Master Mechanics' Association will be held at Old Point Comfort, Fortress Monroe, Va., June 17, 1890, with headquarters at the Hygiene Hotel, where the luxuries of the season will be supplied at \$3.00 a day, with sea breezes and ocean views, foam crested billows, etc., thrown in. The *Magazine* wishes the M. M.'s a royal good time at Old Point Comfort.

MRS. CHARLES D. HAINS is the President of the Hains Medina Valley railroad, in Texas. She is said to be a woman of push and rare business ability, as also a lady of refined manners. Possibly, women are to be the railroad presidents of the future.

THE BROTHERHOOD OF LOCOMOTIVE ENGINEERS AND FEDERATION.

We pay the members of the Brotherhood of Locomotive Engineers no idle compliment when we say the great majority of its membership favor federation, as it exists with the four federated Orders of railway employes, viz.: B. of L. E., B. of R. T., S. M. A. A. and the B. of R. C.

To make this alliance equal to any and every emergency, the B. of L. E. is required. With the engineers in line with the conductors, trainmen, switchmen and firemen, ample protection to the members of each is assured, and now, as from the first, we are unable to discover any well grounded objections the B. of L. E. can propose to such an alliance.

We do not hesitate to admit the numerical strength of the B. of L. E. It would be supreme folly to equivocate upon the conquering power of the B. of L. E. when in alliance with other Orders of railway employes it demands that the right shall triumph over the wrong, and the fact that the B. of L. E. can muster a larger force under its banners than some other Orders of railway employes, is an argument in favor of rather than in opposition to federation.

It should be said in this connection that notwithstanding its numerical strength of membership, the B. of L. E., in case of trouble with a corporation, is not strong enough under all circumstances to "go it alone," and engineers know that such exigencies do sometimes arise when the united voice and strength of all are required to secure simple justice, and that in the absence of such an alliance, defeat is almost inevitable.

We but repeat a thrice told tale, but as true as trite, that had the engineers, firemen, trainmen, conductors and switchmen been in compact alliance, acting as one, unified for the welfare of all, the history of the C., B. & Q. affair would have read differently. In this notable battle had federation existed a victory would have been won for the right, and it is universally admitted that the battle was lost because such an alliance did not exist.

It occurs to us that just here it is well to introduce figures approximating actual conditions as illustrative of cogent reasons why the strong, numerically, should federate with the weak. Stated in tabulated form, we have something like the following:

B. of L. E. membership	20,000
B. of L. E.	18,000
B. of R. T.	16,000
S. M. A. A.	6,000
B. of R. C.	2,000
	42,000
	20,000

It will be seen that as matters now stand the federated Orders number 22,000 more members than the B. of L. E., and it is

fair to presume that this per cent. of difference holds good on most of the railroad systems of the country. With such figures in full view, the arguments in favor of federation are greatly strengthened.

But there is another view to take of the subject. It will doubtless be conceded that in proportion to numbers, the greater the liability to have grievances, hence the B. of L. E. would have more grievances than firemen, trainmen, switchmen or conductors. The idea which we desire to present is, that in proportion to the numbers of the federated Orders, the greater the liability for grievances and the greater the demand for the support of the Orders of less numerical strength. In a word, federation is productive of a sense of security to all against wrongs. And thus it happens that the conclusion is almost universal that with federation strikes disappear.

In saying this we are fortunately in possession of facts which triumphantly demonstrate the conclusion. It was not long since demonstrated on the Erie railroad. It was as conclusive at Pittsburgh when the employes contended with some fourteen different railroads. It was a notable victory on the Q. & C., and in many ways demonstrated its power for good on the O. & M. On the Erie the engineers won a victory, at Pittsburgh the yard men, on the Q. & C. the conductors and trainmen, and on the O. & M. the engineers and firemen. And just here let it be said that without federation, for in every instance federation was invoked, there would have been a strike.

We do not permit ourselves to believe the B. of L. E., in the face of all the facts, in the face of logical conclusions, the trend of the mind forces of railway employes will sit down on federation. Once in the federated body, the B. of L. E.'s power and influence would be acknowledged and every problem solved.

We shall not permit ourselves to discuss any proposition calling in question the honor or integrity of the representatives of the federated Orders. It is only required to state that any intimation of dishonorable acts is unworthy of consideration and that the B. of L. E., should it become a member of the SUPREME COUNCIL, will have no cause to regret its action. It will find men and Orders honest and courageous, ready when the exigency arises to maintain every obligation to win victories for the right and to stand firmly by every pledge.

THE Boston Labor Leader says: "Rev. Joseph Cook does not believe in eight hours. That is so much in favor of the movement, anyway." The Rev. Joseph isn't half cooked. He isn't done brown. He needs roasting.

The Westinghouse automatic air-brake is now in use on 20,000 engines and 195,000 cars.

AUTOMATIC COUPLERS.

An Important Bill Introduced in Congress that Should Become a Law.

Hon. L. S. Coffin, ex-railroad commissioner of Iowa, has long been engaged in the philanthropic and patriotic work of securing legislation to reduce the annual slaughter of brakemen and switchmen growing out of the imperfect couplers in use on the railroads of the country. Mr. Coffin has also paid special attention to the killing and maiming of brakemen in consequence of the shameless negligence of railroad corporations in not providing freight cars with properly constructed brakes.

Owing to Mr. Coffin's persistent efforts, a law has been enacted by the Legislature of Iowa, which will, it is believed, be of incalculable benefit to railroad employes, particularly those whose duty it is to couple cars and man the brakes on freight trains. Nor has Mr. Coffin permitted his labors to cease with his Iowa triumph, but has been instrumental in having the following bill introduced in Congress, the full text of which we give herewith:

H. R. 9682.

IN THE HOUSE OF REPRESENTATIVES.

April 24, 1890.

Read twice, referred to the Committee on Commerce, and ordered to be printed.

Mr. Henderson, of Iowa, introduced the following bill:

A BILL

For the Protection of Property, Trainmen, and Other Railroad Employes in Handling Locomotive Engines, Freight Trains, and Freight Cars Engaged in Interstate Commerce.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress Assembled. That it shall be unlawful for any corporation, company, person, or persons operating any line of railroad, or for any car or transportation company using or leasing freight cars engaged in interstate commerce, to put into such use any new cars, or cars that have been sent to the shops for general repairs, or when either of whose draw-bars need to be replaced with new ones, that are not equipped with safety automatic couplers or draw-bars, such as will not necessitate the going in between the ends of the cars to couple or uncouple them, but which will automatically couple themselves, and can be uncoupled from the sides of the cars.

SEC. 2. That after January first, eighteen hundred and ninety-five, it shall be unlawful for any corporation, company, or persons operating a railroad, or any transportation company using or leasing cars of any description used in interstate commerce, or in the construction of any interstate railroad, to have in such use for the transportation of freight, or passengers, or both, any car not equipped with the said safety automatic couplers.

SEC. 3. That it shall be unlawful for any corporation, company, person, or persons operating any line of railroad to use any locomotive engine in the work of interstate commerce upon any railroad, or in any railroad yard, after the first day of January, eighteen hundred and ninety-two, that is not equipped with a proper and efficient power brake, or what is known among railroad men as a "driver brake."

SEC. 4. That it shall be unlawful for any corporation, company, or person operating a line of railroad in the work of interstate commerce to run any train in such work after the first day of January, eighteen hundred and ninety-three, that shall not have

enough cars in such train equipped with some kind of power or automatic brake, so that the engineer upon the locomotive can control the train, as passenger trains are now controlled by the engineer, without requiring brakemen to go between the ends or on top of the cars to use, as now, the common hand brake.

SEC. 5. That any corporation, company, or person operating a railroad and engaged in interstate commerce, using a locomotive engine or running a train of cars or using a freight car or "way car" contrary to the provisions of this act, shall be deemed guilty of a misdemeanor and shall be subject to a fine of not less than five hundred dollars nor more than one thousand dollars for each and every offense; and any railroad employe injured by such engine, train, or car contrary to the provisions of this act shall not be considered as waiving the right to sue and recover damages for personal injuries by having remained in the employ of such corporation, company, or person running such engine, train, or car contrary to the provisions of this act; and in any civil action brought against such corporation, company or person by any employe thereof for damages resulting from a personal injury received by the plaintiff in the coupling or uncoupling of cars, or from a lack of such proper and efficient automatic brakes as contemplated in this act, while in the employ of such corporation, company or person, if it shall be established by evidence upon the trial that either of the cars which the plaintiff was endeavoring to couple or uncouple when such injury was received was then and there in use by the defendant in violation of any of the provisions of this law, the fact that the injury to the plaintiff was caused in whole or in part by the neglect or carelessness of any other of the defendant's employes, or that the plaintiff's negligence or carelessness contributed to the injury, shall not be any defense to the action or received in evidence, but that one of said cars or engines was then and there in use on said railroad, contrary to the provisions of this act, shall be deemed conclusive evidence of gross carelessness on the part of the defendant.

SEC. 6. That it shall also be the duty of the Interstate Commissioners to require all corporations, companies, and persons engaged in interstate commerce as common carriers to report annually under oath the number of cars used in such commerce, and the number equipped with automatic couplers, such as are contemplated in this act, and what kind and the number of each; also the number of engines used in such commerce, and the number equipped with "driver brake," and the kinds and number of cars used; and also the number of cars equipped with power or automatic brakes, and the kind used, and the number of each, all of which shall be included in their annual report.

SEC. 7. That whenever any railroad company, corporation, person, or persons engaged in the transportation of interstate commerce on any railroad shall have equipped their rolling stock, either prior to or by the time of the dates fixed in this law, with such automatic safety appliances as are contemplated in this act, such corporation, company, person, or persons may lawfully refuse to receive cars for transportation over their own lines, or for switching purposes, from lines of connecting roads that are equipped with such automatic safety appliances that will work, interlock, and interchange automatically with the system of automatic couplers and brakes in use on its own rolling stock.

SEC. 8. That this act, being deemed of great and public importance, shall take effect upon its promulgation by the President.

It would be difficult to prepare a more important bill. To pass it becomes almost a sacred duty. In operation with all the provisions strictly enforced, it would save more lives than the life-saving boats and appliances on all the coasts of the continent.

We write for the purpose of urging railroad employes throughout the country to promptly prepare and forward to their

sentatives in Congress petitions earnestly urging the passage of the bill. No time should be lost. The wording of the petition should be simple. Give the number of the bill, the committee to which it was referred, and then urge prompt action. Let the petitions pour in by thousands. Every Lodge and Division of railroad employes should act, and act at once. This done, we believe the bill will be acted upon and become the law of the land during the present session of Congress.

A WRITER whose mental optics are far seeing expresses the opinion that "within the next ten years some of the grandest pieces of engineering ever conceived will be started. Bridges will be commenced which, if talked of now, would be regarded as chimerical. Houses fifteen to twenty stories high will be built. Tunnels are to be built under cities. Pneumatic tubes will be constructed to carry passengers three miles per minute." Such schemes may appear visionary to some, but engineers do not think so, and they are engaged in giving them practical shape.

THE *Chicago Rights of Labor* refers to the fact that Mr. Robert Lindbloom, "the millionaire Board of Trade man," delivered an address at a meeting of carpenters in that city, and among other things said: "It is now for you to regulate the supply of labor. If the carpenters work eight hours a day instead of ten, is not the supply of that particular commodity reduced one-fifth? You are on the right track now. Try to decrease the supply of labor and labor will become more valuable." It is quite generally believed that there are one million idle men in the United States, who are willing to work, but cannot obtain it at any price. In multiplied thousands of instances, men and women are at work at starvation prices, just enough to keep their agonized souls in their wretched bodies, just enough to keep them on the ragged edge of famine, while some are receiving fair wages. Why are labor affairs in this wretched condition? It is because labor is not organized and federated - just that and nothing more. Why is labor not organized and federated, and able to dictate wages? Let them answer who can. Why are labor organizations occupying, in many cases, antagonistic attitudes? Is it because of the jealousy of labor leaders, or the labor press? Is it owing to ignorance and prejudice? Whatever the obstacles to unification may be, they ought to be removed. We all understand the character of the "scab," but it is questionable if the "scab" is the worst foe of organized labor. One thing is certain, the ills to which labor is subjected will not only remain, but will be increased, as long as labor organizations refuse to federate and regard "an injury to one the concern of all."

S. P. WELLER.

The *Magazine* takes special pleasure in making mention of Mr. S. P. Weller, Division Master Mechanic on the Missouri Pacific railroad, residence, Sedalia, Missouri. Mr. Weller is in the very prime of young manhood, and thoroughly equipped for the responsible position he holds, and it would be difficult for the company to find a more valuable man. Mr. Weller knows how to handle men. He is a strict disciplinarian without the semblance of arrogance; a quality which men are quick to discern and appreciate. He demands of employes a strict performance of duty, and this done he sees to it that all their rights are maintained, and is prompt in recognizing merit. We regard Mr. Weller, as an exceptionally well qualified railroad man, and expect to see him at an early day occupying a still more advanced position in railroad affairs.

We have on our table the *Switchmen's Journal* for May, No. 1, Vol. 5, enlarged by the addition of sixteen pages, and otherwise showing improvement and a determination on the part of the publishers to keep abreast of the times. We regret to notice the "good bye" of Mark L. Crawford, whose vigorous pen, in the past, has given the *Journal* a commanding position in the labor literature of the day, but as his "good bye" is not a "farewell," we shall expect to hear from him in the future. As we respond to the "good bye" of Mr. Crawford, we read with satisfaction the article of John Z. White on "What are Labor Organizations Trying to do?" and shall anticipate more good things from the pens of other writers as promised. We congratulate the publishers of the *Journal* upon its advanced position in the list of labor publications, and wish it a success equal to its acknowledged merits.

Is the discussion of federation now going forward, the statement has been made by those opposed to it, as an argument to demonstrate the folly of an organization of superior numerical strength federating with one of less membership, that the Brotherhood of Locomotive Engineers has a membership of 27,000.

We have seen this statement before but have not been inclined to question its correctness, but when it is used as an argument against federation, in which we are all vitally interested, it must bear the test of inquiry and be susceptible of proof. Is there anyone connected with the B. of L. E. who will make affidavit that the bona fide membership in good standing of that organization is 27,000?

We do not pretend to state the membership of the Engineers' brotherhood, but we speak advisedly when we say that it is not 27,000 by several thousand.

MASTER WORKMAN T. V. POWDERLY some time since made a speech in Boston, reference to which was made by the *Boston Globe*. Mr. Powderly's topic was, "American Labor." The *Globe* says:

After alluding to the reason for his presence in Boston, he spoke of the dignity of labor, and said he felt that his mission was to point out to the wage-earners the right to take hold of that which belongs to them, but not that which belongs to any other man, and that he should aspire to do so as by right. He urged the manufacturers and business men to take a more lively interest in them, that they may enjoy better circumstances, such as will enable them to become good, self-respecting citizens. This they cannot be if they are forced to live on food that is fed to hogs.

The foregoing is a somewhat remarkable paragraph. When did the Boston workingmen "take hold of that which belongs to any other man?" Is it to be expected that "the manufacturers and business men" of Boston will take such a "lively interest" in "wage-earners" as to provide them with better food than is fed to hogs? Labor must be tremendously dignifying if wage earners "are forced to live on food that is fed to hogs." It might be well for Mr. Powderly to exhort the "manufacturers and business men" of Boston not "to take hold of that which belongs" to wage-earners.

In the editorial article captioned "Justice" in the *Engineers' Journal* for May, the statement is made that "at the time of the adjustment of the grievances on the Q. & C. there was not a single lodge of Brakemen, and only one lodge of Firemen on the entire system of 1,150 miles of road."

The fact is that at the time of the adjustment of grievances on the Q. & C. there were eight (8) lodges of the Brotherhood of Locomotive Firemen in good standing and in working order, so that the statement above quoted contains just 12½ per cent. of truth, a fair average for the entire article captioned "Justice," with Bro. Rogers, of the *Brakemen's Journal*, still to hear from. We refrain from further comment out of regard for the great body of engineers who make up the B. of L. E., and who are earnestly endeavoring to place their Brotherhood in alliance with other organizations of railway employes, whose advancing columns are marching forward under the banner of Federation, to certain victory.

We are indebted to the Elliott Frog and Switch Company, East St. Louis, Ills., for a neatly bound catalogue, containing numerous engravings showing the various kinds of railroad frogs, crossings, switches, etc., manufactured by the company. The catalogue contains much other valuable information relating to railroads, such as the number of rails per mile, as also spikes, bolts, etc., very handy for those who are engaged in railroad building.

In 1835, a London newspaper saw many direful things likely to happen if the craze for building railroads was not subdued. The idea of being whirled through the air at the rate of twenty miles an hour was horrifying. The noise the train would make, the stench of the smoke, the frightening of cattle, sheep, swine and horses, night and day constituted objections to railroading that the John Bulls ought to mightily protest against, and a great many of them did protest. But the craze did not subside, and John Bull has been very much developed by the introduction of railroads in his dominions. In view of such facts it is not surprising that John Chinaman is to-day very much like John Bull in 1835, and may be fifty years hence just where John Bull to-day.

"DURING the years 1887 and '88, when Mr. Arthur and Mr. Sargent conferred with each other, every interest desired for the betterment of the B. of L. and L. F. was accomplished, except the settlement of the grievances of the C. B. & Q. Brothers. Of fifteen cases presented for their consideration fourteen were honorably adjusted to their entire satisfaction."—Editorial in *B. of L. E. Journal*, May.

Was there any federation in this? Were there not perfect federation between the B. of L. E. and B. of L. F. in the settlement of these grievances? No one will deny it if all the Orders had been federated. The word *except* in the above paragraph, written at a cost to the engineers and firemen of the country of \$1,500,000.00, of untold suffering and want, would have been omitted.

"THE B. of L. E. has no use for federation"—*E. J. Rauch* in *Engineer's Journal* for May. That is what Van Tassell of New York said so emphatically before he was kicked out of the B. of L. E. for stealing.

Literary Notices.

The *Arena* for April is a particularly attractive number, as the following table of contents indicates: Frontispiece, Bishop J. L. Spalding; "Religious Morals and the Public Schools," an exhaustive paper by Rev. Minot J. Savage; "God in the Constitution," a reply to Colonel Ingersoll, by Bishop J. Spalding; "A Newly Discovered Law in Physics" by Stephen M. Allen, A. M., LL. B., F. R. S.; "Eternal Punishment," by Rev. W. E. Manley D.; "The Mask of Tyranny," an arraignment of "Socialism," by Wm. Lloyd Garrison; "Of Day House," a pen-picture of the life and work of Benjamin Disraeli, by James Realf, Jr.; "Why and cause," the second "No Name" paper; "Child Slavery," a symposium, Helen Campbell, Rabbi Solomon Schindler, Jennie June, A. A. vaillier, Florence Kelley Wischniewetzky and Orchardson; "Ungava," a Canadian idyl (translated), W. H. H. Murray; editorial notes. The *Arena* has firmly established itself among the most of the great magazines of the day devoted to the serious discussion of great living themes, may well be termed the acknowledged leader of liberal thought in the magazine world.

The attention of our readers is called to the advertisement of G. A. Schlechter, of Reading, Pa., which appears elsewhere in our columns. Mr. Schlechter is an extensive manufacturer of jewelry and is to us highly recommended as a fair and square business man who guarantees satisfaction to every patron.

The Brotherhood.

Correspondence concerning the Brotherhood is solicited for these columns.

Communications should be written on one side of the paper only, and forwarded so as to reach the Editor not later than the *fifteenth day* of each month

JOLIET, ILLINOIS, April 21, 1890.

MR. EDITOR:—I notice that in your March issue (page No. 138) you publish an attack on the Illinois Steel Company's Club, at Joliet, Illinois. It is to be hoped that in a spirit of fair play you will also publish the following reply, the *facts* of which can and will be verified by myself if you so desire, as I have investigated and know them to be *correct*.

Whittier concludes his poem of Maud Muller by saying that the words of saddest import are: "It might have been;" a more sportive genius (Bret Harte) has corrected him by saying that sadder far are the words: "It is, but not ought to be." This precisely represents the writer's view of the article published in the *Magazine* for March under the heading: "The Spider and the Fly Business." It *most decidedly* "ought not to be." With surprising egotism the writer assumes that the Illinois Steel Company has 2,000 employes and that all of them are of intellect so dense that they will walk into this web, alias, the Steel Works Club, and deposit their \$2.00 without suspecting the atrocities that are so palpable to his finer senses. Surely some trifling percentage of these men are capable of attending to their own interests.

The important points, however, and the only ones that really need any reply, are the gross misstatements. The Illinois Steel Company did build the Steel Works Club House; they also equipped it, and the cost was considerably more than \$50,000. Having done so they leased it to a board of directors selected by vote by the members of the club, they leased the whole building, without any reservation whatever, and the consideration paid was *one dollar per annum*. What per cent. this gives on the capital invested I will leave for your informant to figure out. But as he seems inclined to admit that they might reasonably expect to get six per cent. on their investment it should be evident that the company having sunk the sum of \$50,000 in this enterprise and receiving no return on it, are practically giving \$3,000 per annum for the good of their employes.

But this is not all. The Illinois Steel Company pays the salaries of the club employes, viz: superintendent, librarian, janitor, instructors, door-keepers, etc., it pays for papers and magazines, for additions to the library, for repairs, for all cleaning materials, for fuel, and lights, in short it pays all the running expenses of the club, these figure up to \$1,200 per annum, making with the interest, \$7,500. This amiable "spider" (?) therefore, before asking his employes to come up and spend "round sums" of \$2 per annum for themselves pays, himself, \$3.75 for each one of them.

Your informant pictures to himself this heartless corporation gloating over its eight per cent. wrung in round numbers of \$2.00 from its oppressed workmen. It is a genuine pleasure to reassure him, THEY DON'T GET IT; NOT A CENT. The membership fees of fifty cents per quarter are paid to the treasurer of the club, and are expended by the board of directors of the club in supplying entertainments, lectures and classes to the members. No shareholder of the Illinois Steel Company can be a member of this board.

Let me briefly sum up what I have said. The Illinois Steel Company has given into the control and management of their employes property to the annual value of \$7,500. The employes themselves, or such of them as *desire* it, give a subscription of \$2 per annum, which they control absolutely from first to last. Where then, comes in the chicane, and where, above all, the lucre?

The company, however, does hope to profit, by its enterprise. It hopes to have healthier, men, happier men and men leading lives more nearly akin to that which is man's birthright. In fact, it hopes to get a return in just such ways as the writer of the article in question would not like to admit. The club nor the Illinois Steel Company does not interfere with labor organizations, and most if not all, of the members of the club are members of the various societies with which the company treat annually. The club represents no church, no political opinion and no man's hobby, it is simply a step towards that good will which it is to be hoped will be a very important factor in future adjustments between capital and labor.

Finally I must express my sorrow that it should be permitted any man to condemn as fools 2,000 workmen as intelligent as any in the country, and as knaves a corporation, that (whatever may be our opinion of corporations in general) is certainly showing a wise generosity worthy of emulation elsewhere.

It has always been our misfortune, probably our greatest one, that we give audience to presumptuous ignorance as freely as we do, but perhaps this is the first time a corporation has been represented as offering education in all its different forms to its workmen as a means of keeping them in bondage.

P. S.—There are no Corbins connected with this company, thank God.

Yours fraternally,

Myron S. Perrigo.

PORT JERVIS, N. Y., May 5, 1890.

MR. EDITOR:—As I have never seen anything in your valuable *Magazine* about Deer Park Lodge, No. 1, I have concluded to write and let the world know that we are in a flourishing condition. Some of the old members are a little slack about attending meetings; a good many being promoted to the right side, haven't the time to attend meetings, but they most all stick to the B. of L. E. Now, I say, let us new members take hold and keep No. 1 where it always has been, one of the most advanced in the Order. I hardly know what our Lodge would do if we were to lose our Master. He seems to be our main support. Rumor says he is about to take a wife and we all know he is not far from promotion, but in spite of all we can't spare him from the head of our Lodge. Our Secretary is already promoted, but he is the same "Billy," and is with us almost every meeting. I have only a few words more to say and that is in regard to the writer who signs himself "Kicker," in April *Magazine*. He ought to be kicked P. D. Q. I have no wife, but if I had and would talk like the "Kicker" does, I would want to be loaded with a car of hogs and shipped to Stevens Point and take the "Kicker" for a partner, otherwise I am near enough to him. I for one find the Woman's Department very interesting and hope it will continue as heretofore. As this is my first attempt in writing to the *Magazine*, I hope it will not find the W. B. Hoping the *Magazine* will keep on prospering and give it to Corbin and his like, I remain,

Fraternally yours,

Pete.

ST. LOUIS, MO., April 28, 1890.

MR. EDITOR:—The members of Industrial Lodge, No. 21, recently, tendered a grand surprise party to our Receiver, Wm. C. Linck, at his residence, 2803 St. Louis avenue. The light fantastic was tripped until midnight, when the guests were seated at the elegant supper prepared for the occasion by Mrs. Linck. Among those in attendance were Miss Ella Needlen, Miss Lu Close, Miss Anna Tigh, Miss Dush, Miss Kistner, Miss Patten, Mrs. Diemert, Mrs. Mahoney, Mrs. Hoffman, Miss Stutiman, Miss Kickers, Miss Linck, Miss Hahl, Miss Henchet, Miss McCormie, Miss Harrison, Miss Rudd, Mr. W. M. Herkle, Mr. Volker, J. E. Murphy, W. A. Murphy, D. R. Martin, H. H. Webb, Chas. Harvard, W. M. Cowen, Eli Giclas, O. L. Dering, John I. Martin, E. Howard, Gus Loheman, John Lemihert, Charles Ard, Frank Morlie, Harry McGruene and others. A most enjoyable time was had and the occasion will be long remembered.

Member of No. 21, B. of L. E.

CHICAGO, May 6, 1890.

MR. EDITOR:—The time is rapidly approaching when our worthy Grand Master will blow the breath of life into, and his gavel start upon its journey the Second Biennial Convention of the Brotherhood of Locomotive Firemen. Why does the B. of L. F. hold conventions? To enact laws for the government of the Order as time and occasion demand, and modify or repeal cumbersome existing ones. Is there any that stands in need of modification or repeal at present? The writer believes there is, and struggling under this conviction, wishes to invite our members to an inspection of one of our present laws; viz: the insurance feature of our Order. Why was the B. of L. F. organized, and why is it perpetuated? From data at hand, principally the preamble of our Constitution, we learn that it was organized "for the purpose of uniting Locomotive Firemen, and elevating their social, moral and intellectual standing; and for the protection of their interests and the promotion of their general welfare." There follow then a few arguments why those reasons existed, but those are the principal reasons why our Order was organized, closing with our motto, "Protection, Charity, Sobriety and Industry," supposed to be a beacon light for our instruction and guidance.

Is our Order animated and conducted in accord with the foregoing preamble and motto? No; and I propose to show that the aims and objects of the Order, as outlined in the preamble and motto, are not the end sought, and the entire machinery of the Order is subserved and subordinated to the purpose of fostering an insurance association at the expense of labor.

It is plainly evident, from the language employed by those who framed our preamble, that they intended the B. of L. F. should be a labor organization; it is still further evinced by the action of the Philadelphia Convention in declaring it such, and I understand from the columns of the *Magazine* that it poses as such. And now I wish to inquire why the interests of labor are not made supreme and pre-eminent to all other interests of our organization? Why is it that a man who is a staunch friend of labor, perhaps a martyr to it in the past, sober, charitable, industrious and intelligent, is debarred from participating in the benefits of the B. of L. F. until he contracts to pay a tax of \$4 a quarter out of his scanty earnings, to a fund for the purpose of granting legacies to strangers, and be reassured with the knowledge that under no circumstances will he ever receive any substantial return for the same. Perhaps some brother will doubt the truth of the last clause in the above sentence; if so, let him examine the *Magazine* for the past fifteen numbers, and he will see that out of a total of 218 claims allowed since the revision of our total disability laws at Atlanta, only 26 were for total disability, while 192 were for actual deaths, which means that our members received a direct benefit of \$39,000, while we paid to outsiders the sum of \$288,000; we got 12 per cent., while they got about 88 per cent. Is this the proper way to achieve success as a labor organization? Is it fair to compel our members to pay a tribute of \$4 per quarter to something that has no connection with labor whatever, before he can, or will, be rated as an equal with his fellow-firemen? I claim it is not.

Let us be consistent: During the past year or two the columns of the *Magazine* have teemed with letters denouncing the B. of L. F. for refusing to admit to their organization members of the B. of L. F., making the assertion that it was no concern of the B. of L. F., and that it was an infringement of our liberties for them to dictate, or inquire into our connection with the B. of L. F. Now, I claim that it is just as arbitrary and dictatorial for us to insist on a candidate's subscribing to and supporting our insurance feature before we admit him, as it is for the B. of L. F. to insist on a candidate's not subscribing to and supporting it before they admit him to their Order, and every other argument which has been advanced against the B. of L. F. for their system of coercion can also be advanced against ours, for both are the products of selfishness, and actuated by the same motive; viz: a desire to compel the younger element to provide a competency for the families of

the old members after their death, a duty that they themselves have neglected to perform.

And that it is a system of exclusion and selfishness there can be no doubt, as there are a large number of firemen who cannot afford to belong to Order at present, and pay \$5.75 per quarter, but would doubtless find it an easy matter to pay \$8 per quarter, the exact cost to each member per quarter minus the insurance. Not only does it prey upon firemen from joining, but think how many it has caused to leave.

Search our expulsion list, and you will find that there has been a very small number expelled, being untrue to the interests of labor, while there have been thousands expelled for being unwilling to pay their assessments, and in each case I hold that it is wrong to expel them. Can their insurance policies, but do not brand them traitors to organized labor for refusing to support insurance association. And I claim that every expelled is an emphatic protest against our system of compulsory insurance.

Now, I want it distinctly understood that I am attacking the insurance feature of our Order. I believe the cost of it is very reasonable, and just from the exhibit furnished by our worthy Editor on page 323, April *Magazine*, I learn that it compares very favorably with the several other railroad organizations.

But the cost or utility of our insurance is not what I am protesting against; it is against the slight adjustment of our laws which compels a member to support it. Now, let us change the compulsory nature of it, make it as attractive as possible, and all of our members will support it, so we will continue, and if any of the brothers refuse to renew their insurance policies, then it will prove an assertion that it is coercion in its present form. Coercion is wrong, and a wrong in our laws is something for the next convention to rectify. It is sound logic, and that it can be proven, others have challenged by a

Newspaper

MAUCH CHUNK, PA., March 9, 1890.

Editor Locomotive Firemen's Magazine:

As I do not want the entire Brotherhood to feel that Lehigh Lodge, No. 251, is dead, I write to you. We are still alive, wide awake and in first class condition. We number seventy-four members, and I think is doing right well for a mountainous country, and what is better still, the boys are all ready to stand up for the B. of L. F. every time. If a brother finds his way to Lehigh Lodge he meets friends of the right spirit and will not get discouraged.

Our Master, Wm. Spence, noted for his skill is the right man in the right place, and when the chair the boys attend to business; in fact, we are first class officers, and the membership is the best.

In regard to a change of name of our Order, seventy-four members, we have about thirty engines and I can vouch for them that the name B. of L. F. is satisfactory to all of us, and we hope it will be so. The most of our engineers have run from ten to eight years, and they are not ashamed to wear pin or emblems of the B. of L. F. in any shape or form. I have been watching and reading the *Magazine* right along and I find that some of our promoted firemen, after running an engine a year, are those who want the name changed. I say, for two years or better I have been put on the throttle, and I am proud of the name. I esteem myself lucky to wear the letters, B. of L. F.

I would like to ask through the columns of the official organ, how the kickers would like to see the United States of America change the name of the Terra del Fuego, or some other big name? I give my answer, and I can speak for our full membership here at Mauch Chunk. Our forefathers fought for their freedom, and so shall we for the old name of L. F., and if the kickers are ashamed to belong to the Order or show the colors representing the L. F. let them pay up like men and withdraw from one where they can wear something that shows that they are a big gun or one pulling a thousand. These are my sentiments.

Yours truly,
Homer P. A.

THE SONG OF THE SCOOP.

A few nights ago, as I lay in my bed
And mused o'er the freaks of the living and dead,
My tired eyelids drooped o'er my much fatigued
eyes
And to air went my thinking, so deep and so wise.
And I had a queer dream, such a comical one,
That surely the moon or the stars or the sun
Ne'er shone on a man or a woman or child.
Who had looked on a vision so funny and wild
As my dream of the song of the scoop.

I thought my old scoop, which so long I had used,
Had pounded and battered and often abused,
Came into the room and hopped up to the bed,
And stroked back the hair on my wondering head.
Then he stood on his head and he winked his feet
And a break-down he danced, so peculiar and neat.
That I called for a song and a ballad he sang
In a voice in which quivered a No. 5 twang.
And this was the song of the scoop.

"Of all tools invented and fashioned by man
For the good of himself or his nation or clan,
The shovel's rank first for they gain him his bread
While through life he goes stumbling, and when he
is dead,
They throw out the earth and a cavern they make,
Where at ease he may lie and his last slumber take;
They help him descend and they help him to rise
And they help him rob old mother Earth of her
prize."
'Twas thus ran the song of the scoop.

"And of all the great army of shovels and spades,
Which are used in most any conceivable trade,
To the family of scoops the most honor is due
For they, of all tools, the most staunch are and true.
And of all scoops now rattling so often and loud
The fire-boys' scoop has the most right to feel proud;
They're the bravest of scoops, the most wiry and
strong,
And that is the family to which I belong."
Kang the song of my merry old scoop.

"We never complain and we willingly go
Through sunlight or moon light or rainstorm or
snow,
And we scoop up the "diamonds" and make the
fire roar.
And merrily rattle and bang on the door,
And we twist and we turn and swing forward and
back,
From the deck to the door, from the door to the deck,
And whether the weather be dripping or dry,
To keep the "white flag" always floating we try."
So boasted my jolly old scoop.

"And last, but not least, of the things that we do
And of which we are proud, and quite justly proud,
too,
We earn for the fire-boy the beef steak and "spnds."
Which fatten him up and put strength in his blood.
We give him warm garments and muscles of steel
And make him feel jolly from topknot to heel.
We feed his sweet wife and his girls and his boys
And bring to his hearth and his heart countless
joys."
So merrily warbled the scoop.

Here he stopped, winked and balanced himself on
his toe,
And all over me and the bed did he go,
Then he polkaed o'er every square inch of the floor,
Then sang "Annie Rooney" and skipped through
the door.
Then I sat up in bed and I laughed loud and long,
But still through my mind would come buzzing his
song.
So I put it in rhyme and I leave it to you
To say if his ditty be false or be true,
This comical song of the scoop.

Spasmodic.

TAYLOR, TEX., May 10, 1890.

MR. EDITOR:—For the first time since its organization in April, 1885, the members of Alamo Lodge, No. 233, are called upon to mourn the loss of a member, Bro. James Cavanaugh, who died at San Antonio, Texas, at 6:30 a. m., on April 14.

Pursuant to instructions from the Lodge, the brother's remains were embalmed and placed in a metallic casket and shipped to Taylor, where the casket was taken charge of by members of the Lodge in full regalia, and borne to the parlor of the Dwyer hotel, where it remained until 11 a. m. on the following day, when the remains were shipped to Ellsworth, Kansas, the home of his mother.

The remains of Bro. Cavanaugh were accompanied to Ellsworth and laid to rest in the cemetery at Lone Walnut, by Bros. E. P. Curtis and R. T. Maher, assisted by friends of the family.

We are indebted to Assistant Master Mechanic F. W. Adams, of the International & Great Northern R. R. and the officials of the Missouri, Kansas & Texas R. R., for courtesies extended. We are also indebted to the members of Pottawatomie Lodge, No. 223, for their kindness in purchasing transportation for us from Junction City to Ellsworth and return.

We assure these men, to whom we are greatly indebted, that no body of men could more appreciate a favor. From the bottom of our hearts, do we thank them for their kindly acts, and reassure them of our profound gratitude and regard. E. P. C.

PITTSBURGH, April 6, 1890.

Editor Firemen's Magazine:

The question is asked in our April number why is it necessary to keep and maintain an insurance in the B. of L. F.? I say B. of L. F. because it must be the organization Brother Trenholm has reference to. First of all, because a good many men will join a labor organization that would never join any benevolent order, and the consequences would be, should no compulsory insurance system be attached, that ten chances to one, in case of death, the family would be left in destitute circumstances. Second, a system of relief in case of sickness, disability or death conducted by raising collections would be far more detrimental to the Order at large than our present policy system. This applies especially to localities where our membership is small. Third, because it would take 33 1/3 years to scrape together \$1,500 at the rate of laying aside 13 1/3 cents per month. Brother Trenholm, do not advocate a course which would prove a failure to the splendid condition which our Order at present is in, do not take away a blessing and institute a curse; for that you would certainly do by abolishing the policy of our Order, as it would necessarily establish the donation business in a good many cases, and instead of gladdening the heart of many an old and feeble mother, wife and children with a check for \$1,500, which of course would not be an independent fortune, you would not be able to raise enough to buy a decent coffin. I am working on a road where every man excepting three belongs to a labor organization whose insurance is not compulsory. We have over 275 men in the Lodge at present whose wages average \$2.15 per day; the collections raised in the above named manner I would not want to take to the Poor Board, to say nothing of taking it to the family of a man whom I called a brother, because I would be ashamed to show them that his friends (?) did not have a heart in them larger than a pea. I have had too many cases of this kind come under my observation to ever let it enter my mind to advocate the abolishment of our insurance system. I will say no, and no again. I will save on something else, I will make sacrifices time and again in order to lay aside my little \$1.33 1/3 per month, and say go forth, I don't need you, although the amount is almost too insignificant to mention, in the home of the feeble mother or sorrowing widow, as no doubt you will be needed there. It is a joy to me to know that I belong to an Order whose motto of protection is not only there because it is customary to have one, but that its meaning is carried out twofold. As to making excuses for firemen who consider the cost of the Order which prevents them from joining, I would say let them stay out for I guarantee they would not make good members.

The dollar they pay out looks to them like a barn door, but the value they would receive is only a second consideration. Men unable to judge the value of our Order are of no earthly use as members. Again, as referring to our own members being expelled for non-payment of dues, I would like to ask any brother if there is an honest excuse for one out of every ten so expelled? The readers of this article are kindly requested to read my article on page 332, Vol. XIII., and if there are any that could show up a less income than mine then I will take a back seat. Having been Receiver, or acting Receiver ever since the first month I went into the Brotherhood, close observation has showed me that in the Lodge, No. 378, out of ten members expelled for non-payment of dues, there was not a single one who could honestly say that he could not have paid his dues had he been so minded. A good many and almost all these excuses are idle talk. If there is a will there is a way. I have also the first case to hear from yet where a brother has asked to be carried by his Lodge and was refused, providing he was deserving. Brothers lay away one-third of your dues in each month of your quarters and you will find it not so hard to get along.

Yours fraternally,

F. J. Thomer.

SAVANNA, ILL., April 6, 1880.

Editor Firemen's Magazine:

I notice the past few numbers of our *Magazine* contain communications from some of the brothers, which might be construed by the people at large as fair samples of good old-fashioned "kicks," while the brothers in question only intended to make a few remarks. Well, boys, that's right! If you don't like it, spit it out! You will perhaps feel better when you get through and so will the rest of us; at least, a great many here feel that way. Of course the *Magazine* is ours; so is the Editor. You have a perfect right to accuse him, abuse him and play horse generally with him; and he mustn't say anything back. Isn't that the idea? Now the columns of the *Magazine* are open for the expression of our ideas, be they what they may. Let every man express those ideas, but at the same time he must not feel discouraged, if the editor or some of the brethren feel disposed to take him to task concerning his ideas. Perhaps he may be led to see that they are entirely wrong. As I understand this controversy, it all comes from the fact that some one thinks he has the right to express ideas different from other people and that because the editor has seen fit to topple over his "air-castles" he should be soundly taken to task. Now boys, be generous! Allow the editor the same privilege you claim yourself and you at once remove all cause for further "personalities," for it has come to that and no more. It may be that you have been denied space because your opinions differed with those of Brother Debs, but my experience with the editorial fraternity has led me to believe that they want no better "snap" than some one to disagree with them. If I were you, I shouldn't give him that much satisfaction. Our *Magazine* is read by thousands who are not in our Order but whose good opinion is worth much, and I do not think it looks well to see three or four pages taken up every month in a controversy, that may be funny to some but disgusting to others. Better use those columns in discussing some "anti-back-breaking" attachment for "ten-wheelers." Allow the editor the privilege you ask yourselves, and all will be quiet once more. We have too much at stake to allow such small matters to mar the usual good feelings which exist in our noble Order.

I am going to speak my thoughts concerning federation. I believe in it, and when that is said it means a good deal. I think that every employé in these United States should be under the control of one grand head composed of one or more representatives from each department. I think when that is accomplished the interests of a section man drawing \$1.00 per day should be looked after as closely as those of an engineer, drawing a salary of \$50.00 or \$200.00 per month. I do not believe in strikes, but with labor so organized we will at once remove all cause for them. We will then have our employers in about the same boat they have the majority of

the laboring class of this country to-day, viz: who "Paddy had the hen." At any rate, should we be compelled to strike, we could strike hard. I do know what to think about that change of name. It would sound pretty nice though—B. of L. wouldn't it? We could wear a great big pin and unsuspecting might think we were "brave engineers" when in truth we were only common "handlers." I believe it would disguise us to such extent that we would "stand in" a good deal better with the girls; eh! Suppose we try it. Those of who are firemen, will derive just as much benefit from the Order as we now enjoy and perhaps engineers will be benefitted by it. Now, Mr. Editor, if you throw this aside and say nothing we'll be friends. But if you publish and give me "aussie" you'll never again hear from an

Extra Man

FT. SCOTT, KANSAS, March 20, 1880.

Editor Firemen's Magazine:

Just let me say this to the Brotherhood, boys: H. C. Lord Lodge, No. 153, is alive and flourishing. We have twenty-nine members; six are away all time. The average attendance, at meetings, is which I think is good, considering that they are road men but two, and there is a good deal of summer work on the Gulf road.

We think that federation is just the right thing and the only thing for all labor organizations is to federate to keep even with the corporations that employ them. The boys here are not in favor of the change of name. They think the good name, Brotherhood of Locomotive Firemen is enough.

As representation by districts is to be brought at the next convention, I will say, for my part, I am not in favor of it by any means. Under present law, one man can represent three Lodges for the expense, the Subordinate Lodges have to stand that and if a Lodge cannot afford to send a delegate let them pay their pro rata share with another Lodge on the system and let one man represent both Lodges.

We had our seventh anniversary and ball on Friday evening, March 25th, and it was a grand success socially and financially. The boys worked well and every one had a good time. Supper given at the Tremont House and there were two couples who sat down at the banqueting table from the Ft. Scott *Daily Tribune* the following

"The anniversary ball of H. C. Lord Lodge, of the Brotherhood of Locomotive Firemen at Ft. Scott, last night was a brilliant and successful affair. The hall was crowded to the extent of its capacity. It is estimated that 500 were present. The orchestra furnished inspiring music, and all were merrily till a late hour. The order was of the best, which was assured by the presence of the families of the firemen, their wives and children looking on the pleasing spectacle presented by the gaiety of the young men and women as they threaded the maze of the dance.

"There were many present from a distance. Kansas City being represented by Mr. and Mrs. J. Leonard, Mr. and Mrs. E. Goss, Misses Mollie Murphy, L. Moreland and Leote Lytle, and Messrs. Fred Norton, C. E. Goodfield, Harry Hammond, John Richardson from Springfield, Mr. and Mrs. A. Hellman, Mr. Mrs. Charles Dando, and Miss Edith Lucas; New Clinton, Lamar and Parsons were also represented.

"The Gulf road kindly put a special car at the service of the Lodge, and extended the courtesy of the road to the many members of the Lodge and their guests. Dancing began with the grand march and was continued through a programme of two four parts, including a diversity of terpsichorean exercises, at the middle point of which supper was served. When we say this was spread at the moment, Captain Z. A. Woodard's popular house, it been sufficiently described to those who have been there before."

Thanks were extended to the citizens of Fort Scott for their liberal patronage and to the Gulf Road for the friendly interest manifested in the undertaking.

BE COURAGEOUS.

Men, stand erect, the time has come
When all of brawn and brain,
Should not be like the cattle dumb,
Or sing in whining strain;
A craven heart is sure to sink
Upon life's toilsome way,
And venom'd gall must hourly drink
For many a weary day.

No birthright mark of noble blood
God ever gave to man;
'Tis only noble to be good,
Such is Jehovah's plan.
Upon this earth the tiny cries
Of babes salute our ears,
And prove that in each bosom lies
A fountain full of tears.

Upon the rugged road of life
There's work enough for all;
The active man can brave the strife,
The coward he will fall;
Good willing hearts and willing hands,
Shall ever victors be,
In this the freest of all lands,
That ever yet was free.

An equal start upon the road
Is all that we should ask;
Each back must bear a certain load—
Don't think its weight a task.
'Tis only those that always fail
Who bend beneath despair.
They'll let their courage downward quail,
And ruin prospects fair.

A self-reliant feeling must
Be won by those who try,
No one should cower in the dust,
And like a craven die.
The sting of death is just as keen
When creeping by degrees,
As rapid lunge of polished skean,
Winged with brief agonies.

Now let us at our daily task
Be faithful and be true;
No honest man should wear a mask
Of any doubtful hue;
He ne'er should cringe and think himself
Beneath the plane of those
Who have their coffers lined with pelf,
Nor fancy such our foes.

Shandy Maguire.

LITTLE ROCK, ARK., April 7, 1890.

Editor Firemen's Magazine:

I wish to say that Rose City Lodge, No. 45, B. of L. F., had a called meeting here a few days ago on account of Brother Hannahan. We received a message about 12:20 A. M. that Brother Hannahan would be here at 9 A. M. This did not give us much time, though we had about 25 or 30 minutes in the hall and every one present seemed to like Brother Hannahan's talk on Federation. I have always believed in federation, though since Brother Hannahan explained its objects and benefits, I can see more clearly where the advantages are and I can say for myself I will vote for federation and will do all I can to get others to follow suit. I will say that Brother Hannahan's visit here was most welcome; received though we would like for him to give us more time to prepare for him when he comes again, and we will be glad to have him come any time. We can say that we were glad to meet young Mr. Debs, Brother E. V. Debs' brother. We will call him a gentleman, as Brother Hannahan says he is one of the first-class. They both left here together for Pine Bluff. I hope they have had good success on every mile they have traveled since they left here. Brother Hannahan said he would try and come again soon and we all hope he may. He was an eye-witness to one of our Arkansas free knock down and drag outs on the platform just as he got off the train between a coon baggage hustler and a white man.

More Fun.

WEST TORONTO JUNCTION, March 26, 1890.

Editor Firemen's Magazine:

The members of Queen City Lodge, No. 262, being anxious that some notice of the Lodge should appear in the *Magazine*, I respond to a request and ask for a little space.

We have had new life instilled into us lately by a visit from our worthy Grand Master, Bro. Sargent, who having concluded to shake the "Uncle Sam" dust from his sandals, stepped over the border into Canada. We were all pleased to meet him and listen to the very instructive address he delivered to us Sunday, March 9, in the hall of Dominion Lodge, No. 67. More than fifty Brotherhood Firemen were present, Queen City Lodge being well represented by eighteen members who were handsomely treated by Dominion Lodge, and we hope to have the opportunity to return the compliment.

The next time Bro. Sargent visits Toronto, we hope to see him at West Toronto Junction, where we have very efficient officers, the trouble being that our members are not able to attend Lodge meetings as often as is desirable. We expect a large increase in our membership this summer. Already we have five applicants for initiation and there are five or six more to come in.

Some of our brothers are anxious for spring to come and for navigation to open so that business would improve, as it has been dull since the 1st of January, to an extent that I don't know how the boys get money to pay their dues. Some of our brothers, who were promoted last fall, don't relish drawing \$10 and \$12 a month, when they might have been earning \$50 to \$60 firing passenger runs all winter. If a subscription should have to be taken up to pay board bills, there would not be as many sign it as have signed to give towards a present to a foreman who may have been removed from one round house to another.

We had Bro. H. G. Reid, of 234, North Bay, and Bro. Alf. Bilbe, of 287, Schreiber, visiting among us for a few days, and were pleased to make their acquaintance. Hope they will come again.

Mr. Editor, I must say a good word for federation. I do not know of one dissenting voice in the ranks of the federated Brotherhoods, and through a circumstance that happened a few days ago, we have gained all of the B. of L. F. members here. In our opinion the day is not distant when all railway employees' organizations will be federated. I have taken quite an interest in the discussions in the *Magazine*, and so far cannot see where our Grand Officers have gone beyond the power given, and I feel certain they will be able to uphold the course they have pursued. I remain, Yours fraternally,

Seldom.

IS MARRIAGE A FAILURE?

Is marriage a failure? For two years I thought it was,
Polly thought the same, and we had sufficient cause.—

We don't think so any more for, 'tis one of the boys,
And kicked the beam exactly at ten pounds avoirdupois.

Is marriage a failure?—Look at that sedan chair,
Of our itty ootsy tootsy: note his wealth of golden hair.

O, you should hear his mother, in the morning when she sings
"Open your lzy pizy, and see all dese purty tings."

Is marriage a failure? Well, when ootsy tootsy has the colic
And the order comes for soothing syrup, or a little pargoric.

I swear marriage is— then I hear the sweet refrain,
"Jolty bolty, nuzzer's baby"—and all is still again.

Is marriage a failure? That very much depends
On how many little angels Heaven condescends
To lavish on a fireman's home, and does he get sufficient pay.

To clothe the kids and keep 'em fat on three square meals a day?

Hopping Daddy.

TO MAX MARTIN.

Response to "God-Speed, in October Magazine.

'Twas a beautiful morning in autumn,
The air was so bracing and pure;
The day seemed to call to the forest,
All nature, in fact, to allure
My attention from teaching, and truly
I longed for a ramble that day;
For my interest turned from my classes—
My energies wandered away.

But just before calling for study,
One of the boys brought my mail—
The *Magazine*. Glad to receive it,
For I never had known it to fail
To bring to my mind recollections
And thoughts of the friends far away,
So I hastily turned to its pages
Eager for what they might say.

Surely, I was surprised when I saw it—
"God-Speed"—dedicated to me,
As over and over I read it,
I wondered how it could be
That the author had felt such an interest
In my efforts at rhythm and rhyme,
As to pay such a beautiful tribute
At such a particular time.

For 'tis true I was feeling discouraged,
But my labors were lighter from then
And I cherished more fondly than ever
Esteem for the hard-working men
Who always appreciate effort,
Though feeble and faint as my own.
How strange, when I stop to consider
That the author to me is unknown!

But who is this person so modest?
I've tried to obtain his address,
And thus, in a personal letter,
My gratitude to him express.
Come out from the mists that conceal you,
And write me a letter some day;
Along with it send me your picture,
The compliment I will repay.

STANBERRY, Mo., April 30, 1890.

Geo. W. Hall.

WATER VALLEY, MISS., May 10, 1890.

MR. EDITOR:—Please allow me to inform you that our worthy Collector, Bro. Guess, has played us a little trick by getting a sweet little wife to help him enjoy life. He was married on the evening of the 7th of May to a beautiful young lady by the name of Miss Agnes Meaders. There was quite an enjoyable time at the wedding. All the members of 402 were cordially invited, but only a few could attend to see Brother Guess take his degree. The happiest man at the wedding, besides Brother Guess, was our Master, Brother W. H. Price; he seemed to enjoy himself very much. After the ceremony was performed the happy couple repaired to the parlor and at that very moment the Firemen's Brass Band out on the balcony began to roar and then sweet strains of music echoed through the vicinity of Water Valley. All the members of the band remained at the residence of the bride for quite a while, until at last, when they left for home, they bid the bride and groom good bye, wishing them success and happiness. Brother Guess left on the 3:30 train on the following morning for Chicago to spend his honeymoon. Best wishes to him from all the members.

Gallagher.

SALT LAKE CITY, April 14, 1890.

Editor *Firemen's Magazine*:

The members of Salt Lake Lodge, No. 178, on Sunday, the 13th inst., were called upon to lay our brother, Joseph Rudman, away, and hope when they are called upon to travel the unknown route they will be as well prepared. The members of the Lodge desire to express their sympathy for Mrs. Rudman in this hour of her great sorrow for the loss of her husband, who was a member of long standing in 178, where the boys were always glad to meet him.

Fraternally,
A Member.

STEVENS POINT, WIS., May 8, 1890.

MR. EDITOR:—Allow me to take up a cudgel in defense of Golden Rule Lodge, of which I am a member. The impression may be that one of us has written the letter in the April number to the Woman's Department. Inquiry at the round house shows that none of the members have their *Magazine* sent there. This city is the terminus of four divisions, the road and a member of some other Lodge and a dozen of some other place may have written me here, as he could easily do if he wished. I challenge you, Mr. Editor, to find a Lodge composed of more orderly men than Golden Rule has. Many of our own homes and keep out of debt and do our duty for our families and employers. I do not know a man who would have the ideas that "Kicker" seems to have about managing wives. There are cranks in other Lodges, perhaps, as cranky as he is, but my opinion is that he did not write in earnest. It is absurd to think that one man could have all the foolish ideas. I suspect he wished to set the ladies by the ears and make an excitement in the Woman's Department. He has not outgrown his boyish kick for teasing, and probably used to chop the heads of his sisters' dolls. Perhaps he wished to take offense of the correspondents who use slang and sign themselves "Kicker" and "Growler" and other romantic names that I have seen signed to some of their letters. By the way, Mr. Editor, don't you think a doggerel "Rustler Joe" was too full of slang blotch the fair pages of the *Magazine*? There wasn't one line of purity or elegant language in it. I might quote other examples, but forbear. But don't you think that picture I drew of the bridal chamber was a little overdrawn? It is an ill wind that blows no good; we are glad Stevens Point has been heard from last, for it has seemed as if we were forgotten by Grand Officers. Bro. Hannahan, we extend your cordial invitation to visit Golden Rule Lodge; it will do all in our power to entertain you. On Monday night we gave our second annual ball, which every one agreed was about the best ever given here, where many respectable balls are held. The spacious rink was crowded, though the weather was stormy. The local papers gave us a good press. A number of our members are on the right hand side of the engines. Bros. Hammond, McNulty, Goltz were promoted nearly two years ago. Hammond joined the B. of L. E. lately, but has left us yet and says he intends to stick to the L. E. just the same. Bro. Kenyon is running a switch engine here, and is the proud father of a new boy. Bro. Luxan is in the yard at Ironwood.

In conclusion, I will say that there is no dissatisfaction felt here with our editor. No one has written against him or intends to try such a game. I guarantee that, for I know what the different members think of him, as an editor and officer.

["Justice," in his defense of Golden Rule Lodge, No. 131, at Stevens Point, against any surmise that "Kicker," whose anonymous communication appeared in the *Magazine*, is a member of Golden Rule Lodge, has not only spoken manly words for the Lodge, but has done equally good work for the Brotherhood at large and himself immense credit. In our criticisms of "Kicker's" offensive drool, we made no reference to Golden Rule Lodge or to any of its members, but it is, nevertheless true, and unfortunate as true, that all too frequently there are found in Lodge association, creatures recognized as men, of "Kicker's" type, creatures, physically, well enough, but devoid of heart and brains.

It is our good fortune to know that Golden Rule Lodge is, in all regards, one of the best in the Order, and nothing contained in our strictures evinces anything to the contrary.

and if "Kicker," wherever found, has sufficient shame left to deny the authorship of his execrable letter he may not be totally depraved.

To the reference made to the poem "Rustler Joe," we have this to say: It was written for and first appeared in *Texas Siftings*, a paper widely read by cultured people, and simply recites, in the rough and uncouth dialect of the wild west, an incident, which whether fanciful or real, serves the purpose of demonstrating that chastity ennobles women who inhabit shanties, as certainly as their more fortunate sisters who enjoy the luxuries of brown stone palaces. The dialect of the "diggins" among the mountains, is evidently not that which is used in a boudoir, but the poem in question is totally devoid of vulgarity which offends against chastity.

In publishing the *Magazine* it may be and it is doubtless true, that communications appear, which, contain expressions offensive to good taste, that slang terms occasionally appear; but, we are inclined to the opinion that such blemishes are not sufficiently frequent to create alarm.—ED. MAGAZINE.]

NEEDLES, CAL., May 6, 1890.

MR. EDITOR:—Not having seen anything in the *Magazine* of late from Silver Mountain Lodge, No. 327, I thought I would try and see what I could do with my pen. I am not much of a writer, especially when it comes to writing for publication, but will do the best I can.

To begin with, business here on the road is extra good this spring, the boys getting about all they want to do, and in consequence there have been several of the boys promoted, among them being the somewhat notable Sunset Cox, who has the great and only 40 on the new Bedrock branch. Billy makes a darling on the right side. Then there is the notorious Missouri Joe who is out at Bagdad running the 14, helping up the hill; he has become quite noted on account of his having lately discovered a wild man running around on the desert at Ash Hill, but nevertheless he is a good one. Joseph Spencer is the name of this worthy young man. Frank Hut and Mark Lawlis are both running the goat; Frank days and Mark nights. Thomas O'Brien is the next one and is running extra, and they say that he is doing excellent work.

We had quite a happy and unexpected event take place here on the first of May, in the shape of a wedding, the contracting parties being Mr. Joseph Brobant, who is the secretary of 327 and Miss Hattie Tuck of this place. I understand that Joe has gone to keeping house at Mojave, out of which place he will fire the old 52 on the short run. Joe has the best wishes of all the boys.

I suppose that Michael Sours, or, better known as *Baron Red Nose*, will be the next victim in the matrimonial market, as they say that he has a sweetheart somewhere in the south that he is gone on, and we all look for the announcement every week now; well Baron, we all hope that you will get her soon, and that she will prove a most helpful mate. There are several of the other boys who are preparing for the market also. I am very sorry to say that we have just lost one of our best firemen in the person of Mr. Michael Smith, who was very well liked by everybody; he having become dissatisfied, he resigned and has gone east to seek employment. Well, Smithy, we all hope that you will succeed in obtaining a better position, for this is not the best place in the world to work.

Hoping this may appear in the *Magazine* soon I will come to a close for this time, but will try and do better in my next.

A True Friend of the of the B. of L. F.

MEXICO, April 9, 1890.

Editor *Firemen's Magazine*:

As one feeling interested in the welfare of the Locomotive Firemen (having at one time handled the scoop myself) I pen you a few lines for insertion in your *Magazine* about Porfiorio Diaz and the International railroad. Having visited Porfiorio Diaz a short time ago after a long absence, I found that the men had formed a Lodge (No. 38), which means that they are not going to be left behind in progress. Since the year 1885, this city (then named Piedras Negras) has grown enormously, the buildings not being of the old flat adobe style but more on the American plan. The railroad buildings have likewise pushed ahead and where once stood (not many years ago) mesquite brush, is now covered with nice rock dwelling houses, offices and streets. The shops are also greatly enlarged, and I feel confident in saying, are second to none in Mexico. The company have thirty-three engines, Cooke and Schenectady eight and ten-wheelers. They have also first-class rolling stock, road-bed and accommodations as can be proven by anyone traveling over the road. The employes are a very courteous and obliging lot of men. The boys are hoping that the company will soon push the road on to Durango, as at present things are dull. It is hard times for the poor firemen when they cannot get in more than about 2,000 miles per month; though 2,000 miles is work enough for the amount paid them for 4,000 miles. A trip over the road especially on a freight engine with one of the big trains attached would be enough to convince anyone that my statement is true. Of course the reason that the boys persevere is that they hope in the future to attain the position of engineer. Many of the boys who once handled the scoop on this road, are now on the right hand side and are showing themselves to be well qualified for the position. The boys have obtained these positions by strict attention to their duty, and a knowledge of their business. The boys handling the scoop now are aiming at the same. Look at their engines. The brass work and bright work shines, the jacket of the boiler is clean and everything is in its place and if the train is at any time late you can bet it's not for want of steam, for the boys get there all the time.

As for the boys being a jolly set, a trip to Porfiorio Diaz is enough to convince anyone that it's true; for a jollier and more sociable set of boys I have never met; both firemen and engineers. If there are any ladies doubting my statement just pay them a visit and if many of them are not "benedicts" before long it will be your fault. Those who feel like changing their names and enjoying married life can rely on having good, steady, sober husbands and comfortable homes. Then join with me in wishing them health, wealth and prosperity. M. H. C.

JERSEY CITY, N. J., April 18, 1890.

MR. EDITOR:—As the members of No. 13 have been quiet for some time I have concluded to give you a few notes for the *Magazine* from this locality. Bro. E. F. Jones has taken to himself a better half. Bro. Jones had the cage ready before he got the bird. Bro. Fred R. DeGraff very quietly slipped up to High Bridge and stole away with one of their charming belles. How about this, Bro. Fred? The members of No. 13, extend to these brothers and their brides their congratulations and best wishes.

Our Lodge is growing rapidly and our prospects are most encouraging. We now have 103 members and all are working together in harmony and good will. Bro. Geo. Hull, our Master, and our other officers are well up in the work and understand fully how to handle a Lodge.

Bro. S. H. Opdyke, our Conductor, is looking for the man who tied and sewed up his overalls. F. Fisher, one of No. 11's old standbys, says that at Packnass they charge \$2.00 to stand on the porch, \$3.00 to look in and \$5.00 for dinner. We desire through the *Magazine* to thank Bro. W. E. Haffard and wife for their courtesies while visiting Wilbur Lodge, No. 384, and also to the members of No. 211, who, with the members of No. 251, visited No. 384 on March 23. The question is asked how many ball tickets did Bro. Joe Bennett sell? Perhaps Joe can answer.

Yours fraternally,

C. A. Wilson.

Editor Firemen's Magazine:

In the March issue, page 238, Bro. Frank Walton indignantly asks: "When did the Brotherhood of Locomotive Firemen become an institution for the suppression of the opinions of its members?"

Softly, Bro. Walton, the editor of the *Magazine* is not the Brotherhood. It is not the Brotherhood that is suppressing opinions but the very amiable editor aforementioned that is industriously laboring to pervert those opinions and heap odium on their advocates. Doubtless the editor would like to have the public believe that his rabid mouthings are the prevailing sentiments of the Order, and that all those who disagree with him are vain croakers seeking to destroy the Brotherhood. Time, the great rectifier of all things, will dissipate this illusion and teach the editor that he is no more entitled to speak for the Order than you or Bro. Carter or Bro. Burns or Bro. Cross.

You might have asked with consistency: "When was the editor of the *Magazine* exalted to the position of infallible High Priest and Supreme Grand Oracle of the Brotherhood of Locomotive Firemen; whose dictum we are bound to accept as an article of faith, and whom profane scribblers must not question or criticize under penalty of condemnation for attacking the Brotherhood?"

It is a wonder to me that this shining oracle who has been given so much credit for astuteness cannot recognize the fact that he has sacrificed the dignity of his position by the policy he has been pursuing and exposed himself to the contempt of all fair-minded men.

The Toronto Convention censured the associate editor for coming over into the correspondence department under a *nom de plume* and sarcastically dissecting the communication of a brother who had assailed him and others. If a convention classed this simple epistle as "undignified," and censured the writer, what term will be invented to properly designate the foot notes of the chief editor. It remains to be seen if it makes any material difference "whose ox is gored."

Since the controversy over changing the name of the Organization sprung up in the *Magazine* the editor has shown himself possessed of traits of character a large number of his acquaintances had considered foreign to his nature. He has shown that he is intolerant, unscrupulous and vindictive. He has shown that he is capable of taking every unfair advantage of his opponents, distorting, perverting and mutilating their correspondence with his foot notes and interpretations, and dragging the writers down from the highway of legitimate argument into the gutter, that he may besmear them with mud and slime and thereby render them contemptible. He has dug up from the recesses of an imagination pregnant of such rotten material, charges of conspiracy, envy, disappointed ambition and jealousy to impugn their motives and lessen their influence. He has denounced as "infirmities," which, in the sense he used the term, means idiots, or imbeciles, those brave boys who had the courage to stand forth and declare against changing the name of the Order. There was a time, and not so very long ago either, when the editor himself was opposed to any change of name; now the necessity for change of name has become a mania with him.

I was at one time favorable to a change, but times, circumstances, feeling and policy have changed since then, and I now consider that any change of name would be injudicious and inexpedient. I fail to see where we have anything to gain by setting up a rival organization to the B. of L. E., and undermining or endeavoring to undermine that magnificent organization. The engineers have altered their policy, altered their laws and declared in favor of Federation. Almost everything we contended for has been accorded us; almost everything we have hoped for in the way of closer union and harmony of action is about to be realized through a reasonable system of Federation. Then why continue a profitless strife, or by changing the name of the Order, renew hostilities with the B. of L. E.? If the editor of the *Magazine* and P. M. Arthur have any old scores to settle let them be settled outside of the Brotherhoods. In the name of common sense and common decency do not drag the Brotherhoods into any more disgraceful brawl.

I have taken part in past fights with the B. of L. E. because I considered they had done the firemen a grievous wrong, but while my pen was engaged in strife, my heart longed for peace. I was ever anxious that the engineers might see the error of their way and treat firemen as they deserve to be treated, viz: as men and equals. This they have shown a disposition to do since the Denver Convention and are taking steps to come to a better understanding with us; under these circumstances consider any man who would advocate or endeavor to bring about a change in the policy of either Order, is not the friend of either, but the enemy of both. This much I say at the risk of a foot note that will relegate me to the ranks of the "infirmities," but as Bros. Carter, Cross, Burns, etc., are there before me I have no fault to find with the company.

The editor has recently assumed a new rôle, viz: defender of the Brotherhood. Now, let us look at him a while in this guise. First, it must be necessary to show that the Brotherhood is assailed else this self-appointed champion would have nothing to defend. This he does by extracting from letters of correspondents obscure sentences which taken from the text of the communication and made stand alone he interprets for the benefit of his readers—poor, benighted readers—and construes them into attacks upon the Order. Then he waxes eloquent in its defense and proceeds to annihilate the assailants; but Great Scott! the weapon he uses for this purpose is sword of fire? no; the mitten of the pugilist? well no, though he has the vocabulary of the prize ring at his tongue's end; what is it then? a slop bucket filled with filth! A weapon no man of decency would wield, as it is impossible to use it without the user becoming more befouled than his adversaries.

He says Bro. Burns attacks the Brotherhood because he stated that at a specified period the Order lost dignity and began to decay on account of the antics of the editor of the *Magazine*, and then he tells us that the Order was never more prosperous and presumably dignified. Well a stranger would have to wade through several *Magazines* to discover traces of dignity in the editorial foot notes. Seven authorities are quoted to prove the Brotherhood in a prosperous condition, a condition of affairs we all desire to see continue; but the editor evidently forgets that in a foot note to a communication from Bro. Cross in the *Magazine*, October, 1889, he asserted that the Brotherhood was rapidly losing in membership the past two years; and that the loss was greatest in the last year, etc. Now, behold the consistency of this self-appointed champion. When he makes the assertion that the Order is losing members by the wholesale, we are expected to take it as a true statement of affairs, and doubtless it is, as he has the records and ought to know what he is talking about. But *presto*, let Bro. Burns make the same assertion and he is denounced as an enemy of the Brotherhood, and a lot of outsiders who cannot know of our internal affairs, are quoted to prove Bro. Burns a falsifier.

Again he waxes wrathful at Bros. Cross and Carter and denounced them as "infirmities" because they persisted in pursuing a line of argument contrary to the editor's hobbies. T. P. O'Rourke comes forward in the March issue and says those who believe the Brotherhood is depending on the gas health or longevity of life of any one man in its existence were possessed of a childish fancy, and lo! he has attacked the Brotherhood and passed judgment on the mental calibre of the entire membership, although in the same paragraph he states that: "The Brotherhood can live, prosper and advance guided by the aggregated average of its own intelligence," and "that it has that in itself which lights its course." Surely it takes a wide streak of imagination to say that this is an attack on the intelligence of the Order. The editor can call Bro. Cross, Carter, etc., "infirmities" with impunity; but T. P. be careful, you rascal! Again the champion. The G. B. A. of the U. P. system addressed communication to the Grand Lodge about Federation, not intended for publication. The editor gave it to the world with his comments and a row or two. It evidently began to dawn upon the mind of the editor after a while that he had made a egregious ass of himself in this connection, and

began to look for means to justify his action. Yes, now he has it, a conspiracy, a dark, designing conspiracy, and it is made use of to justify the havoc made with the slop bucket.

The editor would have made an excellent detective; it is a pity he hasn't been afforded an opportunity to display his talents in that line. What a valuable man he would have been to Stone, Crocker, Paul Morton & Co. The G. B. A. of the U. P. system did not meet in Denver in October as the editor asserts, but in September, as the Constitution declares they should, and the editor knew such to be the case when he penned this assertion, but then it was necessary to prove his theory of conspiracy.

There was no conspiracy and the editor knows it; the G. B. A. of the U. P. did not meet in Denver in October and the editor knows it; the Union meeting held in Denver in October was not the G. B. A. of the U. P., nor did that Union meeting arrogate to itself any powers or authority to act for the Brotherhood in presenting a plan of Federation to the B. of L. E. Convention, and it presented no such plan; this is also known to the editor. Then why lie about it simply to uphold the plea of conspiracy.

Beneath the surface of all this rant and raving about the U. P. system we can discover without the aid of a microscope a feeling of vindictive hate on the part of the editor, which had become engendered in him long previous to this present quarrel. Reading between the lines we find underlying it all a savage attack on an individual whom the editor dares not name or openly assail. All this rant about defending the Brotherhood is the veriest hypocrisy; all this talk about conspiracy is the veriest subterfuge; the whole mass of stuff that has been hashed up to us in the *Magazine* from first to last about this matter was for no other object than to crush this same individual. It was not the generous effort of an honest man striving to defend a principle or decry a wrong, but the vindictive pursuit of an enemy.

Now, after having raised a tempest in a teapot, and the pot having exploded and wounded our worthy editor, he comes before the footlights and exhibiting his wounds, cries for the sympathies of his audience. Lo! the champion has become a bleeding and torn martyr, and he resorts to the same old silly subterfuge he has so often found effective in the past, and threatens to resign.

So much for the general features of the controversy. Now to my own end of it.

In the March issue I made the assertion that none but Grand Officers were appointed at Philadelphia to revise the Constitution. The editor very graciously points out my error and I stand corrected. I was not present at the Philadelphia Convention, but my recollection of what transpired at Minneapolis led me to believe that there were none but Grand Officers on that committee. There was no intentional falsifying. With that one exception I am prepared to stand by all my communication contained, and my purpose is not to malign the Order and make it odious, but to give it a healthier vision, that it may see men and circumstances in their true characters; that it may learn to be thoroughly self-reliant and independent of leaders, or would-be leaders. I have a firm and abiding faith in the intelligence of the vast mass of the rank and file of the Order, and am always willing to abide by the expressed will of the majority; but no fear of abuse or lying misrepresentation shall silence my pen or make me bow the knee before any clique or coterie who have impudently set themselves up as a supreme power in open defiance of the expressed wish of the majority. That Conventions have delegated their functions to the Grand Office is a fact which must be apparent to the casual observer, else whence originated the Federation of the Supreme?

Instead of my error about the Philadelphia committee knocking the bottom out of my argument it does not even make a pin hole in it. Because the action of the Atlanta Convention fully justifies all my premises and conclusions. The results of that action furnishes the best evidence of the evils of such a course.

It is scarcely necessary to go outside the pages of the *Magazine* to prove that "hero worship" is encouraged and fostered. Here we see the "faithful" lauded to the skies, patted on the back and praised

for being good boys. Those who agree with the editor and his hobbies are held up as models of perfection: "progressive, broad-gauged, whole-souled, intelligent, know what they are talking about, every word weighs a ton," and so on *ad nauseum*. Here also we see those brave boys who have had the hardihood to stand out against the editor and his hobbies denounced in the vilest language—language that would bring a blush to the cheek of Biddy Moriarity or a Billingsgate fishwoman. Here are a few of the choice epithets: "infirmities, cowards, sycophants, croakers, spotters, informers, insects, enemies of the Brotherhood," etc., etc.

Does any sane man imagine for a moment that there is any other purpose behind all this than a desire to pose as a Sir Anthony Absolute, to be recognized as the great "I Am," and revered accordingly? Is not one class entitled to just as much consideration as the other, and should they be not allowed to express their opinions in the *Magazine* without being besmeared with filth by the editorial *yahoo* that presides over it? I do not desire at the present writing to go any deeper into this hero-worshipping business, but that we have it I hold to be an incontrovertible fact.

He says I represent a type of men who have no faith in human nature and who are held in check only by fear of chains and prison bars. Past experience has taught us the necessity of keeping a watchful eye on the Grand Office; we have had Grand Officers who proved to be far below the standard we had rated them at; we may have like Grand Officers again. I do not infer theft when I speak of "honesty" and "efficiency." There are men who are honest in financial transactions and yet rotten to the core in other respects. We have had a few examples of misconduct in the past that have somewhat shaken our faith in "inborn integrity;" is it necessary to cite them?

I hold the Grand Officers to be the paid employees of the Order, and it is only simply good business policy to see to it that they render service in a manner satisfactory to their employers. There is no sentiment in it, and there should not be any. All your talk about "inborn integrity" and the rest, is simple rot.

At the close of his tirade against me he says that if I should persist in refusing to obey the Grand Master in the contingency of a strike of the federated Orders, I would be expelled. He has suddenly discovered a little authority somewhere, Lord knows where, to enforce the laws of the Supreme. In the December *Magazine* he declares his impotency to compel the U. P. firemen to honor the Supreme with their obedience. If there is no power to compel obedience from the men on the U. P. system, where does the power come from to chastise a single refractory individual? Will you please inform us? Even a foot note will serve for this. When next you append your comments to my correspondence, please don't address me as brother so frequently while literally tearing out my heart; I hate such hypocrisy.

T. P. O'Rourke.

The foregoing communication from Bro. O'Rourke was mailed to us from Pocatello, Idaho.

Referring to the closing paragraph of the communication, we deem it altogether proper to address the writer as "Brother O'Rourke." The great Brotherhood of Locomotive Firemen made it possible for T. P. O'Rourke to be addressed by that title, and as we have "a firm and abiding faith in the intelligence of the vast mass of the rank and file of the Order," we shall be governed by its edicts, even in such inconsequential matters, and in the severities of debate, Brother O'Rourke should know that a man can be a gentleman.

Brother O'Rourke starts out with the intimation that the "amiable editor" of the

Magazine is engaged in suppressing somebody's opinions. Certainly if somebody's opinions have been suppressed by the "amiable editor," that somebody can be named. Who is he? Name him. Let the Brotherhood know whose opinions have been suppressed. No such somebody exists. He cannot be named. Instead of suppressing opinions the "amiable editor" has labored assiduously to put expressions of opinions, often involving personal attacks and insults, into presentable shape, has corrected orthography and syntax, and in this labor of love, the enemies or the editor are not exceptions.

The trouble with Brother O'Rourke is not that opinions have been "suppressed," but that they have been published—to quote Brother O'Rourke, opinions have been exposed "to the full effulgence of God's glorious sunlight." Opinions have been printed in the *Magazine* just as they were expressed, just as they were coined, not a word nor a crotchet, nor an insult, eliminated; the good, the bad, the indifferent, all; everything has appeared. Hence, any charge, and all charges relating to the suppression of opinions, are simply deliberate falsehoods.

When opinions have been expressed by correspondents calculated to prove injurious to the welfare of the Brotherhood, the "amiable editor" has pointed out the errors, criticised the opinions, "for the good of the Order," as Brother O'Rourke on one occasion said: "These correspondents know very well, if they know anything, that Brother Debs, instead of trying to widen the breach, has put forth every effort to effect a reconciliation." In saying this, Brother O'Rourke was truthful; he made no mistake, and the policy of the *Magazine* which he so highly commended, has been adhered to right along, without variableness or a shadow of turning.

The talk about "distorting, perverting and mutilating" correspondence evinces a purpose to be studiously untruthful. It is in keeping with the false charge of "suppressing opinions." In all conscience, Brother O'Rourke is bound by every consideration of propriety, to confine himself to his own communications, rather than like a Don Quixote go roaming about in search of other cripples and lame ducks and force upon them a defense, which must be regarded in the nature of a calamity.

Moreover, it is supreme folly to make such charges, because the pages of the *Magazine*, when communications and criticisms, stand side by side supply irrefutable proof of their falsity. To correct errors, to crush falsehood, to overthrow subterfuges and coverts, to counteract malign influences, to expose conspiracies and defeat them, becomes a duty which, however unpleasant cannot be ignored, and that the unfortunates, under

such dispensations, exhibit anguish, is quite natural, but when they seek to defend their folly, they are certain to secure contempt rather than condolence.

Brother O'Rourke admits that he has taken part in the "fight with the B. of L. E." and while he, metaphorically, was in the thickest of the fight, his "heart longed for peace," and since in his "fight with the engineers," his tongue and pen did not keep time with his "heart," he may now have heart and soul yearning for "peace," while his tongue bears testimony of implacable hate towards the "amiable editor."

When Brother O'Rourke, as he says, was in the fight with the B. of L. E. he suggested such generous words as, "Messrs. Engineers, when you cease your mean, underhanded system of persecution towards our Order," etc., and Brother O'Rourke was also of the opinion that "there are times when patience ceases to be a virtue and resistance to oppression becomes, not only necessary but a sacred and patriotic duty." Manifestly Brother O'Rourke believed while "Messrs. Engineers were indulging in mean, underhanded persecution towards our Order" that "resistance" becomes a "sacred and patriotic duty" but when men in "our Order" express opinions calculated to debase and degrade "our Order," Brother O'Rourke's devotion to the welfare of "our Order," oozes out at his finger ends, and he would have others join the spineless coterie and chime in with their flatulent sycophancy.

Brother O'Rourke has ample reason for knowing that the "editor," now, as when he (O'Rourke) was championing the interests of "our Order," permits no assault upon the B. of L. F. to go unrebuked. It is the same old "role." It is "our Order first, its rights and prerogatives, its character, standing and welfare. As for the "weapon" wielded in defense of "our Order" Brother O'Rourke is quite at liberty to characterize it as best suits his comprehension. His figures of speech determine his character, and place him irrevocably in the ranks of vulgar parrots.

It seems to be entirely foreign to the comprehension of Brother O'Rourke, that "our Order" can lose members, without losing strength and dignity—just as some men when they leave their country confer upon it a blessing. Neither decay nor loss of dignity occur, when the morally or intellectually infirm abandon an organization any more than the removal of weeds and worms impede the growth of corn and other crops, and current facts relating to the growth of "our Order," we can assure Brother O'Rourke and those who fish in the same muddy waters, are, if they will have it so, highly complimentary to the "anti" of the editor of the *Magazine*."

Brother O'Rourke is unfortunate in his efforts to set himself right before the world. He did refer to the members of the Brotherhood as "weak minded and unthinking," the victims of "childish fancy." It is possible that Brother O'Rourke did not mean to say that, because, in saying it, he denounced the Brotherhood as *infirmities*, semi idiotic, intellectually feeble, imbeciles. Brother O'Rourke was apparently overwhelmed with the idea that "hero worship" had so permeated the Brotherhood as to make such declarations proper, but when the "amiable editor" pointed out the great impropriety of such "mouthings," he seeks to secure exemption from just criticisms by quoting himself as saying the Brotherhood "can live, prosper and advance by the aggregated average of its own intelligence."

It will be borne in mind that Brother O'Rourke is displeased, because the "amiable editor" has referred to opinions as "infirm," forgetful, we doubt not, that he had denounced the membership as men of "childish fancy, weak-minded and unthinking." Such is Brother O'Rourke's way of opening his mouth and putting both of his feet in it, such is the way he has of digging a hole for others, and tumbling in himself, such is his way of breaking his own neck in a halter he with great painstaking prepared for another. Caught and crippled in his own deadfall, limping and howling in search of sympathy and condolence, Brother O'Rourke excites mingled sentiments of commiseration and contempt. He drags forth a number of Brothers whom he is anxious to defend, but does not tell them if they are the "weak-minded and unthinking" brothers he has stigmatized, and he does this, when he is illy able to bear with philosophic serenity, the deserved castigations he has himself received. In the great generosity of a heart, which pants for "peace," he squeals for the crowd; like a dervish he is ready to howl at anybody's funeral.

Brother O'Rourke prates of the proprieties of speech while he indulges in such chaste expressions as, "lie," "slop bucket," "filth," "lying misrepresentation," "rotten imagination," "yahoo," etc.

Brother O'Rourke wants some one to read between the lines to find "an individual whom the editor dares not name or openly assail." Brother O'Rourke has reason for knowing that this individual is not himself. Tattooed by such skill as we have had leisure to bestow, Brother O'Rourke is a living example of our courage, and if Brother O'Rourke will induce the mysterious "individual," to exercise the indiscretion which characterizes himself, and write over his own signature, we will certainly take his case under consideration.

Brother O'Rourke, strange to say, feels

the force of the "amiable editor's" statement, to the extent that he confesses that he made a mistake in his statement relating to the committee charged with the revision of the constitution. The statement was boldly made; it was a grave mistake, and was made to *boost* the flagrant charge of "hero worship" against the "weak-minded and unthinking" membership of "our Order." When the "amiable editor" corrected the mistake "for the good of the Order" he did not apply the epithet of "liar" to him, nor did he inquire of Brother O'Rourke, "why lie about it?" But that is the way Brother O'Rourke treats the "amiable editor," and then with undiluted gall, calls in question our suavity of style, when contending against men like himself, who either purposely or by *mistake* malign the Brotherhood. Brother O'Rourke asserts that in making the mistake "there was no intentional falsifying;" nor was any charged, and yet, the mistake was made for a purpose so flagrantly unjust, that even Brother O'Rourke deemed it advisable in his own defense to intimate that he is honest. While we sympathize with Brother O'Rourke in his painful dilemma, it is not the less unfortunate for him to practically assert that he is not a liar and take his chances for being believed. It is quite unnecessary to say that a man with the confessed infirmity of statement, which characterizes Brother O'Rourke, can expect little consideration, when he makes statements. Having made one statement which he has had to declare was not intentionally false, there is a seeming necessity for him to follow up that policy. He says the "amiable editor" has denounced somebody in the "vilest language." Why does he not quote the language? Simply because he cannot find it. The charge is groundless, fabricated, and Brother O'Rourke ought to say that "there was no intentional falsifying." It does not look that way, and still we hesitate to ask Brother O'Rourke, "why lie about it?"

Brother O'Rourke remarks that "there are men who are honest in financial transactions, and yet rotten to the core in other respects." That may be true or false. We doubt if any man could say that and prove it, unless he himself was the guilty party, and knew himself to be "honest in financial transactions, and rotten to the core in other respects." Evidently a man who has no faith in "inborn integrity" innate, "originating in or derived from the constitution of the intellect," must be the victim of that vicious vagary that all men are "inborn" rascals. Brother O'Rourke is of the opinion that "inborn integrity and the rest is simply rot." We do not doubt that Brother O'Rourke is built that way. It is safe to say that a man who has no faith in "inborn integrity," has none of it in his composi-

tion. A man who is honest because he fears the penalties of dishonesty is in no proper sense an honest man; remove the penalty, and his native scoundrelism will assert itself. He will be careless about his statements, and will confess his mistakes only when circumstances compel him to do so. As he has no faith in "inborn integrity" he has no faith in any other virtue. Inborn veracity is as much "rot" as "inborn integrity;" honor, truth, fidelity to obligation, everything of that nature is "rot" and it would certainly be no stretch of language to say of such a man he is "rotten to the core"—nor would it be in the line of exaggeration, to say, that throughout the animal kingdom or the realms of animated nature, a viler thing could be found.

Why talk about a "firm and abiding faith in the intelligence of the vast mass of the rank and file of the Order," and then kick like an army mule at everything the Order does? Why seek to embarrass the Order and place obstacles in its way? Such acts contradict professions. They disclose vicious motives, vulgar jealousies and envies which must not be permitted to go unrebuked.

We have an abiding faith in the "inborn integrity" of the Order. We do not believe the talk about "inborn integrity" being "rot." We believe there are honest men regardless of penalties and prisons and surveillance. Men who, no matter what the temptation may be, will not steal, nor make statements which are false for a malign motive. To such men the destinies of the Brotherhood must be committed if it is to exist. No greater disaster could befall it than to place its affairs in the hands of men who scout the idea of "inborn integrity." Let a man obtain control or a set of men obtain control, who regard "inborn integrity" as "rot," who are honest only because they dare not steal, and the terrors of the law would soon be forgotten and wreck would overwhelm the Brotherhood.

Brother O'Rourke says:

At the close of his tirade against me he says that if I should persist in refusing to obey the Grand Master in the contingency of a strike of the Federated Orders, I would be expelled. He has suddenly discovered a little authority somewhere, Lord knows where, to enforce the laws of the Supreme. In the December *Magazine* he declares his impotency to compel the U. P. firemen to honor the Supreme with their obedience. If there is no power to compel obedience from the men on the U. P. system, where does the power come from to chastise a single refractory individual? Will you please inform us? Even a foot note will serve for this.

Brother O'Rourke makes another mistake when he says, "he" (the editor) has suddenly discovered a little authority," etc. The point we made, was, that the Supreme Council has no authority to debar the men on the U. P. system or any other system from striking if they determine so to do—but should they strike without the approval

of the Supreme Council, members of the Brotherhood would not be assessed to sustain them while the strike continued. It is in the matter of support that the authority of the Supreme Council comes into view.

Again, should the Supreme Council approve of a strike on the U. P. System, or any other system, and Brother O'Rourke should refuse to pay any assessment ordered to maintain the strike, he would find himself unceremoniously expelled from the Order. His notions of "allegiance" would cut no figure whatever.

This thing of boasting of incipient treason, is well calculated to lower Brother O'Rourke in the estimation of members of the Order, who have hitherto regarded his vagaries and hallucinations as of little consequence, but if he really contemplates rebellion, the Brotherhood will promptly place him where, at his leisure, he can exercise himself either in howling or kicking as may best suit his nature.

We have devoted more attention to Brother O'Rourke than his scurrilous communication warrants, and now leave him to such reflections as are suggested by the notes we herewith append.—ED. MAGAZINE.]

OMAHA, NEB., April 25, 1890.

MR. EDITOR:—I believe it was the intention of our last convention to bring about Federation among the rank and file of the different railway organizations, and practice the motto, "An injury to one is the concern of all," in its broadest sense. By referring to Section I of the Atlanta articles of federation it will be at once admitted that it was the intention to form a General Board of Federation on each separate system of railroads in North America, which could be easily done, as is perfectly plain to anyone who knows anything about our Boards of Adjustment, and the same plan is pursued by all of the different labor organizations in regard to the settlement of grievances. And by extending the law so that local Federated Boards could be formed at any place on a system where two or more different organizations existed, grievances could in many cases be adjusted without the intervention of a General, Federated or National Board, saving both time and expense, but in case a local federated board failed to adjust a grievance, it would take its course to the General Federated Board of the system, when, if they failed to adjust it, the case would be referred to the National Federated Board for their sanction to extreme measures. By following the above course I believe 99 per cent of all cases could be settled without even a threat to strike. Now, by forming local Federated Boards, it will promote a feeling of mutual equality and assistance in many cases that is not now being done, and instead of precipitating strikes, will bring before all the different feelings of the common members of the various organizations, which would have the same effect as a Board of Arbitration in settling a large share of the present troubles between labor organizations and capitalists. Now I would ask the readers of the *Magazine* to take a copy of the Constitution of the Supreme Council of Railway Employes (if they can procure one) together with the Articles of Federation adopted at Atlanta, (they will find it on page 811, November number of *Firemen's Magazine* for 1888), and a copy of the laws of the Protective Department found in our present Constitution and By-Laws, and compare them and see for themselves whether there is anything in our present laws on Federation they would like to see changed at our coming convention.

One of the Rank and File.

DO YOUR BEST!

An up grade work is ours, boys,
Do your best.
Old scrap heap's hard firing, boys,
Do your best.
Don't be discouraged, watch and pray,
There comes for us a brighter day,
While shines the sun, we'll make hay boys,
Do your best.

We have much to learn, boys,
Do your best.
We've tons of coal to scoop, boys,
Do your best.
We must keep the fires a burning,
We must keep the wheels a turning,
We must work and keep on learning, boys,
Do your best.

The right hand side is ours, boys,
Do your best.
And we're going to get there, boys,
Do your best.
We've no time for vain regret,
Our picks and scoops are not "to let,"
We're not built that way, you bet, boys,
Do your best.

Wide awake and steady, boys,
Do your best.
Willing, always ready, boys,
Do your best.
"God bless the fireman's home always,"
That's about the way I pray—
And I am one who's come to stay, boys,
Do your best.

Palcshor

TOPEKA, KANSAS, April 9, 1890.

Editor Firemen's Magazine:

Although a constant reader of our excellent *Magazine*, I do not remember to have read anything in its columns about the boys of Flower-of-the-West Lodge, No. 205, which is to-day one of the most harmonious Lodges on the Santa Fé railroad. The boys are doing good work and promotion has been the order of the day. Among the promoted, the hustlers, Bros. C. M. Riddle, C. McGinnis, John Finnie, Geo. Tittley, J. K. Mullins and our newly elected applicant, Bro. Edward Polly, and more will follow soon. Mr. H. Middleton, our Superintendent of Machinery, is a great favorite with the boys, and Mr. J. W. Smith, Division Master Mechanic, is not to be forgotten. He has been our examiner for promotion, and his course deserves great credit, which the boys award him as they pass over to the right hand side as first-class engineers.

The readers of the *Magazine* may have thought that No. 205 had passed out of existence, because of its silence, but such is not the case. Our members are neither poets nor orators, nor are they masters of penmanship, but they are hard workers and are always ready to assist an unfortunate brother. Our Lodge to-day has a membership of forty-three in good standing and six candidates are awaiting initiation. How is that? I think it hard to beat.

On December 19, 1889, was given our first union ball, which was a great success. The hall was handsomely decorated, the attendance large and more than 250 couples were on the floor at one time dancing to the strains of the sweetest music. No expense was spared to make the occasion all that could be desired by the three great Orders, and federation was represented to its fullest extent. It was a matter of regret that our worthy Grand Officers could not be present, but it is to be hoped they will be present next time.

I do not want to make any one tired, but must say a few words to the *Magazine* and its most esteemed editor. My pen cannot express the feelings of gratitude that fill my heart, as I read its columns and see the active work that is carried on so faithfully in the interest of our Brotherhood, and the way our worthy editor has endeavored to bring about the condemnation of John Livingston, Corbin and Honzono. I feel at liberty to say that there is not a man in the Brotherhood who could give such subjects

more justice, and I therefore extend to him the love of a brother and the highest praise I can bestow, and I hope he may live many years to come and continue the noble work in the interest of the Order and triumph over his enemies.

Now, one word to the firemen who are in favor of a new name. I do not approve of a new name, for the reason that it looks as though the firemen wanted eventually to do away with the engineers' order. Now, this is a wrong idea. The principle upon which the new name would work, as I understand it, would be something like this: The Firemen Brotherhood would be the B. of L. E., the name covering the position of engineers, and also with the idea of making their insurance policy \$2,000. Now, this is wrong, without having the consent of the Brotherhood of Locomotive Engineers. Otherwise, it would be infringing upon the rights of the B. of L. E. and it seems like a plan set up to wipe the B. of L. E. out of existence. Now, brothers, we don't want to do this, for we know it would be wrong. Therefore, let us live under our parent Order. Although I am running an engine the B. of L. E. is good enough for me and I do not feel degraded by not belonging to the B. of L. E. If the firemen, when promoted, can't live under our flag, let them join the B. of L. E. their places will be filled by men who take up the scoop when they lay it down, and in the future there will be harmony between the two great Brotherhoods. Brothers, think well of this, and give us some of your best opinions, and don't get into a passion. I like the views of Bro. Carter, of 283, on the subject, and would like to hear from more of the brothers.

I am sorry to note the condition of affairs on the P. & R., to see the men robbed of their independence and their rights, as American citizens, for which our forefathers fought, and to see my fellow-men bound down in slavery. For one, I say "give me liberty or give me death."

A Member of the B. of L. F.

NEW HAVEN, CONN., April 15, 1890.

Editor Firemen's Magazine:

I desire a little space in the *Magazine* to say that Elm City Lodge, No. 284, is progressing quite satisfactorily. We have a membership of about one hundred, and our meetings should be better attended, but as it is we are taking care of our interests. Our annual ball given in January was a success and netted the Lodge about \$200. More would have been secured, but for "La Grippe," which was prevalent in the ranks of our Lodge, notwithstanding this we were able to add about \$300 to our deposits, making the account \$750. Our Lodge pays \$6.00 a week to its members, provided they are entitled to benefits.

I regret to say that the Lodge recently lost one of its best members by the death of Bro. Andrew Foran, who was universally loved by his brethren of the Lodge. Bro. Foran leaves a wife and five children to mourn their great loss. The *Meridian Journal* referred to the funeral of Bro. Foran, as follows:

"The funeral services over the late Andrew Foran, the well-known locomotive engineer were held yesterday afternoon and attended by a very large number of friends and acquaintances of the family. A special train arrived from New Haven at 10 o'clock with a score or more of the members of Elm City Lodge, No. 284, Brotherhood of Locomotive Firemen, to which Mr. Foran belonged. A few members of the Lodge in Hartford came down on the morning train.

Elm City Lodge took charge of the funeral after leaving the church. At St. Patrick's cemetery, where the burial took place, they formed in a circle around the grave, wearing their regalia, as they did from the time the funeral procession left the house.

After the casket had been lowered into the grave Master Levi Rood and Receiver Alonzo Pyle read the burial service of the Brotherhood. At its conclusion each of the members threw a sprig of evergreen into the grave."

Rev. Father McAlenney read the burial service at the church and his remarks were exceedingly appropriate, urging those present to pray for the widow and the orphans.

Yours fraternally,
W. A. F.

POCATELLO, IDAHO, April 4, 1890.

MR. EDITOR:—The short time now remaining until the appearance of the *May Magazine*, makes it impossible for me to answer your comments in March issue as I would like, so I will devote a few spare moments to one or two particular items.

On page 236 of the March issue there appears an item, captioned, "Time."

There is, on file in the office of our Grand Lodge, if not purposely destroyed by some occupant of said office, an official notice of the annual meeting of the Union Pacific Joint Board of Adjustment, signed by Jackson Hoover, chairman, notifying the Grand Officers that said Board met in Denver, September 23d and adjourned September 25th, 1889.

In this, as in every other matter, the Firemen of the U. P. system, obeyed to the letter the laws of our Constitution.

I unhesitatingly state that Bros. E. V. Debs and J. J. Hannahan know every line in the item referred to, to be absolutely false in every particular. And now, without going into all the details of this unblushing falsehood, I will simply say in the language of Bro. Debs, that "Any unprejudiced mind, in all of this, will see the wheel within the wheel, of a scheme" that was intended to throw discredit on the Brotherhood men of the U. P. system, to draw from them the sympathy and support of other parts of the country, to place them in a defensive position before the Brotherhood that would be hard to explain.

Surely it must be a weak position, held by Bro. Debs when to maintain it, and the support that has always been his, he resorts to trickery, intrigue, and falsehood. I patiently awaited the arrival of the April *Magazine*, before writing this, fully expecting that Bro. Hannahan at least would correct the mistake, but failing to find any, I am compelled to believe that it was, very mildly putting it, an *intentional mistake*.

One word more in regard to the item on page 237 entitled "That Meeting."

My friend from Salida was correct in all his statements, as published in the *U. P. Magazine*, excepting that "That Meeting" was called at the request of Bro. Hannahan. The meeting was called for the purpose of hearing Bro. Hannahan talk, as is done wherever he goes. I am prepared to present Bro. Hannahan with a few facts and proofs when the proper time comes, in regard to the false report given to the world about that meeting. Now, Mr. Editor, it is not necessary to froth and fume in regard to epithets, &c., in this letter, as the writer was present at the meeting of the U. P. Joint Board that was held in September, was also present as a visitor in Denver when "That Meeting" was held, was present when the proceedings of said meeting were given to a *Republican* reporter, was also present as an admiring spectator when Bro. Hannahan was escorted by a *committee of engineers* to their convention hall, and after manipulating all these heinous schemes "for the overthrow of federation," and enduring such incessant surprises from the wonderful imagination of our invincible editor, is it not surprising that I am still able to sign myself as of old,

Frank Walton.

[In the foregoing communication of Bro. Walton, there is little of consequence except that which relates to the time of meeting of the General Board of Adjustment of the U. P. system. Bro. Walton refers to an article captioned "Time," which appeared in the March *Magazine*, and becomes unnecessarily irate because we said the General Board of Adjustment of the U. P. system met in October instead of September, as the Constitution of the B. of L. F. provides.

Bro. Walton charges that "Bros. E. V. Debs and J. J. Hannahan know every line in the item referred to, to be absolutely false in every particular." To clinch the charge before he makes it, Bro. Walton refers to an

"official notice" signed by Jackson Hoover, Chairman, notifying the Grand Officers that a meeting of the "Union Pacific Joint Board of Adjustment" was held in Denver from September 23d to September 25th, 1889.

Now, if such a communication was sent to the Grand Officers, Bro. Hoover has an acknowledgment of it, but our files fail to disclose the receipt of such notification. The insinuation that such a notice would be "purposely destroyed," is both vulgar and malicious. But whether such a notice was or was not sent, as the sequel shows, is of precious little advantage to Bro. Walton in this controversy.

The communication relating to the General (or Joint) Board of Adjustment, is dated Pocatello, Idaho, October 20th, twenty-five days after September 25th. Notice, the meeting was held in Denver, the transactions of the Board are dated at Pocatello, Idaho, nor is there in the transactions of the Board of Adjustment, as officially reported, which arraigned, tried and condemned the Grand Officers, any mention of the fact that the Board met in Denver September 23d, or anywhere else, unless from the date of the communication it could be inferred that the Board met October 20th.

If the Board did really meet in Denver, September 23d, 1889, and transact the business set forth in the document (and in this we are willing to accept Bro. Walton's statement) dated Pocatello, Idaho, October 20th, why was the document held back twenty-five days? Why was it held back till the time the B. of L. E. Convention was in session? If a vote was taken September 25th, why delay the notification, that the Grand Officers had been tried and condemned twenty-five days? And if the vote was not taken at the September meeting when was it taken? Did Bro. Walton send the document out over the U. P. system to these several members constituting the Board to obtain their approval of the document condemning the Grand Officers without being heard? If he did not do this, how could he know the final decision of the members of the Board? Was the document in its entirety, as forwarded to the Grand Officers, submitted to and approved by the Board? Or, was the document concocted and cooked in a way to gratify and satisfy its author or authors?

Every reasonable man will inquire, if the meeting was held in Denver September 25th, how does it happen that the document was delayed until October 20th? Why was it not sent from Denver September 25th, as soon as the meeting adjourned *sine die*?

Taking the document as it stands, dated at Pocatello, Idaho, October 20th, 1889, making no reference whatever to any meeting of the "Joint Board" in Denver, or elsewhere, and the conclusion is not only rational, but almost inevitable, that the meeting from

which the document emanated, was held October 20th, and that was our conclusion.

We do not doubt that it will be difficult for Bro. Walton to make satisfactory explanations of the many strange circumstances that surround the extraordinary document in question. Certain it is that the document makes no allusion to any meeting where it was concocted, nor is it presumable that it was approved in its entirety at any meeting of the Joint Board of Adjustment of the U. P. system. Possibly something was outlined, some motion made by some one and upon such a flimsy basis a royal pronouncement, *a la* Santa Anna, was sent adrift. Certainly, we appreciate the machiavelianism displayed in omitting to designate any place of meeting of the "Joint Board," and as neither time nor place of such a meeting appears in the document, and as it was dated October 20th, we inferred that date was the time when the meeting was held, and the nineteen paragraphs of the "Bill of Attainder" exhaustively discussed and judgment passed. It was wholly a bad piece of business, and as an original proposition, we do not believe that Bro. Walton's heart was in it. As for Bro. Hanahan, we are not required to answer for him, as he is eminently able to do so for himself, as he doubtless will at the proper time.—ED. MAGAZINE.]

EAST HARTFORD, May 13, 1890.

Editor *Locomotive Firemen's Magazine* :

Having read a letter in the May number of the B. of L. E. *Journal*, I find one of our supposed worthy brothers, one E. J. Rauch, posing as the modern Sampson of the B. of L. E., and who chimes in to ask no assistance of any other labor organization. "as we have fought our own battles for twenty-seven years unaided." This, he or any other fair-minded man, must admit is false.

Having at one time been a member of the B. of L. E., I know that since its infancy it has always assisted when engineers have required its aid, and that it has been loyal to the interests of the B. of L. E. I say to engineers, be fair and give credit at all times to those to whom credit is due.

I would also ask my worthy brother, who is to blame for the B. of L. E. having to humiliate itself to catch on to the last bob on the kite's tail? Comment is unnecessary.

Now, Mr. Editor, I don't want to tire you with reading this criticism of Bro. Rauch's letter, but contrast it with that of Bro. G. W. Vrooman's, and then note the difference in manhood. Bro. Rauch says he was a delegate to the Denver Convention. I will bet that his Division will not send him again, as he was not eligible then. If I am correctly informed he is a road foreman of engines on the Manhattan Elevated railroad. Perhaps he thinks his opposition to federation will sooner or later place him in the renowned Col. Hains' chair, but I think he will have to wait for that until cold weather.

(Circular No. 2, I honestly think, will be adopted. The rank and file of the B. of L. E. want it regardless of the opposition of the few and then strikes will be a thing of the past, and as I have heard Bro. Arthur say, railroad corporations will say, "Come let us reason together."

I have stretched this out further than I intended, and will close by saying to Bro. Rauch, why did you not go on the C., B. & Q. when the B. of L. E. and B. of L. F. were fighting for justice and take H. B. Stone by the throat and choke him into submission,

or go over on the P. & R. and tackle old man Corbin? And as for us in New England, we don't want your services, as we receive fair treatment at the hands of our officials, except now and then an understrapper who seeks to curry favor with the company, such as yourself. If the shoe fits, E. J. R., put it on.

Old Nutmeg.

[The foregoing communication was written by a member in good standing of the Brotherhood of Locomotive Engineers. The communication of Mr. Rauch which the writer refers to is not worthy of attention, and an average kindergarten graduate would be regarded as exceptionally stupid were he or she or it, to offer such a silly composition for examination.

In discussing federation in the *Engineers' Journal* Mr. Rauch, as a matter of course, takes the side of the corporation and opposes the whole business. Mr. Rauch is essentially a "company" man and if anyone doubts it let him ask the engineers and firemen of the Elevated railway of New York, of which he is the road foreman of engines. We are not surprised that Mr. Rauch is opposed to federation. He is also opposed to strikes under any conceivable circumstances and if he will be perfectly frank he will admit that he is opposed to labor organizations on general principles. There is no better evidence of the conquering and emancipating power of federation than that such men as Mr. Rauch are opposed to it.

Firemen are aware and are not going to forget that upon every proposition involving their interests brought forward at the Denver Convention, Mr. Rauch voted against them with both hands.—ED. MAGAZINE.]

LOVELAND, IOWA, March 21, 1890.

MR. EDITOR:—No movement for the advancement of the general welfare of mankind ever succeeded without a great deal of opposition from those who see only ruin and defeat in measures that will bring victory and justice. So we find those who would cry down and detract from the merits of federation.

One argument we meet with is that it would destroy the individuality of each separate organization, and produce a union of trades and dissimilar wants which would prove the downfall of the orders involved, as has so often been the case in the past when it has been attempted to unite different trades and occupations in such a manner as to secure concentrated action at any and all times necessary. In prior cases the attempt has been to bring all into one distinct order, and to do away with separate trades unions. This scheme has so far proven impracticable.

Federation desires to maintain this same individuality which the old system sought to destroy, and by forming a Board, appointed by the different Federated Orders, to secure the opinions and aid of all members of the federated body in case the rights and privileges of any members were assailed. Thus we see that the main difference between the old system and the new of federation is: The first sought to destroy the individuality of its members, the second seeks to maintain it.

Another argument we meet with is: That "Federation" will be the means of increasing labor troubles through the acts of some unscrupulous members of the different orders, and that slight pretexts would be considered a sufficient cause to cause a general strike. If an order should strike for a cause not deemed sufficient by the "General Board" to demand the coöperation of the other orders, then it must bear the battle alone, as it com-

menced the fight on its own responsibility. When, if the grievance was of a sufficient importance to need prompt adjustment the aid of the Board could be called in and the trouble most likely would be settled without resorting to extreme measures. For it is obvious if Russia, Germany, England and the United States should form a union and say to any other nation "You remedy this wrong, you correct this abuse," that it would be done at once, for the opposing force would be too great to overcome. So they have won a victory without a blow, which one of them alone could only have obtained after a long, fierce conflict, and perhaps even then have met defeat instead of victory.

It is plain, therefore, if "Labor" unites for its battles with "Wrong" and "Oppression," there will be no battle. The force will be too great to overcome, and "Monopoly" will yield gracefully rather than receive an ignominious defeat.

Give federation a fair trial; let it demonstrate the strength of concerted and concentrated action, and you will find strikes a thing of past days.

A victory for one order is, to a certain extent, a victory for all, for it checks the unjust demands and rules of dishonest "Capital" for a time at least.

Among railroad employes, where it is sought to form a federation of the train and enginemen whose interests are very similar, much opposition is met with from two orders. One of these orders, "Does not believe in strikes" is its principal reason for not wishing to federate.

In case of its members being unjustly treated, it would point to the past good deeds of its members, to their servility as a body to the laws of their employers and beseech *not demand* justice. In this order are many upright, fearless, independent men who can ill bear this insult, and will be found in the ranks of "Federation" and the "Right" soon, even if their order remains aloof.

The other order believes, or claims to, that it stands on a plane considerably elevated above the mass of workmen.

This plane, however, is invisible to the eye of ordinary mortals, and can only be seen in the mind of some of the chosen members of that favored order. A large number of this order are also advocates, and believers in federation in spite of the chosen doctrine of "An Aristocracy of Labor," promulgated by the "Grand Officers" of that order.

As long as the means of obtaining an object are honorable, it does not matter so much what they are. In case of a strike of the enginemen on any line, if the trainmen are old and experienced hands the company can fill the places of the strikers with men that, under ordinary circumstances, it would not employ in any capacity, for it knows the hindmen are all right and will see that the train is kept out of any avoidable danger.

If the trainmen strike and the enginemen do not, the result is the same. Where if all concerned had quit, it would have been an impossibility to secure competent men to fill all the vacant places, or even a part of them, and the company would have been compelled to come to terms of settlement.

Above all, let all orders cultivate and gain the friendship of other organizations: it will not cost anything, and in time of trouble it may prove of much benefit.

X. Q.

TO A FRIEND.

May you while on earth live a life of content
And ne'er do an act that you need to repent.
Deriving great strength from the power on high
Giving glory to God while you live, when you die
Even this is the wish of your friend.

Edward Splaine.

TO MADGE.

The wheels of time revolve with speed,
I hope my friend that you'll take heed
Ever to tread in duty's way
Resolved to serve God night and day;
Never to fail but onward press,
Ensured that God will help and bless
Your every effort great or less.

Edward Splaine.

St. JOSEPH, Mo., May 7, 1890.

Editor Firemen's Magazine:

I have heard it said, "with all her faults, I love her still." For one I admire any society, that has for its object, the promotion of man morally. My object in writing to the *Magazine* is to build up, not to tear down our Brotherhood. I do not wish to censure men, but rather to exalt the great brotherhood principle of doing unto others as we would have others do unto us. All members of our Order should have one aim—the success of the Order.

Brother firemen, it grieves me to hear one brother abuse another brother in the official organ. Mistakes are made by the very best of people. The men who seek to correct others, are generally most in need of correction themselves.

We, as members, can be justly proud of our Grand Office and of our Grand Officers. My visit to Terre Haute on April 20th, was a surprise and a pleasure. To see how nicely and correctly business is attended to, and I am convinced that it has required a patient study to put our Brotherhood affairs in the shape they are in at the present time. I believe it would be a grand idea, if all of our members would read their *Magazine* through as soon as received, and then hand it to some non-Brotherhood man, and explain to him its value. Don't wait until some friend gives you an introduction; go to him and introduce yourself and solicit his membership; generally, it is such men that make the best members. Make our Lodge meetings interesting. Always be slow in selecting local officers, not that one man is any better than another as a man, but upon the principle that only the few are qualified for the duties of officers. It is doubtless true, that we all know from experience who have been firing a long time, and always be firemen, as it is impossible for them to be beginners. Such men have missed their calling, and should try some other business. Whatever you don't slight the little points, as they sometimes prove to be the largest. While on this subject, let me impress upon your minds the importance of never allow religion or politics to enter your Lodge room doors, because they are the two things to which men cling with the greatest tenacity. For religion, no man can change mine, and I would sacrifice all things for it. As for politics, men have their views and have a right to believe in them; but trouble will always follow, when any one introduces religion or politics into the lodge room. I don't pay to talk religion or politics in our struggle for success, and the constitutional clause on this subject, should be enforced.

In regard to change of name of our Brotherhood I still advocate it, and while I have a better opinion of P. M. Arthur and the B. of L. E., I believe change is necessary, because the times demand it. Undoubtedly the Engineers will federate, which all right, we cannot get along without them, nor they get along without us. But, we must work ourselves first, and then assist the B. of L. E. and of R. T., and let me add, when we help these organizations we help ourselves. Our Order is composed of firemen, hostlers, engineers and men in all occupations. Does this not require a name suitable for all?

W. E. Sullivan

MISSOULA, MONT., April 10, 1890.

Editor Firemen's Magazine:

It is an ill wind that blows no one good. Here it has been blowing a little gale that lifted Bro. Legett, Oleson and Baird from the left to the right-hand side, not to switch engines, but to road engine which has afforded much pleasure to all of us. In addition to the general rejoicing the arrival of a boy to brighten the home of Bro. Wiley, should be mentioned, as also the fact that Bro. Hanan is happy over the arrival of his wife and boy from East. Such things help to reconcile the boys to a lot, and it is gratifying to say that the boys of nanza Lodge are happy and doing well. Now, Editor, do you ever contemplate coming West for pleasure or business? If so, when the brakes call out "Missoula," be ready with your hand of the window for a shake, for there will be a large army of friends ready to grasp it, and particularly the writer, who fraternally subscribes himself

One Who Knows

GOOD-BY.

There's a kind o' chill'y feelin' in the blowin' o' the breeze.

And a sense o' sadness stealing through the tresses o' the trees.

And a mist seems fallin' dreary on the mountains towerin' high.

And I feel my cheeks grow teary as I bid you all good-by!

"Good-by" the winds are sayin' "good-by" the trees complain.

As they bend low down an' whisper, with their green leaves wet with rain:

"Good-by" the roses murmur, an' the bendin' lilies sigh

As if they all felt sorry I have come—come to say good-by.

I reckon all have said it some time or other soft
And easy like, with eyes cast down, that dared not look aloft

For the tears that trembled in them—for the lips that choked the sigh.

When it came a-swellin' from the heart an' made it beat good-by!

I didn't think 'twas hard to say; but standin' here alone,

With the pleasant past behind me and the future dim, unknown,

A-gloomin' yonder in the dark—the tears come to my eye.

And I'm weepin' like a woman as I bid you all good-by.

The work I've done is with you; maybe some things went wrong.

Like a note that mars the music in the sweet flow of a song:

But, brethren, when you think of me I only ask you would

Say as the Master said of one, "He hath done what he could."

And when you sit together in the time as yet to be,
By your love encircled firesides in the valleys fair and free.

Let the sweet past come before you, and with something like a sigh

Just say, "We ain't forgot him since the day he said 'Good-by!'"

F. L. Stanton, in *Rome Tribune*.

More Reasons Why the Boys Don't "Git Thar."

MR. EDITOR:—"Uncle Silas" gives us an excellent picture of the "H O G" fireman. Here is his mate and the man who is largely responsible for his being a "H O G." When "Bill" first commenced firing, he was a genial good natured fellow and had a laudable ambition to do his best and learn all he could. But (sad to relate) the foreman put him on the 106 with "Jack," a member of the genus "H O G." The foreman put him there for the reason that he was a new man, and it was almost impossible to get any of the old men to stay with the 106 longer than two trips. "Jack" is generally an individual whose head is about twelve sizes too big for his hat, and he makes "Bill" feel at home at once by remarking that "he don't see what that d—d fool (meaning foreman) means by putting every d—d farmer (meaning "Bill") that comes along, on the 106 when he knows it needs a good man." "Bill" don't know anything about the run and "Jack" don't lower his dignity by volunteering any information that would help him, but when they strike an easy piece of track and "Bill" lets her pop a couple of times "Jack" grabs hold of the door chain and pulls the door open with a jerk and wants to know if "Bill" is trying to get every d—d drop of water in the tank out through that pop: then "Bill" lets his fire go down considerable and they come to a place where "Jack" has got to pat her on the back a little, the pointer begins to go the wrong way. "Bill" begins to hustle to pick her up again and "Jack" helps him by remarking, "see here, young feller, I can't pull this train with cold water." Of course "Bill" learns the run after a time and don't allow himself to get caught, but he

don't mix any brains with his coal because he has no incentive to do so. When the "Con" comes over ahead and tells "Jack" he has an order to pick up fifteen empties at X and he thinks they are way down in the hole, "Jack" shows what an ass he is by cursing the road and everybody on it from the President down. "Bill" always has to suffer for "Jack's" freaks of temper as he always tries to take it out of the 106. When "Jack" has to come back two or three times for the brakeman to make a coupling, he gets hot and shows how much he knows by pulling the 106 open and letting her slip until she empties a couple of barrels of water over her jacket and windows that "Bill" has spent three or four hours in cleaning: of course this don't amount to much as "Bill" has nothing to do only scour. If "Bill" is of an inquiring turn of mind and musters up courage to ask "Jack" for information on some point that isn't clear to him, "Jack" gives him a look of withering contempt and either don't answer him at all, or answers him in a way that makes him feel so small that he never has courage to ask another question. After "Bill" gets through taking water and gets down to fix his fire "Jack" calls to him to move here a little so he can oil the wedges. "Bill" jumps up with his eyes dazzled by the fire and moves her a little too far. "Jack" hollers loud enough to lift the roof of the cab, calls "Bill" a d—d fool, and wants to know if he will never get so that he can move an engine a foot without moving her a mile. Maybe the 106 has a thump somewhere, and while she is standing on the siding waiting for the "Canon Ball" thermometer to go in the shade, "Jack" tells "Bill" to give her a little steam and work the lever till he sees how her rods are. After "Bill" has worked the lever for five minutes without hearing anything from "Jack" he stops because he has not strength to do any more, and looking out for "Jack" finds him complacently feeling of the tank truck boxes. "Jack" then tells him if he is d—d fool enough to stand there and pump that lever all day he ("Jack") ain't to blame for his lack of sense. And when the foreman asks "Jack" how "Bill" is getting along with the 106, "Jack" assumes the air of a martyr and says, "Oh, he manages to get along, but his head is thicker than a fourteen dollar Bible, and he'll never know anything about an engine if he lives to be a thousand years old." Is it any wonder that "Bill" gets to be just as big a "H O G" as "Jack," and forms habits through "Jack's" influence that will stick to him through life? He is bound to develop into just such a man as "Uncle Silas" describes, and if he is ever put on another engine with some nice fatherly old fellow (such as I take "Uncle Silas" to be) who would take an interest in him and like to see him get along he judges him by the same standard as he does "Jack" and receives his good advice in a very ungracious spirit, he is so used to kicking and growling that he can't understand anything else. Both "Jack" and "Bill" are (thank God) going gradually out of business, but the one class of men is just as numerous as the other. Habits formed on the foot-board stick to a man like pitch. I know because I've "been thar." If the editor is willing I will describe other engineers I have met who are Jonahs to the fireboy, in future numbers of the *Magazine*.

Vacuum.

LONG PINE, NEB., May 6, 1890.

Editor *Firemen's Magazine*:

As none of the brothers here seem inclined to write, I will send a few items. Business on the road is good for this time of the year, all of the boys are getting in a little more than full time. There have been several promotions lately. Bro. Heaton, of No. 17, to night hostler, at Chadron; Bro. Caldwell, of the same lodge, hostling days at Norfolk, and Bro. Wolf, of 254, nights at the same place. All are in hopes that the road will build this summer as business would then be much better.

We have two good Lodges on the road, Pine Ridge, No. 17, at Chadron, and Climax, No. 254, at Missouri Valley. Nearly all of the firemen here belong and all take great interest in the Order. I am very much in favor of a change in name for the Order to something that will include all classes of engineers. Hoping that some of the other brothers here will pluck up courage and write, I will close.

F. E. & M. V.

ORIGIN OF THE GRAND LODGE, B. OF L. F.

Reminiscences by A. L. Jacobs, the Only Delegate Remaining in the Order.

Under the date of April 21, 1890, Brother A. L. Jacobs, a member of Buffalo Lodge, No. 12, contributes the following interesting reminiscences of the formation of the Grand Lodge of the Brotherhood of Locomotive Firemen, A. D., 1874, in Hornellsville, N. Y.

It is needless to say that such reminiscences are of great value and interest to the Order, especially so, because as the years go by, those who were present when the Brotherhood was born and christened, must necessarily be silent.

Brother Jacobs starts out by saying:

As a member of the Order I will briefly review my connection with railroad and the organization of Buffalo Lodge, No. 12, and also the formation of the Grand Lodge of the Order—its members and officers.

I began firing on the old Erie road, August 23, 1869, on the Buffalo Division, then and for many years afterwards, of six foot gauge. I served in this capacity, and as hostler, until December 24, 1879, when I was promoted to a freight engine by Master Mechanic, Frank M. Wilder, and am yet running a regular freight engine on the same road, not having advanced as rapidly as "East Line," to the passenger service.

Referring to the organization of Buffalo Lodge, No. 12, my recollection is that one forenoon in October, 1874, a stranger was noticed in the immediate vicinity of the Erie round house, and it was soon learned that the man was none other than our honorable brother, Joshua A. Leach, who had visited our city by request of the members of old Erie Lodge, No. 2, then located at Hornellsville, the purpose being to establish a Lodge in Buffalo with the boys on the west end of the Erie road. The quietness observed in the movement, was owing to the fact that at that time the company did not favor such organizations.

However, in the afternoon of the same day, the matter was discussed among the firemen, numbering about fourteen in all, together with several men employed on our Division, who belonged to old Erie, No. 2, and we concluded to organize a Lodge. The first obstacle we encountered related to obtaining a suitable room in which to organize. Some of the boys said, "You may come to my house," others, "you may organize up stairs," in my house," and finally, Old War Horse, Cappy Crossman put in his say as follows: "Why not organize the Lodge in the wash-room used by the engineers and firemen, over the Erie carpenters' shop?"

Following this suggestion, an examination of the room was made by Bro. J. A. Leach, and it was decided to organize there with the following officers—viz:

D. S. Dickenson, Master; I. H. Crossman, V. M.; Dan Gannah, Past Master; Lyman Falfre, Financial Secretary; E. S. Draper, Secretary; A. L. Jacobs, Warden; Thomas Hannon, Conductor; J. F. Diehl, I. W., and Dan Harris, O. W.

Everything was now complete, so far as organization went, and we continued our meetings in the wash-room for several weeks by permission of the Master Mechanic, W. E. Brown, long since deceased. Finally, this room became too small for us, the organization being new and for firemen only, it grew rapidly, and it was decided to appoint a committee to procure a hall in which to meet. As a result, the members of Division No. 15, B. of L. E., granted us the free use of their hall for one month, at the expiration of that time it was to be decided by the Division whether we could longer have their hall free or pay rent.

Then, as now, the B. of L. F. had enemies in the B. of L. E. and at the expiration of the month, Division No. 15, B. of L. E. decided not to rent. Buffalo Lodge, No. 12, met at once. We conferred with Mr. Higham, with whom we contracted to reconstruct some tenement rooms he had in the same block Division No. 15, B. of L. E. was located, and in five days we were behind our own desks.

The furniture in the new hall consisted of two

four-legged desks, twenty-four wooden chairs, two gavels, presented by Mr. White, a boss carpenter of the Erie and a ballot-box, the expense of the whole outfit was about fifteen dollars.

At the time of which I write, there was no Grand Lodge nor was one created for some time subsequently. The laws we had were two copies of the laws adopted by Deer Park Lodge, No. 1.

In the latter part of November, 1874, a circular was issued by J. A. Leach, asking each Lodge to send two delegates to Hornellsville to the first annual convention to organize a Grand Lodge and elect Grand Lodge Officers, and to transact such other business as might come before the body.

Bro. Leach took the authority of issuing the circular, by reason of having been the organizer of Lodges up to the 14th day of August, 1874.

In compliance with the request of Bro. Leach, set forth in the circular, at the first meeting of Buffalo Lodge, No. 12, held in December, Bro. T. Richardson and A. L. Jacobs were chosen to represent Buffalo Lodge, No. 12, in the first annual convention of the Brotherhood of Locomotive Firemen.

On the 15th day of December, 1874, eighteen delegates, representing twelve Lodges, assembled in the room of Old Erie Lodge, No. 2, over E. H. Laughlin's store on Main street, in the village of Hornellsville and there laid the foundation upon which stands to-day the grandest labor and fraternal organization under the sun.

I herewith append a list of the Lodges represented in the first annual convention, and the names of delegates.

Deer Park, No. 1—B. F. Knight and G. W. Heidtall.

Erie, No. 2—D. G. Mack and H. W. Plummer. Jersey City, No. 3—A. Morehouse and Sidney Clark. A. and G. Western, Meadville, No. 4—K. D. Co. and John Armore.

Galion, No. 5—Wm. N. Sayre.

Dayton, No. 6—J. C. Spencer.

Seranton, No. 7—P. B. Posten and L. K. Gleason.

Jackson, No. 8—F. N. Schooley.

Delaware, Ohio, No. 9—R. Kelley.

Cleveland, Ohio, No. 10—C. M. Garner.

Excelsior, No. 11—J. C. Tonzean.

Buffalo, No. 12—A. L. Jacobs and T. K. Richardson.

The first annual convention was in session eight days, and the printed minutes occupy less than eight pages of the *Firemen's Magazine*, and he desire to ask the Editor of the *Magazine*, how many of the delegates named above are now alive in the Order?

It may be well to briefly review the proceedings of the convention, as many of the readers of the *Magazine* would doubtless like to learn of them from brother who was present.

On the first day we had the opening address of A. Leach. We were not welcomed to the village of Hornellsville by the Mayor, for the reason that at that time no Mayor presided over that burg—neither were we welcomed to the village and state by Governor and other dignitaries, as are now the distinguishing features of our conventions. A committee was appointed on secret work, constitution and by-laws, and thus the first day went by.

On the second day, we received a communication from J. Bartlett Smith, then Chief of Division 4 of L. E., to meet with them at their hall at 2 p. m. December 17, which was accepted. Also an invitation was extended to the convention by Master Mechanic J. W. Chapman, of the Western Division of the Erie, to visit the company's shops. No work was done, chiefly with reference to insure the form of assessments, etc. J. A. Leach, elected Grand Master, H. W. Plummer, V. G. Wm. N. Sayre, G. S. and T.

The Convention adjourned Friday, December 19, to meet in Indianapolis, December, 1875.

About four years ago, in company with Master F. P. Sargent and Grand Secretary and Treasurer E. V. Debs, while in Hornellsville, I visited hall where the first annual Convention of the B. of L. F. was held. The owner presented Messrs. Sargent and Debs with the gavel that was used by Grand Master Leach on that memorable occasion, be deposited in the office of the Grand Lodge as a souvenir.

Having written of Buffalo Lodge No. 12 and of the first annual Convention of our Order as memory recalled incidents, I will in the near future, write of the ups and downs of No. 12 as I know them. I agree with "East Line" in regard to change of our name to that of the Brotherhood of Locomotive Enginemen. Fraternally yours,

Amos L. Jacobs.

[Brother Jacobs asks who of all the delegates attending the first annual convention of our Brotherhood are still alive and in the Order? We do not know, how many are still alive, but so far as we know AMOS L. JACOBS is the only one of them who is still in the Order.—ED. MAGAZINE.]

PALESTINE, TEX., March 24, 1890.

MR. EDITOR:—The third annual ball of Neches Lodge, No. 156, came off on March 19, and was a great success, both as an enjoyable and financial affair, everyone being loud in their praise of music, supper, and the manner in which the ball was conducted, and we have cleared about \$100.

There were present about 400 people, comprising friends from San Antonio, Austin, Taylor, Longview, and Trinity, and we received the kindest treatment from the officials in regard to transportation and other courtesies.

The various committees cannot be too highly praised for the manner in which the ball was arranged, conducted and finished.

Yours fraternally,

W. E. Randolph.

CHICAGO, ILL., March 20, 1890.

Editor Locomotive Firemen's Magazine:

I am a member of the Order. I don't want the others to think I am trying to set myself up. I'm of that kind of a hair pin. But I do read the *Magazine*, and have tried to make myself acquainted with the laws of the Order. I belong to that class of men who attend lodge meetings. When I have anything to say I take part in the debates. Of late such matters have been discussed which I thought important and I took a hand in the argumentation.

Now I am not going to tell you what I said or how I did it, but I want to mention the subjects and something about the opinions expressed.

Well, to begin, the new name question came up. I took up all the time we had at one meeting. I made objection to a change of name. One brother said he liked the old name, that with the name we had got along finely, but admitted when he remembered there were hostlers and boozers in the Order, he was inclined to favor a name that would include them all and he didn't want but that it was best under all the circumstances to change the name.

A engineer said that he liked the Brotherhood of Locomotive Firemen. He said he had often been asked to join the B. of L. E., and sometimes had been inclined to join that Order, but had refused because he was loyal to the B. of L. F. and didn't like the obnoxious laws the B. of L. E. had made against the engineers, since the Denver Convention, when he was asked to join. He said, they said, you are not a fireman, what do you want to train to be a fireman for? He said he told them to wait till the firemen would have a name that would include engineers, and induce them to stay in their own brotherhood. He said that "all the members of the Firemen's Brotherhood were locomotive men," and that he liked the name mighty well.

At another meeting we discussed federation and action of our Grand Officers. Everybody was in favor of federation, and all thought our Grand Officers at the meeting in this city, last June, had done what they could. They started federation and it was more than half the battle. Some of the members referred to the action of the Board of Adjustment on the U. P. system when the Grand Officers were condemned without a hearing and thought it an outrage. That was my view of it.

At one meeting the *Magazine* got a hearing and a handling—and its editor too. Everybody admitted that it was the best brotherhood paper ever published. What pleased the boys was that our book always defended our brotherhood; that it spoke out square when the brotherhood was attacked. One brother said that the editor had done his duty to the Brotherhood and that the repeal of the obnoxious laws at Denver would never have been done if the *Magazine* had not fought them. Some one said the editor criticised some of the boys who wrote letters to the *Magazine*, but admitted that when a brother wrote letters in the interest of the B. of L. E. and against our Order that they ought to be criticised, and if the editor didn't do it, our *Magazine* might just as well be edited by P. M. Arthur.

The editor's open letter to P. M. Arthur, everybody said "took the cakes." We are not fighting engineers but we've been fighting for equality—and we are going to have it. The B. of L. E. is going to give equality—it's going to federate—and no paper has done so much to bring it about as our *Magazine*.

I'm thinking I have written as much as you have room for and I'll stop.

Torpedo.

LOUISVILLE, KY., March 20, 1890.

Editor Firemen's Magazine:

I have been reading the *Magazine* for January, and carefully read Brother W. S. Carter's letter, and the editor's comments on the same.

Over here in "Old Kaintuck" we don't pride ourselves much on compliments,—that is, saying pretty things,—except to our girls. The boys on the L. & N. are good fellows, but they have a sort of rough and tumble way of greeting each other when at work quite different from what you see when they are enjoying a little leisure and have on their Sunday rigs.

I want to tell Brother Carter, "of 263," that he isn't as pretty as he was before he wrote that letter on page 47; but I guess he knows more—he ought to.

Brother Carter says: "Now, I have a few words to say in regard to our worthy editor's style of running the *Magazine*." Now, Mr. Editor, I "have a few words to say in regard to our worthy editor's style of running the *Magazine*." It doesn't appear that Brother Carter has any grievance of his own. It looks to me as if Brother Carter was "spillin'" for a fight, and so put a chip on his shoulder and dared the "worthy editor" of the *Magazine* to knock it off. He is like some fellows I have seen, who wanted to fight so much that they would take up the quarrels of others—and they most generally got handsomely licked. When the "worthy editor" got through with Brother Carter, "of 263," he looked like a candidate for an ambulance or a shutter. Being a Brotherhood fireman who stands square on the books of his lodge, and a reader of the *Magazine*, I want to say that I like our editor's "style." He is no coward. He talks for the interest of the Order. Brother Carter, "of 263," cannot find an instance where our book was not the defender of the rights and interests of Brotherhood firemen—not one. Then what is he howling about? Does Brother Carter, "of 263," want the *Magazine* to be a door-mat for the enemies of our Order to wipe their feet on? Does he want it to be a spittoon for any loungers to spit in? And when some fellow does try to wipe his feet on it, does he want the "worthy editor" to say, "All right, go ahead"? I know what I am talking about. I read our *Magazine*, and I read other railroad papers. If our "worthy editor" has made any mistake, it has been in printing letters that ought to have been thrown into the fire. I have read some of them that were a disgrace to the Order, and but for the editor's comments on them, would have done harm to the Brotherhood. They were "rot" of the worst kind. They showed that the writers had little sense, and were using what little they had to injure the Brotherhood. "Them's my sentiments," and I don't charge anything for them, either. The *Magazine* is the best publication of the kind in the country, and firemen who don't know it don't know much about books of any sort. Fraternally,

Fair Play.

SPRAGUE, WASH., March 19, 1890.

Editor Locomotive Firemen's Magazine:

I thought I would let you know that we are in a flourishing condition and still growing. Our lodge now numbers fifty members, ten of whom have been initiated within the last two months. Six applications for membership are now in the hands of the committee.

Our Worthy Master, J. D. Irby, has recently been promoted to main line service, and handles 192 in first class style. Bro. Palmgreen occupies Bro. Irby's seat on switch 84. Our Master Mechanic, Moir, is promoting the boys as fast as he thinks they are competent. Bros. Richmond and Bowman have recently been promoted as switch engineers, and Bros. Clark and Palmer as hostlers. Bro. Ike Stephens takes his departure on the first of the month for Oakland, California. Business of a very pressing and pleasing nature calls him away and when he returns he will be accompanied by his bride. Lodge 133 extends its heartiest congratulations to its Worthy Receiver. Business on the road is good. Immigration is so great over the Northern Pacific that the company has found it necessary to put on another passenger train, a fast run which goes on the first of April.

The shops are crowded with broken down and wrecked engines thus making a great deal of work for shop men. Consequently first class machinists are in good demand. The company proposes to rebuild the shops at Sprague.

The new shops are to be of brick. Machine shops of greatly increased capacity and a forty stall round house will be constructed during the summer. The Idaho division of the N. P. has had some serious accidents this last winter, due mostly to the severe winter and deep snow which we have had in Eastern Washington. Engines 447 and 100, double header on snow plow, jumped the track, wrecking both engines and fatally injuring Engineer Melcher and Fireman Burroughs, January 8, 1890.

Bro. Burroughs, a member of Hercules Lodge, No. 63, died January 12. The remains were accompanied by the bereaved wife and children and Bro. George Kendall, representative of Sprague Lodge, No. 133, to Danville, Ill., the former home of the deceased brother.

Another sad accident occurred March 4. Engine 220, on a west bound freight, collided with the switch engine No. 57, at the eastern part of the yards in Sprague. Bro. Al Moore, was switching in the yards and was struck by the incoming train which he was unable to see owing to a dense fog which prevailed. Bro. Moore escaped with a sprained ankle, but his fireman was so badly injured that he died in four hours. The deceased fireman, Alfred Anderson, had no relatives in this country, being a native of Sweden. Although not a member of our order, the Brotherhood paid him all due honor and respect and he was laid to rest with the feeling that he was one of the many heroes who fall at the post of duty.

Yours fraternally,

No. 133.

MISSOULA, MONTANA, March 12, 1890.

Editor Firemen's Magazine:

I am a regular reader of our highly esteemed *Magazine*, and have always thought it was a daisy, but lately I see so-called "kickers," who don't have to kick, writing in its columns. I would like to express my views on some of the subjects they have been kicking about. In the first place, they want the Woman's Department abolished; they seemingly want the whole earth themselves, with a fence around it. The women have quite as much right to the *Magazine* as these kickers, and probably a good deal more, as kickers generally get their *Magazines* free, while the women folks pay for theirs; and I guess they will always have a share of the *Magazine* devoted to the Woman's Department. To see the way kickers are kicking against women, a fellow is led to think a woman has no right to live; and they also seem to think that if they were to quit kicking about this, that and the other, the editor would cease publishing the *Magazine*; but I tell you, kickers, the *Magazine* will always have lots of good, sensible reading in it, and

more, if you will only keep yourselves out of it columns. You make me tired. If you don't like the style in which things are conducted, you know what to do.

I see where a certain party has been kicking about not having more writers in the *Magazine* about how to fire and clean engines. That party is Cross, and he wants to know anything about how to fire coal, wish he would come up here, and we would treat him in throwing Bozeman coal; and I think by this time he had got out on one of our old ten-wheeler for ten miles, he would throw down his scoop and say he knew too much about firing coal. I tell you the *Magazine* is a poor place to learn how to fire. It is the same as the boilermaker adjusting his draft-plates. No; he is in the shops, and don't know whether the engine is going to steam or not until engineer takes her out and adjusts her on the straight track. The cab, with a full train, is the place to learn how to fire, especially when the engine is working in the company's notch. As to how to clean an engine, the best way to do that is to put her wide open when she is going ahead, especially if she has a straight shot, and then watch the effect but keep your head inside.

But, putting all jokes aside, the kickers get their work on the engineers, and try to down them in the eyes of the public. I wonder what the public thinks about the two organizations scrapping—trying to down the other? Any man with common sense knows there are black sheep in every do. The engineers out in this Western country are so tired of hearing such kicking, and I, for one, think it is time it was stopped. It is queer that I never hear from any kicker in this section down the *Magazine* editor or the Woman's Department. I guess the reason is, the boys in this section have too much manhood left in them.

Well, as I expect to get a roasting from some of these lines, I guess I had better stop.

Respectfully yours,

Cross

CHARLESTON, ILL., March 14, 1890.

Editor Firemen's Magazine:

On Sunday night, March 3d, I had the pleasure of donning a B. of L. F. pin, after a severe and protracted struggle with the frisky goat of Little Giant Lodge, No. 187, of this place, and although the deer was an ugly beast and, as I afterward learned, I been kept in solitary confinement without food two weeks in anticipation of my advent. I hung like grim death and came out victorious. I am proud of my membership as a six-year-old boy with his first pair of red-top boots.

Little Giant is flourishing. We have, I believe, fine a lot of boys among our members as ever occupied seats in a lodge room, and our members are sober, industrious and steady as could be desired. As every rose has its thorn, however, we have difficulty here, viz: to get all to attend meetings when they can. It is hoped that we will develop ways and means in the near future whereby greater interest may be taken in this respect. I think that no member should allow himself to be absent from the lodge room when in the city meeting time, except, of course, in case of sickness or needing rest after a hard trip. Our Worthy Master and Past Master have both their Sunday lay-off here, and consequently are able to attend every meeting, and I have hopes that as soon as the next cost band take up their beds and walk out of the city, that a great many more of our members will be more regular in their attendance.

I understand that our Grand Master intends to pay Little Giant a visit in the near future, and members are looking forward to the event with much pleasure. If we could only have the assurance that he would be accompanied by our Grand Secretary and Treasurer we would be glad, indeed. If he will kindly inform "yours truly" in time, I will lay off a trip, so as to be at the meeting, with new pencil and endeavor to do him and his justice in my next.

In closing, will say I hope to become better acquainted with all *Magazine* readers in the future space can be found for me.

Fraternally,

C. W. Martin

ASHTABULA, O., March 19, 1890.

Editor Firemen's Magazine:

The night of February 18th Western Reserve lodge gave their fourth annual ball, in the city hall. As early as seven o'clock the gay party began to assemble, and by nine o'clock there were nearly three hundred couples in attendance. At eight thirty Bowman and McFee's orchestra, of Cleveland, gave a concert that lasted thirty minutes. At nine o'clock the grand march was formed, led by Bro. Mills and lady, and was one of the finest ever seen in this city. At eleven o'clock supper was served at the Hotel James, and was sumptuous. The firemen's ball has been the leading ball of the season the past four years, and we intend to make it in the future what it has been in the past. The arrangements were of a character to reflect great credit upon the lodge, and especially upon Brother Davis, master of ceremonies, and upon the committee of arrangements. The railroad officials that were present were T. W. Niles, superintendent of the A., J. & F.; G. H. Houghton, road master, and Mr. Wadlington, round house foreman of the P., Y. & A. They pronounced the party one of the finest they had ever attended. Mr. Kimball, superintendent of the P., Y. & A., ran a special car from the harbor to the city and return free of cost to parties wishing to attend the ball. Mr. Niles abandoned all trains except passenger trains on the A., J. & F., in order to give the boys a chance to enjoy themselves. Brothers Hill and Weisel had charge of the cloak room and, notwithstanding the large crowd, not an article was lost or exchanged. We, one and all, vote that the two brothers were equal to the occasion and have our sincere thanks. Nickel Plate Lodge, No. 377, was well represented, as was also Lake Shore Lodge, No. 183, of Collinwood.

Things are very dull on the road now, which gives us lots of time to ourselves; at least, Bro. Rose finds time to visit Andover as often as twice a week.

Our lodge is growing; there were two candidates put through last week and there are four applications on file. As I am afraid I have taken up too much space in your valuable *Magazine* I will close.

H. S. R.

SEATTLE, WASH., March 18, 1890.

Editor Firemen's Magazine:

I wish to tell the brothers that Puget Sound Lodge, No. 407, was born the 12th of January of this year with a starter of eight names; we have increased to thirteen with five more applications in. This is the terminus of the N. P. system, and as most of the men on this division belong to No. 192, it makes our chances of getting a large membership very small, but what we lack in quantity, we will try and make up in quality. Most of us are employed on the Columbia & Puget Sound narrow gauge railway, and we are all new in the Order. Our representative in the legislature from this district (who is an ex-steamboat engineer) tried to get a bill passed requiring locomotive engineers to be licensed. It did not pass, but he is going to try it again. Will some brother please give his ideas on the subject. The firemen in this state sent in a remonstrance to the Governor, and he said if the bill passed he would consider it before he signed it. We all look forward with pleasure to getting our *Magazines*. They do us a lot of good in more ways than one. Any man will profit by reading the Woman's Department. I will be more brief next time. Yours fraternally,

C. E. H.

ST. JOHN, N. B., March 15, 1890.

MR. EDITOR:—I have not seen anything in our *Magazine* for a long time about our down east Lodge, Justice, No. 357, which is located at Vanceboro, and meets in a cozy little room in Plummer's building, where we have some fine meetings with our noble Master, Bro. John E. Shea, of the Maine Central, at our head, and our never-tiring and faithful Bro. Whitfield Nobles as Secretary. In fact, I might say we have got a Lodge of all noble brothers. Our members are very much scattered about for our Lodge is composed of Brothers of the Main Central shore line and Northern and Southern divisions of the New Brunswick railways, and therefore it is sometimes very difficult for brothers to get away

and go a long distance to Lodge meetings, but I can assure you that the majority of our members are warm Brotherhood men, and our worthy Master and Secretary are brothers that we cannot too highly praise, for let what may come, or go, Bro. Shea's and Nobles' stately figures are to be seen on the Lodge room floor, and always ready and willing to do something for the good of the Order. We have another worthy and distinguished brother in the person of our Collector, Bro. C. J. Labor. Up to a short time ago, his chair, I might say, was never vacant, but he wooed and won the heart of a most amiable young lady from Fairville, a sister of one of our noble brothers and we shall have to excuse him for his absence, for we know how to sympathize with him, but we must say, although he is sometimes absent from us, he never neglects the duty assigned to him and he is always sure to have his notices around to us in good time when he wants us to pay up, and look pleasant, for it would be a hard job for us to do otherwise when we meet his smiling countenance. I remain,

Fraternally yours,

Andy S.

ALTOONA, APRIL 5, 1890.

Editor Firemen's Magazine:

It occurs to me that something should appear in the *Magazine* about Eau Claire Lodge, No. 68, and so I have concluded to drop you a line or two. We are all proud of our Lodge and can say we own our hall and Lodge room. We have a large membership and but few have been subjected to expulsion, as we have a Collector who does not forget to let the boys know when to pay their quarterly dues.

Our hall is used by the B. of L. E., the B. of R. T. and by the Ladies' Auxiliary Society, and the latter takes great pride in keeping it well decorated for us all. I am sorry that "Kicker," in the Woman's Department, April *Magazine*, has such a poor opinion of woman's rights, and am of the opinion that should he ever show up in Altoona, and the ladies should get their grip on him it will be all day with him.

Bro. Pat Dugan, of our Lodge, has been advised by his doctors to lay off for a while and recruit his health and strength, else they could do nothing for him, the trouble being a tendency to consumption. Pat has worked hard for the last ten years, and rest will do him good. Bro. Charles Jungck has his place in the meantime. Bro. Pat Keating has been promoted to hosting, nights, while Bro. D. Jones does the same thing, daytime. Bro. Defoe, our *Magazine* Agent, has been very good natured of late—its an eleven pounder, and of course looks just like its pa. Hoping that some one of our Lodge will take sufficient interest in its welfare to follow up this brief communication, I am

fraternally,

T. A. B., 68.

PORT JERVIS, N. Y., April 21, 1890.

Editor Firemen's Magazine:

Lea's Opera House was all aglow with electric lights the 8th of April, it being the occasion of the third annual ball of Lodge No. 1, B. of L. F. in Port Jervis. It began to rain in the morning and all day long the rain clouds poured their contents down on the heads of people who were abroad, but in spite of the weather our friends put in an appearance about 9 o'clock in the evening and at 10:30 the hall was filled with as fine looking people as you ever met, about 400 being present. The attractions of the ball were the artistic decorations on every hand, such as flags, banners, lanterns, and balloons. On the curtain of the stage, in full view, was a banner with a locomotive and the motto of our Order.

Through the kindness of our railroad officials, we were able to have use of flags and lanterns. We had a lunch, and the merry dancers were waited upon by Mrs. Decker, Cole and Fordy. We noticed among our many friends Bro. Hopper, of No. 3, who seemed to enjoy himself. The committee appointed to conduct this ball worked hard in hand to help those who attended, to have a good time, and all present expressed themselves by saying they had enjoyed themselves, and hoped we would long continue to hold our annual balls. The party broke up about 3 a. m., and we wended our several ways home tired, but well pleased.

Long may the boys of the B. of L. F. live to enjoy their well merited success.

J. F.

Personals.

J. V. PIPER, Master of 61, has the unqualified confidence and support of the members of his Lodge.

LOU FISHER, of 109, is contemplating a change of climate in view of his rapidly declining appetite.

WHEN last seen C. M. Nicter, of 206, was headed for Mexico. We hope he reached his destination safely.

THE union meeting lately held by Lodges 45 and 304, was well attended and much good was accomplished.

UNDER the direction of Wm. Merkle, Master, assisted by an able corps of officers, No. 21 is rapidly coming to the front.

AT the organization of Lodge No. 414, Bros. Pate and Wheat rendered Vice Grand Master Hannahan valuable assistance.

W. J. BAIN is distinguishing himself as Master of Pine City Lodge, No. 81. He handles the gavel with dignity and ability.

BRO. CARSON, of 51, and Bro. Amos, of 109, make good side partners. They generally get what is good and plenty of it.

PAT GAUGHAN is rapidly mastering the Spanish language and promises to graduate soon with full honors.

FRED. MYERS is one of the wheel horses of 188, and when there is work to be done, Fred can always be counted on.

It is said that Bro. Watts, of 81, is champion of the bean board, having credit for the longest run on record.

It is rumored that "Happy Jack" Wellman is partial to vendors of tamolies. Jack doubtless knows his business.

J. Franklin, Master of No. 278, and Bro. Sullivan, of the same Lodge, know how to entertain visiting Brotherhood men.

W. J. MURPHY, Master of No. 109, is always ready to assist in anything that will advance the interests of the Brotherhood.

THERE are no flies on Lawyer Green, of No. 81. He can prop up a horse or galvanize a dog when necessary to save funeral expenses.

CAPTAIN RICE, well known among the boys, is now running out of the City of Mexico. The captain is a royal good companion.

BUT short notice of a meeting is required at DeSoto, Mo., to secure a full attendance. The members of No. 6 are abreast of the times.

It is said that Bro. Mahoney, of No. 44, forgot all about it being Friday when his eyes lit on the spring chicken at the St. Louis banquet.

C. D. HENNESSEY, of Lodge 337, is now running out of the city of Mexico, on the Mexican National. As a burro trainer he has no equal.

CONSPICUOUS among the active members of No. 51 are Bros. Carson, Gaffney and Reed, who never weary in working for the good of the Order.

WE are informed that Bro. Brady, of No. 314, will soon leave for Ireland, not for a shamrock, but for his Colleen Bawn. We felicitate you, Bro. Brady.

WE learn with pleasure that Bro. Davis, Past Master of No. 287 has drawn a valuable prize in the matrimonial lottery. May joy ever be with them.

A THOROUGH disciplinarian is Bro. Lordan, Master of No. 320. He believes in doing business upon business principles, and in this he is eminently correct.

ALEX. WILLIAMS, of No. 6, is unflinching in his devotion to the interests of the Brotherhood.

RUMOR has it that Bro. Gaffney, of No. 51, who fires the pay car on the Frisco, will soon locate permanently in St. Louis. Bro. G., you have our best wishes.

ENGINEER MIKE ELEY, of the Inter-Oceanic railway, is spoken of as one of the handiest men with an engine on his line. The boys all have a good word for Mike.

A. HICKERSON is doing good service for the boys at Newark, Ohio. Old "Hick." believes in securing proper State legislation, and is bending his energies in that direction.

ARTHUR BASSETT, of 85, holds forth at the old stand and is doing a good business. Brotherhood men holding the proper credentials will find in Arthur a sure friend.

At the meeting lately held by our Vice Grand Master under the auspices of Minnehaha Lodge, No. 61, some good work was done. No. 2 was well represented.

NELSON J. MILLER, of Granite State Lodge No. 306, is the happy father of a ten pound boy. Bro. Miller does the collecting on the White Mountain Division of the C. & M.

W. J. NEWELL, of Dominion Lodge, No. 61 has been united in marriage with one of York's daughters, and the members of his Lodge tender their hearty congratulations.

THE Master of No. 314, Bro. G. W. Sebastian is celebrated for his fine musical abilities. His improvised concerts, especially his flute solos, may be heard to be fully appreciated.

J. V. PIPER and J. F. Mullaney, two No. 61's most worthy members were recently married, and their fellow members unite in hearty felicitations upon the happy event.

J. B. BRENNAN, who handles the quill at Bartholdi Lodge, No. 309, is a hustler of the first order. He understands the process by which membership of a Lodge is increased.

THERE are few better men than Bro. Greenbaugh, as all will attest who know how steady by the "old folks" when misfortune overtakes them. Bro. G. is made of the right stuff.

JAMES W. GRACE, Esq., General Superintendent of Telegraph of the Mexican National, acquiring well earned fame in his line of usefulness. He is in all regards the master of his profession.

EUGENE MCAULIFF, one of 85's stalwart members, is doing yeoman service for the Order in the Northwest. We hear it rumored that Eugene is seriously considering the matrimonial problem.

GEO. D. CARLISLE has run an engine South America and also in Mexico, but has given the throttle for the present and is now in the rail contract business. G. D. is an ardent federationist.

HENRY A. FRENCH, formerly Collector of Empire Lodge, No. 212, is a member of the C. & M. Engineer's staff, surveying the new extension of Montana Central railroad.

MR. JAMES CONNORS, formerly on the Southern Pacific, is now running a passenger train on the Texas Pacific, from Texarkana west, and is recognized as one of the most popular conductors on the line.

WE have learned with profound regret the dangerous illness of the wife of Bro. W. S. Taylor, of Taylor, Texas, and trust that she may be fully recovered ere this issue of the *Magazine* goes to our readers.

ELMER E. BROWN, of 306, has exchanged the blocks (not the scoop) for the throttle of locomotive A. G. Dewey, on the Woodstock. All the boys are pleased to see Bro. Brown on the right-hand side.

WM. CARROLL, Master of No. 309, has been on the right side for the past three years. He is one of the most active and interested workers in the East.

THE boys at Toronto are evidently up and doing, as would appear by the rapid increase in their membership. They are also much interested in federation, and are devoting much earnest thought to that proposition.

WM. BUCKLEY, of No. 259, is exultant over the arrival of a young son, and already claims for the young hopeful the light weight championship of Wisconsin. Con. McAuliffe will doubtless respond to the challenge.

J. J. FOX, formerly of Fort Wayne, has become pretty well Mexicanized, and is thoroughly up with the times. His many friends will be glad to learn that he is getting along finely in the City of Mexico, where he is now located.

A CORRESPONDENT from Ft. Madison, Iowa, says: "You want to look out for us in the *Magazine* contest for 1890. If we did get the leather medal for 1889 we are not discouraged, as we have Bro. Babb for our agent, and he is a hustler."

At the beautiful city of Brockville, Ontario, Grand Master Sargent was the guest of Island City Lodge, No. 69, and was in the hands of Bro. Thos. Shields, Francis Flannigan and Arthur V. Dale, who contributed in every way possible to the pleasure of his visit.

J. C. POTTER, Receiver of 156, and Henry M. Jones, his engineer, (ex-Master of the same Lodge) recently ran into a washout and had a narrow escape from death. They manfully remained at their posts, displaying heroism worthy of the highest commendation.

THE members of Sunny South Lodge, No. 148, extend their thanks to A. J. Randall, Special Agent for the Fidelity Casualty Company, for an elegant gavel presented by him to the Lodge. The boys appreciate the gift highly, knowing that it is a tribute from one who is in thorough sympathy with the Order.

LEWIS L. GAY, of Lodge 188, Chicago, is a model Receiver, as evidenced by his returns to the Grand Lodge, which are always neat, accurate and businesslike. Bro. Gay has a valuable assistant in his wife, Mrs. Gay, who is an excellent accountant and sees to it that the books are balanced and everything in proper order.

PATRICK SWEENEY and John D. Hurley are two of the most popular engineers running into the city of Mexico. Both are widely known among railroad men as clever, whole-souled fellows, whom it is always a delight to meet and know. Members from the States who visit the City of Mexico may expect a cordial welcome when they meet Sweeney and Hurley.

VICE GRAND MASTER HANNAHAN, during his recent journey to the City of Mexico, had the pleasure of meeting Conductors Taggart, Wells, Gorman and Wallace, who treated him with exceptional courtesy and consideration. These gentlemen are animated by the true spirit of fraternal regard for their fellows and enjoy the respect and esteem of all who know them.

A NOTE from Bro. J. Nicholson, Secretary of the Joint Board of Adjustment of the Grand Trunk Railway, in Canada, informs the *Magazine* that at their last meeting, held in Montreal, April 8 and 9, a vote of thanks was tendered Bro. S. Vaughan for the valuable services he had rendered the Board during his term of office as Secretary. The Board also expressed profound sympathy for Bro. Vaughan and his family in their late bereavement.

WE learn with pleasure of the marriage of our esteemed friend and brother, George Kingsley, Collector and Receiver of Rochester Lodge, No. 99, to Miss Abbie Martin, of Rochester. After the nuptials the young couple went to New York and other eastern points, where they spent their honeymoon. Bro. Kingsley, whom all delight to honor, has the heartfelt felicitations of the brotherhood, which he has served so faithfully and well.

WHILE in Brockville, Ontario, Grand Master Sargent, in addition to the numerous civilities shown him by members of the Brotherhood, had the good fortune to make the acquaintance of Hon. Daniel Derbyshire, Mayor of the city, and found him a man of great affability and a gentleman of the old school, who extends courtesies to strangers in a way that makes them feel at home. In company with His honor, the Grand Master was permitted to see all the beauties of Brockville, and become acquainted with a gentleman, who in Canada and the States discusses dairy interests in a way that makes him in demand wherever such interests are important. Mayor Derbyshire is immensely popular not only with the masculines but with the ladies as well, as is evidenced by the fact that his election is virtually by acclamation. The Grand Master highly appreciated the Mayor's attentions, and his visit to Brockville will not soon be forgotten.

BISMARCK at 75 is going to write for the papers. Possibly he may tackle the labor question.

THE second annual ball given by the members of Nauvoo Lodge, No. 391, was a most gratifying success, and the boys feel highly elated over it. Nauvoo has got hold of the branch, and the indications are that she will soon have the whole tree.

WE invite special attention to the advertisement of J. S. TOWNSEND, 1554 Wabash Avenue, Chicago, which is on the 3d page of the cover of the *Magazine* and fully explains the object. Mr. Townsend has in view, which is to afford railroad men a chance to secure a Howard watch. The advertisement is not misleading as Mr. Townsend will comply with his engagements, and those who write, responding to the advertisement, will receive fair play.

Union Meeting.

ON Sunday, April 27, a large and enthusiastic union meeting was held in Terre Haute, under the auspices of Vigo Lodge, No. 16. Delegations were in attendance from Lodges Nos. 14, 63, 160, 111, 188, 405 and 282. Frank Dupell, Master of No. 16, presided, and the meeting was largely promotive of harmonious action on all matters pertaining to the welfare of the B. of L. F. Federation was intelligently discussed by a number of those present, and the brethren had a good time generally.

In the evening an enthusiastic union meeting was held, attended by representatives from the Orders of Engineers, Trainmen, Switchmen, Conductors and Firemen, and many others who are in sympathy with the labor movements which distinguish the period. J. F. O'Reilly, secretary of No. 16, presided, and in calling the meeting to order delivered a telling address, in which he clearly and convincingly outlined the many and great benefits to be derived from federation. His remarks were well received and his arguments pronounced conclusive.

Frank Dupell, Master of No. 16, was very happy in his illustrations of the many advantages that would accrue to men connected with the train service of railroads by federation. Les. Helmer, of Division No. 92, O. R. C., addressed the meeting, expressing the hope that the time was near at hand when all the Brotherhoods would stand shoulder to shoulder on this same high plane of mutual protection, knowing their rights and daring to maintain them against all opposition. J. Redman, representing Division No. 25, B. of L. E., addressed the meeting, and his remarks were accorded the most respectful attention. Short talks were made by others present, and, taken altogether, the meeting was a pronounced success and exerted a happy influence in the ranks of railroad employes.

The Magazine.

On the 1st of July the first half of the current volume of the *Magazine* will be completed. The second half begins with the July number and expires with the December number, 1890.

Those subscribing by the 1st of July obtain the *Magazine* six months for 50 cents, and agents should bear in mind the TWO SPLENDID PRIZES announced for 1890—one new piano and one gold watch. These prizes ought to be incentives to our agents to work with a will.

But there are other considerations, which we hope will inspire not only our regular agents, but the membership generally to increase the subscriptions to the *Magazine* for the half year ending December 31, 1890.

We have no hesitancy in saying that the *Magazine* is worthy of every effort that can be put forth by the membership to increase its subscription list.

We simply state the estimate of those whose opinions are entitled to consideration when we say that the *Locomotive Firemen's Magazine* stands at the head of the list of its class of publications in the country; and this being true, members of our Order are not required to make apologies when soliciting subscriptions. On the contrary, for the sum of 50 cents for six months' subscription, they are doing the subscriber a greater favor than they otherwise could confer for that small amount of money.

In our desire to extend the subscription list of the *Magazine*, we unhesitatingly appeal to the Brotherhood pride of the membership. We do not hesitate to say that if the membership would put forth commendable energy, ten thousand new subscribers could be obtained to begin with our July number. The one thing required is to take hold of the work with a will, with a determination to win.

Why should this be done? Are there cogent reasons for such appeals to the Brotherhood as make them prudent and timely?

Is it not true that the *Magazine*, in its editorial department, discusses questions relating to labor, to economical questions, to organization and federation, strictly in consonance with the welfare of railroad employes? The pages of the *Magazine* answer to the interrogatories.

In its Mechanical Department the *Magazine* discusses problems of special value to men whose chosen calling is to run locomotives, and the discussions are chiefly by men who are in the harness, and this fact gives special importance to the Department. As a general proposition, the writers so simplify their arguments and illustrations as to render their contributions specially valuable to men who are inexperienced, and are ambitious to win promotion; and hence, to such men the *Magazine*, in the hands of ambitious firemen, is worth many times the price of subscription.

The Woman's Department, in every line and sentence, has sought from the first to afford the wives, mothers and sisters of firemen, and women of culture generally, an opportunity to speak for women—their rights and their wrongs, their hopes and aspirations, and to make the *Magazine* a welcome visitor in every home. And thus we might proceed with every department of the *Magazine*, to demonstrate why our membership could well afford to intensify their zeal in seeking to extend its circulation, for the *Magazine*, once in the hands of an intelligent reader, is almost certain, like Tennyson's brook, to go on forever.

Let it be understood that subscribers beginning with the July number for 50 cents, in estimating lists to secure the prizes, two subscribers count as one, because twice 50 cents is \$1.00.

With this explanation, we appeal to agents and to our members to swell the subscription list of the *Magazine* to such an extent as to make 1890 memorable in its history, and that such a report shall be made at San Francisco as shall thrill every Brotherhood man's heart with pride.

Brothers, now is the time to do efficient work, and we hope you will respond, as when on other and all occasions, good work is to be done.

TEXAS has thousands of acres of good land for sale at from \$2.00 to \$5.00 an acre.

REFERRING to the visit of Vice Grand Master Hannahan to St. Louis on the occasion of the organization of Lodge No. 414, a St. Louis paper contained the following: "John J. Hannahan, Grand Instructor of the Brotherhood of Locomotive Firemen, arrived in the city Friday morning. He was met by a committee representing the Locomotive Firemen employed on the Frisco Railroad, and was escorted to the Masonic Hall, corner of Chouteau avenue and Manchester road, where there were in waiting representative Brotherhood men from Sedalia, Springfield (Mo.), Moberly, East St. Louis and St. Louis. A Lodge of the Brotherhood, representing men who are employed on the Frisco entering this city, was then instituted and named Adamant Lodge, No. 41. Last evening the visitors were entertained at the home of Mrs. L. Wilson, Chouteau avenue and Manchester road, and by the members of the new Lodge. An elegant repast was served, and music and singing indulged in until a late hour, when the guests of the occasion were escorted to their hotel by the home members."

The occasion was in all regards a most enjoyable one, and will long be remembered by those in attendance.

RICHARD JONES, a worthy member of Industrial Lodge, No. 21, met with an untimely death while the discharge of his duties as locomotive engineer as detailed in the following account from the *St. Louis Republic*:

"A terrible wreck occurred on the St. Louis, Kansas City & Colorado Railroad yesterday morning, 10 o'clock, about one mile and a half east of Clay in St. Louis County. The construction train, which also carries freight between St. Louis and Union station, was backing down towards Forest Junction on the Wabash road with three cars loaded with rock and two cars loaded with gravel. The train reached a wooden culvert about the centre of the curve, when the rails spread, and the locomotive and the cars loaded with rock left the track. The engineer, Richard Jones, and the fireman, A. G. field, jumped from the engine as soon as they saw the danger, but were unable to get out of the way of the engine before it fell. Jones was caught up by the hips by the driving wheels and must have been struck in some vital part of the body, as he was instantly killed. The poor fellow was pinned and mashed into the soil, where he lay from 7:30 A. M. to the time of the accident, till 1:30 P. M., when his cold and lifeless body was taken from under the driving wheel."

Fireman Garfield was more fortunate and although seriously injured, it is believed will entirely recover.

GATE CITY LODGE, No. 93, B. of L. F., was recently the recipient of a panel, on which was most beautifully carved the name and number of the Lodge, regalia, two shields, and two picks and shovels, also acorns and boughs of trees in miniature. The Lodge is indebted to Mr. Charles Padgett for this beautiful token of his regard and owe him many thanks. The donor and artist is the father of Jesse Padgett, who, a few months since became a member of Gate City Lodge, and during the C. & Q. strike sympathized with the boys and was ready at all times, with tongue and pen, to do the favor. Such staunch friends of the Brotherhood are always held in grateful remembrance.

THE *Boston Herald* of February 26th gives a lengthy account of the wreck on the Providence Division of the Old Colony Railroad, near Boston, February 23. The engine was in charge of Bro. A. W. Spurr, Collector of Boston Lodge, No. 57, and fortunately, are glad to say, escaped without serious injury. It is again all right, the same being true of Mr. Geo. F. Bones, the fireman.

WM. H. LEWIS, M. M., and Wm. Osborn, dispatched of the D. L. & W. at Hoboken, N. J., enjoy the confidence of their employes, from the fact, as it appears by our correspondence, that they treat the men justly and fairly, and evince a proper interest in their welfare. Such men are pre-eminently "the right men in the right place."

Union Meeting at Tulare, Cal.

We find in the weekly *Register* of Tulare, Cal., a full account of a public Union meeting in that place on May 2d. The Brotherhoods represented were the B. of L. E., B. of L. F., B. of R. T. and B. of R. C.

G. B. Mitchell, of the B. of R. T., called the meeting to order, and F. M. Shultz was chosen Chairman. Rev. W. D. Williams offered prayer, and a number of addresses were delivered. Among the speakers were Judge Wm. W. Cross, of Visalia; E. T. Cosper, of Tulare, who welcomed the delegates to the city; W. H. Alford, City Recorder; Frank P. Taylor and M. E. Power, of Visalia. All the speakers expressed great sympathy for workmen, and encouraged federation. The B. of L. E. was represented by six delegates, the B. of L. F. by ten, the B. of R. T. by five, and the B. of R. C. by four delegates. Federation on the Pacific coast is booming, and the outlook is cheering.

The new Continental Hotel at Buffalo, N. Y., at the corner of Michigan and Exchange streets, is now kept by Mr. Donovan, late an engineer on the Nickel Plate, and an old-time member of the B. of L. E. When in the railway service Mr. Donovan was always the friend of our Order and its members, and now that he has gone into business they should stand by him, as we know they will, and see to it that his hotel is well patronized.

Meetings in the East, Including Buffalo, Corning and Elmira.

In writing of a flying visit to various points in the State of New York, to meet and greet and commune with members of the great Brotherhoods of railroad employes, we realize at the outset that the space at our command will not suffice to do the subject justice, and that we shall be able to do little more than make allusions to incidents which merit elaboration. Leaving Terre Haute April 3d, in company with Grand Master Sargent, we arrived at Buffalo on the evening of the 4th and held a meeting under the auspices of Lake Erie Lodge, No. 241. The meeting presided over by the Master of the Lodge, Bro. P. E. Barry, and was largely attended by the members of the three Lodges of the Order in Buffalo and many members of surrounding Lodges were present. Grand Master Sargent addressed the meeting and a general discussion followed which was interesting and important, adjournment being postponed to a late hour.

We left Buffalo April 5th for the city of

CORNING

and during the afternoon of the 5th, through the courtesy of John McGee, Esq., son of President of the Fall Brook Coal Company, Grand Master Sargent and party was tendered the President's private car for a ride to Watkin's Glen, a beautiful summer resort, which was accepted. The Grand Master was accompanied by Bro. Roody, of Elmira, and Bros. Barry and Crossman, of 241. The engineer who throttled the steed was Mr. L. B. Manning and the man who fed it on combustibles, was Mr. J. A. Knie. The visit was one of unalloyed pleasure and the party appreciated the favor extended by Mr. McGee. In the evening of April 5th, a public meeting was held under the auspices of Fellowship Lodge, No. 12, W. E. Preston, Master of Weaver Lodge, Sayre; J. F. Roody, Fellowship Lodge, 121, Corning; J. C. Tuxell, Lodge 120, Syracuse; William Foote, Lodge 354, Hoboken; Joseph Martin, Lodge 120, Syracuse; John Martin, Scranton. Others present were M. J. Becker, D. Hillery, P. J. Murphy and William Hughes, of the Buffalo Car Inspector's association. The meeting was called to order and presided over by Bro. William H. Schroeder, an engineer on the Delaware, Lackawanna & Western R. R., a gentleman eminently qualified for the position, as demonstrated during the evening. The Chairman introduced Rev. M. F. DeWitt, who offered prayer, and then the great federation meeting was then fairly under way. The Mayor being unavoidably absent, the Chairman introduced as his honor's representative, Hon. John B. Stanchfield, who, in the course of his eloquent address, said:

The purport and import of this meeting, ladies and gentlemen, is to perfect a federation of labor. It means that men bent upon one course, in pursuit of one common object, have come together to bind themselves into a federation of labor. Is there within the confines of this hall a man who doubts the advisability of it? Are not two stronger than one? Are not ten stronger than two? Is not the Brotherhood of Locomotive Firemen, within the State of New York, stronger than ten? than a hundred? Would not the firemen of the United States be stronger than those of the State of New York? Suppose you carry it further and you add to it the Brotherhood of Locomotive Engineers, switchmen and brakemen. United we stand, divided we

close of the meeting Grand Master Sargent was presented with a glass cane, highly ornamented and a real thing of beauty, as also with a glass stocking-ball for his beautiful little daughter, Mabel. The presentation was made by Bro. Roody in a little speech which for pretty allusions, is rarely excelled, and in responding Bro. Sargent was equal to the occasion. Bro. Debs was made the recipient of a handsome cut glass ink stand handsomely engraved, really an exquisite work of art. The presentation was made by Bro. Krebs, whose rhetoric captivated the audience and left the recipient of the favor conspicuously used up.

An enjoyable visit to the glass works was made more pleasant by the courtesies of Mr. Arthur Houghton, of the blowing department, and Mr. John Hoar, of the cutting department, which were highly appreciated.

The members of 121 are abreast of the times in all regards, and are on the alert to promote every interest of the Brotherhood.

On the night of April 5th, we left Corning for

ELMIRA.

a handsome city of 40,000 inhabitants and the objective point of our eastern jaunt. During the afternoon of Sunday, April 6th, a closed Brotherhood meeting of Firemen was held in the Opera House, at which Grand Master Sargent presided. The attendance was large and addresses were made by Grand Master Sargent and a number of other brothers.

In the evening a public meeting was held in the Opera House, which was packed from parquetry to gallery. Of this meeting the Elmira papers gave full accounts, and without an exception were warm in their commendations. Special trains from Buffalo, filled with delegates and members of the various railway Orders, was a cheering feature of the occasion. Delegates were also present from Sayre, Corning, Syracuse, Hoboken, Scranton and other localities.

The Organizations represented at the meeting "were," says the Elmira *Telegram*, "the Brotherhood of Locomotive Firemen, the Brotherhood of Railroad Conductors, the Brotherhood of Railway Trainmen and the Switchmen's Brotherhood. Among prominent representatives of the several associations were Frank P. Sargent, Grand Master of the Firemen's Brotherhood, and E. V. Debs, Grand Treasurer of that organization; Grand Master E. W. Wilkinson, of the Brotherhood of Railway Trainmen and Vice-Grand Master P. H. Morrissey; George W. Howard, Grand Master of the Brotherhood of Railroad Conductors, and the following Masters of Lodges of Railway Firemen: J. J. Knauf, Master of Buffalo Lodge 12; W. E. Preston, Master of Weaver Lodge, Sayre; J. F. Roody, Fellowship Lodge 121, Corning; J. C. Tuxell, Lodge 120, Syracuse; William Foote, Lodge 354, Hoboken; Joseph Martin, Lodge 120, Syracuse; John Martin, Scranton. Others present were M. J. Becker, D. Hillery, P. J. Murphy and William Hughes, of the Buffalo Car Inspector's association."

The meeting was called to order and presided over by Bro. William H. Schroeder, an engineer on the Delaware, Lackawanna & Western R. R., a gentleman eminently qualified for the position, as demonstrated during the evening. The Chairman introduced Rev. M. F. DeWitt, who offered prayer, and then the great federation meeting was then fairly under way. The Mayor being unavoidably absent, the Chairman introduced as his honor's representative, Hon. John B. Stanchfield, who, in the course of his eloquent address, said:

The purport and import of this meeting, ladies and gentlemen, is to perfect a federation of labor. It means that men bent upon one course, in pursuit of one common object, have come together to bind themselves into a federation of labor. Is there within the confines of this hall a man who doubts the advisability of it? Are not two stronger than one? Are not ten stronger than two? Is not the Brotherhood of Locomotive Firemen, within the State of New York, stronger than ten? than a hundred? Would not the firemen of the United States be stronger than those of the State of New York? Suppose you carry it further and you add to it the Brotherhood of Locomotive Engineers, switchmen and brakemen. United we stand, divided we

fall, is as true to-day as when these words were uttered in long years gone by. I came here to-night not to discuss its merits, but for the purpose of representing the city of Elmira; fair and generous, she bids you welcome. The Queen city of the southern tier, she gathers within her environments many workmen of all kinds and classes. They are her most respected citizens. Elmira, the city of fair women and brave men, bids you all a sincere and hearty welcome.

The remarks of Mr. Stanchfield elicited great applause, and put the meeting in the happiest frame of mind possible. Following the welcoming address the Chairman introduced

GRAND MASTER F. P. SARGENT, OF THE BROTHERHOOD OF LOCOMOTIVE FIREMEN.

Mr. Sargent's remarks were substantially as follows:

Twenty-six years ago the Brotherhood of Locomotive Engineers organized, binding themselves together for mutual advancement, building themselves up from a moral standpoint, protecting themselves and benefitting their families. The Brotherhood of Locomotive Firemen came into existence shortly after, making themselves honored and respected citizens of the country. The Brotherhood of Railroad Trainmen and Switchmen also sprung up, and they are doing their work in the same direction as those I have named. And yet during the many years of their existence there always seemed to be a separation between them. The Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen, while they work together to a large extent, there is not that pleasant relationship existing which ought to exist among men who occupy such positions as they do. The Brotherhood of Railway Trainmen and Brotherhood of Railway Switchmen, while they have been engaged in the same good work, they have not been that close together, they have not had that interest in each other that has been manifest for the past year. To-day, in the city of Elmira, we come together—engineers, firemen, brakemen, switchmen, conductors, everyone in the railway service—to see if we cannot become better acquainted with each other, if we cannot have a better understanding with each other, to see if we cannot come down on the same level together and work hand in hand and help each other in life's struggle. [Applause.] The Brotherhood of Locomotive Firemen, the Brotherhood of Railway Trainmen, the Switchmen's Mutual Aid Association and the Brotherhood of Railway Conductors are working under the banner of federation. [Applause.] There are a great many men who do not understand what this new movement is on the part of these several organizations. Organizations like ours are always looked upon by the public with suspicion. When a body of men gather as we gather, men are always suspicious of our action. They wonder what we gather together for. If there is any movement inaugurated which brings men together, it looks like the combining of forces to the detriment of the community, and they endeavor to stop the movement. Now, my friends, to-day the movement of federation among the railway organizations will not be detrimental to the interests of the public. It is in the interest of every workman, no matter what his occupation may be. We came here to-night to get you more interested in this work of federation; to get you to establish yourself under better protection. We trust that you may all see the good work that our Brotherhood accomplishes, and offer us your hand in making the purpose of this meeting a success.

Following Mr. Sargent, the Chairman introduced

MR. S. E. WILKINSON, GRAND MASTER OF THE BROTHERHOOD OF RAILWAY TRAINMEN,

who for a brief time discussed federation and made many telling points in its favor. He grasped the subject and handled it with masterly ability. He was both argumentative and eloquent. His appeal to railroad men to stand together for the protection of each and all was convincing and met with enthusiastic approval. Bro. Wilkinson is a full team on the platform. He knows what to say and how to say it. Thoroughly posted, earnest and honest, he is most emphatically the right man in the right place, and is accomplishing great good for the cause

of federation. At the conclusion of Bro. Wilkinson's remarks

GRAND CHIEF G. W. HOWARD, OF THE BROTHERHOOD OF RAILWAY CONDUCTORS

was introduced to the meeting, and his remarks were listened to with undivided attention. Mr. Howard gave the meeting to understand that he represented the seceding conductors from the Order of Railway Conductors. He said "even railroad corporations had no respect for a man who had no respect for himself." He said "the old Order was non-protective and had arrayed itself with the railway corporations against the employes. He noticed, however, that when conductors had to go the old Ordermen were the first to get fired. He had been everything from a wheel barrow hand to a Division Superintendent, and he believed that the success of the employe meant success for the entire road, officials and all." To use a phrase, Mr. Howard hit the "bull's eye" at every shot, and when he took his seat the impression had been made that the Order of B. of R. C. had a Grand Chief who possessed the ability to lead it to victory. At the conclusion of Mr. Howard's address

P. H. MORRISSEY, VICE-GRAND MASTER OF THE B. OF R. T.

took the platform. He spoke briefly, but eloquently, of the object of the meeting. As a friend of railway employes, knowing the ceaseless perils of their employment, he would have them in a condition and in a position to secure and maintain their rights and were confident that their highest interests were secured and protected by federation. Mr. Morrissey's remarks evinced his capacity to defend federation by whoever assailed, and maintain the good name of the great Brotherhood he represents. The retirement of Mr. Morrissey afforded the Chairman an opportunity to introduce to the audience

PATRICK FENNELLS

Alias "Shandy Maguire," the poet; par excellence of the rail, the locomotive and the cab. To say only that would be doing Mr. Fennell great injustice, for his muse has a wider range than the railroad system. His address was a triumph. It convulsed the audience with merriment, and won for the speaker storms of applause. No happier effort for such an occasion could have been made, and at its conclusion it was the general sentiment that Mr. Fennell's absence would have been in the line of a calamity.

Judge S. S. Taylor was introduced, and felicitously told how singularly he escaped being a railroadier.

As a matter of fact the writer hereof appeared on the platform as a speaker, and metaphorically, like the "King of the French, marched up the hill and then marched down again." What he said was very much in the line of what we write, and for the occasion was the "best there was in the shop. With a few appropriate closing remarks by Brother Sargent the Elmira meeting, in many regards one of the best we ever attended, closed. That the effect produced was eminently beneficial we do not doubt, indeed, the evidence was overwhelming and convincing.

On Monday evening, April 7th, the

FOURTH ANNUAL BALL

of Liberty Lodge, No. 242, was given, and so great was the demand for tickets, about one thousand having been sold, that two halls were required to accommodate the guests, numbering about sixteen hundred. A local paper said: "In Bundy Hall the music was furnished by Cassada's orchestra. Chas. Dickinson and Frankie Lovell led the grand march. In the Masonic Temple Reiner's orchestra furnished the music. The hall was nicely decorated. The 'time tables,' otherwise the programs for the dance, were elegant, consisting of a plush and satin harp, with programs in the back. The supply of these programs gave out as early as 11 o'clock, and plainer ones had to be used. At the end of eleventh dance, a quadrille jig, supper was served at the Rathbun house." It is needless to say that the balls were all that could have been hoped for, and far outstripped estimates. The great assemblage of fair women and gallant men, the music, the beautiful toilets, the brilliant lights and decorations, made the occasion one to be remembered with exquisite pleasure.

Our Western Trip.

Notwithstanding the demands upon our time, we were so fortunate, as to be able to accompany Grand Master Sargent in a flying visit to Missouri during the month of March.

We arrived at Sedalia on March 17, some hours later than was expected, and from the depot were escorted at once to Smith's Hall where a public meeting was held. The attendance was all that could have been expected under the circumstances, and still it was a disappointment to the members of Golden Eagle Lodge, No. 78, under whose auspices the meeting was held. But the ardor of the boys was not dampened and the meeting was in all regards a pronounced success.

Arriving at Sedalia at 3:25 P. M. it was about 4 P. M. where

J. H. LEACH,

the founder of the Order, B. of L. F. and its first Grand Master, called the meeting to order and introduced

HON. MAYOR CRAWFORD,

of Sedalia, who in true western style, broad gauged and generous, welcomed the Grand Officers to "the City of the Prairies." The Mayor said many just and complimentary things of firemen and of the Brother which were appreciated by all. At the conclusion of the Mayor's felicitous address the Chairman, "Dad" Leach, as he is familiarly called, introduced

JUDGE W. S. SHIRK,

who referred to Sedalia as a railroad city, largely supported by railroad men, and that its people had a "warm welcome for laboringmen, and especially the railroad man." The Judge was highly appreciative of the position and service of the locomotive firemen, and among other things said:

"My friends, we always hear more of the engineer than we do of the fireman. We are always reading of the heroism of the former, but very few of us hear of the fireman's heroism or peruse poetry dedicated to him. How few of us think that the fireman stands in the same cab with the engineer, and yet he gets none of the credit, notwithstanding he deserves just as much praise as the man who stands on the other side of the cab."

"Another thing we know is that you are only one step behind the engineer. To-day we may be riding behind Mose Avery or Tom Wood, and a little later we will be riding behind you. While you are not in control of the engine, you are in as much danger as the engineer. The fireman deserves as much praise for bravery and nerve as any engineer that ever went down to death while performing his duty. It is right and proper for you to organize for self-protection. One can do little by himself, but with organization, if his cause be just, he will win. I do not hesitate to say that there is not a boy in your ranks to-day who does not feel better because he belongs to the Order. I, for one, have no objection to organized labor as long as it is well directed."

At the close of Judge Shirk's address, the chairman introduced Grand Master

F. P. SARGENT,

who spoke earnestly and appropriately of the Brotherhood, of its aims and of what it had accomplished. He eloquently referred to firemen as a class of wage workers, and said:

"Look at the men who follow the calling of locomotive firemen! Gather together representatives from all classes of labor and compare them with the firemen. You will find in the countenances and of the latter just as much manliness, ability and love of duty in our ranks as in any other you may mention. No matter on which side of the cab, you will find men capable of grasping any question that may arise. Intelligence is the watchword now."

Mr. Sargent paid a high compliment to women by saying:

"We owe the women a debt we can never repay. There is not a lodge room in the country that does not bear evidence of their handiwork, and many a lodge would to-day be out of existence were it not for the ladies. Without them our organization would amount to very little. When I hear a man speak not very encouragingly of the

ladies and say he don't want them meddling, I feel that that man does not realize the worth of the wife, the mother and the sister. One of the chief features of our Order is to care for them, and I, for one, wish there was more of them."

Mr. Sargent having concluded his remarks, "Dad" Leach introduced to the meeting Grand Secretary and Treasurer

E. V. DEBS,

who, as a matter of course, sought to do his best on the occasion, but how well or otherwise, need not be stated here and now. Following our brief remarks, the chairman introduced

HON. L. L. BRIDGES,

who felicitously introduced "Jim Bledsoe" and informed the firemen that if they were as true to duty as was "Jim," he thought the "All Wise" would not deal harshly with them.

With the address and recitation of Mr. Bridges the public meeting closed.

In the evening a grand ball of Golden Eagle Lodge was given at Sicker's Park Hotel, and a magnificent affair it was. At 12 o'clock, midnight, a sumptuous supper was served by Sicker & Conrad, which it was said was never excelled in Sedalia.

On the morning of the 18th the Grand Officers met Golden Eagle Lodge, No. 78, and held a highly enjoyable meeting.

A pleasant feature of the visit to Sedalia was the meeting with Brother J. A. Leach, who organized Deer Park Lodge, No. 1, in 1873, and who has lived to see the Brotherhood grow to continental proportions.

The visit to Sedalia and the meeting with Golden Eagle Lodge, and the pleasure experienced generally will be fruitful of many pleasant reminiscences.

From Sedalia, we journeyed to

ST. JOSEPH, MO.,

where we arrived March 19, A. M. In charge of the boys of St. Joseph Lodge, No. 43, we were permitted to see the beautiful city of St. Joe, one of the most interesting on the Missouri river.

During the forenoon of the 20th, St. Jo Lodge held a meeting at which we were present, and which was in many regards highly interesting. We doubt if any Lodge of the Order has been more seriously tried than St. Jo Lodge, No. 43. The strike on the "Q" tested its fidelity to the uttermost, but it held fast to its charter and to its integrity and in that regard won a signal victory.

In the afternoon a Union meeting of several of the Brotherhoods was held under the auspices of the B. of R. T. At this meeting several stirring addresses were delivered, and Grand Master Sargent, was, as ever, equal to the occasion, and made a fine impression. The necessity for and the value of federation was boldly stated and cogently demonstrated.

In the evening we attended an entertainment and reception at Kirchner's Hall, under the auspices of St. St. Joseph Lodge, No. 43 which was the embodiment of elegance and refinement. The music and recitations were superb, and the supper which followed was faultless, largely owing to the oversight of Brother W. E. Sullivan, Chairman of the entertainment committee, and his charming wife. Nothing was omitted that could afford gratification, and the visit to St. Jo was a ceaseless round of satisfactions.

This concluded our western trip, and we returned to work with the conviction that it is good to go a visiting, now and then.

The Grand Master's Tour in Canada.

Early in the month of March Grand Master F. P. Sargent left Terre Haute for a somewhat extended tour to the Lodges of the Brotherhood in the Queen's Dominions, north of the great lakes, which was from first to last enjoyable.

On March 4th the Grand Master reached

PORT EDWARDS,

and was the guest of Huron Lodge, No. 221. During the afternoon a Union meeting was held, which was largely attended by Engineers, Firemen, Conductors, Brakemen and Switchmen, and a number of addresses were made by representatives of the

various Orders. In the evening, a secret meeting of Firemen was held, and it was found that Brotherhood affairs were in a healthy and prosperous condition. At midnight a banquet was given, with "snapping turtle" on toast, calculated to give a biting appetite. While at Port Edwards the Grand Master was the guest of Brother J. W. Gray, whose many courtesies were highly appreciated. On Wednesday, March 5th, the Grand Master was in

LONDON, ONTARIO,

and during the afternoon held a secret meeting with Beaver Lodge, No. 117, and found the Lodge in excellent condition—every interest receiving prompt and intelligent consideration. In the evening, at 8 o'clock, a Union meeting was held, largely attended by Engineers, Firemen, Conductors, Brakemen and Switchmen, and the speaking was spirited, the speakers handling the subjects with such ability as to produce highly beneficial results. In London the Grand Master was the recipient of many acts of fraternal regard, which he is pleased to acknowledge. On Thursday, March 6th, the Grand Master arrived at

STRATFORD, ONTARIO,

and at 8 o'clock P. M. a Union meeting was held and questions of importance to railroad men discussed, following which a secret meeting of Avon Lodge, No. 38, was held. At 1 o'clock A. M. of the 7th, a banquet was provided by Good Endeavor Lodge, No. 1, Ladies' Society, B. of L. F., followed by music and dancing until 4 A. M. The entertainment provided by the ladies was elegant, and evinced a devotion to the interests of the B. of L. F. worthy of the highest praise. The boys of Avon Lodge are among the very best that march under the Brotherhood banner, and the Order has a right to be proud of them.

On Friday, March 7th, Mr. Sargent arrived at Palmerston. No meetings were held owing to the fact that the members of Wellington Lodge, No. 181, were at work, and owing to the rush of business could not find time to hold a meeting, but a number of the members were met as they came in from their runs. The Order at Palmerston is in good condition, and while in the town Mr. Sargent took tea with Bro. James Nicholson, an engineer and one of the old-time members of the Brotherhood.

On Saturday, May 8th, the Grand Master reached Hamilton, the seat of Maple Leaf Lodge, No. 151. Here, as in Palmerston, the boys were too busy to hold meetings, but Mr. Sargent went to the Lodge-room, where the brothers called to see him as they came in off the roads. During his leisure, the Grand Master enjoyed a ride about the town, and was made familiar with its many attractions. He found Maple Leaf Lodge in excellent condition, and the membership wide awake and working for the good of the Brotherhood.

On Sunday, March 9th, the Grand Master arrived at

TORONTO,

and under the auspices of Queen City Lodge, No. 262, located at Toronto Junction, secret meetings were held in the afternoon and evening. The attendance at both meetings were large and the proceedings interesting and profitable.

Throughout Canada the condition of the Lodges of the B. of L. F. could scarcely be improved, and a nobler set of men are not found in the ranks of any Brotherhood. Firm in their fidelity, wise in council, considerate and progressive, nothing daunts their courage or swerves them from the path of duty.

In this brief summary of the Grand Master's tour in Canada, mention of the meetings at Brockville and Belleville are omitted, because full accounts of the meetings at these places appeared in the May *Magazine*, pages 446 and 448. The tour was one of great satisfaction to the Grand Master, as will be this brief report to the great body of the Brotherhood.

E. W. JACKSON, Esq., General Manager of the Mexican Central, is a most courteous and obliging gentleman and commands the undivided respect of the men in his employ. Mr. Jackson is a thorough railroad man, and in all regards well fitted for the high and responsible position he occupies.

Amusements.

At Ashland, Wis., some time since the members of the B. of L. E. and B. of L. F., gave a grand Unional which, from the accounts given in the local press must have been an exceedingly agreeable occasion. Says a local paper:

"The scene from the entrance was captivating. Streamers of the stars and stripes festooned the ceiling. Three electric lights illumined the hall. The center light cast a soft, mellow red light to neutralize the brilliancy of the other two arc lights. The chandeliers were all decorated with evergreens as the railroad lanterns, which speak the language of railroad life, hung beneath. Each four corners of the spacious hall had the switch lights gleaming from the shadows. Surmounting all this were four huge headlights, standing out like mammoth eyes kindly beaming upon the happy festivities. On each side of the hall were the mottoes of the Brotherhood, "Sobriety and Industry" were the watch words. Over the stage was that magic word, "Welcome." The music furnished by the Third Regiment band of Wausau was superb. It is evident that it composed of musicians. Their selections were new and given with good expression. The lead was rather light for the timbre of the orchestra, but the general effect is not equalled by any orchestra outside of Milwaukee or Chicago."

The same paper says, "The supper was simply grand. It was served at the Wisconsin Central dining room, where five hundred guests were served. It affords the *Magazine* special pleasure to chronicle such exhibitions of good will and fraternal sympathy on the part of the two great Brotherhoods."

Acknowledgments.

BRAINERD, MINN., April 2, 1890.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—With heartfelt gratitude I desire through the columns of the *Magazine* to express sincere thanks to the Brotherhood of Locomotive Firemen of Pine City Lodge, No. 81, for the receipt of a draft for fifteen hundred dollars (\$1,500.00) amount of insurance, due me on the death of my beloved husband, Arthur W. Price, and I also wish to express my appreciation of kindness and attention shown him after death. Words are inadequate to express the gratitude I feel toward your Order. May the blessings of heaven rest upon you, one and all, is the sincere wish of his widow.

Very gratefully yours,

MRS. A. W. PRICE.

CLINTON, IOWA, April 17, 1890.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I received this day through Thos. E. Bulen, Receiver for Clinton Lodge, No. 34, a draft for fifteen hundred dollars, the full amount due me on the policy held by my beloved husband, Richard J. Murray. Please accept my sincere thanks. With best wishes for the welfare of your Order.

I remain very respectfully,

MARY E. MURRAY.

MARSHALLTOWN, IOWA, May 6, 1890.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I wish to extend my sincere thanks to Arbitration Lodge, No. 330, and to the Brotherhood in general for the prompt payment of five hundred dollars, the amount due me on the policy held by my dear brother Patrick H. Kelley, who suddenly met his death while in the faithful discharge of his duty January 25, 1890. We wish thank St. Joseph Lodge, No. 43, for their brotherly care and kindness, and in accompanying his remains to Marshalltown, Iowa; and also to Guide Lodge No. 125, who so kindly assisted in bearing his remains to their final resting place. With best wishes for the success of your noble Order, and express to Mr. R. A. Hetherington, of Lodge No. 320, my wish to return our sincere thanks for his kindness to us in our deep sorrow and affliction.

May the blessing of heaven rest upon you, and all, is the fervent prayer of

Yours truly,

BESSIE KELLEY.

GRAND LODGE.

These columns are reserved as the official department of the Grand Lodge.

All Official Documents, including notices of dues and assessments and other notices, reports and statements will be published in this department.

Officers and Members of Subordinate Lodges are requested to note carefully each month the contents of this department.

JUNE, 1890.

Assessment Notice for June.

OFFICE OF GRAND LODGE, B. OF L. F.
TERRE HAUTE, IND., June 1, 1890. }

ASSESSMENT No. 12, \$2.00.

To Receivers of Subordinate Lodges:

DEAR SIRS AND BROTHERS:—You are hereby notified of the death and disability of the following members entitled to all the benefits of the Order, viz:

CLAIM No. 242. Matthew Wilson, of Calumet Lodge, No. 249, died from injuries received in a Collision, November 24, 1889.

CLAIM No. 243. W. H. Dickerson, of Mission Lodge, No. 281, died of Chronic Peritonitis, January 9, 1890.

CLAIM No. 244. Geo. M. Edwards, of Salt Lake Lodge, No. 178, died of Tuberculosis, February 10, 1890.

CLAIM No. 245. Thos. Hinshaw, of Morning Star Lodge, No. 88, was declared totally disabled by loss of Leg, February 23, 1890.

CLAIM No. 246. Jesse Bowlin, of Taylor Lodge, No. 175, was killed by Railroad Accident, March 14, 1890.

CLAIM No. 247. Robert F. Shields, of Kit Carson Lodge, No. 257, died of Smallpox, March 14, 1890.

CLAIM No. 248. Daniel Hogan, of Liberty Lodge, No. 242, died by Accidental Drowning, March 25, 1890.

CLAIM No. 249. Chas. Williams, of Sunset Lodge, No. 177, died of Congestion of the Stomach, March 27, 1890.

CLAIM No. 250. Peter Burns, of Falls City Lodge, No. 103, was killed by Railroad Accident, March 27, 1890.

CLAIM No. 251. George Goldsby, of Southern Cross Lodge, No. 324, died of Heart Failure, March 31, 1890.

CLAIM No. 252. Grant J. Turner, of Comet Lodge, No. 126, was killed by Falling from Engine, April 4, 1890.

CLAIM No. 253. Allison E. Warner, of Star of the East Lodge, No. 118, was killed by Being Run Over by Engine, April 7, 1890.

CLAIM No. 254. Joseph Rudman, of Salt Lake Lodge, No. 178, died of Kidney Disease, April 11, 1890.

CLAIM No. 255. James Cavanaugh, of Alamo Lodge, No. 253, died of Abdominal Aneurism, April 14, 1890.

CLAIM No. 256. Gustavus A. Howard, of West End Lodge, No. 18, was killed in a Collision, April 15, 1890.

CLAIM No. 257. Lewis W. Putnam, of Morning Star Lodge, No. 88, died of Stomach Trouble, April 20, 1890.

CLAIM No. 258. John Feeney, of Friendship Lodge, No. 375, was killed by Railroad Accident, April 26, 1890.

CLAIM No. 259. Patrick Falvey, of Jno. Hickey Lodge, No. 266, died of Tuberculosis, May 11, 1890.

CLAIM No. 260. Richard I. Jones, of Industrial Lodge, No. 21, was killed by Railroad Accident, May 12, 1890.

An assessment of Two Dollars (\$2.00.) has been levied for the payment of the above claims and you are required to forward said amount for each member whose name appears on the rolls June 1, 1890, as provided in Section 52 of the Constitution, said remittance to reach the Grand Lodge not later than June 30th, 1890. Any Lodge failing to make returns as above provided will stand suspended from all the benefits of the Order, as per Section 54 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. & T.

Addresses Wanted.

JOHN GILLIGAN—A member of Southern Cross Lodge, No. 324, is requested to correspond with the Secretary, E. R. Curl, Gainesville, Texas.

JOHN COCKSEY—At one time a member of J. H. Selby Lodge, No. 243. Anyone knowing of his whereabouts will please correspond with his sister, Mrs. M. S. Hindman, Glasgow, Ky.

M. P. GORMAN—At one time a member of Pacific Lodge, No. 173, Winslow, Arizona. Anyone knowing anything concerning his whereabouts will please correspond with S. R. Edwards, Collector of St. Lawrence Lodge, No. 15, B. of L. F., 114 Grand Trunk street, Point St. Charles, Montreal, Canada.

Lodge Directory.

We have been compelled to omit the Subordinate Lodge Directory from this issue of the *Magazine* on account of the accumulated volume of correspondence which demanded publication, and still we have not been able to make room for all the communications received, and as a consequence a number of our correspondents will be disappointed. We hope in due time to give all a hearing.

Regalia for Sale.

A full set of officers' regalia and twenty (20) members' regalia, in good condition, can be purchased from Self Help Lodge, No. 80. Address George Goding, 428 Benton street, Aurora, Ill.

THE NATIONAL MAGAZINE.

The *National Magazine* for April opens with an interesting article entitled "Chatterton, the Boy Poet," by Rev. Albert Banker, D. D., of the National University of Chicago; the "Current Value of Degrees" is by Dr. F. S. Thomas, M. D., Ph. D.; other articles are "The Columbus Society of Patriots of America," a laudable organization to cultivate patriotism in our American youth; "The Origin of the Name and Office of Justice of the Peace," by Rev. Joshua P. Bobb, LL. D.; and "Save Our Farmers," by F. W. Harkins, chancellor of the National University, the non-resident or correspondence work of which rapidly developing institution is also explained in this number. Sample copy, 10 cents. Address, 147 Throop street, Chicago, Ill.

ANGUS SINCLAIR'S BOOK.

We are under obligations to Messrs. John Wiley & Sons, publishers, No. 53 East Tenth street, New York, for a copy of the Fourteenth Edition of Angus Sinclair's book on "Locomotive Engine Running and Management," a work, the great value of which is attested by the demand there is for it, as shown by the number of editions placed on the market. Manifestly, every fireman in the country who aspires to be an engineer, and every engineer, who is ambitious to know the machine thoroughly, should study Mr. Sinclair's book. With such attention as we have been able to bestow upon its pages, we are satisfied that there are few, if any, difficulties besetting the work of a "runner" that Mr. Sinclair has overlooked or left unsolved, and what is of great value, and a distinguished feature of the book, is, that it is written in a style of such simplicity that a man must needs be exceptionally obtuse if he is not benefitted by the author's explanations. We regard the book as a valuable contribution to the library of the *Magazine*, and shall, as occasion requires, draw from its pages for the benefit of our readers.

WARNING.**The Family Magazine 258 and 259 Broadway New York—A Swindle!**

In the January number of the *Magazine*, page 94, appeared a captivating advertisement which came to the *Magazine* through the regular channels of such business, viz: from the U. S. Advertising Agency to the advertising agent of the *Magazine*. We refer to the advertisement captioned "100,000 valuable presents." The guessing proposition and the bogus prizes offered were simply bait to catch subscriptions to *The Family Magazine*, a publication that has no real existence and consequently the advertisement is nothing more than one of the well planned swindles of the times.

The *Magazine* is not in a position to know except through its advertising agent the reliability of advertisers, and an advertisement received through such a channel is accepted as *straight goods*, and as such appears in our advertising column. It will therefore be seen that the *Magazine* is in no sense responsible for the appearance of the advertisement in question. We were imposed upon, as others have been, by a well planned swindle and some of our patrons have been victimized by the scoundrels who conducted the scheme. We take the earliest opportunity to expose the rascals and to warn our readers.

The better way to deal with foreign advertisers is *never* to pay in advance. Another thing is to scrutinize the advertisement closely and see that only prudent propositions are made: since, whenever a concern proposes to give away *much or little*, it may be accepted as positive proof that the proposition is a swindle.

At any time, when our patrons desire information concerning the reliability of advertisers, we will promptly, upon application, do what we can to satisfy them, and to protect them against any swindling scheme that may find its way into print.

WIDE-AWAKE TRADESMEN

have learned by experience that the only waterproof coat they can sell to a cowboy or hunter is the Pommel Slicker with the "Fish Brand" Trade Mark on it. They are the best waterproof saddle coats ever made. They keep the saddle, the horse's back, and the rider thoroughly dry and warm. No saddle sores from the galling of a wet saddle. When used as a walking coat, the extension front buttons back, and the Slicker is changed at once to an ordinary coat. Just try one, they cost but little and will prevent colds, fevers, rheumatism, and other results to exposure to the weather. Beware of worthless imitations, every garment stamped with "Fish Brand" Trade Mark. Don't accept any inferior coat when you can have the "Fish Brand Slicker" delivered without extra cost. Particulars and illustrated catalogue free.

General Tide Water Coal Agts.

CELEBRATED

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York. 308 Walnut St., Philadelphia.
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all Railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the outputs have increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

Brotherhood of Locomotive Engineers.

[SEAL.]

CINCINNATI DIVISION, No. 95.

CINCINNATI, OHIO, September 5th, 1899.

This is to Certify, That Brother Chas. T. Brown is a member of this Division, No. 95, B. of L. E., and has been a member of the B. of L. E. for twelve years, and we can recommend him as an upright, honorable and worthy brother.

He has lately connected himself with the Railway Officials' and Conductors' Accident Association, of Indianapolis, Ind., and said Association has no connection whatever with the Order of Railway Conductors, or any other order or society—it being a distinct organization for the purpose of insuring railway employes in the United States, Canada and Mexico, against accidents. Brother Brown has been appointed Special Agent for the United States, Canada and Mexico, for the Mechanical Department of railroads. We feel confident that you will find anything Brother Brown represents to be just what he says.

E. E. McMILLAN, C. E.

G. BAKER, F. A. E.

[SEAL.]

INDIANAPOLIS, IND., September 15th, 1899.

To BROTHER ENGINEERS:—Having been appointed Special Agent for the United States, Canada and Mexico, for the RAILWAY OFFICIALS' AND CONDUCTORS' ACCIDENT ASSOCIATION, of Indianapolis, Ind., for the Mechanical Department of Railroads, and having been informed by reliable authority that some of the principal representatives of other accident companies have circulated the report among Engineers and Firemen that this Association is connected with certain Orders and Societies; on account of such representations, which are untrue in every respect, I publish copy of above letter from Cincinnati Division No. 95, B. of L. E., which will be sufficient without further explanation.

As all business from Mechanical Department of Railroads comes through my agency, I will furnish every Agent a copy of the above letter, and any application given to an Agent who has this letter in his possession may be the same as given to me in person.

Trusting that I may receive a share of your patronage, and will be more than pleased to add your name one and all, to our list of membership, assuring you that I will use every honest and honorable means to secure your patronage. For rates, etc., address

CHAS. T. BROWN,

Lock Box 49.

Special Agent, Mechanical Department of Railroads, Indianapolis, Ind.

GREAT OFFER!

PIANOS! ♦ \$35. ♦ ORGANS!

Direct from the Factory at Manufacturer's Prices. No such offer ever made before. Every man his own agent. Examine in your home before paying. Write for particulars. Address

THE T. Swoger & Son Pianos & Organs

PHOSPHOR-BRONZE
INGOTS, CASTINGS & MANUFACTURES.
THE PHOSPHOR BRONZE SMELTING CO. LIMITED
512 ARCH ST. PHILADELPHIA PA. U.S.A.
ORIGINAL MANUFACTURERS OF PHOSPHOR-BRONZE IN THE UNITED STATES AND OWNERS OF THE U.S. PATENTS.

PISO'S REMEDY FOR CATARRH.—Best. Easiest to use. Cheapest. Relief is immediate. A cure is certain. For Cold in the Head it has no equal.

CATARRH

It is an Ointment, of which a small particle is applied to the nostrils. Price, 50c. Sold by druggists or sent by mail. Address, E. T. HAZELTINE, Warren, Pa.

ALVA'S BRAZILIAN SPECIFIC.

Or Cactus Blood Cure.

What the Mexican National Conductors Say.

We, the undersigned, CONDUCTORS of the MEXICAN NATIONAL RAILWAYS, and members of City of Mexico DIVISION 159, ORDER OF RAILROAD CONDUCTORS, take pleasure in certifying that we have used the herb medicine known as "Cactus Blood Cure," with wonderful success, and we have also known many others to have used it with like result.

Appreciating its value, we cheerfully recommend it to ALL BROTHERS, and others requiring a remedy for the purification of the blood, as the best known; and we guarantee that a trial will convince all of its merit.

H. H. MORAN,

H. H. GREENLEAF,

M. E. EGAN,

C. H. STARR,

Members of Div. 159, Order of Railroad Conductors, City of Mexico.

A Parish Priest's Certificate, Certified to by the Archbishop of Mexico.

CELAYA, October 1st, 1889.

I, Parochial Priest and Ecclesiastical Judge of Celaya, State of Guanajuato, hereby certify that I know several people who have been cured by Don Ramon Alva's remedy.

It radically and effectually dispels all impurities in the blood.

FRANCO M. GONGORA,
Parochial Priest and Ecclesiastical Judge of Celaya.

The above signature is that which he uses in all his business, officially and otherwise, and he is an old pupil of mine.

† A. P. ARCHBISHOP OF MEXICO.

This medicine has never failed in a single instance to cure the most virulent cases of Scrofula and Contagious Blood Disease.

In cases of diseases which have been treated with mercury by physicians, it requires a few weeks longer to effect a cure, but a perfect cure is absolutely certain in any case, and when once cured, you will find that all traces of mercury have disappeared.

It is perfectly harmless, and is as good for children as for adults.

After you have been cured by it, we ask, as a favor, that you will give your friends the benefit of your experience, by recommending it.

RETAIL PRICE, \$2.00 PER BOTTLE.

For further particulars address,

EUGENE V. DEBS, . . . *Editor and Manager.*

THE HIGHER EDUCATION OF WOMEN vs. MARRIAGE.

In the *Popular Science Monthly* for March, 1890, we find an exceedingly well written paper, captioned "The Mission of Educated Women," written by Mrs. M. F. Armstrong.

In the paper prominence is given to certain propositions which to our mind are of startling significance, and well calculated to challenge the most serious reflection--and this view of the subject, as presented by Mrs. Armstrong, is all the more grave and weighty because "educated women" are specially involved.

The paper in question is in reply to an article entitled "Plain Words on the Woman Question," by a Mr. Allen, in which he classifies certain women as "deplorable accidents," and we are left to infer that these "deplorable accidents," in Mr. Allen's opinion, are "educated women," who choose single blessedness rather than run the risks of matrimonial entanglements; in other words, they are educated women, who are

self-reliant, and prefer making their own living rather than be dependent upon husbands, and this view of the matter is warranted not only by Mrs. Armstrong's averments and admissions, but by educated women themselves, who, when interrogated, had the courage to respond without circumlocution.

We do not remember to have seen in print anything relating to the "Mission of Educated Women" better calculated to arouse discussion than is found in Mrs. Armstrong's dissertation. In fact, we doubt if hitherto the position has been taken that women of high educational attainments are more disposed than their sisters who have drunk less deeply at the "Pierian Spring," to oppose marriage. To enable the reader to have a correct view of the situation as presented by Mrs. Armstrong, we quote as follows:

"I have been for years connected with a large educational institution, where young men and women are working side by side, under identically similar influences. The officials and teachers in this school are largely women, and women who, to quote Mr. Allen, have become 'traitors to their sex,' in that they have taken upon their shoulders the burden of their own support. They are, with few exceptions, highly educated, many of them college-bred, three among them being regular physicians, while all of them, if I may be permitted to judge, are of at least average attractiveness. As to health, social position, and previous condition, they offer, also, I believe, a fair average, while their intellectual standard ranks them high in the scale of feminine development."

In this we observe nothing unusual. There is no extravagance of language. People at all acquainted with the educational institutions of the country will at once accept Mrs. Armstrong's description as entirely free from exaggeration. The picture of women educators is perfect so far as it

goes, and is conclusive, but had the writer so desired, she could have introduced many embellishments without injustice to her subject. Manifestly, what she says of the teachers of the institution to which she refers, is to introduce a "charming cottage" where "two" of these teachers reside, and where she had the good fortune to meet a "striking assemblage of single women, well looking, well dressed, ranging from twenty to fifty years of age, every one of whom could have, in the past, married, or could still marry, were it her desire to do so." These women were not fanatics; on the contrary, "they were sensible, earnest, in some cases brilliant women, who had, with more or less intention, turned their backs upon marriage, and had chosen instead lives of self-supporting independence." And it is admitted that these women "turned their backs upon marriage" because of their "higher education."

These educated women did not hesitate to furnish Mrs. Armstrong reasons for their choice when confronted with the straightforward request to "tell me why, as representative individuals, you have not married, do not marry, and are endeavoring, so far as educational methods can do it, to perpetuate your type?"

Mrs. Armstrong gives the answers of these educated women to her important interrogatory, and she says "there were no evasions."

The general reader, or the intelligent reader, will feel a lively interest in the replies, because, whether wise or otherwise, they relate to problems of immediate and far-reaching consequences. They involve the laws of the physical, intellectual and moral organism of men and women; God's first command, "Multiply and replenish the earth;" they involve home and all domestic relations; in a word, if the "higher education" of women is to result in their "turning their backs upon marriage," then the world will be forced, inevitably, to regard this "higher education" of women as the most stupendous evil that has visited the world since the deluge.

It will not do to suggest that a comparatively few will receive this "higher education," and therefore that the number who

will "turn their backs upon marriage" will be limited. That is not the question. But rather, does the education of women tend in that direction? It is confessed that such is the influence.

We confess to no little interest in the testimony of the witnesses Mrs. Armstrong introduces in justification of their "turning their backs upon marriage." In one case, a denial is made that education "unsexes" women. It is needless to say that, in one sense, that is impossible—the term relates to masculine prerogatives, not as the result of human statutes, man's ignorance or arrogance, but of the irrevocable laws of his being, and in these laws are blended the animal propensities, the moral sentiments and the intellectual powers. It is not required to discuss "spheres," functions, vocations, and a' that; and yet, as between men and women, orbits are thought to be sharply defined, and when women stray beyond their sphere, they are said to be "masculine," just as when degenerate savages excite the contempt of the "braves," and are known as "squaw men." Educated women are quick to discern when masculine lines become "squaw men," and in every instance such weaklings excite their unmitigated contempt. If a man is a man, he will be at all seasons in the right place, like a planet. He will not violate the laws of his being to become feminine. There will be something masculine, robust, strong in his tenderness, in his gentlest moods; something manly, when he kneels at the shrine of love or beauty—or, if there is not, his weakness will be detected by women, and by them he will be assigned his proper place in the ranks. And what is true of men, is quite as true of women, and no special pleadings will to any considerable extent change verdicts. It is proposed by highly educated women to change somewhat the programme. Says one: "In the past, it is the emotional nature of women which has been cultivated, often at a heavy cost. Now, her intellect is taking charge, and this thing of being 'sacrificed to emotions' is to cease. The witness asks, can it be shown that the training of her intellect makes a woman any less capable of love and devotion? And yet this very witness

claims for the higher education of women the triumph of the intellect over her "emotional nature," the result of which is to prompt her to "turn her back upon marriage." And that such is the outcome of this "higher education" for women is placed beyond controversy by the testimony of "a newly graduated collegian," who said "that in our college it has become a proverb, that if a girl isn't engaged before she is a sophomore, the chances are all against her marriage." And said another highly educated woman: "We become more interested in our studies, more certain of our ability to take care of ourselves, and therefore less interested in men as possible lovers, and more independent of them as a means of support."

In view of all the facts, as stated in Mrs. Armstrong's paper, the mission of educated women is to renounce marriage, home, domesticity, and, in so far as they can influence affairs, annul the command to "multiply and replenish the earth."

Allusions to the fact that husbands are "not infrequently ready to accept assistance from the hands of the women they have undertaken to support;" to "domestic drudgery;" to marrying for "the sake of a somewhat uncertain support;" and to the fact that "the moral sense is in" educated women "more highly developed" than in men; and that they "are morally upon a higher level than men;" go to prove that woman's higher education tends directly to create an antipathy to marriage, a dislike of man, and a low estimate of what is required to establish a home.

It is from such points of observation that thoughtful people are required to contemplate the higher education of women, and the influence such teachings is to have upon women whose educational advantages have been more circumscribed. The opportunities for women to obtain an academic and collegiate education are everywhere increasing. Academies and colleges are multiplying and a vast army of young women are demanding admittance. And it is in testimony—"if a girl is not engaged before she is a sophomore, the chances are all against her marriage;" she is pretty certain to "turn her back upon marriage." As

a result, those who are to marry and establish homes, are to be in the future the comparatively illiterate.

We are inclined to the opinion that those who have been foremost in the advocacy of the "higher education of women," never dreamed that such results would follow, and in contemplating the outcome, so far as indicated by Mrs. Armstrong's paper on "The Mission of Educated Women," they are likely to be greatly perturbed as to further developments.

It will not be denied that women, whether highly educated, moderately educated, or not educated at all, have a right to "turn their backs upon marriage." Nor has any one a right to change their decision. They have a right to estimate men by such standards as they may select. Such propositions are not involved in this discussion. The real point at issue is, does the higher education of women militate against marriage? and if so, is it a blessing to society? It is this thing called "higher education" that is arraigned. What must be the educational influences of a college, when "if a girl is not engaged before she is a sophomore, the chances are all against her marriage"? To discuss such questions would require more time and space than we have at our command, but they are vital, and eminently worthy of the attention of professional educators.

It is, in conclusion, worthy of remark that in proportion as men become educated, as their animal propensities are restrained, their grossness subdued and their intellectual powers and moral sentiments are brought into harmonious relations, women have been emancipated from the inthrallments of ignorance, brutality and superstition, the home beautified and glorified steadily and hopefully; but it is in proof that as women become educated, as they advance in intellectual culture and power, they "turn their backs upon marriage," and of a consequence upon home, since there can be no home without marriage, and in this way reverse the social order, and, in fact, the Heaven-ordained order. If this is to be the result of "the higher education of women," their mission is not such as to command approval of this so-called "higher education."

THE EIGHT-HOUR MOVEMENT.

The eight-hour question is up for debate, and the discussion will proceed until the demand that eight hours shall constitute a day's work will be granted. It is a righteous demand. There is not to be found in it, however severe the analysis, an element of injustice. By making eight hours a lawful day's work, no man, woman nor child is wronged. This cannot be said of the demand for more than eight hours for a day's work.

No greater mistake, in connection with the subject, could be made than to assume and assert that only the well-being of the wage-worker is considered in demanding a less number of hours for a day's work. Such a view of the subject is narrow. It lacks breadth and depth. Upon investigation it will be found to be prompted by selfishness and parsimoniousness, totally destitute of generosity and that broad philanthropy which comprehends the public good the welfare of all.

There are, doubtless, those who believe that the eight-hour movement is of mushroom growth; that it has come, as did Jonah's gourd, and will perish as quickly. Such persons are neither students nor philosophers. They reason badly, or, more properly, they do not reason at all. They assume that agitation is the work of cranks; that it is a vagary, which, like many other delusions, is to have its day, disappear and be forgotten. Such people are doomed to disappointment. The wish is father to the thought, and sire and offspring, at no distant day, will fill a common grave.

The question of reducing the hours of labor, if we may measure time by events, can boast of some antiquity. The seed has been germinating during the entire nineteenth century. In a recent paper, prepared by Mr. Joseph Gruenhut, of Chicago, and published in *The Knights of Labor*, of that city, the facts are brought into commanding prominence. It appears that prior to 1803, fourteen hours constituted a day's work. At that date a movement was made by journeymen shipwrights and house carpenters to secure a reduction to ten hours, and were threatened with "black-

listing" for their temerity. As far back as 1832, the carpenters and calkers of Boston struck to secure ten hours for a day's work. They did not succeed, but their brethren in New York and Philadelphia were more successful, and did secure the boon. That was fifty-six years ago—more than half a century—but to secure this limited success, there had been constant agitation from 1803 to 1833—thirty years.

From 1833, the demand for a reduction of the hours of labor became more and more emphatic. In 1840, Martin Van Buren, by proclamation, established the ten-hour-day system in the Navy Yards of the Government. The Governor of New Jersey recommended legislation favoring a reduction of hours. Workingmen took courage, and the agitation proceeded. In 1845-46 numerous strikes occurred to secure the ten-hour system. In 1847, the British Parliament passed a ten-hour law. This aroused fresh activity in the United States among working men. New Hampshire led off by making ten hours a legal day's work in 1847. The agitation was kept up; strikes were frequent; employers relaxed their grasp slowly, and in 1853 eleven hours were adopted in many parts of the country as the regular work day, as the result of strikes.

A number of States have adopted the ten-hour law.

In 1868 Congress passed an eight-hour law for all Government workingmen. Then began strikes throughout the country for the eight-hour system, and eight-hour leagues were formed, and from that day to the present the agitation has been kept up and is now more active than ever before.

In 1802-3, when the agitation began there were two labor organizations engaged in the great work of trying to reduce the hours of labor from fourteen to ten hours. Now, labor organizations are counted by scores. Then, workingmen were weak now they are strong. Then, capital was arrogant, all powerful; it is arrogant still, but it is no longer all powerful; organized labor confronts it defiantly, and says, as did Moses to Pharaoh, "Let my people go."

From 1802 to 1890—eighty-eight years—there has been ceaseless agitation for a reduction of the hours of labor, and it may be

said that four hours a day have been gained to the toilers of the land—four hours a day for rest, for recreation, for study, for mind-improvement and physical recuperation. Without this agitation on the part of the workingmen, without the strikes, the sacrifices and sufferings incident to strikes, the fourteen-hour day would still be in force, and yet there are men who deprecate agitation, and who have a holy horror for strikes. But the edict has gone forth—working hours must still further be reduced. Does some one ask what has been gained in eighty-eight years of agitation? We answer, four hours a day to each workingman, or for 300 working days 1,200 hours, equal to 120 days of ten hours each. Are there those who begrudge these hours of rest and relaxation to the toiler? Yes. Find them, measure them, analyze them, and when the world knows what they are, humanity will blush crimson for their degeneracy.

The eight-hour demand* to thoughtful men means much more than the gain of two hours from toil; it means opportunities for the idle to obtain work and wages; to become productive and self-supporting. Suppose, in round numbers, there are in the country, 6,250,000 men willing to work, and that only 5,000,000 of them can find employment at ten hours for a day's work. 5,000,000 men working ten hours a day is 50,000,000 hours. It is seen that there are 6,250,000 workingmen, or 1,250,000 idle. If the hours of a day's work are reduced from ten to eight, it will be seen that the reduction affords the idle an opportunity for employment—6,250,000 men working eight hours a day is 50,000,000 hours, the same as 5,000,000 men working ten hours a day. For every four men working ten hours a day, by reducing the hours to eight, admits an idle man. Who are benefitted? We answer, society as a whole. No greater danger can menace society than idleness. It has been said, and it is true, that "idleness is the prolific parent of crime," and not only of crime, but of pauperism. Idleness destroys the home and wrecks the family. It is a scourge which leaves in its wake effects, compared with which, pestilence is a benediction. The eight-hour movement

will prove to be a powerful aid in doing away with idleness.

The eight-hour question is scarcely less ethical than economical. It relates to morals as well as to money. If the idle can obtain employment, they are in the line of moral, physical and financial advancement. If idleness leads to vice, employment is promotive of virtue. If idleness wrecks homes, employment builds homes. If idleness results in poverty and degradation, employment is productive of competency and independence.

The eight-hour movement is not only designed to afford workingmen more leisure, more rest, more opportunities for intellectual culture, but it is designed to afford men, in forced idleness, opportunities for employment and all those blessings it will confer.

The triumph of the eight-hour movement will not usher in the millennium. It will not chain the devil. It will not transform the earth into a paradise, but it will be moving things in the direction of many and great improvements. It will be scoring another victory for right, truth and justice. It will be a harbinger note of the good time coming, when labor shall enjoy more abundantly the wealth it creates.

During the next twelve months the eight-hour discussion is to be more aggressive than ever before. The press has long since begun its crusade. One paper leads off by saying that "the division, eight hours for rest and eight hours for recreation and improvement seems not unreasonable, though in a great many occupations, and in a vast number of individual cases, such a division could not be enforced. It is claimed that a shortening of hours would furnish relief for the unemployed by giving work and wages to a greater number of persons, but this argument is more fanciful than real." We have shown that it is not fanciful; not a vagary. Mathematics never more clearly demonstrated a proposition than that by reducing the hours of labor more room is made for more laborers. Nor is it true that "in a vast number of individual cases" the eight-hour system "could not be enforced." The ten and eleven-hour system has been enforced as against

the fourteen-hour system. But, says the paper from which we have quoted, "In this, as in other conflicts of interest, the trouble is to find a common standing-ground for employers and employes. The latter want ten hours' wages for eight hours' work, and the former insist they cannot pay it. Generally, except in the government or public service, a reduction of hours is accompanied by a corresponding reduction of pay. No law can prevent men from making special contracts, and the most that any enactment on the subject can do is to make eight hours a legal day's work in the absence of any contract or stipulation to the contrary. The result will probably be that in most cases employers will scale down the wages two-tenths, and if the laborer or mechanic wants to earn the old wages, he will have to work the old hours."

In this we have the key-note of the opposition the eight-hour movement is to encounter from a subsidized press. The same old cry that was heard when fourteen hours was a day's work is heard again in favor of ten hours and against the adoption of eight hours. The law, if laws are enacted, fixing eight hours as a day's work, is to be violated, and then we are told that employers, if the law cannot be abrogated by chicane, as a last resort, will "scale down prices." Workingmen should understand that the establishment of the eight-hour system is not to be inaugurated without a struggle.

If, the labor organizations of the country, acting as a unit, shall say, "eight hours shall constitute a day's work," the declaration will be the eight-hour law of the country. If employers determine they will not obey it, then, in that case, let silence brood over the land from ocean to ocean. One day will suffice. Let the fires go out in forge, and furnace, and fire-box. Let the machine stand still. Give the horsepower a rest. If the ring of the anvil, the click of the shuttle, the whir and buzz of spindle and wheel can't be permitted to sing in concert the triumph of justice to labor, let them remain silent. Everything depends upon the united action of workingmen. If they are discordant, there will be no inauguration of the eight-hour movement but if united, harmonious

and determined, they will succeed. In the meantime, let the work of agitation go forward with an increasing vigor.

THE ANNUAL SLAUGHTER.

At a meeting of the Young Men's Christian Association of Railroad Employes held in Philadelphia, not long since, an address was delivered by Mr. W. C. Douglas, in which he referred to a great tragedy, or rather a connected series of tragedies running through the year 1889, by which and through which, five thousand two hundred and eighty men, in the prime of life were instantly killed, and nearly, twenty-six thousand more, were mangled and wounded, and added:

You say to me you cannot recall any such tragedy occurring in the year 1889: that you cannot recollect any great war where five thousand two hundred and eighty men fell on the field of battle, and twenty-six thousand were wounded: that I must be mistaken, or that if anything of the kind did occur, that it must have been in the dark depth of Africa, and done by the murderous slave traders, who destroy entire tribes at a blow. But these tragedies occurred upon the soil of our own Republic. These men were slain in our own land. Five thousand two hundred and eighty men cut down in an instant, in the prime of their manhood, and twenty-six thousand more wounded and groaning on beds of pain: for I am giving you the official statistics concerning the number of railroad men killed and wounded in the United States in the year 1889. It is thrilling! It is monstrous! Think of it, more men killed and wounded upon these lines of steel in the United States in twelve months than there are soldiers and sailors in the army and navy. Why, the whole civilized world would have stood aghast if the intelligence had flashed over the wires that every soldier and sailor in the United States army and navy had been killed and wounded in the year 1889. More men killed and wounded than our magnificent Army of the Potomac lost during the first year of the Rebellion.

It is such men as these that Austin Corbin and kindred knaves would reduce to the condition of serfs. It is these men who make it possible for trains to run that such creatures as John Livingston would deny the privilege of a free ride on the roads they operate. It is well that Christian Associations should feel concerned in the future well being of men whose work is surrounded with perils, but what the world needs is associations, pledged to everlastingly squelch a class of scoundrels who work and plot to add to the perils of railroad employes, poverty and degradation.

WATERED STOCKS.

It is authoritatively stated in the Third Annual Report of the Interstate Commerce Commission, that on June 30th, 1888, the total mileage of the railroads in the United States was 149,901.72, in round numbers say 150,000 miles. Since June 30th, 1888, railroad building has been going forward, and approximates 160,000 miles. It is frequently reported that the railroads of the United States required for their building and equipment \$9,000,000,000. This amount is under, rather than over the investment, provided it required, as officially stated, \$8,129,787,731 to build and equip 136,883 miles.

The official estimate is that the average cost of building and equipping the railroads of the United States has been \$30,000 per mile, and that is considered a large estimate. Suppose we now have in the United States 160,000 miles of railroad, at an average cost per mile, cash, of \$30,000, the total cash cost would be, for building and equipment, \$4,800,000,000, or \$4,200,000,000 less than \$9,000,000,000.

It is just here that the troubles with railroads begin. The owners of the roads seek to earn dividends on *water*, represented by \$4,200,000,000. In many cases it is done; and, being done, a number of questions arise of special importance to railroad employes and to the public at large: By what methods are dividends earned on watered, or fictitious stocks? Two methods only are known. These are by advancing rates and by cutting down expenses; that is, gaining at one end and saving at the other; by charging too much for freight and passengers and reducing the wages of employes, and further by neglecting the roads, permitting them to get out of repair. Suppose there are 1,000,000 wage-workers on the 160,000 miles of railroads in the United States, and that by processes well understood by employer and employé, wages are reduced 25 cents a day below what they ought to be, this reduction in the aggregate is for 313 working days, \$78,250,000 a year, and this vast sum of money goes to pay dividends on *water*. If railroad corporations were content to pay dividends on actual investments, they could without detriment to any interest pay fair wages to all their em-

ployés; but desiring to pay dividends on \$4,200,000,000 of watered stocks, they must of necessity reduce wages, and this is done in many instances to the point that absolutely makes life not worth the living. It is a fraud of stupendous enormity. Perpetually, like Tennyson's brook, it goes on forever. Everybody knows that corporations created by the people rob the people ceaselessly, and yet do it so adroitly that when imposing exhibits are made of stocks, funded debt, unfunded debt, etc., running up into the millions and billions, that the people become bewildered, and the fraud proceeds. Occasionally a case goes to the courts that warrants the conclusion that an honest judge is on the bench and an honest jury is on hand; but such instances are rare. In one way and another, the corporation triumphs. The talk of a "government of the people, for the people and by the people," is pretty, but meaningless. The people permit things to drift as they are drifting, and will continue to pay the penalties which their stupidity invites.

THE AMERICAN WAY.

The population of the United States is variously estimated at from 60,000,000 to 70,000,000. Of the number, it is safe to say that 90 per cent. are native born. If, therefore, we take the widely accepted estimate of 60,000,000, we have 54,000,000 of native born Americans. In writing of American ways, there are those who take the few as the representatives of the entire body. Such writers are flagrantly unjust. They take the few, who are notoriously deficient in qualities of head and heart to command admiration, and set them forth as the true representatives of American character and manhood, integrity and virtue. It would be difficult to properly characterize such gross defamation. It is common to refer to Americans as "*fast*," as if it were better to characterize them as slow or sluggish. It is also said of Americans that they no longer regard small things, particularly in money-making—that is to say, Americans have become so devoted to the dollar as to ignore the dimes; that only great enterprises are deemed worthy of attention, and that the building up of fortunes from small savings

is no longer an American idea. Says a writer: "The advent of railroads, of daily papers, books, telegraphs, created a revolution—a fast age succeeded a slow one. The first result was squandering. The property accumulated by pennies by the fathers slid away in dollars from the sons. That generation simply did not any longer care for the dimes." Such statements are made in the face of the fact that in no country in the world is the showing of small savings by people who work for a living so satisfactory as in America. Such facts demonstrate conclusively that the dimes are properly estimated, and that details are not overlooked. We are told that the American boy has changed; that he is the victim of the mania of money-making; that he has in his brain and blood "a Pacific railroad, an Atlantic cable and a dozen lines of swift steamers," and that he "no longer looks at things as Americans used to look;" all of which is pure fiction, when it is known that ten millions of men are at work in shop and mine and factory, and that the boys are taking the places of their fathers in every department of work. Such estimates of the American character are pure Munchausenisms, and are entitled to no respect whatever. We are told that "the American nation is not only fast in inventive genius, and fast in overcoming a continent, and building churches, and schools, and a press, and literature; but it is fast in other ways, and in some ways to be regretted. We have learned to win wealth in large sums, and to spend it easily. In other words, the spirit of the gambler is upon us. We may call it speculation, if that sounds less unpleasant. The fact remains, and that fact is that we gamble." To clinch the statement we are referred to such gamblers as "Old Hutch," of Chicago, who made millions by cornering wheat. Here is one man, set up to represent the American character and to establish the slander, that Americans are a nation of gamblers. The multiplied thousands, who do an honest, legitimate business are forgotten; they are not permitted to stand forth as the representatives of American character for integrity and honorable methods. Not content with such slanders, we are informed that the nation

is corrupt to a degree that defies hyperbole. To prove this, it is said the "average voter" of the United States "is purchasable" with money or other consideration, that love of country, judgment, conviction, the good of society, all that Americans hold dear and cherish, goes for nothing; that all are boodlers and are ready to sell their birthright for cash or office. The man who writes in such a strain is himself corrupt. He estimates others by himself, or, what is still worse, he selects some moral monstrosity, some creature whose greed, whose sordid, venal nature makes him hideous, and points to him as a representative American, when all around loom up before his vision, men incapable of dishonor, no matter what the temptation might be. Again we are told that as Americans "we have lost the love of work in proportion as we have gained the morbid love of money." To talk of love of work, that is sweating toil, drudgery—ten, twelve, or fourteen hours a day for mere subsistence, or to torture the term love into a significance foreign to it. But the acceptance of work as a means of livelihood, as a necessity, as honorable, as preferable to idleness, is now as ever before a distinguishing characteristic of Americans and the comparative few who make fortunes by questionable methods, do not represent this American character. We are told that the American nation is drifting backward toward old superstitions, and relying upon luck and wizard lore, rather than labor for success in life. We are told that "nine men out of ten will venture their all on a lucky number." We do not suppose that there are nine men in a hundred who would do anything of the kind. The gambler is not a representative American. He simply represents a class, and no matter what success may attend his ventures, he is not and cannot be a representative American. That many American scoundrels have won fortunes by infamous methods is not to be denied. They live in palaces, and fare sumptuously, but they do not represent the American character. As well assume that the jimson represents the flora of America, the polecat its fauna, or the crab apple its fruits, as to intimate that representative

Americans are to be found among those who have secured fortunes by methods which all honorable men abominate. If men desire standards by which to judge of American character, they are at hand. The Constitution of the Republic and the Constitutions of the States settle the question of statesmanship. In war, with its gory glory, America stands first in the list of nations. In material progress, no nation approximates the grandeur of American achievements. In invention, we are abreast of the foremost. In education we have laid the foundation of a system which stands forth as the crowning glory of civilization. The man who overlooks such things in writing of American character, and American ways, deserves the contempt of all thinking men.

AN IMPORTANT OHIO STATUTE.

The fact, however humiliating it may be, has been shamefully conspicuous, that while constitutions lay down principles of equity, the law makers have managed to construct statutes under the operation of which working men have been ceaselessly the victims of injustice, and under the decisions of the courts the wrongs inflicted have been so numerous and flagrant as to create the wide spread impression that the courts were organized to convict the poor and let the rich go free. This repulsive exhibition of the viciousness of laws, and the corruption of courts, has been specially prominent when employes sought redress for wrongs inflicted by corporations. So numerous and various have these outrages become that legislators in various states are seeking to apply remedies, so explicit in their provisions, that lawyers, the most astute, can no longer mislead judges, and judges, however venal, cannot, to the extent formerly practiced, wheedle juries.

In this connection it affords the *Magazine* special satisfaction to introduce the full text of a law enacted April 2d by the late Legislature of Ohio, designed to utterly overthrow some of the unjust methods which have characterized railroad corporations, in their dealings with their employes. The law is as follows:

AN ACT

For the protection and relief of railroad employes: forbidding certain rules, regulations, contracts and agreements, and declaring them unlawful; declaring it unlawful to use cars or locomotives which are defective, or defective machinery or attachments thereto belonging, and declaring such corporation liable, in certain cases, for injuries received by its servants and employes on account of the carelessness or negligence of a fellow servant or employe.

SECTION 1. *Be it enacted by the General Assembly of the State of Ohio.* That it shall be unlawful for any railroad or railway corporation or company owning and operating, or operating, or that may hereafter own or operate a railroad in whole or in part in this state, to adopt or promulgate any rule or regulation for the government of its servants or employes, or make or enter into any contract or agreement with any person engaged in or about to engage in its service, in which or by the terms of which, such employe in any manner, directly or indirectly, promises or agrees to hold such corporation or company harmless, on account of any injury he may receive by reason of any accident to, breakage, defect, or insufficiency in the cars or machinery and attachments thereto belonging, upon any cars so owned and operated, or being run and operated by such corporation, or company being defective, and any such rule, regulation, contract or agreement shall be of no effect. It shall be unlawful for any corporation to compel or require directly or indirectly an employe to join any *company association whatsoever*, or to withhold any part of an employe's wages or his salary for the payment of dues or assessments in any society or organization whatsoever, or demand or require either as a condition precedent to securing employment or being employed, and said railroad or railway company shall not discharge any employe because he refuses or neglects to become a member of any society or organization. And if any employe is discharged he may, at any time within ten days after receiving a notice of his discharge, demand the reason of said discharge, and said railway or railroad company thereupon shall furnish said reason to said discharged employe in writing. And no railroad company, insurance society or association, or other person shall demand, accept, require, or enter into any contract, agreement, stipulation with any person about to enter, or in the employ of any railroad company whereby such person stipulates or agrees to surrender or waive any right to damages against any railroad company, thereafter arising for personal injury or death, or whereby he agrees to surrender or waive in case he asserts the same, any other right whatsoever, and all such stipulation and agreements shall be void, and every corporation, association or person violating or aiding or abetting in the violation of this section shall for each offense forfeit and pay to the person wronged or deprived of his rights hereunder the sum not less than fifty dollars (\$50) nor more than five hundred dollars (\$500) to be recovered in a civil action.

SECTION 2. It shall be unlawful for any such corporation to knowingly or negligently use or operate any car or locomotive that is defective, or any car or

locomotive upon which the machinery or attachments thereto belonging are in any manner defective. If the employé of any such corporation shall receive any injury by reason of any defect in any car or locomotive, or the machinery or attachments thereto belonging, owned and operated, or being run and operated by such corporation, such corporation shall be deemed to have had knowledge of such defect before and at the time such injury is so sustained, and when the fact of such defect shall be made to appear in the trial of any action in the courts of this state, brought by such employé, or his legal representatives, against any railroad corporation for damages, on account of such injuries so received, the same shall be *prima facie* evidence of negligence on the part of such corporation.

SECTION 3. That in all actions against the railroad company for personal injury to, or death resulting from personal injury, of any person, while in the employ of such company, arising from the negligence of such company or any of its officers or employes, it shall be held in addition to the liability now existing by law, that every person in the employ of such company, actually having power or authority to direct or control any other employé of such company, is not the fellow-servant, but superior of such other employé, also that every person in the employ of such company having charge or control of employes in any separate branch or department, shall be held to be the superior and not fellow-servant of employes in any other branch or department who have no power to direct or control in the branch or department in which they are employed.

SECTION 4. This act shall take effect and be in force from and after its passage.

It has been a favorite practice on the part of certain railroad corporations, to exact pledges from employes, in case of disability or death, while in the pursuit of their duties, which relieved the corporation of all responsibility and liability. This proceeding can no longer be practiced in the great State of Ohio.

A number of railroad corporations, manifestly for the purpose of breaking down organizations of railroad employes, have instituted so-called insurance schemes, and have either directly or covertly given such employes to understand that their employment and promotion depended upon their becoming identified with such schemes, and once in, the employes, having no more voice in the management of the funds they contributed than so many cattle, have simply to submit to the dictation of the corporation—pay and be silent. This shameful business can no longer be practiced in Ohio; the serf making scheme has been outlawed.

The Ohio law, it will be noticed, holds the corporation responsible if it operates de-

fective locomotives, provided the employé receives any injury thereby, and the corporation is not, as hitherto, permitted to plead ignorance of such defects. Again, the Ohio law, which we print for the benefit of our readers, does away with the "co-employé" iniquity, one of the most shameful subtleties ever resorted to, to escape righteous penalties.

The Ohio law ought to be on the statute books of every state in the Union, and can be, if railroad employes make the demand.

The time is near at hand when most of the legislatures of the states will be in session, and by concert of action, the Ohio law can be made the law of many states, as also the wise law of Iowa, in regard to couplers and brakes. Now is the time for railroad men to be on the alert, up and doing. The various orders should have intelligent and active legislative committees; bills should be prepared and their passage urged, and when this is done the ballot will win notable victories for railroad employes, before the spring time of 1891 is past.

IS A WRONG DONE TO ONE THE CONCERN OF ALL?

We should find it extremely difficult to formulate a more important question for the consideration of workingmen than is presented in the caption of this article.

If a wrong done to one is not the concern of all, it can be said that the wrong scarcely if at all, concerns any one but the victim of the wrong, and with such a conclusion the term "brotherhood" loses its significance—its strength and glory—is reduced to a level with pagan gods, to be worshiped by the ignorant and deluded, that the priests, who serve the idol and formulate its oracles, may fatten and flourish upon the superstitions of their victims. If a wrong done to one is not the concern of all, then the talk about the "brotherhood of man and the fatherhood of God" is not only a miserable delusion, worse than

"Dead sea fruits, that tempt the eye.

But turn to ashes on the lips."

but is embellished hypocrisy, robbed of its meaning by religious bigotry, and by religious prejudice, is a delusion, unworthy of any recognition in the ranks of sane men. If a wrong done to one is not the concern of

all, why should men waste their breath in shouting:

"When the war-drums throb no longer,
And when the battle flags are furled,
In the parliament of man,
The federation of the world?"

If the theory is "every man for himself and the devil take the hindmost," why not admit that man has been evolved from the hog, rather than contend that God made him "a little lower than Himself," which is the reading of the "new version" of the Bible? To sing of the "federation of the world," is "flim flam," poetic nonsense, unworthy of consideration, if it be untrue that a wrong done to one is the concern of all.

All nations, worthy of the name, pagan as well as christian, admit that a wrong done to one of their humblest citizens, or subjects, concerns the nation. It is a fundamental principle, without which a nation, however boastful of its power or enlightenment, would sink to soundless depths of contempt—a weak nation, when one of its citizens is subject to injury cannot redress the wrong, *vi et armis*, it can only protest, plead for its rights, and appeal to other nations for sympathy and aid, but when a citizen of a great and powerful nation is subjected to wrong, the case is different. History is full of illustrations.

During the "late unpleasantness," an obscure man, a British subject, long resident in the South, being in Louisville, Ky., gave expression to what were regarded treasonable sentiments, and was forthwith arrested and imprisoned. He was without wealth or high social standing, but he appealed to the British Minister at Washington, and forthwith an order came for his release. The wrong that he claimed had been done him at once concentrated upon his case, the power of the British empire—and acting promptly, he walked out of his prison a free man.

Not long since an American citizen was wrongfully confined in a loathsome Mexican prison. When he appealed to his Government, he challenged its power to right the wrong, and his prison doors were thrown open, and he was permitted to again tread the sod of his country. Even China, appealed to the United States to re-

dress the wrongs done to some of the subjects of the Celestial Kingdom, and though their lives could not be restored, the loss of property was made good from the Federal exchequer. Nor is the date remote, when an adopted citizen of the United States visiting his old European home was incarcerated, and held for military duty. The fact becoming known to a commander of an American war-ship, at the port where the citizen was deprived of his liberty, a demand was made upon the authorities for his release, and that there might be no mistake about it, the ship was brought broadside to the town, his guns shotted and run out, and decks cleared for action. The demand was "Send the American citizen on board, place him under the protection of the flag of his country or take the consequences." The wrong done Martin Costa, was an injury to the American nation, and the American nation stood pledged and ready to redress the wrong. As a result, the imprisoned man was released. It would be easy to multiply illustrations, but it is not required. The principle is well settled, and is vital.

How stands the account with American workingmen? In the vast army of unorganized labor in the United States, who recognizes any wrong done to one as being an injury to all? Who protests in the name of Christ, or, in the name of the christian's God? Does the State? Does the Church? Does the ermined Judge? Go search the chronicles, and if you find one solitary instance of the kind, in the name of all things sacred let it go forth to the world.

The fact that unorganized workingmen were the victims of wrongs, flagrant and ceaseless, suggested organization as a remedy. The organization became the parliament of workingmen. If one of the members of the organization was wronged it became the concern of all the members, and all protested. This organization of workingmen is not of recent date, and history demonstrates that protection from wrongs and oppressions was secured through the influence of the guilds, organized centuries before the discovery of America.

It was doubtless true then as now, that a

wrong done to one shoemaker, A. D. 1157, was regarded as an injury to any other member of the guild, but there is no intimation that the wrong done to a shoemaker was an injury to the members of every other guild. Then as now, if the guild of which the wronged shoemaker was a member, was strong enough to redress the grievance, it was done, if not the wrong triumphed and the right was cloven down. The "injury to all" simply meant, an injury to all the members of that particular organization.

Since the middle ages, however much we may boast of the progress of civilization, the brotherhood idea of all workingmen has made little progress, perhaps more in the last decade, than in all the centuries past, and yet, so little as to create only a glimmering hope, that the declaration, as true as any that Jehovah ever inspired, that "a wrong done to one, is an injury to all," is finally to triumph over ignorance, prejudice and all other obstacles.

It is history that the guilds of the middle ages, organized to protect the poor from oppression, growing in numbers, in wealth and power, became at last aristocratic and oppressive, and in numerous instances, the same tendency is observable to-day in the United States of America.

Within the whole realm of the ridiculous and the repulsive there is nothing more revolting than to see one workingman treating another workingman with haughty disdain, caring no more for the wrong done him than if it had been inflicted upon a beast, and all, because his work is in another department of the world's industries. As certainly as the fact of interdependence exists, as certainly is a wrong done to one, the concern of all. Obscured it may be, ignored it may be, but still it remains immutable and eternal, nor will workingmen achieve a complete triumph over their oppressors until it is recognized, emblazoned upon their banners, and becomes their shibboleth.

The demand for federation, means that a wrong done one is the concern of all. In federation there is hope. Without it, the hopes of workingmen will be deferred until

every heart will be sick. In federation envy, which is the bane of organizations will disappear, and as federation proceeds, as education goes forward, thoughts will go deeper and higher, and will eventually include the humblest toiler. Then when a wrong is inflicted upon workingmen in mine or shop, the knowledge of the fact shall be recognized as an injury to all. In this there is nothing utopian. We have furnished illustrations of the practical working of governmental power, and if the trend of workingmen's thoughts is in that direction the world has a right to be hopeful.

THE WORLD'S MILLENNIUM.

Rev. Hugh Penticost talks sense, and never more sensible than in predicting a good time when everybody works. He says:

Your social system decrees that men and women shall work ten or sixteen hours, six days in the week and then you expect them to go to church on Sunday. The preachers lament that people do not go to church and are growing irreligious and appoint committees and invent patent schemes to remedy the evil. I can tell you what the trouble is. Your social system has taken away all leisure from the people through the week, and they will have a holiday on Sunday. What society needs is a system under which more wealth can be produced, and shall be generally and equitably distributed. The whole people, man by man and woman by woman, must be richer before it can be better. When everybody works and nobody drudges; when everybody plays and nobody loafs, when children shall not become producers until their bones are hard and they have spent ten or twelve years in school; when no bread winner knows what it is to want for any needful thing; then mind will develop, conscience will grow healthy, true religion will thrive, robbery will be unknown, and envy, hatred and murder will be things of the past. What I hope to show you is the way which leads to that happy condition which is already open, and you may walk in if you will, reaching the end of the journey step by step, through an ever increasingly pleasant country: that no shot need be fired and no useful thing destroyed on the way. It is simply a question of removing, one after another, those laws which now deprive us of equal opportunities to labor and to live.

The foregoing shows a level head. It is the gospel of fair play. The words weigh a pound, some of them a ton. To "be better" men and women they must be "richer"—that is receive better pay for work. A method must be devised for the righteous distribution of the wealth which work creates. If working men would work together the millennium would dawn in a day. The laws which deny "equal opportunities" would be repealed and the era of "equal opportunities to labor and to live" would be ushered in.

A Roundhouse Sermon

BY

REV. EMORY POLISHER, DEE DEE.

MY brethren of pick and scoop, tallow pots and dinner pails, blouse and overalls, of fire and steam, I salute you—give you the hand of fellowship; extend to you my grapplers, and draw you very close to my cutaway and vest; I've been there myself. It is good to be here. I'm going to preach to you. I feel that I am your shepherd, but I don't think you are my mutton. I don't want to devour you. I think we ought to sing, that is the regulation way to begin services. Please turn to hymn on page 45 of our song book, P. M., and sing:

O for a thousand tongues to praise.
The federated brotherhoods.
They'll do tie to, all their days—
To join them does a fellow good.

O for a thousand hands to grab
The members of the federation—
A thousand boots to kick the scab.
The sneak, who seeks our degradation.

O for a thousand patent cuss words.
Double action, back and forwards,
Keen edged, like old Scotia's broadswords,
To slaughter liars, sneaks and cowards.

O for a thousand prayers to bust 'em—
The curs who want to snout us under.
We know 'em, and will not trust 'em.
But down 'em, sure as God made thunder.

Brethren, you sing with the spirit and with understanding. Your voices are like Mogul whistles. You sing with open throats. It means that to-day you have the track, the right of way, and that nobody must holt with you. I can't salute you with a "holy kiss"—I aint built that way. With me, marriage is not a failure, and my kisses are all mortgaged to Mrs. Polisher and the babies, but I salute you with toots loud and long, yea, verily, if my whistle was as big as "Peter's dome," I'd make the back townships think (Gabriel was blowing his horn—not taffy. On a hundred and sixty thousand miles of railroads in the United States, you make the trains go. But for you, things would be about as silent in the United States of America, as they are in the streets of Pompeii.

My brethren, it is common to refer to some people as the "salt of the earth." The trust barons, the monopolists, the heads of syndicates and corporations, men who corner food, and play the devil generally with affairs, believe they are the "salt of the earth." But my brethren, you are the world's bread and butter, its bacon and greens, its roast beef and gravy, its roast turkey and roast pig, its chicken pie. You are the world's "three square meals" a day. But for you, the millionaires would have to eat their stocks and bonds, their gold and greenbacks, their deeds and mortgages;

they would be reduced to skeletons and the rattling of their bones would make doleful music in the land.

Some one may say, "Brother Polisher is giving us 'taffy,'" Some one may say, "Brother Polisher, wants a big collection to-day, and that's the reason he says such pretty things to us." I don't take up collections for myself. I fire a locomotive six days a week, sometimes seven, and wait for the pay car. Some of you may expect me to hand around the cigars to-day on account of Mrs. Polisher's latest ten pound contribution of the masculine persuasion to the family cottage on Spruce street, a magnificent work of art, which speaks for itself, and reminds me that more hard work must be done than formerly fell to my lot when I lounged around saloons, smoked mean cigars, drank slop beer and strychnine tangle-foot, played pool, spent my money like a fool, got a red nose and an occasional black eye, and folks said, "there is a fireman who is going to the bow wows." But you see I didn't go there. I'll tell you why I didn't go there, I got married, and when I wasn't in the cab, when I wasn't at work, I went home. The saloon didn't get any more of my money. So you see I can preach for nothing and board myself. I aint no brag, I don't love to talk about myself, I don't want any collection, I'm just one of the boys. If you don't believe it, ask Bob Tyler, my engineer. Come and see old "45" when she's panting for a run, the brass is a mirror, and where she is black she matches ebony and shines like a native of Congo; that's the size of it. With these introductory remarks, the regular services will begin, and the congregation will waltz in and sing the following spiritual song with all the demi semi quavers thrown in:

When Sunday comes, I'll leave the road,
If I can, if I can.
And my soiled clothes I will unload,
If I can, if I can.
Of all my foes I'll get on top,
If I can, if I can.
I won't play pool, nor drink a drop,
And from my pledge, I will not flop,
I'll be a man, I'll be a man.

When Sunday comes, I'll go to church,
If I can, if I can.
Leave bad companions in the lurch,
If I can, if I can.
O, yes, on Sunday, I'll be good,
If I can, if I can.
Treat wife and children as I should,
Like a member of the Brotherhood,
I'll be a man, I'll be a man.

Sometimes, my brethren, I call upon the congregation to pray, but I have concluded to omit that ceremony to-day. This thing of making long prayers to be seen of men and women, is an old Pharisee custom that ought to be knocked, metaphorically, into a "cocked hat." The "carpenter's son" didn't like it. He said "when thou pray-

est enter into thy closet, and when thou hast shut thy door, pray to the Father," etc. That's my idea. It is that sort of prayer that gives a fireman patience when he is firing a wheezy old machine on the up grades, gives him spiritual muscle, keeps the cuss words out of his mind, out of his throat and off of his lips and tongue. It is a way of praying that a man can do in the day time and in the night time, and in the cab and in the round-house, and it is the kind of praying the Great Father of us all hears and answers. He is the great Master Mechanic, and it don't make a bit of difference how many worlds he has to manage and keep their tracks in order as they go whirling along, he has always got time to listen to a poor man's prayer that is offered in a closet; that is, in secret, and don't you forget it.

Now, suppose, my brethren, you see a fellow who is just chock-full of kicks—built like an army mule; or a fellow with as many croaks in him as a pond full of bullfrogs—just pray that the kicks and croaks may be gotten out of him, and if you keep at it, you will see the kicks and croaks go; go to—well, never mind where, so they go.

Once in a while you will strike a brother chock-full of the devil—may have several in him—prayer will get 'em out. You may have to do a little *fasting*, but stick to him, and by and by, you will see the devils making for deep water, taking possession of hogs, maybe, no matter what, so they go. This thing of praying in secret is a great convenience. You don't have to put on your cutaway, you don't have to dress up, you don't have to use any regulation prayer. It don't make a bit of difference whether it is grammatical or not, the Great Master Mechanic understands it. He takes no stock in red tape and circumlocution. The old machine may be going sixty miles an hour and rattling like an earthquake, no matter, He catches every word. I like that, it makes me strong when I am tired, it makes the rough places smooth, the dark places light. I put a little prayer sometimes in my polish, sometimes in my pick and scoop, sometimes in the fire-box, and it gets into my arms and I am stronger; gets into my eyes and I see better; gets into my heart, and I am more forgiving; gets into my face and drives away the frowns and gives me smiles that last till I get home, and then, it makes home brighter, makes Mrs. Polisher happier, and the children—well you just ought to see 'em. Therefore, my brethren, we'll all do our own praying our way without any regulations about it.

My time is about up, we are all hungry, I want my dinner, so do you. A few words and I'm through. Let the resolution of us all be, we won't be selfish, we won't be jealous, we won't be envious, we won't be

bigots. We all see poor men struggling better their condition. If there is any one here who is so everlastingly mean and contemptible that he don't want to help them if he can, I want him to get up and get it. If he is at heart a scab. He's got no more sense than a toad. He's like one of the things that stand in front of clothing stores dressed very pretty, he may be, but his clothes are all there is of him.

The world is full of genteel sneaks, and sometimes they get into labor organizations—spies for corporations—spotters, who, even they have their way would down any labor organization in the land. I shall always preach and pray for the defeat of the traitorous schemes.

And my brethren, I beseech you to do well to a class of workingmen, who, because they get more wages than some other workingmen, put on as much style as a dunghill rooster with a dozen old hens following him around the barn yard. This old rooster thinks he can go it alone. He wouldn't federate with anything else. He never had to scratch for a living. Look for that class of Vanderbilt workingmen, they are no good. Their pomp and pretensions, their arrogance and ignorance, if it were a peccacore would make the world vomit like a volcano. Watch 'em.

Please sing the doxology—

There is a day a coming—

Pray on brethren.

Yes, I see the day a coming—

Pray on brethren.

Yes, I see the dawning light.

The day it shall be bright.

When God enthrones the right—

Pray on brethren.

Then our banners will be flying—

Pray on brethren.

Yes, I see our banners flying.

Pray on brethren.

Yes, I hear the drums a beating.

See workingmen a greeting,

And millionaires retreating—

Pray on brethren.

A NATIVE of Africa, a Congo man, learned to read and write and had found out that England was a great country for Christians and that the Archbishop of Canterbury was a big chief of the tribe, and he forthwith wrote to him, as follows: "Great and Good Chief of the Tribe of Christ, greeting: The humblest of your servants kisses the bottom of your garment, and begs you to send his fellow servants more gospel and rum. In the bonds of Christ, Uganda. That Christianized savage has got much to learn before he fully comprehends the fact that the "tribe of Christ" in England and elsewhere have more greed than grace in numerous instances.

MECHANICAL.

Communications relating to Locomotive Running, Firing and Management, and other mechanical topics, are solicited for this Department.

Contributors are requested to be brief as possible, to write on one side of the paper only, and to forward copy so as to reach the Editor not later than the tenth day of each month.

MR. EDITOR:—The June Magazine comes to me with very much matter that can be truly to be very good. And while it is not my wish to enter an argument which is like a jug handle, it is necessary to straighten out people who have not the capacity to take a hint, or the good sense to present their posterior, and not expect a good kick—the hint having been passed over.

"Bushwhacker," "boom," "mirabile dictu," "woog," etc., may be naturally the spoken language of the writer, but people may not see it in his light, and so with the wish that the readers of the Magazine may judge as to how they know their business, I will proceed to show that a man can get mixed up in his endeavors to make "the" ordinary people understand, as Artemus Ward or some other fellow said "so much that aint so," and for myself I prefer to know less and be sure of it. There are plenty of men who have blundered before, but when a man has a chance to hint pleasantly given that he is mistaken, and he flies off to prove his premises and does not stop at some of his pet terms, I must expect to have all the facts put under his nose.

If the article in Rankine's Applied Mechanics he referred to, page 630, reads "The duty of an engine is the work performed by given quantity of fuel, such as one pound. The duty of a pound of coal varies in different classes of engines, from about 100,000 to 300,000 foot pounds. These are extreme results, as respects wastefulness on the one hand, and economy on the other. In good, ordinary engines the duty varies from 200,000 to 700,000."

The word duty in this clause has a meaning which the June article writer has not been made aware of, but will, later on. On the same page of same book, immediately above the last referred to quotation, will be found:

"Formula for the mechanical action of steam on a piston, both exact and approximate have been given in Article 656 equations six to thirteen." And on page 608 same book; last clause on that page will be found: "The exact theory of this case must be reserved for a special treatise on the steam engine and other prime movers."

Of course, a "bushwhacker" and a

"skulker" would not need to call attention to energy, forces, residual forces, actual energy, or the components of energy, energy stored and re-stored or to the transformation of energy or its conservation, as an educated man must have stumbled over such "small" factors, as is evidently the case, from the fact that he knew all about it—but didn't remember it.

In a previous letter I said these several factors were all mixed up by the "philosopher" who "knows so many things that aint so," now let us see whether the dust comes from "small potatoes" or from facts.

"The duty of a pound of coal" varies from 100,000 to 1,000,000 foot pounds. Our friend gets at it in a way that neither Rankine or any other reliable source of information has ever sanctioned. Efficiency is one thing and duty is another.

The duty of a steam engine is the number of pounds lifted one foot high with one pound of coal—or with 100 pounds of coal as the usual unit—not as our critic has figured out at all. As I have all sorts of engines in my books, let us see. Here is a pumping engine, doing 41.5 horse power, by the indicator, and it uses, by actual test, scales, etc., 309.25 pounds of coal per hour or 5.16 pounds of coal per minute. Now, if we take the method of the critic, last column page 509, we get $5.16 \times 6,000 = 30,960$ foot pounds or a little less than one horse power as $30,960 \div 3,300$ is less than one horse power, and this is not my way of figuring but the "Review of the Reviewers." But in the case I have cited it is more ridiculous than his, for reasons to appear later. But let us see what use our pump puts 309.25 lbs of coal per hour to.

The record says 13,119 pounds of water are lifted 4 feet and forced 71 feet so we compute it as a 75 foot raise to save time and not impair our result in correctness—then we use the following formula: $13,119 \text{ pounds} \times 75 \text{ feet high} \times 100 \text{ pounds of coal for that is the common unit} \div 5.16 \text{ pounds of coal used per minute, } 19,068,000 \text{ pounds raised one foot high with } 100 \text{ pounds of coal, and if we get at one pound's duty it will be } 19,068,000 \div \text{by } 100 = 190,680 \text{ foot pounds exerted with one pound of coal—under all these very wasteful conditions. As our critic sneers at Rankine's not taking account of the water and the match to light the fire with, suppose we look at the facts.}$

309.25 pounds of coal evaporate each hour 2474.25 pounds of water at a pressure of 80 pounds on the steam gauge. As we have 41.5 horse power, then $2474.25 \div 41.5 = 59.618$ pounds of water made into steam each hour to yield up one horse power, which is a very wasteful way of doing business. These figures are not theoretical in any sense of the word, and the proof of any mathematical

cal problem can be had if only the man is honest and knows how.

The indicator gives 41.5 horse power and the diagram gives 59,618 pounds per indicated horse power or 2474.25 lbs. per hour. The boiler without any pump blowing the steam into the air, gave up 8.12 pounds of water into steam at $78\frac{1}{2}$ to 81 pounds steam gauge pressure, so that in this case we drop the .12 and say 8 pounds of water for one pound of coal so that the loss from the boiler to the pump shall be accounted for.

In this case it will be seen that steam pressure, speed of the piston, the gain by expansion, the lifting by suction and forcing by pump piston are all entered into the computation. The critic in his assertions has blundered in a way that any schoolboy of 16 or 17 should be spanked for, by assuming that his theory was the beginning and end of the practice, and yet he may not be to blame, for more than likely he did not know any better.

As the doctor may want some authority better than mine for my assertion that *Duty* and *Efficiency* are not one and the same let him turn over one leaf and see page 629 in *Applied Mechanics* by Rankine, paragraph 703. "The **Efficiency of Heat Engines** is the subject of a peculiar branch of science, *Thermodynamics*, and an outline only of the principles on which it depends can here be given. If the number of British Fahrenheit units of heat produced by the combustion of one pound of the given kind of the fuel be multiplied by Joules equivalent, 772 foot pounds, the result is the total heat of combustion of the fuel in question, expressed in foot pounds. For different kinds of coal it varies from 6,000,000 to 12,000,000 foot pounds. This total heat is expended in any given engine in producing the following effects whose sum is equal to the heat so expended:

"1. The waste heat of the furnace being from .15 to .6.

"2. The necessarily rejected heat of the engine being $\frac{t_2}{t_1} \times$ the heat received by the elastic fluid t_1 being the upper and t_2 the lower limit of absolute temperature, which is measured from the absolute zero or 493.2 degrees Fahrenheit below the melting point of ice.

"3. The heat wasted by the engine— $\times \times \times$
 $\times \times \times$

"4. The useless work of the engine
 $\times \times \times \times$

"5. The useful work $\times \times \times$ "

The last paragraph on page 629 runs over on to page 630 and our critic will find here the elements of Carnot's law which is briefly: $\frac{t_1 - t_2}{t_1}$ in which the range of temperature divided by the highest temperature

gives the efficiency of the engine, or the temperature of the steam at which it is received, the temperature at which it is exhausted equals a difference, and this difference divided by the temperature at which the steam is let into the cylinder gives a quotient which is the percentage of efficiency of the obtained results from the use of that steam under that train of circumstances.

The doctor will find this whole matter laid down in Rankine's *Steam Engine under Thermodynamics*, and if he will learn something about it, he will be vastly more careful in his assertions and epithet bestowals and he can study out the tremendous difference between the *duty* of a steam engine on page 630 and the efficiency of a steam engine on page 629. And I want to call his most careful attention to the fact that Rankine printed the word "*duty*" in *italics*, so that he who runs may read, and Rankine was a most scrupulously exact man.

The heat units, and all the transposition of the energy of coal can be found in Rankine's *Steam Engine*, etc., and if our critic had have studied that first, his statements would, in all probability, have been vastly changed as to "possibilities" I guess.

The erudite doctor lays down a law for the "efficiency of the steam," p. 549, 1st column, $200 + 700 = 900 \div 2 = 450,000$ lbs., but he takes Rankine's "DUTY" for efficiency, then he figures out " $\frac{1}{6}$ " for efficiency of furnace and $450,000 \times \frac{1}{6} = 270,000$ foot pounds of force," and again " $\frac{1}{6}$ of this steam," all the time working from a mistaken basis—and all his own lack of observation he had only to look on the other side of the same leaf. Then he says $\frac{1}{6}$ of 270,000 = 45,000 and $\frac{1}{4}$ th of 54 = "6,000 foot pounds of work from the steam generated by one pound of coal." The italics are his. He then proceeds to chastise everybody by his misapprehensions of his deductions from a mistaken starting point. Now let us see, $33,000 \div 6,000 = 5.5$ or if 1 pound of coal does on 6,000 foot pounds of work and a horse power 33,000 foot pounds, then it requires $5\frac{1}{2}$ pounds of coal per minute to run one horse power, whereas it is a well known fact that $3\frac{1}{2}$ to $4\frac{1}{2}$ pounds of coal will and give us a horse power for one hour over and over again, and in the actual figures given on pages 499 of *June Magazine*, 563 pounds of coal a minute give 747.68 horse power one minute or the ratio is the same practically—60 to 1, and the 60 is the actual commercial result to the doctor's *One*.

Rankine says one pound of coal gives from 6,000,000 to 12,000,000 foot pounds of steam, and we haven't figured out the loss by the P. 2, 3, 4 as above, but it can hardly be in the lower estimate reduced to 6,000,000. Hence it is my candid opinion that the doctor is wrong and not Rankine.

I am glad to see on p. 509 that he does admit that his quotation was incomplete and *might* lead to a wrong conclusion, but he must first cease to call names. No gentleman does that, under any provocation, and if he does not know, why not ask? Some one may know—and in my own experience, the men who study and know, are the most unselfish men in the world, but the men who know the least, are full of assumption, and frequently fall as flat as a plank. Heat units, efficiency, duty, etc., can all be found treated exhaustively in "Rankine's Steam Engine," and it is a curious fact that Rankine's figures and formulas are to-day the practical standard of the steam using world.

For comparison of methods please refer to April *L. F. M.*, p. 309. Our critic takes "681.6 H. P. $\times 33,000 = 20,448,000$ feet pounds \div by 50,000 gives 409 lbs of coal per minute or a little more than 12 tons per hour." My quotation is cut short but is exact in figures and terms. He then declaims: "You must shovel in and burn 12 tons of coal per hour. Go back on *Rankin's* (Rankine) teaching, or say you don't have any locomotives of 681 horse steam power. I cling to the last horn, which will you take *L. A. Wilson?*" The writer of this claims 1st, that the basis of 50,000 lbs. in the way and sense he uses it is nowhere taught by Rankine or any other author of acknowledged standard; 2d, that the "*duty*" as translated by the writer of the quotation above is not known or used in commercial or scientific tests anywhere in the world; 3d, that locomotives of 700 Indicated H. P. are in use on any road where freight or long fast mail and passenger trains are run, and that 900 H. P. is not uncommon on special high speed-contract trains; 4th, that plenty of locomotives run that indicate 700 H. P. on up and down grades where 2 tons of 2,000 lbs. each per hour is not exceeded, when the coal is average grade; 5th, that the writer of these theories and blunders has made a mistake in terms and his application of them, and has "*clung to the last horn*" one time too many; 6th, that we are willing to forgive him if he wants to learn something about a locomotive and will tell him what little we know and won't call him a 'Lumphead,' 'Bush buster' or any other pet name, nor ridicule his statements.

My dear critic on p. 507 makes one of the worst of bulls if he will pardon the statement and if he don't feel in a pardoning mood, let the other readers see the point.

The "Dr." says: "But now in the May number of the *Magazine* 'Vulcan' comes to the front with flying colors and a great parade of diagrams and says it has been recently *accurately determined* by the infallible 'indicator,' and *mirabile dictu*, they find only 50½ at one end of the cylinder and 51½ at the other; boiler pressure 151 pounds.

How the mighty has fallen in a few months from two-thirds and more to one-third, a long step toward the truth. Please have the "indicator" *determine accurately* some more times. It is the best I ever heard of. If the apothecary weighed his medicines with *such accuracy* the undertaker's business would soon be on a big boom," etc., etc., *ad nauseum*.

Now what are the facts. In May 1890, are shown some indicator diagrams, pps. 416 and 417. How authentic they are I know nothing, but I propose to take "Vulcan" as his data reads and we will soon see who is the "Blacksmith." Card No. 1 is taken with 100 pound spring steam pressure = 151 lbs., and I find measuring the diagram on p. 416 that the realized pressure at steam line is 143 lbs at one end and 146 at the other, out of a possible 151, and I confess my own inability to see where the mighty have fallen, for my own impression is that it is an almighty good showing. Now then has our "Whistler" bulled again?

The area of the card in square inches: its length \times the scale 100, gives as a mean effective pressure for the whole length of the stroke of 50½ lbs. and 51.5 lbs. on the respective ends, a mighty good showing too for comparison. Now hasn't the doctor fell his whole length over this in his shouting before election, thusly? The valve has a cut off of 151 lbs. at about 30 per cent. of the stroke, so that only $\frac{1}{3}$ of the volume of the cylinder is filled with steam of 143 or or 146 lbs. apparent pressure. And this is all the water that is called for from the boiler, not the whole cylinder full of steam @ 51.5 lbs., and in this there is the gain due to expansion of a higher pressure to an increased total, as well as specific volume, and a reduction of pressure from 143 to 2½ lbs. above atmosphere, and the gain of about 120 per cent. in power by so doing. This will make a huge difference in the doctor's crowing. When he comes to get through the fact that $\frac{1}{3}$ of a cylinder full of steam of 143 lbs. with a density of .3467 pounds per cubic foot will expand to a cylinder full at 2 lbs. above atmosphere or 16.7 lbs. absolute at a density of .04235 pounds per cubic foot, and make an average pressure in the piston for the whole stroke of 51.5 \div 50.5 = 102 \div 2 = 51 lbs. above the atmosphere or 65.7 lbs. absolute at a density of .1534 lbs. per cubic foot, and this leads to another question that will interest our readers—if it don't the "Dr.," viz.: the cubic feet of steam in one pound of steam by weight or the specific volume is as follows:

143 lbs.	2.884.
2 "	23.350.
51.0 "	6.516.

Now the law of Rankine, Regnault and others proves that steam in its expansion *does work* and returns again to its natural

state in an approximation, and I have cited these figures to show all readers that the steam at 143 lbs. = $2\frac{1}{2}$ cubic feet to a pound, while at 2 pounds the volume has increased about 8 times, making 9 times as many cubic feet per pound and the pressure has reduced about 69 times in its capacity for converting the energy into turning the crank or producing results.

Now it makes all the difference in the world what kind of steam we make. If we make $6\frac{1}{2}$ pounds of steam at 150 pounds pressure with one pound of good coal, we get $2884 \div 6\frac{1}{2} = 17:664$ cubic feet, but this stuff is hot and full of snap. If we make 51 pounds pressure we get $6:516 \times 6\frac{1}{2} = 39:910$ cubic feet, and if 2 lbs., we get $23:350 \times 6\frac{1}{2} = 143$. Here then we have:

17:6	} cubic feet of steam in each case
39:91	
143: --	

from the same pound of coal. The middle one will run a fast train of 530 H. P. by cutting off at less than $\frac{1}{4}$ of the stroke. If the 143 lbs. could be used it would do far more in proportion than its pro rata cost, while the 2 pounds has only $\frac{1}{69}$ the power and would require a cylinder with 26 times the area of the present cylinder and valves like the furnace doors, etc., etc., etc. Other comparisons can be made with strictest regard for truth and the facts, but this should be enough for the present.

Card No. 7 presents another way of putting the question to which reference has been made in another part of this article, and it is one of the things our critic has got lost in. The "duty" of steam is one thing and its efficiency another, while all along in the computations of steam power there are inverse quantities. No. 7 says 40.2 lbs. M. E. P. on one end and 45 lbs. on the other end, and this mean exerted pressure while it is several pounds less, the indicated H. P. jumps up to 785. What's the matter? Nothing except that the speed of the piston has increased from 168 revolutions to 308 revolutions per minute, and as the speed increases each pound of mean pressure does far more work and so less pounds are needed, and as one of our locomotives can't be made to run at any one speed, the law favors us when we get in a rush and have to "whoop 'er up" by putting "the old girl right onto her fast steps." Excuse the slang, but this is right hand side "yip," and so at slow rate of speed we carry steam farther and get a higher M. E. P., and when the "old girl flies" we hook her up or cut off shorter, get less pounds M. E. P. and higher speed and use less steam per I. H. P.

It would be impolite to laugh, but if our friend and critic "can gulp," to use his own expression, the theories of his own with the light of his mistakes of computation and application shown to 'the boys,' they

will each one open the whistle five miles at a stretch, only for the rules.

Think it over "Doctor?" You aren't the first one to go wrong, and you probably will not be the last???

To continue briefly, for my time is limited, the facts are not in parallel to Prof. Rankine, but the assumed basis diverges at a considerable angle. So far as his comments on the Indicator go, the indicator is not absolute, but in this case its errors are far less than those of its critic. His "tape worm" is out of place and the indicator makers are safe until their critic can get nearer than $\frac{1}{100}$ ths of 1 to 41:5. An indicator that had absorbed a whole barrel of gin—not one horn—could not by any possibility get so far from home.

My good friend, Debs, knows the exact reason why a "nom de plume" was used by the writer, and he is responsible by consent, so no further attention will be given the innuendoes of the "Doctor." His next question can only be answered by a reprinting of the original statement. His theories are too widely apart from real practice to ever come together.

The discussions of Vulcan and Vacuum the writer has nothing to do with, and proposes to get the "Doctor" entangled in one case at a time, but he can have the facts from one of my old baskets anytime, and he will find that a few pounds of coal will send one of our 700 H. P. his 6:06 H. P. from 0 to 160 lbs. on the gauge.

Your momentum question will be laid over, as your old uncle has to get on a 'snorter' and get outside of his dinner at 3:08 P. M., now 2:30. Let me suggest to the 'Doctor' to study over the diagram on p. 499, June *L. F. M.* and see how much momentum in that train in a dead up hill pull. Notice that $747 \times$ H. P. didn't use up quite 2 tons of coal an hour and that $\frac{1}{4}$ pound of water a minute gave over a H. P., and that it took less than one pound of coal a second to give the 747 H. P. According to the "Dr." this would be $56:36 \div 6,000,338, 160 \div 33,000 =$ or $10\frac{1}{2}$ H. P. about.

Isn't there a hole in your skimmer somewhere? or shall we get a brick to make it work. Come again but stick to steam with your old

Uncle Silas.

CHICAGO, ILL., June 7, 1890.

MR. EDITOR:—Some of the contributors to the mechanical department will confer a great favor by answering the following questions:

1st. What advantage, if any, has the lubricator over the old style tallow cups in distributing the oil after it enters the tallow pipe?

2d. Can the driving wheels of an engine be counter-balanced so as to be perfectly balanced under all circumstances?

Respectfully, F. H. H.

Review of the June Magazine.

MR. EDITOR:--The advance sheets of the June *Magazine* are at hand, and with pleasure we note the unabated interest taken in this department of our book, and the ever increasing number of contributors to its pages. I am particularly well pleased to see the article on indicator diagrams by Mr. Thos. Pray, Jr., and hope that even among the multiplicity of his duties he may find time and inclination to write again, and give us the benefit of his large and varied experience in the avocation to which this *Magazine* and its Brotherhood owes its existence. I will allude to his article further on and use some of it to try to show the fallacy of Dr. Wilson's statements.

"Vacuum" is not quite satisfied with the way his article read, and the same feeling has no doubt been shared by every one who has ever written an article, for on review we find many places where the sense might have been greatly improved by a more fitting choice or arrangement of words, thus proving that our best efforts are ever open to improvement. I took the sense of "Vacuum's" statement to be that it would take the same amount of heat to produce the same amount of steam, whether it was done in the laboratory of the chemist or in the boiler of the engine, provided that the tests were made in a proper manner. "Vacuum" says that he is not responsible for the "cluck" valve, (which should have been check valve) and then proceeds to give what he calls a "modern" rule for estimating the horse-power of a boiler by noting its evaporation for a certain time, and from this to determine the evaporation for an hour, and then to allow a given quantity of water to represent a horse-power. In reasoning with the "Dr." I used the same method a few months ago, for I then called attention to the fact that if the supply of water were shut off for a while, the lowering of the water in the boiler would show how much was being made into steam, but the "Dr." failed to notice the point, as I have no doubt he will do again in the present case; the more so as the "Dr." has felt inclined to decry the powers of a "vacuum" to have anything to offer worthy of his consideration. Take a locomotive doing heavy work, and even if her boiler were 20 feet long and 5 feet wide at the water-line as "Vacuum" has put the figures in his example, it is a well known fact that it would not take 5 minutes to lower the level one inch, if the supply were shut off for that length of time, and I was therefore driven to believe that the boiler was evaporating it, and that the engine was using it, but whether we were getting all the work out of the coal or the steam that could be got,

was a question yet to be decided by the study of the subject and investigation of any and all ideas advanced on it, provided that they had some show of reason to sustain them, and hence a full and free discussion of the matter is to be encouraged and must result beneficially to all concerned.

The question of direct or indirect motion engine needs no answer from me at present, and I am ready to admit that the difference between the heavy and light sides of an eccentric will be its throw, if the axle has been turned down true to the centre at the points outside of the seat of the eccentric at which the measure is taken.

I am glad to find at least one of our contributors who was pleased to see the diagrams in the May *Magazine*, and that they were something new to him, being as he says the first he has seen of a locomotive's work, and that he has studied them to some purpose, as is evinced by the criticism of the steam-lines which he offers as the result of his cogitations. As by the kindness of Mr. Pray we have another diagram in the June *Magazine*, a comparison of the two taken on different engines and under different circumstances will be interesting, and will no doubt help us to understand the problems of the distribution and use of steam in the cylinders of an engine. "Vacuum" thinks that in Nos. 5, 6 and 7, the admission corner is too round and is inclined to blame the design of the valve-motion, but he must remember that Nos. 1 and 2 were taken from the same engine, and that speed is the only alteration which prevailed when the different diagrams were produced. Now, when the piston is moving rapidly a part of the rush of steam is taken up in simply trying to keep up with the speed of the piston and results in giving us the wavy lines, showing that at times the steam was doing its work and that at other times it found the speed too fast to keep up the pressure to the expected line. Take the diagrams sent in by Mr. Pray and we find the steam-line running very near parallel to the boiler pressure line and averaging only 10 pounds below it up to the point of cut-off, which has not been given by Mr. Pray, but is evidently so plainly marked by the drop in the line as to make it unnecessary to give it; the scale shows it to have been about 11 inches. Now the speed in these cards was only 107 revolutions per minute as against 168 (the slowest) and 308 (the fastest) revolutions as given in the diagrams I sent in; then compare the points of cut-off $11\frac{7}{8}$ and $4\frac{1}{2}$ inches and it is at once evident that a machine run under such a diversity of conditions and ever yielding so good a per centage of work must needs be a pretty valuable acquisition to the human family, and one which, while

capable of improvement, is not to be sneered at or to be underrated. The horsepower of these locomotives is given as 747 in the one case and as ranging from 296 up to 785 in the other case, and as neither one was made with a view of corroborating the other, or perhaps without the knowledge that the other diagrams were in existence, they prove valuable evidence for the power of steam.

INJECTOR "Vacuum," ever ready to take a body unawares, gives me a quiet "dig in the ribs" for at one time long ago refusing to accept "Roper's" theory of condensation as the solution of the injector problem, while now admitting that condensation has something to do with it. While I have admitted that condensation has some effect, it still remains a mystery to me, and not me only but many other students, how the mixture of steam and water acquires power enough to overcome the very power from which it derives its life.

Our young friend, Harry E. Pulver, makes an "attempt, as he calls it, to answer some of the questions propounded, and should have credit for it, for hardly ever do we find first attempts so successful in giving correct answers as "Harry" has been in his definition of "lead," and its effects on the action of the engine; he is also very near correct on the position of the valve which, however, should be stated as open to the extent of the lead.

ARCH Before I endeavor to answer "Buckeye" about the arch bar, BAR I should like to know which is the arch bar of the tender truck, and what its functions are in the frame of the truck. There are so many different patterns of trucks that it is impossible to know at once from its simple name which bar may be alluded to by "Buckeye."

DR. WILSON I hardly know whether it is worth while to try to argue with the "Dr." any longer, as he evidently feels that he has a poor case, for instead of bringing sound arguments to fortify his lost cause, he has resorted to the questionable practice of calling names, such as "whine," "critic," "exponent and champion of firemen," "ignorance," "bushwhackers," "sulking behind an incog.," and other equally convincing terms that the "Dr." is at least an adept in billingsgate if nothing else. If we felt inclined to use the "Dr.'s" weapons, we might intimate that all the people in and around Argenta, Ark., were dead, and that the "Dr." was thus obliged to hunt up a new population to try his skill, as it is evident by the opening clause in the June *Magazine*, or that we doubt that there is a "Dr. Wilson" at all, but we will be more charitable and take his word that he is an M. D., and also that Argenta

is too healthy a place for any doctor to thrive and that may be a more successful field opens before him in Kansas.

HORSE- As I have stated, the "Dr." has given us nothing new, and now he wants to know why I pay so much attention to him. Why the fact is that we are looking for something new and astonishing, and have been grievously disappointed, and we did not wish the "Dr." to pass off old matter as the production of his brain. Watt gave us a rule of 33,000 foot-pounds, and all that we would have to do after getting our pressure, area of piston and speed of piston per minute multiplied, is to divide by the "constant factor" 33,000, and the result will be the horse-power; but according to the "Dr." it would ever be imperative to have the very inconstant pull of the "Dr.'s" horse and its speed also for factors, and while the "Dr." talks as if he had something new, he ever makes his horses conform to Watt's measure, at least he seems to do so; but our readers will note that he tries to make the horses abnormally strong when hooked up to a train, in competition with a Locomotive, while he has tried his level best to deprive the latter of all semblance of power. Hark to the utterance of a "giant;" as he says, "I would be ashamed to act unfair to as little a thing as steam" and yet in this very same article, when confronted with the work done by locomotives, he is compelled to give up the sponge like this: "Let me say here once for all, I am not discussing the locomotive, it is steam. I have never denied what locomotives are doing." Ah there, now "Dr.," you do not deny what locomotives are doing, and as we have been ever under the impression that they moved by steam in the interest of science and all the arts, I call on the "Dr." to name the mysterious agency by which the work is done. When the "Dr." introduced us to the momentum of a large grindstone, I thought that perhaps it might be the force which augmented the weak efforts of the steam, but as our friend only sneers at the mention of momentum and wants someone to explain what it is, it must be some other occult force; perhaps a "Keeley Motor" or to have been stowed away in the bowels of our monsters, and have howled winked the sharp men of the past and the present. I hope for the sake of an anguished humanity which awaits the announcement with a becoming degree of curiosity, that the "Dr." will not keep us in suspense any longer, but will name it, even if it should affright us. I said that the "Dr." did not act fair toward steam, and endeavored to make myself easily understood, but it seems that the "Dr." either did not, or would not understand, and is now making a great parade of my ignorance, for saying "that the "Dr." wants the horses credited with

every foot that they move the train, while the piston speed is all the credit steam should have." The "Dr." then quotes the rule for my especial benefit, but I beg leave to assure him that I have not forgotten it, but that the difficulty arises from the fact that the "Dr." mixes things up so that after a while he will forget what he started in to do, and will be obliged to let us have all the steam we want, whether for work or to blow the whistle. After figuring out a "constant pull" for his horses, and having them receive the benefit of every foot they move the train, he turns to steam and tries to confine it to the cylinders, but the attempt will be abortive, for even if it does perform its work in the narrow limits of the cylinder, its effects reach farther, and while the rule "multiply the force in pounds by the space passed over in feet" is true in the cylinder, it is equally true in calculating the work furnished by the cylinder. Thus for instance, when a pair of cylinders are pulling a train along, no fair minded person will refuse to say that the steam driving the piston should be credited with every foot of space that the train is moved, but the "Dr." says no; "all you can have for steam is piston speed," entirely overlooking and ignoring the fact that the "poor little thing in the cylinder" has energy enough not only to impart its own speed, but a speed even 4 or 5 times as great to the train behind it. If a piston moving 4 feet turns a driver 16 feet in circumference, and thus pulls a train 16 feet to its four feet movement, will any one deny that the train was pulled 16 feet and insist that it only showed a movement of 4 feet? And yet that is what the "Dr." is doing, for as he says, "if you do not apply steam along the track or rail, you can not be credited so with it, but will have to be content with the piston speed." As this has been the "Dr.'s" way of calculating all along, it explains how he ever got his figures at about one fourth or one fifth the amount that any one else did in making calculations on the horse-power of a Locomotive.

The "Dr.," in trying to make a strong case on the indicator diagrams, says we have fallen, "for two or three months ago I claimed that we had an average of two-thirds of the boiler pressure on the piston," but now the diagrams showed only about 51 pounds as an average. When the "Dr." makes such a statement he ought to be sure of his case, but until he brings proof that I made such a claim I have nothing to fall from, and am perfectly willing to abide by the indicator tests, for they give us a far more reasonable solution of how the work done by locomotives is done, than the "Dr." with all his hints at some hidden mystery has yet done. I must confess that I have been fool enough to believe a great many things that have been told me (some-

times to my great injury in pocket and in mind), and I am rather inclined to take the "Dr.'s" advice and not be so ready to believe what is told me, and suppose that the "Dr." escapes good all these injuries by never believing what any one tells him. But as I read along in the article I find that the "Dr." makes a sad admission in his explanation to "E. S.," and am led to exclaim, "Physician, heal thyself!" for he there admits that even in so small a matter as the quantity of coal used on a trip he had to take some one's word for it; but he presumes that they told him the truth, and this in the very face of the fact that no one else seems to think that it is true, and those engaged in the same line should be presumed to know a little about it. And yet when we go back over the "Dr.'s" articles we find that he has really given us nothing but what some one has told him from "Rankine and Dana" down to the "boys at the scoop;" and yet this is the man who would advise us to take no one's word for anything that we cannot prove to ourselves. If our editor thinks that he can spare any more space to a discussion of this topic I will in my next answer the questions which the "Dr." wishes, but unless such special permission is granted, I will not be a party to a further occupation of space which might be put to better use.

"Jack" asks, "does the valve admit steam to the cylinder as soon when cut off at half stroke as when worked in full motion?"

The answer is: Yes, or rather a little earlier with the shorter cut-off, for hooking up increases the lead, and this would mean an earlier admission of steam.

The piston of an engine never has its fastest travel in the front end of its cylinder on account of the so-called angularity of the main rod, which is caused by the action of the pin carrying the back end of the rod out of line with the motion of the front end to which the piston is attached, and while the back end is being carried out of line the motion of the piston is that much faster than when it is again brought into line as it is when the pin is coming over the other part of its stroke.

In looking at this question of the fulcrum of a locomotive driver I have ever taken the view that it was at the centre of the axle, as that is the only point that is stationary from a trainman's point of view, no matter how it may look to others who can only watch the engine from their "sanctum" as it goes by, but cannot go with it, as seems to be the case with our friend "A. D.," who is bound to have the fulcrum at the rail in spite of our arguments to the contrary. A different

point of view often accounts for seemingly irreconcilable statements, as in the case of a switch light, which seen by one man is said to be red, while another one may with equal truth say it is green, and if they cannot come to the same line of vision, no amount of argument will be able to convince either of them, for each one would rather believe what he sees than what some one tells him; and so I am agreed to disagree with "A. D." on this point.

"M. J. H." asks how to
INCREASING increase the speed from 50 to
SPEED. 51 revolutions, when 50 was
the limit of the best performance of a given engine, which

he says has $\frac{1}{16}$ inch lead. For so slow a speed, which with a five foot wheel would be only about nine miles per hour, the steam admitted by the $\frac{1}{16}$ inch opening of the lead before the piston in its comparatively slow movement reaches the end of its stroke, would be very apt to make too much of a cushion, which would produce too high a compression and have a retarding effect on the machine, which would be diminished by taking away some of the lead. Such at least is my view of the case, from the meagre facts furnished with the question.

After answering a number of the pending questions, "F. E. & M. V." undertakes a diagnosis of "Dr. Wilson's" case, and thinks that all the symptoms point to a lack of practical experience with the subject, and in this view most all our writers will support "F. E. & M. V."

If Mr. Lockwood is to be believed, wee-wahing and most all other evils are to be traced to the counter-balance, but the alternating pull will no doubt be found to be the cause. It will be found on close observation that this motion does not always show itself on any engine, but that at certain slow speeds it makes its appearance and continues to operate until a greater speed is reached, when it either stops altogether or becomes less noticeable. All locomotives I have ever seen were put up with the right side leading, or one-quarter ahead of the left. Therefore, when the right pin is on the upper quarter in running ahead, the left pin will be on the back centre, and both of them will, for the next quarter revolution, have steam in the back end of the cylinder, and the forces exerted on the two sides will be nearly balanced; but during the next quarter the steam on the right side will have a tendency to push that side ahead, while the action of the other side is to pull back. As this same action also takes place on the other half of the stroke, it is evident that when running slow enough to give these alternating forces time to act, it will pro-

duce the very motion designated as weewahing, or nosing around; but with an increase of speed it is found that there is not time enough between the balanced parts of the strokes to permit this swinging around to the alternating pulls.

"Balance Valve" seems to
SLIPPING think like the rest of us, that
it would be a strange thing to
DRIVERS. have drivers slip without the
use of steam, and thinks that

there is a chance to get up an improvement on our present methods, if the force that does it could be captured and applied to regular service. I have been bothered a great deal of late by slippery drivers, but it has been caused by pulling heavy trains up steep grades with a light engine on a bad rail. Sometimes the rail would be frosty, and at late the low lands would be overhung with a cloud of fog, which would make the rail as slippery as if oiled for the occasion. In all my experience of slipping, I have never found her slipping except when using steam, and even after she has sometimes caught me unawares and has got quite a speed on in slipping, I have found that if steam was shut off she would stop her "dancing" right away. I would like to persuade myself that my present engine is as smart as any, and that she could and would do as much as any one of her size, but she won't go without steam, and it is no use to ask her to do so. I have tried it a few times and it was "no go."

"Cowboy" (who, it seems,
MORE is now a railroader), asks some
VALVE questions which evince a dis-
position on his part to keep his
MOTION eyes and ears open, and to find
out the reason why things are

thus and so. An irregular exhaust is one of the quickest indications of a disarranged valve motion, and if the sides were working against each other as "Cowboy" has it, she would be very "lame."

2d. The lengthening of an eccentric rod would not have the same effect as lengthening the valve rod; because if the eccentric rod is lengthened it first acts on the lower end of its rocker-arm by pushing it ahead, and thus pulling the upper arm just as much the other way or back, while lengthening the valve-rod would push the valve that much ahead, and thus would be quite contrary to the longer eccentric rod.

3d. An eccentric slipped one inch back of its true place would open the ports too late—that is, after the piston had already returned a part of the way on its stroke—but if slipped ahead of its place it would admit the steam too soon and have too much in the cylinder before the piston reaches the end of its stroke.

4th. If either pin is on the true dead centre no amount of shifting the revers-

lever can be made to cover the ports on that side, for throwing the lever does not move the valve on that side, but leaves it open to the amount of lead it has, no matter whether she is to move ahead or back. On the other side where the pin is on the quarter the valve will open the front port while the lever is in one corner, and will open the other port when in the other corner, and while half way between or in the centre will have both of them covered.

5th. On starting an engine with left main crank pin on the lower quarter, and lever full forward, the left piston would start to travel back; the left front steam port would be wide open; the left valve would be moving ahead to recover some of the lap but would not yet have reached the edge of the port, which it would do when the piston had moved a few inches more. On the right side (if the right is leading) the piston would have to start ahead; the back port would be open to the amount of lead and the valve would be moving ahead so as to open the port wide before the piston could move away more than two inches. The big part of the left eccentric passed the front of the axle when the piston was about 10 inches from the front end of its stroke; the big part of the eccentric is therefore near the bottom forward eighth on the left and as the position of the eccentrics must bear the same relation to each other that the pins do, the right eccentric will be found to be a quarter in advance of the other or at the lower back eighth.

6th. If steam issued from both cylinder cocks after passing the dead centre it would show that the piston rings allowed steam to blow through or that the cylinder or the valve and its seat were cut, thus permitting steam to get where it had no business to be.

7th. If steam issued from front cylinder cocks at the right time, and from the back one too late it would seem to indicate too much lap for the travel of the valve, for if travel and lap were right the admission would be either right or wrong on both ends of the cylinder.

8th. By increasing the lap without increasing the travel we could get so much lap that the port would not open at all and every addition of lap will narrow the amount of port opening just that much and hooking her up will not relieve the difficulty.

9th. On an engine equipped with relief valves on the steam chest, the cylinder and piston do not draw air from the same source when running ahead in forward motion, that she does when running ahead reversed. Running ahead without the use of steam does not change the action of the valve from the way it moves when using steam; the steam-ports are therefore ever open on

the end from which the piston is moving and as there is a suction caused by the vacuum in the space behind the receding piston, the air surrounding the steam-chest lifts the relief valve, enters the steam-chest and through the open port rushes after the piston till the valve cuts it off; the air is then forced up the stack by the same route which the steam has to use when it is exhausted, and thus causes the fanning of the fire to which I have alluded in my last article. When running reversed the action of the valve is to have the ports open on the end toward which the piston is moving thus producing pressure in the chest and the steam-pipes and thus holding the relief valve shut. The space on the opposite side of the piston is open to the exhaust but as the piston is moving away from this end the same suction as before causes the air to be drawn from the stack, and this is afterwards forced into the chest and pipes until their limits of strength are sometimes passed, and a rupture of the parts results; the only relief against this excessive pressure is to be had by opening the throttle, and permitting some of the pressure to enter the boiler, from which it could escape by the pop or safety valves, as some of the "boys" when in close quarter have noticed.

CHANGING	In regard to changing the
THE SIZE	diameter of cylinders "R. L.
OF CYLINDER.	G." coincides that no other
	changes need be made, but
	explains that a change of
	stroke would involve other changes, and of
	course he is right in this statement of the
	case.

SLIPPING	A defect in the running
OF DRIVERS	gear of a locomotive would
	have a decided tendency to
AGAIN.	retard the motion of all
	parts in connection with it,
	and instead of making the wheels turn
	faster than was caused by the speed, would
	make them turn slower, and thus cause a
	sliding instead of a slipping of the wheels.
	Perhaps "Heavy Weight" in citing the case
	of a sprung journal as a reason for slipping
	misconstrued the point in question, as there
	is certainly no reason why a sprung axle
	should help the speed of any drivers; if
	such were to be the case it would be a good
	idea to get up all axles sprung and thus
	gain power.

Vulcan.

WINNIPEG, MANITOBA, May 24, 1890.

MR. EDITOR:—In reading a book on fuel and combustion, by Clark, I saw some ideas that may interest the readers of our journal. In the following treatise I do not undertake to show how the smoke from coals can be burned, but I do undertake to show how coals may be burned without smoke, and this distinction involves the main question of economy of fuel. When smoke is once

produced in a furnace or flue, it is as impossible to burn it or convert it to heating purposes as it would be to convert the smoke issuing from the flame of a candle to the purpose of heat or light. When we see smoke issuing from the flame of an ill-adjusted common lamp, we also find the flame itself dull and murky, and the heat and light diminished in quantity. Do we then attempt to burn that smoke? No; it would be impossible. Again, when we see a well adjusted Argand lamp burn without producing any smoke, we also see the flame white and clear, and the quantity of heat and light increased. In this case do we say the lamp burns its smoke? No; we say the lamp burns without smoke. This is the fact, and it remains to be shown why the same language may not be applied to the combustion of the same coal and the same gas in the furnace as in the lamp.

The above is the writing of C. Wye Williams, A. I. C. E.

Four gallons of nitrogen and one gallon of oxygen compose atmospheric air. If there was only oxygen the fires would burn too quickly. Nitrogen will neither burn nor support combustion; it is for the purpose of diluting the oxygen. The gases of the coal are hydrogen and carbon. In themselves they are of very little use in a fire-box without the oxygen of the air to consume them. It takes two atoms of oxygen to consume one of carbon, and the product of combustion is a glowing white. You see a common coal oil lamp that is turned up too high so that it smokes, the reason that it smokes is because it does not get sufficient oxygen. The same thing can be applied to a locomotive fire-box. Say that you have your fire burning at a glowing white heat and you put a heavy charge of coal in. It not only prevents the oxygen getting through the grates but chokes your fire, makes a lot of smoke that lowers the temperature in your fire-box, and goes in the flues and out through the stack unused for the purpose of heat. I have put these few ideas together to explain why young firemen should fire light and often to keep their fire at a glowing white heat.

T. Reece.

EAST SAGINAW, MICH., May 18, 1890.

MR. EDITOR:—I see by our *Magazine* for the month of May that Bro. Max, of Jackson, Tenn., wishes to know which is the quickest way to set an eccentric while out on the road, so I thought I would ask you to give the "boys" my idea on it, and ask a few simple questions about boilers, as they are of such importance that they are the first you will be asked when examined for a license to run a stationary engine where the laws require it.

My idea of setting a slipped eccentric is

this: To set a slipped go-ahead eccentric place your engine on the dead centre; then put your eccentric at an angle of 90 degrees (that is, with the big side of the eccentric straight up), then tighten up your eccentric bolts and you will have it set square. If it is a back-up eccentric, put your engine on the dead centre and do the same; or you can throw the link over and that will bring your eccentric all right.

The questions alluded to are:

- 1st. What is steam?
- 2d. To what temperature must water be heated before it will boil?
- 3d. What is a boiler?
- 4th. How many braces has a boiler?
- 5th. How are the seams of a boiler made water-tight?
- 6th. How is water supplied to the boiler to replace that which is converted into steam?

7th. What is an injector?

8th. If you were asked to find the distance between the centre of your front axle or the front drivers and the centre of your cylinder, how would you go to work to do it on a standard engine?

9th. If you should want to find out how close your piston comes to the cylinder head, how would you go to work to find out?—that is, after you had knocked off the cylinder head and broken your piston.

Yours truly,

J. A. Hancock.

Amboy's Imps.

ONE TURN

MORE FOR

M. J. H.

"Do not rush into print against the Imp," is a partial injunction of our friend A. I. in the April *Magazine*. As I have not contributed anything to this department for the past three months, I don't think I can be accused of rushing very wildly in this matter. Now, while A. D. has shown aptitude in sketching and drawing, and has selected an excellent symbol to represent resistance, I fail to find anything illustrative in either his April or June contribution that hasn't been worn threadbare in previous issues. Referring to the principles involved he says, "A. H. Tucker has shown that I understands them." Thanks, A. D., if there is any truth in that statement you are wrong in some of your deductions. If I remember correctly we have had Mr. Forney's statement on the question of "fulcrum" in print these columns and A. D. is welcome to the comforts he can extract from that. If I know anything about this matter A. D. has located the resistance wrong. According to appearances in Fig. 1 the April number page 304 he has located it where the engine couples to the tender. My idea is that the principle resistance to locomotion in the locomotive comes through the frame. But the point at which it acts on the machine

where the driving box bearings come in contact with the journal of the driving axle. There is where I locate it and there is where I think it will be found at all times. In Fig. 1, page 304, of the April *Magazine* A. D. practically locates it in the same place, but he has left it to the imagination instead of marking it on the drawing. Now look at Fig. 2 of the same page and number. If this railroad business is carried on as claimed by A. D. the resistance to locomotion must be at the little gentleman's feet instead of at the long-eared gentleman's nose, for the former is the point at which the opposing forces meet according to our friend's representation. As you are handy with the pencil, A. D., will you not illustrate how you apply your theory to the vertical cylinder locomotive? Such a one for instance as is illustrated in the *Locomotive Engineer* for May. Notwithstanding it is an easy matter to ask a question that is hard for ones-self as well as others to answer, I want to ask A. D. this question: Suppose a cylinder or ball of any given diameter be placed at the top of an inclined plane of, say 45°, and friction or adhesion be eliminated, will it slide or roll down the incline? Give reason and what, if any, of the mechanical powers are employed or act in the operation.

HOW TO GET M. J. H. asks a very practical question in the June number and I will give him one answer to it. Cut off the valve and turn the eccentric back on the axle so as to leave the lead as it was before, or a little less will do. This ought to be illustrated, but I haven't the time to do it. A. H. Tucker,

CHILLICOTHE, MO.

Expired Railway Patents.

The following list of railway patents, furnished by F. B. Brock, Patent Attorney, Washington, D. C., expired during the month of May, 1890, and are now free to be used by anyone, viz.:

Automatic Brake, G. E. Earl.
Car Pusher, A. S. Bailey.
Sleeping Car, J. S. and D. R. Leighton.
Railroad Crossing, J. Wood.
Switch, J. F. Sinthicum.
Connecting Car Bodies and Trucks, C. D. Tisdale.
Car Indicator, C. H. Coffin.
Throttle-valve for Locomotives, H. Watkeys.
Car Spring, A. Bridges.
Hand Car, J. D. Hinckley.
Safety Switch and Signal for Draw Bridge, E. H. Tobey.
Self-feeding Tank, B. D. Moody.
Signal, Johnson and Layton.

Persons desiring copies of patents, drawings and specifications, can obtain the same for fifteen cents, by applying to Mr. Brock, whose address is as given above.

GALVESTON, TEXAS, May 22, 1890.

MR. EDITOR:—I am constrained to write a few lines this morning, as I received advance copy for June yesterday and find some queries and statements which admit of long lists of arguments.

In May *Magazine*, "Vacuum" proposes a different basis for computing horse power in engines of all kinds than has heretofore been customary to use as a standard, and calls forth various comments on his departure. So far as I am concerned I think that of all the good, sound, sensible things "Vacuum" has always contributed, this is the most logical and sound and most to be commended for the weight it bears.

Rankine's basis for computing horse power as quoted by Dr. Wilson may have its merits from an economical point of observation, but as to practical power developed and used it has no weight at all; it admits of too wide a range for anything like accuracy in general results. The minimum as I and the maximum 19, either of which can be selected or both rejected, and any intermediary figure selected as a basis for computing the power. One man could take the lowest and demonstrate that a machine possessed, say ten horse power, while another, with equal accuracy, could demonstrate that it contained the power of one hundred and ninety horses. Now let us take a practical, common sense view of this matter: We will assume that our engine is an animate being, that the heat has generated *life*, and as long as fuel is added in proper quantities to produce the required combustion and water supplied to the boiler to be evaporated the life continues to exist, and is capable of being utilized to great advantage. As soon as these conditions are altered there comes a change. Allow the fire to be extinguished and the engine *dies*; becomes inanimate. *Is it any different with a horse?* Cut off his supply of fuel (hay and corn) and the fire of life dies out. Even cut his fuel (feed) short, and his efficiency is greatly impaired, and in a very short time, too.

Now we will draw a comparison: As fuel and water are the requirements of a locomotive or other engine, and the regular feed and drink the requirements of horses and mules to keep up energy and develop power, we might just as well say that horse power did not exist in the amount of muscle and bone *developed* in a horse, but in the amount of muscle producing nutriment contained in a given quantity of food, and this will admit of almost as wide a range as Rankine's good average amount of utility with best engines.

What would you think of a man who would come to you and say, "How much can your team pull?" You own a good average team, take good care of them, feed

them well and are proud of them. You answer that they can pull a ton on a given road under given circumstances. This you know can be done, as you have proved it repeatedly. But this man produces a book and pencil, asks you how much corn, oats or barley you feed at a time and how often; also how much hay and other roughness is added, and how much water the horses drink. He begins to figure—allows a certain amount of nutriment to sustain the body, give sight to the eyes, hearing to the ears, nerve force to the brain, proper bodily nourishment to the blood, and a given amount for waste in offal, and shows you what remains to *generate muscle and bone*, and says your horses can't pull a ton at all, in fact, they are *not horses* in strength, they are only a pair of *billy goats*, because the amount of nutritious units in the amount of feed consumed cannot develop such power. What would you say, or would you say anything at all?

I am inclined to think that, in the language of Josh Billings, you would immediately rank him among the damp-hool fraternity.

The only basis for computing power possessed is that of power developed and utilized. If your team can pull a ton under given circumstances they are a pair of horses, let any man say what he pleases to the contrary—"de fax am dar." If this is then a good average demonstration of the power of the horse, you are developing two horse power. If you take a machine which can, under the same conditions, pull one hundred times as much, or one hundred tons. Then you are developing two hundred horse power, and it don't make any difference whether you utilize 1-100ths or 99-100ths of your power producing units, in so far as the actual power is concerned. The economy of the machine is all that is affected in any way by these different conditions.

We are told that by practical demonstration in the chemist's laboratory it was determined that one volume of water converted into steam of 140 pounds pressure contained 179 volumes. Now we have something tangible. Here we have a safe basis to work on and one that will stay by us and not elude us as soon as we stretch out our hand to grasp it.

Dr. Wilson, in a prior number, said he did not believe that in a locomotive the expansion would reach 179 volumes, but he failed to give any reason for so saying, and, as like causes produce like results is a law of nature, I am inclined to take hold of *that horn* and stay by it. If causes are the same, atmospheric pressure and density of water the same, you can't make anything else out of it, for as soon as the cause is reached the effect is produced. Of course

there are some exceptions, but they only prove the rule. Take water containing alkali or any kind of vegetable or mineral impurity and it can't be produced, because a part of the water goes out with the steam, caused by the foaming of the water. Here, of course, the volume of steam would not be so great as it would be, to a certain extent, mixed with water.

Now, I will give you a brief history of a trip with a 16x24 eight wheel engine, and this is a fact. We started out with a train of forty loads, and sure enough loads we found them. At a junction we set out six merchandise cars, and took instead six lumber. We filled our tank and started, but the forty loads were so heavy that our speed could not be got up to more than six miles per hour. The tank held 2,700 gallons of water, and was full, and boiler full. Steam was kept at 140 pressure; no waste through the pop; pressure never below 135 pounds, and only down to that occasionally when injector had to be put on in addition to the pump to keep water in her. The engine was worked at from twenty inches to the corner all the time, but very near all the time at twenty. In twelve miles run (time two hours the injector would not work on account of water being too low in tanks. We cut and run for the tank, and reached it with one good gauge in the boiler and the tank as dry as a chip, not a drop left in it, and all had gone through the cylinders as *dry steam*, no foaming. The engine was an excellent steamer, and under the given conditions did not burn much coal, about a ton, or perhaps a trifle over, so she must have utilized over the average of her heat units; but what catches me is the amount of water evaporated—2,700 gallons—623,700 cubic inches of water in two hours, 5,197½ cubic inches per minute. As steam at 140 pounds pressure is 179 volume to one of water, we have a total consumption of steam 111,642.300 cubic inches in two hours, 930,352½ cubic steam in one minute.

Now let us investigate some of the doctor's figures as given for computing horse power.

I burned one ton of coal in two hours, making twelve miles, according to his calculation. The result would be that the engine developed 3.03 horse power one-half ton of coal per hour (his example, page 50) *June Magazine*, giving one ton per hour credit with 6.06 horse power, one-half ton per hour should be one-half of that, or 3.03, 6,000 foot pounds of work from the steam generated by one pound of coal, as I use his average, also, of a good steaming engine. and as I use one-half ton per hour. I must use 16½ pounds per minute; $6,000 \times 16\frac{1}{2} = 100,000$ foot pounds, Watts' standard: $100,000 \div 33,000 = 3.03$ horse power.

The rule for computing horse power by size of piston head, or rather area of piston head by average steam pressure, and length of stroke and number of strokes per minute, would give about the following result: Area of cylinder, 201.1624 square inches. As the engine was working nearly full stroke, it is safe to estimate two-thirds of boiler pressure as being utilized; so we have $201.1624 \times 90 = 18,104\frac{1}{2}$ pounds of pressure on the piston. This, by the complete stroke of 4 feet, 72,416 pounds; this, by the speed engine being 5-foot wheel, would make 352 revolutions to the mile, requiring one hour to make six miles, would be 2,112 revolutions per hour, a fraction over 35 revolutions per minute— $72,416 \times 35 = 2,534,560$ foot pounds $\div 33,000 = 75\frac{3}{4}$ for one cylinder, or a little over 151 horse power, quite a difference; and I would like to know which horn the doctor will take now, for I am sure that if he could find horses of which it would require only 3.03 to pull such a train he could burst all the locomotive works in the country, as no company would spend from \$6,000 to \$10,000 for a machine which would require the pay of an engineer and fireman at \$4.00 and \$2.25 per day respectively, and the regular running expenses, besides from \$500 to \$1,000 every two years to overhaul, when the best of horses could be had at from \$125 to \$200 each and need no repairs, and would live about half as long as a locomotive will last, and their bill for feed would not be near as much as the fuel and oil for the locomotive. Let all intelligent men compare all of the doctor's writings with this, and if it so occurs that I have taken his scalp, why I can't help it, for in spite of good, sound logic he refused to be convinced, and has made statements that such amount of steam could not be generated in such a time. All I have to say is, just go to firing and see.

The train consisted of twelve loads of coal in box cars, loaded nearly to the roof, 22 cars of steel rails, from 90 to 100 rails to the car. 56 pounds per yard, 560 pounds per rail, or 50,400 pounds on the lightest loaded cars of steel, and 56,000 on the heaviest, the six lumber cars contained loads of yellow pine lumber, and the conductor said the lightest lumber load was over 52,000 pounds. I wonder what effect Dr. Wilson thinks the pull of 3.03 horses would have on such a train of cars.

As for me, I shall, until something positively better is produced, take the horn which says steam pressure on the piston does the work, and that it has enough power to do good work, as well as being more economical as an aid to the commerce of the country than horses, and when it says that, I must say that an engine which costs \$6,000 or \$7,000 must do more work than any small number of horses, or it is not a paying investment.

The doctor calls for facts, and wants no more "incogs," as they are small potatoes. Well, maybe so, but sometimes it so occurs that those who do not remain "incog" are not even *small potatoes*, and while the doctor is firing out so promiscuously, calling people fools and such other endearing terms, I would like to call to his mind the saying about those who live in glass houses, for if he is not careful he will surely have a crystal shower falling on his bald pate before he is aware of it.

The Dr. wants facts, does he, well why in the name of common sense don't he give some facts; why don't he demonstrate some of these statements of his? I have read the greater part of his writings and I have failed to find a solitary point established, a solitary statement demonstrated; true the Dr. went into a long array of figures, but what does that signify? Why any 15-year-old boy or girl either with half a common school education could do as well; they don't amount to anything, for the Dr. says *suppose* a number etc., and makes a long demonstration and then says, it ain't so; then he says, if so and so, you would get such a result, *but so and so don't exist*, but his saying it don't exist does not prove it; and he will have to commence on different tactics.

The Dr. wants facts, does he? Well, I will give him a little *grade* to ascend; when he gets over it, I may give him some more facts. I presume the Dr. has often observed the street car mules in a town where the streets are hilly; what a trouble two good mules had to start a car loaded with people on a grade of from 50 to 90 feet to the mile and after they got it started they could not make a speed of six miles per hour if they worked their feet off, yet the Dr. says that he has demonstrated that an engine (17x24) capable of taking a train of 4 coaches, 1 sleeper, 1 baggage, 1 express and 1 mail car total 8 cars, up the same grade and get up a speed of from 15 to 20 miles per hour only ranked as 6.06 horse-power. Out upon such nonsense! Does the Dr. think that three times as many horses as are required to pull a street car and make 4 or 5 miles per hour will even *start* such a train, or one-half of it, or even one-quarter of it, much less take the entire train and make 20 miles per hour with it? Such engines as I mentioned here do this and do it right along "an de fax am dar" but I don't presume the Dr. expected to find them, but he has and when he manages that hill, maybe I could find another grade for him to ascend, but that one he will never surmount as it is 12 inches to the foot a yard wide and reaches to the top line of the atmosphere it is insurmountable as he knows as also does everybody else who knows anything at all about the ability of horses that they could not in

such numbers begin to start the trains that are pulled every day.

TIME TO *Another fact for the Dr.: I used to fire a 17x24 blood engine on a fast freight run, the one I mentioned on which my average was 35 miles per ton, steam pressure 135 pounds. I have frequently had gauge register 125 pounds, drop in two scoops of coal and observe that I had a few big lumps to break, then to give me time to wield the coal pick I would drop in two more, at the same time observing that the gauge still registered 125, pick up my coal pick and before I could strike a half a dozen blows and pull out the lumps I could hear a simmer at the safety valve and hurriedly open the door to prevent popping. I would have 135 pounds of steam, an increase of ten (10) pounds, in about (40) forty seconds and this in addition to what was being consumed by the cylinders and the engine working at from 8 to 10 inches cut-off making 12 to 15 miles per hour up hill: "dis am a fack" and I have had the same experience on numerous other engines and so have hundreds of other fireman, and if this don't prove that the Dr.'s *supposed*, that an engine will not make steam as rapidly as they are credited with, is a *wrong* suppose, then I can't read the signs correctly.*

THE DOCTOR'S *The Dr. seems to have been anxious for some one to take his scalp and if he don't now acknowledge that I have it, why all I have to say is that he should not have said that it would be a hairless one, but should have said he did not have any scalp at all, and in fact did not even have the wherewithal to contain such a commodity.*

VACUUM. *The Dr. says nature abhors a vacuum and calls Bro. "Vacuum" a fool, but like all the balance of the Dr.'s sayings, this has not even the stability of a vacuum, as a vacuum is capable of being destroyed to give place to atmospheric pressure, or what that pressure can force into it to replace it, but this statement is forever condemned to nothingness, there is no redemption for it. The fact is nature does not abhor a vacuum, but frequently creates it and to very destructive purpose as is demonstrated by the cyclone leaving in its path the tale of the power of the vacuum.*

The only adversary vacuum has is atmospheric pressure, they are antagonistic to each other and can't be combined or mixed and on this antagonism rests the secret of the working of the pumps and injectors; without it such things as the successful workings of steam fire engines, locomotive or stationary or marine engine pumps or injectors, any kind of force pump in fact, could not exist, as the source of power lies in the

fact that atmospheric pressure is a selfish and jealous article and wants to occupy the entire earth's surface and as soon a vacuum takes a little bit of her territory she turns herself about to dislodge the usurper and by that means the water forced in as the atmosphere can't through the water, but can drive the water up a height of 33 feet to worry her alive sary, vacuum.

Do all the ships saved on the ocean briny deep by the constant use of the pumps; all the houses saved in times of fire by the working of steam engines; all the commerce of land and sea made possible by the proper application of vacuum heard Dr. out in saying nature abhors a vacuum or do they bear testimony to the fact that nature created her as a second child, taught atmospheric pressure, the elder, forever antagonize the younger for the welfare of mankind?

*Some writers I would like to answer, specially "Jack," "Cowboy," "F. E. & M.V." a mistake by "Vacuum" about the theory of an eccentric and a few others, but I have written so much that I must close for this time. The editor will take out the *blade* which would of course render useless the writings of an*

Eccentric Stop

SAGINAW, MICH. May 21st, 1890

MR. EDITOR: -Dr. Wilson is evidently feeling well. He accuses me of calling him a fool. I used antithesis to demonstrate fallacy. I am not aware that I called him a fool, but it seems that I struck a spot if the doctor is disposed to accept figure literally. I can only say: "Well, Doctor, if the coat fits you, put it on; there is no question but that you have demonstrated your ability to wear it with honor. Now, Doctor, you need have no fear that I will pass your tirade by in silence. I ain't bothered by that way, and although it *suits* me to wear *incog*, I am probably as well known to the members of the Brotherhood as you, and correspondents of this department have advised me that I am not afraid when convinced to hold an untenable position on any subject to come out like a man and acknowledge my error, but I have never yet been driven from a position by invective or frothy nunciation, and I don't propose to commence now. To state the case plainly, I have attempted to overthrow Watt's theory of H. P. and set up a theory of your own, instead and if your theory cannot be reconciled to plain every day facts, your opponents are not to blame; they didn't understand the facts. You must remember that I am the prosecutor in this case, and on the burden of proof rests, and you would do well to employ something besides invective and abuse to convince your opponents of the facts that run counter to your theory.

are but phantasms, dreams and snares. Also accept the burden of proof yourself and quit trying to shift it on your opponents. I care nothing about your theories, it is a matter of perfect indifference to me whether they are right or wrong. Your opponent's duties end in setting you right on your application of the facts by which you must prove your theories correct. If you can't reconcile the one to the other, don't beggar the argument and resort to invectives to sustain yourself, but come out like a man and acknowledge (what is evidently true) that you don't understand the facts. Now Doctor, I published not merely a table of figures, but a *demonstrative rule*; the application to the question involved is as plain as noonday to a man having a grain of common sense. You say, "I was writing on the question of steam and did not know that gravity was steam, please give me one of your rules for estimating horse-power of your locomotive where gravity is used as a factor in the estimate." I know of no rule for estimating horse-power that takes gravity into account and the only man I ever heard attempting to bring gravity in as a factor is *yourself*. You call on me to solve the problem of gravity. I want you to solve it and give the solution through the columns of the *Magazine*. It will be a profitable lesson for us all." Now in April *Magazine* did you not give us some examples of "something real?" Did you not in these examples take the entire distance run by these trains and charge it all up as *work done by steam* and compute horse-power on that basis? Don't evade this question, but *answer* it. Do you not know that there is not and never has been an engine that could *pull*

I use the word *pull* in its literal sense) the trains you have instanced the distance indicated in your examples with the amount of coal shown? and that the *trains were running the engines* not the engines the trains for a large part of the distance shown? Don't evade this question, but *answer* it. Now please explain by what rule of logic or common sense you can compute horse-power on this basis. You are the only person yet engaged in this argument that has got momentum, gravity, inertia and a little of every occult force known to nature mixed up with your steam, and it is because we have attempted to eliminate these forces from your calculations as unfair to steam that your ire is awakened. Did you give one single figure in your example to prove that your engines *used any steam at all* in getting their trains over the road? Don't evade this question or hide behind the miserable subterfuge that you are not discussing the locomotive now, but *answer* it. Now take those examples again and tell me the exact amount of steam used in doing effective work on those trips—understand,

not coal, but *steam*. Figure horse-power upon that basis and I will accept your result as approximately correct. You claim to be discussing *steam*, and I want you to stick to your text and discuss *steam*. Now I want you to produce your authority for the statement "If a man burns more than a half ton of coal per hour he will have little time to ring the bell or wipe the sweat from his face." The assurance with which you advance this proposition is truly amazing. Are men who have been burning double and quadruple this amount to accept such statements from you without question? Does not the fact that you have shown such palpable ignorance on this question lead to the inference that you are equally ignorant on all subjects connected with locomotive running and management? You will probably answer this with the plea "I ain't discussing the locomotive now." In the name of common sense what are you discussing? You attempt to force your theories on locomotive-men who use these columns for the sole purpose of discussing the locomotive and when shown that your theories and their facts don't agree, you resort to ridicule and invective and enter the plea that you are not discussing the locomotive. You are certainly an adept at juggling figures. I admit that slack is a factor in starting of freight trains, but not to the extent that you have shown. Yes, I see trains started every day that are made up with the express purpose of eliminating slack as far as it is possible to do so and are to all intents and purposes the same as one car and I could give you (did I see fit) the approximate weight of our heavily loaded excursion trains which are run here in the summer season and consist of from 12 to 16 coaches handled by an 18" and sometimes a 16" engine. Now you may call all this *traddle* or anything else you please, it will not alter the case one particle and until you offer something better than mere assertion to strengthen your position and refute the *facts* that confront you, I at least shall pay no further attention to you, but, as I said before, once convince me that your theories are right and capable of application to locomotive work and I will lay every other consideration aside and accept them. To conclude, I would advise you before undertaking to tear any more indicator diagrams to pieces to inform yourself on the first principles of link valve motion. You don't need to go very deep into the subject, just the *first principles* are all you need to know. You will then be able to understand how the indicator shows a mean effective pressure through one stroke of 50½" and through the other stroke, 51½" at a boiler pressure of 151 pounds and with a 7½ inch cut-off and also spare the readers of this department from the spectacle of a man attempting to argue on subjects

of which he is entirely ignorant. Now Mr. Editor, I am aware that I have departed somewhat from the lines of legitimate argument and I apologize for so doing. I shall not offend to this extent again. While the amount of coal burned here may seem large to "Vulcan" I can assure him that I have been careful to keep within the limits rather than to stretch them. He can see by "F. E. & M. V.'s" letter that they also know something about burning coal in Nebraska. My reason for calling "Vulcan's" attention to his answer to "A. T. C." on boiler pressure was that he seemed to lay particular stress on the answer, thus conveying the impression that only those parts of the boiler in direct contact with the steam were subject to strain. I would like to answer many of the questions appearing this month, but cannot venture to monopolize any more space, so will leave them for some future time.

Vacuum.

EVANSTON, WYO., May 13, 1890.

MR. EDITOR:—I have just returned home and seen the *Magazine* for May, and find on reading my letter of March 17th, on the slip of driving wheels on a down grade without the use of steam, that I have made an error in equating the pressure causing slip and the work destroyed in slip. In place of taking 303 revolutions per minute, I should have taken 5.05 revolutions per second and formed the equation thus:

$255 \times P \times 5.05$ actual run, $\times 2 \text{ ft.} \times 2 = 171,102.5 \text{ lbs.}$ Hence $P = 33.24 \text{ lbs. per square inch back pressure.}$

I have little doubt that the most of your readers will have noticed the error and made the correction for themselves, but in case there are any that have not, I will feel obliged by your publishing my correction.

Yours faithfully, *Evans.*

P. S.—In place of reading in my letter of March 17th *reduction parts*, read *eduction parts*.

TAYLOR, TEXAS, May 25, 1890.

MR. EDITOR:—In the May number of the *Magazine* I read an article from "Vacuum," in which he reproduced a device by which it is claimed water can be drafted 37 feet. "Vacuum" does not say whether he believes the device will do what is claimed for it or not; but since he has called our attention to it, I think we should express our opinion of it. As for myself I beg leave to differ from the originator of the device and will give my reasons for so doing. As "Vacuum" says, water cannot be drafted a greater height than 34 feet. Now since this is practically true, *why* is it true? Science teaches us that suction is created by vacuum and vacuum by the absence of air, hence by removing the air from the suction pipe we form vacuum, and this, suction,

which in its turn drafts the water. Now since we cannot draft water to a greater height than 34 feet, it is from one of the following reasons: Either we have no pump which has power to remove all the air from a suction pipe exceeding 34 feet, the vacuum formed when the air is all moved has not the power to draft the water to a greater altitude. In either case the device does not remove the difficulty. Let us now examine the diagram.

We have "A. B." the suction pipe, 37 feet long; at "C." is a T nipple and an elbow, 25 feet above water line. "D. E." is stand pipe level with the pump or 12 feet long. It is a known fact that air presses equally in all directions; hence it would require as much power to remove all the air from a short pipe as a long one; therefore it would require as much power to remove the air, either in whole or in part, from standpipe "D. E." as from suction pipe "A. B." But on the hypothesis that the pump has not the power to remove all the air from "A. B.," neither can it remove it from "D. E.;" hence the device on this basis is a failure. Under the other hypothesis the pump has power to remove all the air, but the vacuum formed has not the power to draft water. It is a self-evident fact in case that the device is again a failure for by whatever means the air is moved from and the vacuum formed in suction "A. B." the power of suction remains unchanged. This is my opinion of the theory, and at the first opportunity I will give it a practical test. In the meantime I would be glad to hear from some of others on this subject.

Er. Su.

MOBERLY, Mo., May 15, 1890.

MR. EDITOR:—In reply to O. R. and in May *Magazine*, I would say that I have been and am firing a very free steaming engine, and find that the best way to fire is by leaving door on latch. And in proof of this I will give the example of this engine as compared with other engines same division. The engine I have firing has been on the hardest run on division for eight months, and has not her flues calked over five times, while the other engines on lighter runs have to be calked from twelve to fifteen times.

As an example of light firing, this engine has taken a train of eleven coaches for ten miles with eighteen scoops of coal.

Er. Su.

MINNEAPOLIS, MINN., June 15, 1890.

MR. EDITOR:—Having for some time been an interested reader of the *Firemen's Magazine*, I should like to ask a few questions:

1st. Why are the rocker-arms of some locomotive engines put up out of centre, as per Fig. 1, or have in them what some call lead, while on other locomotive engines of different pattern and of the same size the rocker-arms are central, as per Fig. 2.

2d. Why is it that on some engines the rocker-arms are $\frac{3}{4}$ '' out of centre, while on others $\frac{1}{2}$ '' and still others are only $\frac{1}{8}$ '' out of centre?

3d. How, in a mechanical way, do you find how much out of centre to make the rocker-arm, and what mechanical rule is used?

Respectfully,

Subscriber.

THE *Railway Age* has presented a table showing that 666 new lines, with an aggregate contemplated mileage of 53,436 miles, have been projected since January 1, last; that on these lines 14,818 miles are under construction or contract, 9,617 are surveyed, and 29,001 are incorporated or projected. The article concludes: "The fact that in the first three months of the year, new lines representing over 53,000 miles have been brought to public notice, and that their construction is urged and to a large extent probable, is impressive evidence of the enormous field for railroad enterprises which the United States still affords. The mileage proposed in these three months is equivalent to almost one-third of the entire railway mileage of the country now in operation, and yet the projection and inauguration of other lines is still going on at an equally rapid rate, and the prospect is that the roads projected and in various stages of development during 1890 will exceed in aggregate mileage our entire present completed system."

The New Brakeman.

He had just finished husking corn down in Indiana, and came to town to get a plug of tobacco. A brakeman on a passing freight train had been taken suddenly ill, and the conductor hired him to take the brakeman's place. They had not been on the road long when darkness overtook them, and while stopping at a small station the rear brakeman put out the red lights on the caboose. The conductor and his new brakeman were standing on top of the next car to the engine, when suddenly the new brakeman, dropping his lantern on top of the car, started toward the caboose at a break-neck speed. The conductor was puzzled at his strange performance. But on he went at a 2:10 gait until he reached the caboose, when he kicked both red lights into a thousand pieces. Returning to the conductor, panting like a quarter-horse, he was asked what was the matter with him. He replied: "Gosh dang, that was a narrow escape; did you see them lanterns? They were red hot, and if I had not got there when I did they would have set the caboose a fire." *Switchman's Journal*.

THE Central Railroad of New Jersey has awarded the contract for double tracking the Lehigh & Susquehanna Division between Mauch Chunk and Wilkesbarre to Whitney & Burk, of Philadelphia. The contractors are erecting shanties for their laborers at Pen Haven Junction, where the work will be begun on a four mile stretch within a fortnight. The work of double tracking at Solomon Gap is included and the whole job is to be completed before next winter.

DR. BARNARD says: "It is difficult to procure men at any price who combine superior skill, comprehensive mechanical knowledge, and general intelligence in such proportions as to make them valuable as foremen, managers and specialists in mechanical pursuits, or in the operating branches of railway service."

THE Widdifield & Bowman Electric and Air Brake Co., of Toronto, Can., whose brakes were recently exhibited on a train on the Lehigh Valley Railroad, will soon equip a much larger train, making all the parts stronger and more durable than heretofore.

THE Pennsylvania railroad system has the largest gross receipts of any in the United States, aggregating upwards of \$50,000,000 per annum, although its mileage is less than that of some of the other systems.

THERE is no class of men who have contributed so much to the present civilization as the mechanic.

Woman's Department.

EDITED BY IDA A. HARPER.

Letters pertaining to Woman's work, such as education, temperance, home and fireside, and kindred topics, are solicited.

Correspondents are requested to write plainly, on one side of the paper only, and forward their manuscript so as to reach the Editor not later than the tenth day of each month, directing all communications for this Department to

MRS. IDA A. HARPER,
TERRE HAUTE, INDIANA.

A WORD ABOUT MARRIAGE.

A carefully compiled set of marriage statistics brings out the fact that the age for marrying has steadily increased for a number of years, the average now being twenty-six years for men and twenty-four for women. The age in professional and wealthy classes among men is seven years and among women is four years more than among the so-called working classes. The proportion of those who never marry is much greater among the former than the latter. The wealthy men cultivate such luxuriant tastes that they cannot afford to marry and they surround themselves with so many comforts that marriage is not a necessity; while wealthy women are bred to habits and requirements so extravagant that they frighten away prospective husbands. The wretchedly poor and ignorant marry and people the earth with no thought of responsibility, no provision for the present or the future, and they are a burden upon the frugal and the industrious portion of humanity and a detriment to the mental and moral improvement of the human race.

It is within the great body of the middle classes that we find the most perfect form of the marriage relations. Here people marry from the highest motives. Genuine and unadulterated love is the inspiring sentiment. Men and women marry with the intention of founding a home and a family. They are willing to commence in a humble way and practice a rigid industry and economy. They are simple and frugal in their tastes, and a praiseworthy ambition for higher things lends an inspiration to toil and self-denial. In consideration of these facts it is not surprising that from this class of people come our best statesmen, our most successful writers, our most enterprising business men and our highest exponents of religion and morality. The middle classes are the large reserve force of the nation. We draw upon them, as from a great quarry, for the materials to build our government.

In the passing of the years, through the regular revolutions of the ages, the middle class becomes the aristocracy. Thrift and

industry produce wealth, age and respectability secure position. With riches and influence come habits of luxury and idleness which fasten themselves more strongly upon each succeeding generation. The various forms of excess and immorality follow in the natural course of events and, as nations rise and fall, so families thrive and flourish, reach their zenith, decay and pass away. The ranks are quickly filled from the stalwart forces, disciplined by hardship and endurance, fresh, healthy blood rushes into the arteries of the nation, and the great life goes ceaselessly on. The foundation of the commonwealth is the home and family and these can exist only through marriage. Thus, when all is told, we come back to the simple fact that no institution in all the world compares in vital importance with that of marriage. In consideration of this subject we should employ the keenest perception, the wisest judgment, the highest impulses of heart and mind. In both boys and girls from early childhood should be developed those characteristics which shall fit them for husbands and wives. In that future, that Utopian hereafter, when marriage shall have reached its highest state, will never be necessary to ask the question "What are the best methods for raising husbands and wives?"

With the hot weather upon us, there is no matter of domestic arrangements that seems of quite so much importance as that of keeping cool. It is almost an impossibility for people to be amiable amid the discomforts of summer, the heat, the dust, the insects and the various annoyances of the warm months. By careful management these evils may be partially mitigated and this beautiful season of the year may not be robbed of all its enjoyment. There is nothing which contributes so much to personal comfort as screens. Where people own their homes the outlay of money in filling every door and window with a wire screen brings manifold returns. Where property is rented a piece of wire netting or even mosquito bar tacked across the window is much better than no protection and the wire doors, very cheaply made and will generally fit an ordinary door. It is sometimes urged against screens that they exclude the air but this is not perceptible and they certainly shut out so many objectionable things that a slight measure of air can be spared. The luxury of enjoying three good meals a day without sharing them with a solitary fly is worth great deal, and so is a whole evening spent in reading, writing, or social enjoyment, undisturbed by moth or beetle or any winged creature, while the delight of a sound night's rest unbroken by that pest of warm weather, the mosquito, cannot be put into words.

The first requisite for comfort in hot weather is indisputably—screens.

There is one distinguishing peculiarity in a man's nature which compels him the moment he enters the house in hot weather to throw everything wide open, doors, windows and shutters, and even the curtains must be sent flying up to the ceiling. It is a sort of universal failing and must be borne with the best grace possible. The careful housewife, however, will open wide the doors and windows in the early morning and fill the house with pure, fresh air and then, if the day is to be hot and sultry with no wind stirring, she will close shutters and windows and keep them closed until the sun has gone down and the evening breeze springs up. Only those who have tried it know the delightful coolness it imparts to the house. With proper care the temperature within may be kept many degrees cooler than that on the outside.

Heating food and drink should be avoided in a great degree. One hearty meal a day is perhaps essential but warm bread and hot drinks and quantities of meat should be dispensed with. They supply a great deal of heat to the system and the consequent attempts to "cool off" frequently produce congestion and chills. People who are idle suffer as much or more in summer than those who work. They have time to think about it and to consult the thermometer and fret and fume and make themselves and everybody else uncomfortable. Let the day's work be followed by a bath, some clean clothing and moderate recreation and a great deal of comfort and enjoyment can be secured. A most essential observance is to avoid violent emotion, to keep as even tempered and equable as is consistent with the nature of things and to have great consideration for others. Summer is nature's holiday and one which, with proper judgment and discretion, may be heartily enjoyed by all her children.

ENCOURAGED by the many interesting and valuable replies received in response to our inquiry as to the Best Method of Managing a Husband, we will ask our correspondents to give us their ideas upon the Management of Wives. Do they require any managing or have they so high a conception of their duties that they fulfill every obligation, no matter how they are treated? Are they remiss in their daily walk and is it the fault of the husbands? Are our lady readers satisfied with the way their husbands manage them? In observing the domestic life of your friends and neighbors does it strike you that husbands exercise the same tact and judgment that are supposed to be necessary on the part of women in order that married life may not be a failure? Or do they rely upon the fact that, as they hold the

pocket-book and their wives are entirely dependent upon them, it is not necessary for them to make any special effort to promote harmony and bring peace and contentment into the home? How would the wives wish to be "managed"? Let us hear their ideas upon this question. We would also like to know what the gentlemen think upon this subject. What are their theories and experience? Do they ever give any thought to the management of their wives or do they simply depend upon their authority to have things as they desire around home? A great deal has been said about the management of husbands, now let us know how the wives are to be managed or whether they require any management.

REPLIES to "Kicker" still continue to pour in. We feel sure our readers will agree with us that this individual has been pretty severely handled and that through his contribution he has really done a service to the Woman's Department. The many excellent letters received have shown unmistakably the prevailing sentiment in regard to this feature of the *Magazine*. It is not necessary to consume any more time or space with this subject and we hope our correspondents will now take up some other topic.

For Woman's Department:

A SACRIFICE FOR PA.

By BESSIE MORGAN.

"Well, Desire, I've told ye what he said, near's I can remember. It kinder took me by surprise. Somehow I hadn't thought of you as bein' old 'nough for anythin' of that sort, but after all, you aint no younger'n your ma was. But what be I to say to George?"

"Tell him he's a goose! Tell him I couldn't think of such a thing, and I don't see how he came to!"

"Ye don't mean ye won't have him!" incredulously.

"Pa! Did you think I would! George Hayes! It's too ridiculous!" She leaned against the kitchen door post and laughed.

Her father was standing just outside, on the step. He turned upon her severely.

"Yes, George Hayes, Desire Palmer! What ye got to say agin him? You've knowed him all yer life, an' ye know jest what he is. You may travel the wide world over, an' though you'll find many a wus man, you won't find ary a better! An' I wout have ye laughin' at his honest love in my presence, either!"

Desire hung her head.

"I—I wasn't laughin' at that, Pa, but I couldn't. I know he's good—but—but his nose turns up, and he's such a wide mouth, and—and big hands."

"Well, I never!" said Pa, after a few minutes of silent astonishment. "I never expected to hear George Hayes objected to 'count of his looks! Mouth too wide! His teeth are han'som as yourn! Big hands! He's got a heart to match, I tell you! What if they are big? They'll hold yourn all the safer!"

"They wout then!" said Desire, rolling her little soft hands up in her apron, as if the terrible George Hayes was standing by, ready to pounce on them at the first chance, literally as well as figuratively. "I shouldn't think you'd want me to go off and leave you, Pa!"

"That's jest where 'tis," said Pa, eagerly. Ye woudn't have ter go. Our farms lie close together

an' we'd turn 'em inter one, an' we could go an' live in his house, or he could come over an' live in ourn, jest 's we pleased. Think what a farm that would be! An' he's got the money to go on with it. I've worked, an' saved, an' raked, an' scraped all my days, an' I've *managed* to get on somehow. I haint laid up nothin'. I couldn't, for I've got that old mortgage paid off at last, but I aint so young as I was once, an' I *should* like to feel I could 'take a little comfort, fore I die'."

"Pa!" cried Desire, then she darted to the stove, and flung the oven door open wide, and a cloud of blue smoke streamed out. "There!" she said, "the biscuit are burned to a crisp, and it is all your fault for talking to me so, and making me forget what I was doing." Well, I suppose we'll have to make the best of it, and have them for tea. You feel so poor to-night Pa!"

"They look pretty black," said Pa, inspecting them carefully. "I guess you'd better make some more, Desire. Well, I'm goin' out to the garden ter work till supper's ready. I won't give George no answer till ye've had time ter think it over. If ye'd set your mind on somebody else, I wouldn't say nothin'. But ye haven't—less it's some 'maginary feller, ye won't ever see. Yer ma named ye well. Ye've ben wantin' ye didn't know what ever sense ye was born!" said Pa resignedly, as he went out. Then pausing for an instant on the step, "Have ye noticed how the apple trees is bloomed out, Desire? We'll have a grist of fruit next fall, if nothin' happens."

"Glad we'll have something," said Desire, as she brought out her bread board again, and laid it on the table before the window. An apple tree spread its cloud of pink and white blossoms just outside, and a robin was singing in the branches.

"Poor Pa!" said Desire to herself, as she sifted the flour.

What he had said was perfectly true. He had worked and struggled all his life. Who could wonder he longed for a little smooth water now. What pleasure had he ever had all these years.

But then, George Hayes—Desire did not dislike him, quite the contrary, and she had not meant she thought him ugly in her remarks about his personal appearance. No one had ever looked at his laughing, saucy face without liking it. But merely that he would not do for a lover. It was preposterous to think of him in that capacity, or to imagine him guilty of serious love making.

Here someone came suddenly up to the door. Desire turned hastily, and blushed for the first time in her life at the sight of her neighbor.

"Going to have a sewing society, Desire?" inquired he, pulling off his straw hat and smiling at her without any embarrassment.

"No, of course not!" with a little stare. "Why?"

"You seemed to be getting in such a supply of hot biscuit. Where'll I find your father?"

"He's in the garden," adding to herself, as her lover departed. "Now he'll go and ask Pa what I said, and Pa'll have to tell him and that'll be settled. O poor Pa! I believe if I had it to do over again I'd say yes! All my life long I've been wishing I could do something to help Pa and make him happy, and then when I had the chance I wouldn't!" Desire's eyes filled with remorseful tears.

The corn house door swung open, and out came her father, with his hoe in his hand, which he had been sharpening. Fate had given Desire another chance to sacrifice herself, if that was her wish. Her heart sank, but she gave herself no time to think. She rushed out and caught him by the arm.

"Pa!" she cried breathlessly, looking up to him, the soft wind ruffling her pretty hair. "Pa, George Hayes came to see you a minute ago, and I sent him to the garden, because I thought you were there. But Pa, I've thought it over, and—and I've changed my mind. You can tell him yes!" Then she flew back to her biscuits before he could express either surprise or joy.

It's done, and now nobody can say I don't love Pa! I *couldn't* do more for him than to let him choose my husband for me! Then Desire's thoughts wandered off, in a girlish dream, of what a lover *might* have been, and she was still contemplating her ideal when stern reality in the person of George Hayes returned hastily.

"Did you mean it, Desire?" and coming up to her, he took her by the shoulders and turned her round, to face him.

Desire looked up at him, with a funny expression, half frightened, half defiant, and yet with a sort of trust in him at the bottom of it all. George met the look for a minute, and then bent his face to hers. But like a flash, Desire sprang back, her cheeks growing pinker than the rose-flushed apple blossoms.

"You mustn't do that!" she said.

"Why not?" asked George, with a little laugh. Then he grew suddenly grave. "Why did you send me word my answer was yes, Desire?"

"If you had rather it was no, I can change it very easily!" said she, her pretty lips decidedly inclined to pout.

"Is this the way you sacrifice yourself for Pa?" demanded her conscience sternly.

But George said nothing. He only walked away to the door and stood looking out. Perhaps he was disappointed.

Desire hurried her biscuits into their pan with a possible dispatch, a prey to conflicting emotions. Then she slid them into the oven, and closed the door on them with decision. She had made up her mind. She walked up behind her silent lover and touched him lightly on the arm.

"George, I wasn't polite to you, just then, but you see nobody ever kissed me, but Pa. But you—*you can* if you like!" with a breath like a person preparing for a plunge in cold water.

George could have laughed, wretched as he was, the desperate determination in every line of the face upturned to him.

"Thank you, dear," he said, very gently, "but don't like this at all. Do you suppose I want to kiss you against your will?"

Desire was not pleased. She had not wished to kiss him, but having made up her mind to perform this painful duty, it was not for him to object. She was turning away from him coldly, when he stopped her.

"Why did you send me such an answer, Desire? Why did you send me such a question?" said she, feeling that her only safety was in evasion.

"My excuse could hardly have been yours," said sadly, and then in the tone of one who feels asks an unnecessary question, "Do you love me, Desire?"

Desire drew a long breath.

"I—like you, rather."

"And I—love you, too well, to be satisfied with that. I'm afraid. The fault was mine for supposing such a thing could be possible. Don't look so unhappy, Desire. I'm not going to torment you with my addresses. We can still be friends. Good by!"

"O dear! O dear! O dear!" cried Desire, as she as he was gone, and she hid her face against the door post and cried, just where she had hidden it before, when Pa first told her of this unlucky proposal.

But short time was allowed her to give way to tears. Pa's voice was heard speaking outside.

"Why George, you ain't goin'." I guess not to-morrow! It's six o'clock and supper's all ready, an' you must come in an' try Desire's biscuit!"

Then George's voice, hastily explaining that he had important business that must be seen to at six o'clock! Supper all ready! How and what Desire rushed wildly to the cupboard and began setting the table as fast as she could. Surely Pa was the most unreasonable of men! Did he suppose she could get engaged and get supper, both at once, say nothing of breaking the engagement and everybody's heart at the same time! What was she to have for supper? O, codfish balls, and the goodness they were all ready to be fried. *Ge couldn't* be such a goose as to come back with that there they were, standing in the door!

"Why, Desire, you're kinder late 'bout supper to-night!" said Pa, with radiant countenance.

One glance at them told her that he had given George no chance to explain, but had brought in whether he would or no, and her heart sank.

"What on earth's made your face so red, child?" inquired Pa, gently pinching his daughter's flushed cheek.

"Perhaps if you were getting supper over the

with about two minutes to do it in, you'd look hot!" exclaimed Desire, as she placed her fish balls on the table and returned for the biscuit. "These are scorched, too," she said resignedly. "We'll have to eat them this time. I can't make any more to-night!" Pa looked annoyed.

"Why Desire?" he said, "taint like you to be so careless—I don't know what George'll think of such cookin'!"

"They're not burned much," said George, hastily. Then they took their places at the table, when Pa, instead of his usual short grace, uttered a heartfelt thanksgiving for the mercy and goodness that had that day been shown him, in granting him the wish of his heart, concluding with a prayer that all the blessings of his life might be showered on his son and his daughter.

There were tears in his eyes and a tremble in his voice, as he finished, and his wretched daughter hung her head, and busied herself pouring out very queer cups of tea, hiding her scarlet cheeks as much as possible behind the teapot.

George listening to Pa's prayer, understood at last why Desire had said yes to his unwelcome offer. He had no teapot to hide behind, so, though he looked very white, he held up his head and stood to his guns like a man, and protected Desire from her father's embarrassing remarks as far as was possible.

"There's one thing about it Desire," said Pa, "twont do for you to try to keep George on codfish. It's plain enough he don't like that kind of eatin'!"

"It's very nice indeed," said George, who had eaten about three mouthfuls, and unconsciously Desire sent such a look of gratitude towards him, from under her lashes, that Pa's attention was attracted, and he laughed aloud.

"Reckon you'll take another after that George," he said, putting it on his plate. "Girls are easy to please, if you praise 'em enough—'Twas less'n an hour ago this one was laughin' at the very idea o' takin' you an' sayin' yer mouth was too wide—an' yer hands was too big—Haw! haw! haw!"

But no one joined in Pa's laughter. There was an awful frozen silence for an instant, and then Desire jumped up and fled from the room.

"Catch her George!" cried Pa, "serve her out well for sayin' you wa'n't ha'n'som!" and George sprang up and followed her. Desire had flown for refuge to the darkened sanctity of the parlor, hiding her face on the hair cloth arm of the slippery, inhospitable sofa.

"Go away!" she sobbed. "You had no right to follow me! You hate and despise me!"

"Desire," said George, coming up beside her. "I only followed to tell you I didn't mind. It was all perfectly true. 'Hate and despise you!' I despise no one but myself! Don't cry so Desire!" dropping down on his knees beside her, half desperate at the sight of his cruel love's grief. "I'll go and explain to your father, and then I'll go away, and you need never see me, or hear of me again!"

"You think of nothing but me!" sobbed Desire. "And it was true—I did say all those horrid things—but—but I did not mean I thought you were ugly!"

In spite of himself George laughed. "What does it matter! Of course you thought so. You couldn't think anything else. It doesn't make any difference."

"No!" cried Desire, suddenly lifting her tear wet face. "It doesn't make any difference! If you were perfectly hideous it would be just the same!"

"I know you couldn't love me, under any circumstances," said George gently.

But Desire had hidden her face again. "I could," she said, in a smothered voice, "because I do!"

"Desire!" he said, incredulously.

One of his much abused hands was resting near her, on the sofa. Without raising her head Desire seized it, and pulling it down within reach, laid her soft little cheek against it, and kissed it.

Mrs. Zerelda Wallace, who was at one time in ill health, with a large family, a house full of boarders and one girl to assist her, was advised by her physician and friends to take beer as a tonic. "No," she said, "I'll put the beer money into another girl and take more time for rest."

LOS ANGELES, CALIFORNIA, May 1st, 1890.

Editor Woman's Department:

It has been my pleasure to be a reader of your valuable and interesting *Magazine* for some time. I am pleased to say, but have thought myself incompetent to contribute anything to Woman's Department. And while I feel no less competent now, still the subjects open for discussion are so good I feel the inclination irresistible to try. First I would say in regard to managing a husband I know little. Not because I haven't a husband, but simply because I feel that "God's help" and *pure true love* and to fulfill our marriage vows so far as we are able, sufficient to live as God meant us to live. And I think if our duties were considered pleasures and our perplexities in our household were taken a little more good naturedly there would be more room for smiles when our tired husbands come home. And then there would be little need for managing on either side.

And if we are truly his companion in all things, finding pleasure in reading to each other and being as entertaining as we were before marriage, even though we may be sometimes as tired as our husbands, still how soon we feel rested if only we know we have done something to soothe him and he gives us the praise due us.

Human nature needs outward manifestations constantly of the love which we bear each other. Never be afraid of showing your love as well as telling it to him to whom you are joined. Life cannot have too much love in it to be happy.

At the same time bear in mind your own value to him and therefore keep your own independence. I do not think it necessary to in any way forfeit our independence, and indeed I think we are sure of keeping the respect of him if we do not.

And now a word to him who signed "Kicker," if such a person was really sane. I sometimes doubt if he was in possession of his senses when he wrote such a cowardly, unmanly article. If so, alas for her who calls you husband. I truly pity her. If there were many such as you (the name man is far too high a title for you) I fear the world would be visited with more plagues than those you mention and so it ought. But you did speak true when you said woman was not your equal, for woman is so far your superior that you ought never to have been permitted to call "one" wife. Words fail to express my opinion of you. I trust some one who is more able will speak a word to you for your own good.

And now if I may be permitted to say just a little more I would say San Diego Lodge No. 90 of San Bernardino is doing nicely, though we *do seldom* hear from it, and can boast of a membership of true, loyal and noble men of whom my husband is a member. Hoping this, my first, will find a spare corner in your next issue, with best wishes for No. 90, I am truly yours. *Bess.*

MOUNT VERNON, OHIO, May 28, 1890.

Editor Woman's Department:

As I never see anything in our valuable *Magazine* about Franklin Lodge, No. 9, I will try and write something about it. On May 14th the Lodge gave their thirteenth Annual Ball at the City Hall in Columbus. It was an occasion of great enjoyment and met with the success that similar affairs by No. 9 have always attained. Great interest centered in the result of the contest for the gold-headed cane awarded to the most popular engineer and the watch charm to the most popular fireman. William Ingersoll (cousin to the famous Robert Ingersoll) was the lucky recipient of the cane and C. C. Coit, of the charm. Eight hundred tickets were sold for the ball, and in the voting \$550 were realized on the cane and \$275 on the charm, the latter donated by Mr. Frank Bonnet. The grand march was led by Bro. W. H. Stump and Miss Annie McLaren. Brothers Landon and Kennedy made every one feel at home. Thanks for their kindness. Our worthy Bro. Frank Shively and Miss Ada B. Clements, one of Mount Vernon's fairest daughters, were bound in holy matrimony at the bride's home, May 28. Hosts of friends congratulate the happy couple and wish them their full share of prosperity and happiness. With best wishes to the Brotherhood.

An Engineer's Wife.

C. W. M.

For Woman's Department :

OUR HEROES.

I will tell you a tale as told unto me—
A tale of the picturesque west country.
Midway 'tween the mountains and measureless sea.
Perchance you may touch it in journeying round:
If so, bare the head and silence all sound.
For the place where thou standest is holy ground.

One morning in summer when sweet melodies
And anthems of birds caroled soft thro' the trees,
Commingle with fountains in wild harmonies.
We ventured to search thro' our wonderful land:
To feast on the views of its snow-mountain grand,
And gorges deep, hewn out by Nature's bold hand.

And he, who the iron and steam was to guide,
Stood fearless in action and honest in pride;
A king in full health; discontent he defied.
We envied his life, like to soaring on wings.
He answered, "For me, no song that bird sings
Is so sweet as the smiles and the dear welcomes

Of the wife I have left this morn in the nest,
And the bairns that lay soft asleep on her breast.
Heroic is grandeur, but sweeter is rest.
When the sun's slant rays on the white waters fall,
Like pale amber streams 'gainst a clear crystal wall,
In radiant beams, heaven-like, over all."

On we go, past the cataract's musical roar,
Whose wind-beaten waters are curbed nevermore.
Infinity's frownings behind and before.
Cañon to right of us, and cañon to left:
The sunless arcade scarce by daylight is cleft—
As by majesty's touch, its sight was bereft.

Fleet as an arrow, we are swept towards the sun:
Crashings and groanings and thunder are one.
Adown the incline—none knew how it was done:
The train was detached this side of the rift.
But the steed and the driver by fate set adrift,
Sped swiftly, eternity's veil to uplift.

Bruised, bleeding, we pillowed him by the stream-side,
Soon to cross the river of Destiny wide.
—Already his pulses are meeting the tide.
Tell Mary, when Duty's voice called unto me,
I answered, unquestioned, this day her decree,
Life's riddle to solve of the soul's mystery."

There are lives that go out on battle's red plain:
And victims are offered for principles vain;
And hearts, for one's own, on the altars are laid.
But one, has earned kinship with angels alone,
For no greater love unto mortal is shown,
Than to lay down a life for a brother unknown.

Ida M. Davis.

TERRE HAUTE, INDIANA

[We welcome Mrs. Davis to the Woman's Department. She is one of Indiana's most valued writers.—Ed.]

MISSOULA, MONT, May 8.

Editor Woman's Department :

My April Magazine has just arrived and in it I see a communication from a thing signing his name "Kicker." He says he has worn the pants since he has been married. Now I think he is altogether out of place in pants. I think he would look better in harness, that's what they put on such animals out in this country. I think I saw "Kicker's" partner yesterday. They had worked him in a logging camp until he was old and crippled and then turned him out to die. He had one ear laid back and the other was sticking straight out. He looked as though he wanted to kick the engine but I guess his better judgment told him it was no use and he had better keep quiet.

Now if "Kicker" had shown as good judgment in keeping still there would have been one fool that the world at large would not have known anything about. If "Kicker" had some of the manliness of that friend of his that he tells about I think he would be far better and if Mrs. Kicker had a big brother I think "Kicker" would regard her as his equal. Oh, how glad I would be to meet such a Noble Brother,

how I would strain him to my bosom and shed tears of joy; how I would lay off six months twice a year to get to be in such grand society; how I would introduce him to my friends, as the great and noble "Kicker" who has never seen a woman who was as good as he is; how I would put a canvas over him and have the people pay large sums to get to see him and advertise him as the great I Am, (or a twin brother to Joe).

He says some women make a dog laugh, he even acknowledges he laughs. I wonder what class of dogs he belongs to. I should judge he belonged to the class known as the sneaking curs. He also says that Cleveland's defeat, the Johnstown disaster and all the strikes and la grippe were a judgment from Heaven on the people for allowing the women to hold a convention in Washington. He also threatened to have Bro. Debs bounced for allowing the women to run the Magazine. Oh, how Bro. Debs must have felt when he read "Kicker's" communication. I imagine he shook all the buttons off his clothes and his hair must all be gray from fright for Bro. Debs is that kind of a man. I don't know how Bro. Debs looks at it but if I was in his place I would think I was one of the greatest compliments that could be paid me to have such a thing as "Kicker" work against me. I can imagine what kind of a blow "Kicker" has. When his children see him come home they all run and hide and tremble with fear and his wife wonders whether she will get a skin or a lick from his fist. Children raised by such things "Kicker" are what fills our prisons and makes the roughs and toughs of the world. I had better die before the society for the prevention of cruel animals gets after me. Yours in justice,

A Friend.

If Kicker will write a communication and sign his name and address I will do likewise. There is no I would like to tell "Kicker" but respect for the Woman's Department and its honest Editor keeps me quiet.

GENEVA, N. Y., May 4, 1890

Editor Woman's Department :

Although I have read only a few of the *Firemen's Magazines* that were lent to me by a friend I have been very much interested in them, so I thought I would try and write something for it.

In the April Magazine the ladies wrote very many letters on "How to manage a husband." I think is a very good subject but I cannot say very much on it as I am not married. I think Grace Carroll Eldorado, Ill., has excellent ideas of married life if I am ever married I shall try and do as she says as near as I possibly can. If every woman did I do not think that there would be so many unhappy marriages.

I must change my subject for I did not intend to write on how to manage a husband. I want to say a few words to that gentleman from St. Paul Point that signed himself the "Kicker," and that he did not consider any woman his equal. I wonder if his thought turned back to his dear mother now sleeping her last, long sleep in death, or if he remembers his childhood days when no one could soothe his cares or troubles like his old mother could. For there is no one like a mother. As soon as we advance beyond the period of childhood and embark our lives in the storms of this world there are no lessons that will be as useful as the old lessons learned on mother's knee, and we will through all the temptations and trials of this world and come out victorious if we do as mother says. No matter if we start and fall, we will always have some one to turn to, who will never forget or neglect us, and always find a cure for our aching hearts. We may make new friends and when trouble comes they may turn from us and prove false, but then we will not despair for we have our mother who will comfort and protect us.

There is many a man who commits some terrible crime while intoxicated and is cast into prison. Who is it who pleads and obtains pardon for him, if it is possible, but his dear mother?

If every man loves his mother as he ought to, he will also love his wife and then I am sure there will be no trouble.

Wishing the B. of L. F. Prosperity, Success and Eternal Happiness. M. F.

CORNING, N. Y., March 20, 1890.

Editor Woman's Department:

We learn, with regret, that on the 18th of this month death once more visited earth and took, in its cold remorseless arms, "A dove, pure and spotless," from the home of Mr. and Mrs. Ed Everetts, a member of Fellowship Lodge, B. of L. F. Dear Little Robbie, the joy and sunbeam of a loving home, has gone to dwell with the angels. For only seventeen short months did his little light shine, then Jesus took the little one home, and the many friends of the bereaved parents extend to them their sincere sympathy. But he is not lost, only gone before, and while our hearts go out in sympathy to the parents, we can but remind them that *He* said, "Suffer little children to come unto me and forbid them not, for of such is the Kingdom of God." The funeral was held at their residence, 159 East Erie avenue, the interment taking place in Tioga, Pa. The singing was selected and rendered by Mrs. Grace Mariotte, née Brown, and Miss Carrie Frazee. Dear little Robbie is "safe in the arms of Jesus," and we are sure he is "Waiting and Watching" for papa and mamma.

Spake we softly, "God in Heaven,"

Keep our darling free from ill,

Worldly gear and worldly honor,

Ask I not of Thee,

But from want, and sin and sorrow,

Keep him pure and free."

Two little, waxen hands,

Folded soft and silently,

Two little, curtained eyes

Looking out for thee,

Two little, snowy cheeks,

Dimple-dented never more,

Two little, trodden shoes

That will never touch the floor,

Shoulder-ribbon softly twisted,

Aprons folded clean and white,

These are left us, and these only,

Of thy darling's presence bright,

For *He* holds the pet lamb

Safe from earthly straying,

But we miss him sadly,

By the window playing,

'Till we look up and see

There with purer vision,

Two little snowy wings

Softly flutter to and fro,

Two tiny, childish hands

Beckon still to thee below,

Two tender angel-eyes

Watch over thee, earnestly,

Through the loopholes of the skies,

Baby's looking out for thee.

Mrs. G. F. Roody.

CLIFTON FORGE, VAIL, April 10, 1890.

Editor Woman's Department:

The *Magazine* for this month having put in an appearance, I have eagerly perused its pages, and, as usual, did not see one word from the members of Jackson Lodge, 274. I will not wait longer, but will attempt something myself, and do hope this will influence some member who is more capable of writing than myself.

The Lodge is in a prosperous condition, with an able set of officers at the head of it. The boys are all good, responsible and intelligent, therefore causing much good to be done in our city by the Brotherhood, and as a sister of one of your members, I am glad we have such a noble organization in our midst. May God ever forward the cause of the B. of L. F. and help the members to be ever mindful of their duties.

A festival, given under the auspices of Jackson Lodge, March 27, netted "old 274" the snug little "dot" \$250.00. The principal feature was the awarding of a handsome gold watch to the lady soliciting the most money for the Order. The competing candidates were Miss Marie L. Hyde and Miss Fannie Peck. The contest ended in favor of Miss Hyde, she begging \$163.81, and Miss Peck \$64.80.

With many good wishes to the *Firemen's Magazine*, and all its readers, I am, very truly,

A Fireman's Sister.

HARTFORD, CONN., April 20, 1890.

Editor Woman's Department:

I noticed in the April number of the *Magazine* a communication signed "Kicker," from Stevens Point, Wis. I should say he was a "Kicker," and to think that the Editor of the Woman's Department would allow such a communication as that to appear in its columns is more than I would have believed. I suppose this "Kicker" calls himself a man. If he does, he is the smallest and meanest man I know of.

I think the Woman's Department is a very interesting part of the *Magazine*, and I congratulate Bro. Debs on having so able an editor for this department.

In regard to the managing of a husband, I think if this "Kicker" would let his wife do a little of the managing he would be a little better off. I would like to know what this "Kicker" ever got married at all for? I think his wife must be an angel. His neighbor, that he speaks of, is a very sensible man, and the "fool" fits his case better than it does his neighbors. In his communication he says, "When his mother lived," I think if his mother was living now and should see the way he uses his wife she would give him a few pointers, if she was anything like the mothers around here. He also says that the country is going to ruin because the women have too much to say. Well, that is a great speech for as smart a man as "Kicker" pretends to be. To think that the defeating of Cleveland, the grippe, and the Johnstown flood had anything to do with the Woman's Rights Convention is too ridiculous for anybody to believe, even such a man as "Kicker." I hope Bro. Debs (or Mr. Debs, as "Kicker" calls him,) won't worry over any such things as a "Kicker" at the next convention.

In regard to flirting I think "Kicker" must be crazy to think that if his wife should do the same things that he does he would leave her. I think the best thing his wife can do is to leave him, if that is the way he feels. And now, Mrs. Editor, I think if "Kicker" would read the *Magazine* a little more thoroughly, and profit by its example, especially the Woman's Department, it would be a good thing for him.

Wishing the Woman's Department success, will close, hoping some abler correspondents will give the "Kicker" his just dues. Yours fraternally,

285.

DEPHOS, O., May 21, '90.

Editor Woman's Department:

I have for the last five or six months read the correspondence from different lodges and of course different towns but have never seen any from Fidelity Lodge, No. 185. I have three brothers, two of whom I am glad to say are firemen, and it is not my fault they are not. They are neither one B. of L. F. men yet but will be as soon as they are old enough. Two of my brothers are married but one is still at home. How I run for the door, for we live close to the Clover Leaf to see every engine that I hear puffing on account of its terrible load, or the ringing of the bell as the fireman sitting on the seat box is patiently ringing, to see if it is my dear, dear brother coming home safe. Then I keep watch down the street, and when I see him coming I meet him and welcome him home. A Fireman's Sister.

C. M. P.

MISSOURI VALLEY, IOWA, May 16, 1890.

Editor Woman's Department:

I have been a constant reader of the *Firemen's Magazine* for the last two years, and have never seen any letters from Climax Lodge, No. 254, B. of L. F. I wish to say in behalf of the members of No. 254, they are a jolly, intelligent set of men, and have a large membership here; my husband being one of them. They have just fitted up a large hall for themselves and the B. of L. E. to use for Lodge rooms, and have it very nicely furnished. I enjoy reading the Woman's Department and am interested in "How to Manage a Husband." My experience is—kind, loving words and a smile, when he returns home, weary from the day's work, to be a very effective medicine. Best wishes for the Brotherhood.

Mrs. N. I. O., An Engineer's Wife.

BATTLE CREEK, MICH., April 6, 1890.

Editor Woman's Department:

I have often remarked there being nothing in the *Magazine* from Calhoun Lodge, but for myself have never felt competent to write. But the letter from "Kicker," I think, has stirred every right minded woman to defend her own. I feel certain many will join with me in saying shame! shame! to think there is such a man in the ranks of the B. of L. F. All honor to Mr. Debs! I trust there will be honest men "at the convention," so "Kicker's" "influence" will not harm him in the least. As for "spoiling" his wife, after living with the man he pictures himself to be, he has little to fear. One can see how refined he must be, when he made that insulting offer to his wife. Poor woman, could she have seen what was before her, I doubt not but that she would have donned the garment, and I trust would have had as much good influence in the world as he who wears it and calls himself a MAN. Poor man, he sighs for his mother's time, and don't seem to realize this is a progressive age. It is time woman was sustained and respected. There are many places that require a woman's hand besides washing overclothes and minding children. Though Mr. Cleveland was defeated, and the Johnstown floods came, he is the first one to lay it to a woman's work. If I remember, we don't vote yet; but if we ever do, I think there are ladies in the land capable of filling the offices as well as men. And if God gives them the talent, why not use it for good, and all the adobe the "Kicker" can make will not keep them down. Shame on him for speaking so lightly of virtue and honor! How dare a married man mention such a thing as flirting! I don't wonder railroad men are looked down on by so many outside of the work, if such men as he speak for them. For the shortcomings of one, all must suffer.

My husband is a fireman, and works hard, but I know he finds his comfort in his home and baby; and we have no "maunaging," either. But he is a gentleman, and I know he is respected, for he respects himself and his own. When you think of what the "Kicker" upholds, he is no fit member for society, and is a slur on the Order he belongs to and a disgrace to the family who cling to him. My letter is too long, but I shall never feel she did not resent the gross insult offered her mothers, wives and sisters.

"Rory."

BLOOMINGTON, ILL., May 27, 1890.

Editor Woman's Department:

As I have been a constant reader of your *Magazine* for the past few years, and have never seen anything concerning Blooming Lodge No. 40, I feel it my duty to give you a brief synopsis of it.

The Lodge is worthy of attention. Its members are all trustworthy and jolly and a "good looking" class. I am personally acquainted with a great many of our Evergreen City Railroaders, and find them very sociable, especially the firemen.

Our city is prospering in beauty and improvements, as well as the B. of L. F. Lodge. I think some of the firemen's sisters or wives ought to appreciate it and let them know they are not at the end. Wishing the brightest success for the firemen of the B. of L. F. No. 40, I remain,

A late firemen's sister,
Josie Baum.

BRAINERD, MINN., May 7, 1890.

Editor Woman's Department:

Who is this Mr. Kicker, of Stevens Point? Is he a man or a brute? Did he ever have a mother, or did he "just grow"? He says he had a mother! Take it for granted that he did, he surely is a brute by nature. I have seen quite a few that I think would do to "bum" with him, to loaf on the corner and insult ladies as they pass.

Now, to you, Mr. Kicker, you have entered, or at least placed yourself open to that wide scope of criticism: I would advise you to take your medicine like a man, or at least like that great "Lord of Creation" that you profess to be.

Mr. Debs is not going to abolish the "Woman's Department," nor is he going to be bounced from his position, for no reason except the "kicks" from such a chronic as you. Women running his *Magazine*? What a large scope of knowledge you have anyway. You are mad at our genial editor because he allows our sisters, sweethearts and wives to express themselves through the columns of our esteemed *Magazine*. You must have been born on a canal boat, and have been raised there, and from your talk we believe that it has not been many moons ago since you quit working at your trade, i. e. mule punching.

You have your *Magazine* sent to the roundhouse, so that your your wife will not be "spoiled" by reading it; too bad about you, you poor fool! Do you not know that you are robbing those at home of something they prize? But a man that is such a "home tyrant" (and we suppose, a "street angel") as you, is not supposed to contribute to the amusement of those who should make our lives here below a heaven.

You don't need managing. No, I should not think you did. Managing is not the word that should be used in your case; clubbing would be more appropriate.

You never saw a woman that was your equal. You must be blind. Why, say, Mr. Kicker, only last week I went fishing; I took some little worms with me—you may not realize what kind I mean, but have reference to those used for baiting a fishhook—and do you know I think those very same worms were far more than your equal. You may not believe me, so ask any reader of this department, and see if they do not corroborate my ideas.

Several years ago, I thought all the fools were dead, but I was sadly deceived. A man supposed to have enough intelligence to be of any service on an engine, comparing the days of his mother's girlhood to the enlightened days of the present, is simply absurd. In your mother's days they didn't have clubs. Are you aware that there are quite a number of things that they did not have in your mother's days, but which we now possess? For instance, probably there were not very many men like yourself alive in her days, and numerous other things, Mr. Kicker, numerous others.

Yes, I imagine we do give women too many privileges. But, Mr. Kicker, if women were as silly as you wish them to be, what would become of the poor world of ours? Why it would dwindle down to nothing, and most likely would be equal to the inconceivable emptiness of your poor, dilapidated ill-used head.

You will work against Mr. Debs at the next convention? Has it ever entered that "dome" of emptiness of yours, who and what Mr. Debs is? I would not take him more than five minutes to shut your mouth so tight that you would think you had been dumb for the past twenty years.

You think "we" need a little amusement or might go crazy. You surely have had but very little amusement in your day. And of course you need no pleasure whatever. She is simply too drudge, your slave; created for no other purpose than to do your bidding as would your little spaniel pup. Yes, Mr. Kicker, leave her to the drudge and the children and you go down town with the boys and never give a thought to home and your wife; it is the way a man (C) should live.

Now, Mr. Kicker, I will leave you to the rest of the readers of the *Magazine*. S. A. P.

THREE RECIPES FOR PLAIN CAKE.

Ingredients—Four eggs, one-half pound of white sugar, the grated rind and juice of two lemons, one-quarter pound of flour.

Ingredients—One cup of sugar, one-half cup of butter, one-half cup of sweet milk, two cups of flour, three eggs, one teaspoonful of soda and one of tartar, or three teaspoonfuls of baking powder.

Ingredients—Five ounces of butter, one-half pound of sugar, one pound of flour, one large cup of milk, one teaspoonful of soda, two teaspoonfuls of cream of tartar.

Either of these recipes makes a good plain cake.

"Emma"

FRIENDSHIP.

CLINTON, IA., June 3, 1890.

Very few people ever stop to think how much the word friendship implies. Love seems to be pretty well understood and generally appreciated and reciprocated, but friendship—ah me, there is very little of that now.

I doubt if a good, true friend would be appreciated. We are not living in the days of Damon and Pythias. A man would not be quite so safe in pledging his life for the reappearance of a fellow being as was Damon.

In those days it might appropriately be said, "Friendship is Love without wings." Now friendship as well as love gracefully spreads its wings and flies away without even a regret. I sometimes think with the hermit that said, "Bah! there is no such thing as friendship."

We think we have friends in great numbers. In adversity we look around and wonder if some unknown, something has swept away all human beings save our self, when lo, we see some one coming; yes, they wish to know if there is anything they can do, trembling for fear there will be. It does not always take money to show friendship. Don't be afraid your pocket book will suffer if you approach a friend in distress.

We would not be censured so much for faithlessness if we did not claim to be a friend to every one we meet and become acquainted with.

It is evident that we cannot be a friend to everybody; therefore let us not claim to be everybody's friend.
K. B.

AMIGARI, April 7, 1890.

Editor Woman's Department:

The *Magazine* for April has just arrived. I am very much interested in this department. It is the only part I read in it. My husband is a member of Charity Lodge, No. 5, B. of L. F., but I do not know if the Lodge is in good order or no. I think that is not for us to know. Now, about how to manage a husband. If men find their wives at home and a hot meal ready for them when they come in from their trip, and a neat wife and clean children, and a tidy home, there will be no fear but that they will come in smiling. As for liquor, it is best let alone, especially when they are in so much danger.

I see a request for taffy. I like it, also. A little taffy goes good, sometimes. This is how I make mine: One cup of molasses, one cup of brown sugar, a piece of butter the size of an egg, and a tablespoon of vinegar. Boil, and when you think it has boiled enough, try it by pouring some into a cup of cold water, and if it hardens it is done.

I have lots of good recipes that are nice for the lunch cans, if you would like them. The lady that wants the taffy recipe says she has a nice pudding recipe. If she will send it I will send mine, as we like pudding better than pie at home, and I am always glad of a new one. I remain, an engineer's wife.
Mrs. Black.

WINNIPEG, MANITOBA, April 1, 1890.

Editor Woman's Department:

My husband has been taking the *Firemen's Magazine* since New Years, and although I have been greatly interested in the Woman's Department I had not the slightest desire to contribute to its columns until I saw the venomous attack in the April number, which "Kicker" made on the ladies. At first I thought of treating his effusion with the contempt it deserved but on further consideration concluded it would be very unwomanly to allow our good name to be vilified in such a manner and not make an attempt to defend it.

As for managing my husband I don't do it, I manage my house, children, and myself instead, and he stays home nights and does all the other virtuous things which "Kicker" attributes to "fools" and yet he does not consider I "run him" and neither do I. I am pleased that "Kicker" should put himself in his proper place among the inferior animals when he says, "It would make a dog laugh." I have often laughed. No one worthy of the name of man

would first trample on woman's rights in his own home and then proudly boast of it afterwards.

The sentence in which "Kicker" refers to the calamities which he ascribes as the result of women having too many privileges, we consider altogether beneath our notice, also what he says in reference to flirting. Of course we are aware, and are ashamed of the fact, that there are some women who do flirt but I decline to acknowledge them even as passing acquaintances, as a woman who has no more respect for her own good name than to leave it open to censure cannot expect others to bring themselves down to her level.

As for believing all that is told us, let me assure you, sir, that you hit very far wide of the mark for we don't even believe in you being what you represent yourself—a tyrant by nature—a "dog" that laughs at the exalted work of woman—but we believe that you have merely written your letter for the sake of provocation. In conclusion allow me to tell you that if God had not intended there to be an equality between man and woman he would not have taken Adam's rib with which to form Eve.

"She was not taken out of his feet, sir,

By man to be trampled upon,

Neither was she taken out of his head, sir,

To reign and to rule over man,"

"But she was taken out of his side sir

His helpmate and partner to be," etc.

A Fireman's Wife.

[We hope you will repeat your call.—Ed.]

CONNEAUT, OHIO, April 7, 1890.

Editor Woman's Department:

Your welcome *Magazine* was received some few days ago and I have been bottling up my wrath every day since, and now I have concluded to draw the cork and air my eloquence on the "kicker." I think when he went to work for a railroad company he missed his vocation. He should have been a slave driver and have a negro girl for his wife but still I think she would be too good for him. I do not believe in a woman *bossing* a man, for I think that a man who will be bossed by a woman is not deserving the name of man; but I would really like the chance of managing the "kicker. I think he would change his sentiments towards the ladies before I was through with his case. I think precisely as he does about any woman being his equal. I do not think there ever was his equal (in meanness). He says some of them put on airs and belong to clubs and societies and it makes a dog laugh, and then he says, "I have often laughed." There must be some dog about him. I did not have the slightest idea what caused the gripe until I read "Kicker's" letter, and it seems it was the result of Cleveland's defeat, and the Johnstown flood too, followed as a natural consequence. At least that is what he says. I was not aware that we were of so much importance. I would advise Mr. Debs to heed his warning because if he works against him at the convention I am afraid he would be defeated! One man's opinion (and such a man as he is) amounts to so much!

As to his flirting, I would brand him on the face "married," if I were his wife. I do not care if my husband flirts as he passes along the road, but I would object pretty strongly if he should take ladies to places of amusement at the other end of the road. But I know that he does not, and I know from experience that a true woman when married does not think of flirting with other men. As to managing my husband I will not say much for my letter is already too long. I have all the money and pay the bills and when he wants any money he knows where it is and he takes what he wants. I can coax him to almost anything but I could not drive him. We are both of us a little high strung and I sometimes think that we need some one to manage both of us. But if we would all of us abide by the golden rule I would have no trouble in managing him if he isn't a "kicker." If this is acceptable I will write again and give some good recipes. My husband is a B. of L. F. man but he is an engineer.

Yours,

Mrs. Jack S.

Troy, N. Y., April 5, 1890.

Editor Woman's Department:

My husband has often asked me why I did not write something for the *Magazine*. I have said I would, but somehow the time has slipped by, but now, on this beautiful Saturday evening, while I am waiting for him to come home from his work, I'll make the attempt.

I will not say much about the way I manage my husband, except that I try to be as loving and cheerful as possible, and when I see he is tired and a little out of sorts I try and think of some lively bit of news for him, or some little act of kindness for him, and moreover, to be *patient* and not have too much to say. He has told me that my not noticing every little thing and my patience had helped him many a time; that if I had been "cranky," too, he should not have quite the same feeling for me that he has. We must remember that a "soft answer turneth away wrath."

I wish there were more household hints given in letters from the sisters, for many, who, like me, are young in married life and the duties of housekeeping, would appreciate them I assure you.

I have a recipe for corn bread, which I think some one will like.

CORN BREAD.—One and a half cups of sour milk, one cup Indian meal, two cups flour, one egg, one-half cup sugar, one tablespoon of soda dissolved in one tablespoon of hot water, a little salt and two tablespoons of butter.

TAPIOC PUFFING.—Four tablespoonful Tapioca soaked over night, one cup sugar, one teaspoon laundry starch, yolks of four eggs, a little salt, one quart milk, flavor to taste. Beat the whites of eggs for frosting. Boil altogether, except whites of eggs, until thick enough, then pour into a dish and drop the frosting in large spoonfuls, to look like icebergs.

LEMON EXTRACT (very nice).—Pare a lemon as thin as you can, add two-thirds cup of alcohol, let stand until rind is hard, then pour off and reduce with water.

ORANGE PUDDING.—One pint milk, let come to a boil; one and one-half tablespoonfuls corn starch, one-half cup sugar, yolks three eggs, let it boil a few minutes, then set away to cool, then pour over three oranges, cut up fine in a dish, and spread the beaten whites for frosting.

Taking two holders and fasten about one and one-half yards of tape or braid to them, then slip over the belt of the apron, is very convenient on baking days, for then you know where your holders are every time. Try it once.

I think I've given enough hints for this time, and if this is approved of I will send more sometime, which shall be useful and ornamental. With best wishes for the Firemen and their *Magazine*, I subscribe myself
A Fireman's Wife.

[The Woman's Department is very glad of these domestic letters. Our Department, to be interesting, must have variety. — Ed.]

TORONTO JUNCTION, ONT., May 5, 1890.

Editor Woman's Department:

I have long desired to write a few of my opinions for this department, but fear of the waste basket withheld me until I read Kicker's letter; then my indignation overcame my fear, and I am forced to express my opinion of "him." I was about to say "this man," but when I recall the words he uses in speaking of women, I feel sure that all true men will agree with me, when I say he is not worthy the name of man. I can assure him that in a few years, when women have more power in the government of our land than they have at present, there will be few such vulgar bores as he on earth. No wonder he lacks in intellect, when his mother's life consisted of the dull monotonous work he describes. Let him compare the son of a woman who, as he says, "puts on airs and quotes poetry and politics" with himself, and note the superiority of the former, and why?—simply because that mother cultivated her mind as it is the duty of every woman to do. I do not mean to assert that women should occupy all their time in cultivating the mind. But to

all women, and especially to married women! say "Don't let your intellect get rusty if you want to retain your husband's love." I have seen bright, happy girls before marriage, who a few years after have the appearance of a dull dowdy. They apparently become so deeply interested in house and home work that they forget their duty to society and themselves, and then they wonder why their husbands do not admire them as much as before they married. They read so little and associate with the world so little that it is quite impossible for them to carry on a conversation on any topic.

My dear women, let me advise you not to put your nose to the grind stone in this style. If you have a good husband (and if you have not you should not have made such a mistake as to take him) and keep a clean house and good fare, you have something to be proud of. Then hold your head up; be assured if you lose conceit in yourself your husband will do so too. Study as much as you can. Don't neglect social and religious duties. Be a kindness to some one, whenever you can, and you will be happier yourself and give greater happiness to all whom you meet. And your good man can not fail to admire and love you. The man who possesses such a treasure as "One Who Is Not Ashamed Of Work," is certainly thrice blessed. How any woman can accomplish so much is a mystery to me. I presume she is an American and that may account for it. I am not married and am not quite an old maid but can keep house and keep it well, too. But I never attempt any excesses. Regarding the management of a husband, I have not much to say. When girls thoroughly realize the fact that they must learn to keep house, and cease to marry for aught but love, then husbands will require less management.

One who is interested in the *Firemen's Magazine*
Sara Shearer.

FT. WORTH, TEX., March 30, 1890.

Editor Woman's Department:

As the April *Magazine* is at hand and I am doing my day's work I will pen these few lines to you. I am a constant reader of the valuable *Magazine*, and think there are many good selections, and I admire shandy Maguire's and Mrs. Bloom's poems very much. And I agree with the ladies as how to manage a husband. We can do more with kind words than cross ones. If they come home cross be kind to them, do not speak cross in return. If we had to be up nights as they do we would be the same way. But be loving and kind and if he has any heart at all you can overcome his cross ways. Do not be angry at him when he is going out on the road. Always say good-bye in a kind way, and be at home when he comes in and have something for him to eat, if it is cold it is not so bad as to have nothing at all. I do all my shopping and going when my husband is out so I can have more time to spend with him when he is in, for it gives me much pleasure to have a nice talk after his long, weary trip. I hope that the Woman's Department will hold its own and continue as it is my favorite spot in the *Magazine*. The boys & No. 83 are doing well and are made of the right material and are good, kind-hearted fellows. With best wishes to Mrs. Harper, and success to the *Magazine*.
Noma

SIOUX CITY, IOWA, May 14, 1890.

Editor of Woman's Department:

Having just received the *Firemen's Magazine* with its pages full of interesting and entertaining news from poetry down to prose, I cannot but admire the style in which it is edited. From the contribution given by the sisters I guess they are all in a flourishing state of health and I suppose the brothers are a fine lot too. But isn't it provoking when a naughty Fireman with hands of black, daubs a pretty girl's face all over and disarranges her nice curls? Well I suppose they think it lots of fun, and in one sense it is, but when you come to take it off it is altogether different. But you forgive them just in the old, sweet way. Before I retire I would advise the Fireboys to be always jolly and don't give a continental whether their best girl likes their jollifications or not. Wishing every blessing to the B. of L. F. and health to the editor, I remain
Constance.

JACKSON, MICH., March 18, 1890.

Editor Woman's Department:

Each time the *Magazine* has found its way here I have felt a great desire to write to it, as I would an old friend, and when the impulse was over my ideas seemed so vacant that I did not want them on my friend's pages.

I have been interested in reading the different ways of managing a husband. It has been three years since I landed at the port of Fate and embarked in that apparently strong, but very uncertain ship of Matrimony, and since then—well, there have been no storms and the current has carried us along so swiftly that I haven't had time to find out whether I manage my husband or he manages me. I have a suspicion it is the latter. But reins of confidence are held lightly and I am satisfied.

I don't think any woman can always keep a smiling countenance. Even Nature, that grand-mother of us all, has spells when her face is dimmed by tears and clouded in mist. We can try, and happy are those who succeed. I try, I try my best. But when I am smarting with pain from having come in contact with the stove, and have my husband say in that never-to-be-forgotten way, "Didn't you know it was hot?" my temper boils up like a glass of Fourth of July soda water. Of course it settles down presently, usually about as flat.

One word about the *Magazine*. I think it is improving. I hope that friends of it living in Mexico and other far away places, will write more to us of those distant lands we may never see, and if we do we may feel as though we would meet friends among those mud houses.

I hope that "Kicker's" throat is not sore from laughing at woman's doings. Such communications are like a dose of quinine, bitter, but strengthening.

With good wishes to all, I will close. *Prue.*

[Call again.—Ed.]

MEMPHIS, TENN., April 1, 1890.

Editor Woman's Department:

I have been a constant reader of the *Magazine* for two and one-half years, but have never contributed anything to this department.

How to manage a husband: In the first place do not get one that changes with the wind. Always welcome him home with kind and pleasant words, and it will be returned. I always try to make our little home look bright and cheerful, clean and tidy. A husband will always appreciate such a home.

But such a husband as "Kicker," on page 316 of April *Magazine*, is not worthy of being called a brother much less a husband. Any man who would say his wife is not his equal should be classed lower than the lowest beast. My hubby thinks I can manage the month's wages as well as he can.

I do my own work and would be glad to get any information from the ladies on housekeeping, cooking or fancy work, as I have plenty of idle time.

To Sister Flo.: White Cake Recipe—one half cup of butter, one and one-half cups sugar, whites of four eggs, one-half cup milk or water, two and one-half cups of flour, two and one-half teaspoonfuls of baking powder. Cream for cake: one and one-half pints boiling water, two yolks, two tablespoonfuls sugar, flour to thicken, flavor with vanilla. Spread between layers. This is an excellent cheap cake. I am like the other sisters, I watch the pennies.

With the very best wishes for the Woman's Department, and B. of L. F. *Annie.*

LOUISVILLE, KY., May 21, 1890.

Editor Woman's Department:

I wrote once before and would have continued writing, but for the death of our well beloved and only child, our little Ruby. When I read the Kicker's letter I laid my grief aside and girded up my loins and armed cap a pie. I am ready to do battle. If I were judge and that abject, vile imitation of man, was to be brought before the bar of justice, I would either sentence him to the work-house or the lunatic asylum, most likely the latter place, for I don't think a sane man and probably a man with a noble, loving wife could be guilty of such offending trash. I think the firemen should search him out

and scratch his name from the books. Firemen generally treat their family well, and I would like for Mr. Kicker to appear in person and repeat his filthy railings to our protectors and in all probability he would go back to Kickerville a sadder and wiser "varmint." I have seen asses before now kick out of the traces and that may be the fate of our cowardly acrobat yet before he gets over his assault on the Woman's Department. I cannot help thinking that it is some envious outsider that has broken through our ranks, for it seems absurd that any one who has taken the oath of the glorious Brotherhood would be guilty of such vileness. So full am I of indignation that words are inadequate to express my loathing for such a contemptible reptile. Now, sisters, one and all, rally 'round the flag and make him rue the day that his stupidity ever caused him to cast such a bomb shell in our midst. I will close crying: "Out with the skunk! before his putrid essence pervades our midst and contaminates our sacred fold."

A Fireman's Wife.

NEW ORLEANS, April 18, 1890.

Editor Woman's Department:

I am a constant reader of the *Magazine* and more especially the Woman's Department. I agree with Mrs. L. H. in favor of a query column, also, I think a "Cooking Receipt" column would be very beneficial to our readers. I would like very much to take the "Housekeeper" published in Minneapolis, if I knew the proper address.

Here is a recipe for a good white cake for Flo. One cupful butter, three cupfuls sugar, one pint flour, one and one-half teaspoonfuls baking powder, whites of six eggs, one cupful milk, twenty drops of extract of bitter almonds. Rub butter and sugar to white, light cream; add the six whites whipped to dry froth, the flour sifted with the powder, the milk and extract, mix together thoroughly but carefully, and bake in jelly cake tins in a quick oven fifteen minutes; then arrange in layers with white icing and grated cocoanut mixed in the proportion of two cupfuls of the former to one of the latter.

Shandy Maguire's and Mrs. H. B. Jones' poems are very interesting. I would not like to give my opinion of "Kicker," for I am afraid I might be too hard on him, but I will say this, that I am sure that he is a kicker both by name and nature. I will come again if I am welcome.

A Fireman's Wife, Marigold.

[Address, Editor *Housekeeper*, Minneapolis, Minn., for particulars.—Ed.]

THE ART OF CONVERSATION.

"Speak little and well, if you wish to be considered as possessing merit." Who does not want others to think of him, as possessing those accomplishments which adorn any character and help to make it beautiful, and one of those accomplishments is, certainly, the art of conversation.

Every one, no matter if he does take pride in saying that he does not care for the opinion of others, down in the innermost recesses of his heart does crave the respect and admiration of all, especially of those whom he loves.

Conversation does not consist merely of talking.

"Words learned by rote a parrot may rehearse. But talking is not always to converse; Not more distinct from harmony divine, The constant creaking of a country sign."

In conversation we want to be able to express our own conception of things in the best and clearest language, draw out the ideas of others, and refrain from saying those things which might offend or in any way wound our friends.

We also ought to be able to converse on more than a few subjects, as the weather, the condition of the crops, or the health of the family. Nor do we wish to weary those with whom we are conversing with long tedious accounts of some of our remote ancestry.

Let us also refrain from talking about ourselves; "the extreme pleasure we take in talking of our-

selves should make us fear we give very little to those who listen to us." May we not read, and thus keep ourselves informed of the interesting events transpiring at all times, through the works of our best authors, and in this way be able to converse in an intelligent and entertaining manner.

One important part in the art of which I speak, is to be a good listener, and almost as much tact is required to listen well, as to be a good conversationalist. In conversing with our friends let us be entertaining and if possible vivacious.

Steele says, "Beauty is never so lovely as when adorned with the smile, and conversation never sits easier upon us than when we now and then discharge ourselves in a symphony of laughter, which may not improperly be called the chorus of conversation."

Rose Stevens.

KEOKUK, IOWA.

ARGENTA, ARK., May 18th, 1890.

Editor Woman's Department:

As it is Sunday, and I have nothing to do, I will try and write a few lines to our welcome *Magazine*.

I wish some one from Rose City Lodge, No. 45, Little Rock, Ark., would write and let the Three Branch Boys, No. 304, know how they are getting along, and why don't some of our firemen's wives write, and don't ever be ashamed to say "I am a fireman's wife," for they are good, noble men.

If any of them want to get my "Dutch" up, just let them say anything about a railroad man, for I am a railroad man's wife, and I am glad of it.

I see in the March number page 224, a piece entitled "The best way to manage a husband." I will tell you how I manage mine. Well, if my husband asks me to lend him the pocket book, I always lend it, and if he says "My Love, may I go up town or to the shop," I always say yes, and I am sure he will not stay long. For I once heard my Love tell a friend of mine, that if a woman wanted to manage him she would have to rule with kindness. So you see if you are good and kind to your husband, when he is away or up at the shop or some place where he ought not to be, he will get ashamed of himself and come home. And another thing: if your husband tells of some fun or of something that he has done or said, you ought not to get mad and swell up and blow off about it, for it does not do any good you know. So I think if any are having a hard time managing their husband, if they will only try this prescription, it will work like a charm.

Your true Friend,

Jessie Constance.

P. S. What has become of Dr. L. A. Wilson? Please let us know for we are afraid that he has been carried away with horse power or steam.

SANBORN, IA., May 15, 1890.

Editor Woman's Department:

I am only a little girl of 10 years, and as this is my first experience in writing any kind, except friendship letters, you must not expect it to be very good. My home is in Sioux City and I am visiting my uncle in Sanborn, Mr. Emmett Wentworth. He is master of Ferguson Lodge, number 190, Mitchell, South Dak., and as he takes the *Magazine* I get to read it. I hope my letter is not so tedious as to be a waste basket victim, I remain a little friend of the B. of L. F.

Maud Hall.

MONTREAL, April 17, 1890.

Editor Woman's Department:

The boys of St. Lawrence Lodge, No. 15, of the Brotherhood of Locomotive Firemen, gave their many friends a complimentary social and dance at Point St. Charles on Monday, April 14th. They had a fine evening and the entertainment was a pronounced success in every respect. With best wishes for the B. of L. F.,

I remain, a Fireman's Wife,
E. S.

The late principal of the normal department of Howard University, Martha Briggs, a colored lady, was universally loved and respected as a woman and an educator. Rev. Dr. Shippen, in a eulogistic sermon the Sunday after her death, coupled her memory with that of John Bright.

EDUCATION.

Miss Kate Bogle, of Lincoln County, Kentucky has recently been elected superintendent of public schools.

Mary A. Greene, of Boston, will give a supplementary course to that of Mr. Hemenway on "Law," at Lasell Seminary. She will specially treat of women under the law.

Here she is again! A young lady stands first in the competition for the six \$900 scholarships at Cornell University. What's the matter with the young men of this day and generation?

Mrs. Belle Ball, a talented Kansas writer, who was for a year or more the literary editor of the *Kansas City Times*, is now with the *Kansas City Star* and holds a responsible position on the editorial staff.

Mrs. Helen Campbell has accepted an invitation from the Chautauqua managers to lecture in that course for 1890, and will give a series of lectures on "Social Economics and Women," beginning the 1st of August.

Mrs. Elisha Jones has given \$10,000 to Michigan University for the endowment of a classical fellowship for girls. It is intended by her as a memorial of her husband, who gave a large portion of his life to the University.

The Association of Collegiate Alumnae has now 1,070 members. They are distributed among thirty-five States of the Union, as well as England, France, Germany, Russia, China, and Japan. Verily the college girl is abroad in the land, and will soon be abroad in all lands.

INDUSTRIES.

The sphere of woman continues to enlarge. The latest evidence comes from Connecticut, where a young woman has just been given a license as a dispensing druggist. It deserves to be added that she not only got her license, but passed the best examination that has yet been had before the examining board. *Boston Herald*.

Light is thrown upon the temptation to crime in great cities by the fact that in Chicago we have women who make twelve shirts for seventy-five cents and furnish their own thread, women who "fish off" a costly cloak for four cents; children that work twelve hours a day for a dollar a week. "All that good should be so dear and flesh and blood so cheap."—*Frances E. Willard*.

The daughter of the late Dr. Bliss, the famous physician who was the medical adviser of several presidents, and whose name has been a household word in the capital for forty years, is one of the rising physicians of the city, says a Washington letter. Dr. Clara Bliss-Hinds is not only winning popularity in Washington as a practicing physician, but is becoming famous throughout the country as an advocate of woman's life insurance, and of the systematic collection of statistics bearing upon the birth and death of the human race.

Terence V. Powderly, at a mass reception given him recently by the Chicago Knights of Labor, advocated woman suffrage in his address, and was warmly applauded by his five thousand hearers. He also advocated equal pay for equal work. Mr. Powderly said: "The Knights of Labor did not invite women to join them to make their gatherings pleasant, or from courtesy toward the sex, but we thought them toiling outside during the day, and we thought they ought to have a chance to work out their salvation inside—for we are women's rights men. We asked them in to work side by side with us, so bravely have they fulfilled our expectations that I have wished all our men were women. To-day machinery places man and woman side by side, work where formerly man stood alone, but her compensation does not rise to the level of his. We believe in equal pay for equal work. More power to machinery will open up more employments for women, and unless you recognize them, they will do the world's work—and you will walk the streets a job."

THE O. R. C.

The 22d Annual Convention of the Order Held in the City of Rochester, N. Y., May, 1890.

AMAZING GROWTH OF THE PROTECTION IDEA IN THE RANK AND FILE, AND THE ANTI-PROTECTION PROVISION OF THE LAW ELIMINATED BY A VOTE OF 214 TO 66.

The 22d convention of the Order of Railway Conductors convened in the city of Rochester, N. Y., in the month of May. Two hundred and eighty delegates responded to roll-call, and the convention proceeded to business. It was by all odds the most important convention in the history of the Order. It is well understood that the O. R. C., from the first, has been a *non-striking* and, therefore, a *non-protective* order.

During the few years past the Order has been somewhat agitated over the *strike* or the *protection* question. It was founded twenty-two years ago upon the principle that *moral* suasion could bring about any desired remedy for any wrongs which employers might inflict upon the members of the Order. The Order placed a high estimate upon the conscience of corporations. It believed that corporations had souls; that corporation ideas of justice to employees were so sublimated that it was only necessary to point out a wrong to have it promptly dethroned and the right set in its place.

The work of education in that direction had been going forward for twenty-two years, and railroad corporations understood that under no conceivable circumstances would the O. R. C. strike. In its organization there was neither striking, kicking, protesting, nor protection machinery. The Order was committed to the theory to take what it could get and keep silent.

As the years went by, conductors, members of the Order had their wages reduced, and were silent; they were required to scab, and were silent; spotters were put upon their track, and they were silent; they were unceremoniously discharged with

smirched reputations, without a chance to defend themselves, and still they were silent. It was useless to appeal to the Order. It had no voice; it was dumb. It was organized paralysis; it could neither kick nor strike. It was without sand in its craw, and was as spineless as a fish-worm, and still the wrongs went forward and multiplied, and still the great Order of Conductors was silent as a tombstone and as inert as a clod.

Education in the wrong direction had done its perfect work. It had educated its members to kiss the rod that smote them and lick the boots that kicked them, and say nothing.

Outsiders looked on in bewilderment. They knew thousands of conductors who were self-reliant and self-respecting men, as independent and as courageous as any other men, and they wondered why it was that such men would submit to indignities that other men resented.

In this case surface indications were not reliable; they did not indicate what was going on beneath the surface. Conductors, members of the the O. R. C., were aroused to their condition, and they were discussing the subject of protection. They were formulating plans for ridding themselves of an odious law, and for coming into line with other organizations which did protect their members.

The growth of the protection idea in the rank and file of the O. R. C. speaks trumpet-toned for the right, for the ultimate triumph of the right, for truth and for justice.

The first thing in order was to get rid of the *anti-strike* provision in the constitution, the organic law of the Order, which had been in it for twenty-two years—no easy task.

At the convention held in the city of Denver in 1889, only *nine* votes could be mustered in opposition to the *anti-strike* provision of the Order. Behold one year later, when, at the convention at Rochester, 214 votes are recorded to eliminate the anti-strike clause, and only 66 to retain it—an overwhelming majority of nearly *four* to *one*.

A more splendid triumph for correct ideas has not occurred during the century. It is full of hope for men who understand their rights and dare maintain them. It is a victory of wonderful possibilities; a revolution of the most cheering significance. In this connection our readers will be interested in the following document, prepared and given to the press by William P. Daniels, Grand Secretary and Treasurer of the Order. It is a novelty in its way, and shows the dilemma of the O. R. C.:

To the Editor of the *Morning Herald* :

In consequence of the many exaggerated and false reports that have been published since the opening of the 22d grand division of the Order of Railway

Conductors. I have decided to request you to publish for us a brief statement of the actual facts in regard to our action here.

I do not wish to be understood as censuring or reflecting upon the newspapers of Rochester in the slightest degree, as I fully realize the fact that they have simply published information that has been given them by interested parties.

The statement openly made and sent broadcast over the United States that the Order of Railway Conductors has become a striking organization is absolutely false. They have merely taken from their laws a clause by which members were obligated not to engage in any strike of railway employees. They have put nothing in place of it and will not do so, the intent being to maintain a position that will leave each and every individual member free to do exactly as he chooses, and to exercise his inalienable rights as an American citizen.

It is an absolute fact that can be proved by indisputable evidence, if necessary, that some of those members who are now accusing the Order of Railway Conductors of having resolved itself into a strike organization have, within the very recent past, publicly announced themselves as in favor of the very action that has been taken.

There has been no change in the principles of the Order of Railway Conductors, the assertion of members to the contrary notwithstanding, and it certainly appears to the writer, as well as to many others, that the statements made by some of these members is for the two-fold purpose of gaining for themselves personal advantages in certain quarters and to injure the Order of Railway Conductors all that they possibly can, by endeavoring to make the public and railway companies believe that the Order has placed itself in a position of antagonism, not only to the corporations in whose employment its members are, but also to the best interests of the general public.

It is also a noticeable fact that all of the information given to the newspapers has been directly in this line. The withdrawal of Mr. Chittenden was hardly an accomplished fact before it was published in the daily papers; the remarks of Mr. Wheaton declining the nomination as Grand Chief Conductor, on account of what he alleged to be a change in the principles of the Order of Railway Conductors, were hardly uttered before they were published in the daily papers; the two telegrams received yesterday, one to Mr. Ostrander and one from Mr. Chittenden, are both published this morning.

Had those who have acted with the majority during the entire session taken the same course with regard to giving the public information, matters would present an entirely different aspect. It has been openly asserted by some few of the members who declined to acquiesce in the action of a large majority, that they would use their best endeavors to make the Order of Railway Conductors a strike organization, or place it in the control, if possible, of the very few who perhaps desired to go to the extreme on the strike question. Let me ask the members and the public generally to suspend their verdict, and make their decision upon the acts and record of the Order of Railway Conductors, and not on *ex parte* statements and false accusations made by a few dissatisfied members, among them some whose ambition for place has been disappointed.

In regard to the extract from the New Haven News, published in the *Advertiser* of the 19th, which is also being spread broadcast over the United States by those same discontented members, such puerile nonsense is unworthy of any serious attention, and it is, perhaps, well for some of those whose cause Mr. Hermance espouses that it is so. For, if all of the facts were made known to the public, it would place some of these malcontents in a very unenviable position. The wholesale charge of perjury made by Mr. Hermance can, in my mind, only be likened to the one juryman who could not, by any means, influence the eleven ignorant and obstinate ones to join him in his opinions.

The position of the Order of Railway Conductors in regard to these members is exactly this: There is no desire or disposition to force any members out of the Order so long as they are willing to abide by its laws, and, in accordance with their obligations, yield cheerful compliance to the will of a lawfully con-

stituted majority. If, however, they cannot do this, we have no room for them. Due allowance will be made for the disappointment and ill feeling consequent upon defeat; but if, after a reasonable time, common sense and good-fellowship does not resume its sway with these men, they must leave the Order of Railway Conductors.

In regard to the surrender of the charter of Division 168, its charter has not yet been surrendered, and while it is quite likely that some of its members will withdraw, I am reliably informed that undue advantage is taken by those who follow the lead of Mr. Chittenden, its charter will not be surrendered.

Action has already been taken by the Grand Division to divine exactly the position of the Order, and authoritatively deny the absolutely false statements that have been given, either directly or indirectly, to the press of this city, by the adoption of the following resolution:

Resolved, That the Grand Chief Conductor be authorized and instructed by the Grand Division to furnish to the press the following statement and attest the same by his signature:

"While individual action of members of this Order is now in no way restricted, this organization is not on a strike basis, nor has any legislation in that direction been proposed. C. S. Wheaton, Grand Chief Conductor."

Yours very truly,

WILLIAM P. DANIELS

ROCHESTER, May 21, 1890.

It will be noticed that Mr. Daniels says that while the anti-strike clause of the laws of the Order is repealed, nothing has taken its place, and that now, while the members of the Order may *strike* if they choose, the "organization is not on a strike basis."

The discussion of such propositions is entirely foreign to our purpose. It is sufficient to say that many members of the Order, those who made up the sixty-six to preserve the anti-strike clause, believe the Order is on a strike basis, and because it is on that basis, many have withdrawn from the Order. And to make matters in that direction still more emphatic, we reproduce a Philadelphia telegram of June 1st, showing Austin Corbin's view of the subject:

PHILADELPHIA, June 1.—A rumor that the Philadelphia & Reading Railroad Company has ordered its conductors to withdraw from the Brotherhood of Conductors, or leave the employ of the company was confirmed to-day by Assistant Superintendent Bonzano. He said the action was resolved upon by the officials of the company after the convention of the Brotherhood of Conductors which met at Rochester, N. Y., May 15th. Previous to this convention the Brotherhood had an anti-strike clause in its constitution. At the convention that clause was repealed, and shortly afterwards notice was issued to conductors that they must leave the Brotherhood of the railroad service. Mr. Bonzano says they have promised to leave the Brotherhood, and some have already done so.

"We have had enough of labor organizations," said Mr. Bonzano. "All conductors, engineers, brakemen and firemen on the Reading Road are now non-union men. The unions are bad for the men and bad for the company."

The foregoing is conclusive. Bonzano Corbin's Italian bandit, declares unions are bad for the Philadelphia & Reading because it is a somewhat difficult matter to reduce union men to slaves, make them shave and button up their coats at the bidding of a boss.

Even before the convention adjourned those who believed that conductors ought

to submit to any treatment corporations might see proper to inflict, commenced withdrawing from the Order. Says the Rochester *Herald*:

One of the eastern delegates said last evening, in conversation with a representative of this paper, that the action of the convention in eliminating the non-striking clause would certainly result in the withdrawal of a large majority, if not all, of the New England, New Jersey and Pennsylvania divisions from the Order. "With the conductors on the Philadelphia & Reading who belong to the Order," said he, "there is but one alternative. They will be compelled either to leave the Order or quit the service of the company. This is the only organization ever tolerated on that road, and the company would not allow one of its employes to be connected with an organization in any way favorable to strikes. As soon as can be arranged, a conference of representatives of all divisions opposed to strikes will be held, and steps taken toward the formation of an organization similar in all respects to the present one, except upon this one question, concerning which we differ so radically from the majority. I say from the majority, but it is by no means certain that a majority of the rank and file is represented by the action of this convention. We have 2,000 members in New England who will unite with an organization formed on a strictly non-striking basis."

Manifestly, the O. R. C. has outlived its usefulness to its members. Fortunately for the courageous men of the Order, the Brotherhood of Railway Conductors stands ready to receive them, or, when another convention of the O. R. C. is held, something may take the place of the anti-striking clause which the Rochester convention eliminated from the laws of the Order, and then the O. R. C. may take a fresh start in the line of protection and progress. Certain it is that those who oppose progressive ideas are of little consequence, and can no more withstand the onward march of events than a school-boy's toy-boat could outride the rapids of Niagara.

OLD DOCUMENTS RELATING TO TROUBLES ON THE PHILADELPHIA & READING R. R.

A friend and an old railroad man who has taken special interest in the Philadelphia & Reading Railroad troubles beginning in 1887, and culminating in a strike and sweeping out of existence all labor organizations on the P. & R., sends us for publication these documents which are of special value to those who would preserve the history of an affair which, for individual and corporate baseness, is unparalleled in the railroad management of the country. The document bearing the earliest date is as follows:

RECEIVERS OF THE PHILADELPHIA & READING RAILROAD.

I am directed by MR. AUSTIN CORBIN, President, to issue the following notice to employes:

To such of our old employes as have stood manfully and faithfully by us, we feel obliged and thankful, and shall not forget them. But the time has now arrived when all our employes will be required to decide whether they expect to retain their places by reason of honest and faithful service and prompt obedience to the orders of the company that employs them and pays them, or by blind obedience to the direction of the Knights of Labor, through

which organization the leaders hope to coerce us into the employment of men who consider their first obedience due to that order.

The men who stand by us will have employment, with reasonable hours and good pay, as much as is paid by any other corporation of a similar character. Men who do not will never be allowed on the road again under any circumstances.

We have never objected to labor organizations and do not now. Every man shall be free to belong to one or not, as he pleases. But the leaders of such orders cannot and shall not dictate to this company as to whom it shall employ or how operate its property. Places that are left in obedience to the orders of the Knights of Labor shall be filled by new men, and such new men will be retained, and under no circumstances be discharged to make room for men who have left their places.

Hereafter we shall operate this property with employes who consider their first duty is to the company, and expect to obey reasonable orders made in the transaction of its business.

There has never been a moment when, under any circumstances, we would arbitrate any question growing out of this strike. There has been nothing to arbitrate. It is only a question as to whether the company shall be permitted to operate its own property—a property in which there is invested over \$200,000,000—or whether that property shall be controlled by the Knights of Labor.

It may as well be understood now, and from this time on, that any wheel that is turned on the Reading system will be turned under the orders of the management of the company, and under the orders of nobody else.

A. A. McLEOD,
General Manager.

DECEMBER 29, 1877.

It will be observed the complaint is made that the Knights of Labor, without an honest grievance, had brought about troubles on the P. & R., when, in fact, it was proved by witnesses summoned by the Congressional committee when investigating the troubles on the P. & R., that Corbin and his lieutenants brought about the troubles and forced the Knights of Labor to strike, the men having been the victims of Corbin's infamous policy.

The following document, issued over the signature of Austin Corbin, himself, is a labored effort to show that the P. & R. corporation acted always on the defensive, and was never actuated by any desire or purpose to interfere with labor organizations; when, in fact, the troubles to which he refers were brought about by him to destroy all labor organizations in any way connected with his operations. We give the full text of his letter, as follows:

THE PHILADELPHIA & READING RAILROAD COMPANY.
PANY.

General Office, 227 South Fourth Street,
PHILADELPHIA, January 21st, 1888.

In answer to the various communications from people along the line of our road, who are deeply interested in the operation of both the Railroad and Coal and Iron Companies, we beg to make the following statement:

In December certain carloads of merchandise arrived at Port Richmond, consigned to the Philadelphia Grain Elevator Company of this city. The employes of this Company at Port Richmond in charge of the switch engines, refused to transfer these cars to the Elevator Company, and gave as a reason that that Company did not employ Knights of Labor. They were immediately notified that with such a question this Company had nothing to do; that they were common carriers, and bound to receive and deliver freight to any person or Company that offered

it to us and paid for transportation. Notwithstanding this, they still refused to make the transfer, and an order was issued by the General Manager of this Company, of which the following is a copy:

PHILADELPHIA, PA., December 22d, 1887.
MR. I. A. SWEIGARD, General Superintendent, Philadelphia, Pa.

DEAR SIR:—I am informed that several carloads of flour, consigned to the Philadelphia Grain Elevator Company, are in our Port Richmond yard, and that some of our men have refused to move them. Give orders that the cars be moved, and, if the men refuse, discharge them immediately from the service of the Company.

(Signed) A. A. McLEOD, General Manager.

Five crews of men in succession were directed to move this freight, and upon their refusal, were discharged. Because of that action, the leaders of the Knights of Labor, or a portion of them, ordered all the employes of the Philadelphia & Reading Railroad Company, as they were pleased to denominate it, "on strike." They left the service of the Company with notice to it that they would not return unless the men discharged were re-instated. To this the management answered that the men discharged for disobedience of orders would never be re-instated, and this Company proceeded to fill the places left vacant by the voluntary withdrawal of the employes from its service, as fast as it could secure proper and competent men. Finally, on Saturday, the 24th day of December, the General Manager issued an order that the names of such employes as did not report for duty on the morning of Tuesday, the 27th day of December, would be stricken from the rolls, and their places filled by new men. That was done. The men who left the service of the Company had never made, and have never to this day made, any complaint that they were worked an unreasonable number of hours, that their wages were not fair wages for the work performed, or that in any single instance they had been treated otherwise than kindly by the management. Notwithstanding this, and that under the terms of their employment with the Company they were bound to render honest and faithful service, complying with all reasonable orders it might make in the regular transaction of its business, they violated every obligation of this character and, by their own act, cancelled any obligation there might have been on the part of the Company to retain them in its service. Over 2500 men voluntarily left our service. The same number of new and competent men presented themselves for service with the company. They were employed, and will be retained so long as they perform their duties faithfully.

We have never made any objection to labor organizations. In employing labor we have never asked the question whether an employe was a member of one or not. So long as men perform the duties they owe to this Company properly, we shall stand by them, whether they be union or non-union men. No man shall be ostracized on this road because he belongs to a labor organization, and no man will be ostracized because he does not. Our employes will be expected to render faithful service, and take orders from the management in relation to its business promptly, and without question. As long as they do this, they will retain its confidence and friendship; but any action hereafter, such as has been taken heretofore by employes, will merit and receive the same treatment. The trouble on the railroad is ended, and will never be opened again.

As to the miners' difficulty, I have to say this: On the 14th day of September, at the request of a Committee representing the miners, the Superintendent of the Coal and Iron Company, Mr. S. B. Whiting, met them, and at their request agreed upon an advance of wages of the miners for four months, commencing on the 1st of September, 1887, and ending on the 1st day of January, 1888. This agreement was reduced to writing. One copy was retained by the Committee, or Mr. Davis, Chairman, with the signature or initials of Mr. Whiting upon it. The original has the signature of John H. Davis, Chairman, upon it, and was left with Mr. Whiting, and is now in possession of the Company.

The agreement reads as follows:

MEMORANDUM OF AN AGREEMENT made at Pottsville, September 11th, 1887, between S. B. Whiting, General Manager of the Philadelphia & Reading Coal and

Iron Company, and John H. Davis, Chairman, and others, a joint committee representing the miners, laborers, and other employes of the Philadelphia & Reading Coal and Iron Company, now working under the \$2.50 basis.

The Philadelphia & Reading Coal and Iron Company are to raise the present schedule of basis prices for wages and contracts eight per cent. from September 1st, 1887, for four months, or until January 1st, 1888, and this agreement is to terminate January 1st, 1888. If a settlement was made with the other companies before that time, the Philadelphia & Reading Coal and Iron Company is to adopt whatever advance in basis rates agreed upon by all the other Companies, or in case no agreement is reached by January 1st, or the men return to work at former rates, then and in that case, the Philadelphia & Reading Coal and Iron Company are to return to the payment of the \$2.50 basis schedule prices as paid up to September 1st, 1887.

POTTSVILLE, PA., September 17th.

(Signed) JOHN H. DAVIS, Chairman Committee.

Under this agreement, the Reading Company proceeded to make payments during the four months strictly in accordance with the terms of the contract, and we paid the miners during those four months, in addition to the basis wages that had theretofore governed the settlement of their wages, the sum of \$241,906.49.

No contract, as it seems to me, could be plainer in its terms than that one, and, if a party to a contract can ever be expected to stand by its terms, we had right to expect that the miners would stand by their part of this agreement. About the 20th of December, however, a request was made upon the Company to state what it intended to do by the miners on the 1st day of January. An answer was furnished to them through Mr. Whiting, according to the instructions contained in the following letter, which was on the 22d day of December addressed to him as the basis of an answer to be made to the men:

MR. S. B. WHITING, General Superintendent, Pottsville, Pa.

PHILADELPHIA, PA., December 22d, 1887.

DEAR SIR:—By direction of the Receivers I am authorized to address you as follows:

In September last the Receivers made with the men the following contract:

"The Philadelphia & Reading Coal and Iron Company are to raise the present schedule of basis prices for wages, and contracts eight per cent. from September 1st, 1887, for four months, or until January 1st, 1888, and this agreement is to terminate January 1st, 1888. If a settlement is made with the other Companies before that time, the Philadelphia & Reading Coal and Iron Company is to adopt whatever advance in basis rates is agreed upon by all the other Companies, or in case no agreement is reached by January 1st, or the men return to work at the former rates, then, and in that case, the Philadelphia & Reading Coal and Iron Company are to return to the payment of the \$2.50 basis schedule of prices as paid up to September 1, 1887."

You are authorized to say to the men as follows: That as we have lived up to our part of the contract rigidly, and now we expect the men to live up to their part by continuing to work after January 1st, unless the Lehigh Valley miners should return before that time at an increased schedule of wages. That is what the men agreed to do, and we expect them to perform their part of the agreement as honestly as we have ours. At the same time we say to the men, that if they perform their part of the contract after the 1st day of January, we will at any time thereafter, if they desire it, take up the question again, and see if another and more satisfactory basis than the old one can be made between the men and the company. We are willing to say further that we will pay at all times as high wages as any other company and we have always been, and are now, in favor of paying good wages to our miners.

(Signed) A. A. McLEOD, General Manager. Notwithstanding the terms of the agreement, and of the notice given to them in this letter of the 22d of December, the miners refused to continue to work in the mines after the 1st of January, as the

had promised to do. I am informed that they did this for two reasons: 1st—because we would not re-instate the men who were discharged on the railroad; and 2d—because we would not continue the eight per cent. advance which we had, under this agreement, paid for the four months mentioned; and we are informed, that they would on no basis of wages have been willing to return to work, unless we had first re-instated the railroad men or arbitrated that question. As I have stated, that question is ended, and no matter in connection with that strike will ever be submitted to arbitration. As to the question of wages to be paid to miners, we have always paid, and have always been willing to pay, as high wages for mining coal as any of the large companies which are selling coal in the market in competition with this one. To pay more than our competitors for the mining of our coal would practically drive us out of the competitive market, and the only market to which we could bring our coal would be to such points on the line of the Philadelphia & Reading Railroad as are, by reason of their location compelled to buy from us and could not buy from other people. If we were to exact from the people who have invested money in industries along the line of our road, an extra price per ton for coal—a price beyond what the same class of industries pay on the lines of other anthracite coal roads—it would be only a question of time when these industries would leave us and go to points where they could obtain cheaper fuel. For these and various other reasons which every business man can understand, it would be impossible for us to maintain even a solvent corporation, much less return anything to the shareholders, if we were compelled to pay for our products more money than our neighbors pay for theirs. We regret exceedingly that this action on the part of the employees of our road, as well as the action of the miners, promise to bring such disastrous results to those portions of the state dependent upon the output of the Reading galleries; but there is no alternative for this company that I can see, except to insist upon:

1st—The right to manage its own property; and
2d—The right to employ labor in the mining of its coal so that it will have at least an equal chance with its neighbors in every competitive market to which anthracite coal goes.

The \$2.50 basis established by this company in 1875 is a liberal one for the miners. Under that basis they receive as much money for their labor as miners receive in other localities. In the Wyoming district, as I am informed, the miners are paid a certain agreed sum, without regard to the price of coal, while our miners share in the increased price beyond the \$2.50 basis; and every miner of our coal knows that under that basis, with the prices that have prevailed during the month of January, those in the Schuylkill Valley would have received wages very considerable in excess of the wages paid elsewhere, and even at a lower price for coal than obtained during this month, their wages would still have been in excess of those paid in other localities.

For the twelve years, commencing January 1st, 1876 and ending January 1st, 1888, this company has mined 51,000,000 tons of coal: paid for it to miners, \$57,110,000; and has received, as the net proceeds, for the coal so mined, only \$41,840,000 making an actual loss in the mining of its coal, of \$15,270,000 during that period. In other words, we have distributed throughout the country 51,000,000 tons of our coal, the miners having received every dollar of net money we obtained for it, and we lost in the operation \$15,270,000 besides; and during all these twelve years, the stockholders of the Railroad company which transported this coal, who have paid up \$40,000,000 of money for their stock, have not received one cent by way of dividends and they have just been called upon, with a portion of the junior securities, to pay in, by way of assessments, \$12,000,000 of fresh money, to make good the losses of the companies.

In view of these results, it is not the time now, according to my judgment, to undertake to pay more money for the same class of labor, than is paid by other competitive companies.

AUSTIN CORBIN, President.

Having succeeded in breaking up all labor

organizations on the P. & R., and in the anthracite mines controlled by the corporation, Austin Corbin organizes an insurance scheme for the purpose of fleecing the men in his employ, and for the purpose of subjecting them to degradations unheard of in the United States and scarcely paralleled in any autocrat-cursed land in the world. The third document, which we submit, is as follows:

To the Employees of the Philadelphia & Reading Railroad Company:

I am informed that some of our employees have stated that the sick and death benefits, under the plan submitted to them by me in the circular recently sent out upon the subject of organizing an Insurance Association, are not as liberal as are made by some other societies to which a part of them belong. Under the plan submitted, these benefits were made as liberal as we believe will be absolutely safe to commence with, based upon such reliable statistics as we were able to obtain. Whether this statement as to other societies be correct or not, it should make the plan of the proposed Association none the less attractive, because every dollar you pay to the Association is held for your benefit, without any deduction for expenses, and, besides that, the Company will pay into your treasury an additional sum of money equal to 10 per cent. on all your subscriptions up to \$1,000,000 and, thereafter, five per cent upon all payments you make. In order that the plan when inaugurated shall be absolutely sound, and that all benefits promised shall be positively assured by an ample fund. Every dollar of this contribution of the Company's, as well as our own contributions, belong to you, the subscribers, and is under your control as to management. You have the right to elect a majority of the Board of Trustees. If, therefore, after a few years experience, you find you can safely treat yourselves more liberally, either by making smaller assessments, or increasing your benefits, you have it always in your power to do so; but at the commencement you cannot afford to undertake payments on any basis that is not an entirely safe one.

If you join this Association, you need not withdraw from any other benefit societies; but I hope you will find it desirable to connect yourself with this Association, because of the substantial financial support proffered by the company, and the positive certainty that every man will have secured during sickness, a very considerable contribution towards his support, and, in case of death, those who are dependent upon him will not, at any rate, be left destitute.

Most plans of assurance of this character provide for the distribution of only so much money as the members themselves pay, after making a deduction of all expenses of administration and management. In this case, the Philadelphia & Reading Railroad Company contributes a large additional amount of money to that paid by the members, and assumes all the expenses of management.

In this connection, however, I wish it clearly to be understood, that all of our present employees are free to become members of this Association or not, as they please, and none need have any hesitation in declining, if they desire to do so. It will in no respect change the kindly feelings that the management has towards them.

This plan has been proposed entirely in the interest of the employees of the Company and their families, and can in no possible way result in pecuniary advantage to the Company.

AUSTIN CORBIN,
President.

PHILADELPHIA, September 20th, 1888.

After numerous protestations that the P. & R. had no objections to labor organizations, the studied policy has been to tolerate no man who belongs to such an organization, provided it proposed in any way to protect its members against outrageous wrongs. The work of destroying labor or-

ganizations has gone steadily forward, and now, Austin Corbin, having his men sufficiently degraded, amuses himself by issuing orders to them to shave, button up their coats, etc.—the strange feature being that the men who submit to Corbin's rule, without protest, call themselves free men.

GRAND CHIEF ARTHUR AND CHAUNCEY M. DEPEW.

The Indianapolis *News*, in an issue immediately subsequent to the New Haven, Conn., meeting, at which Grand Chief Arthur and Vanderbilt's President of the New York Central R. R. appeared, said:

"Grand Chief" Arthur of the Locomotive Brotherhood yesterday addressed a meeting of the Brotherhood, together with that other laboring man, Chauncey Depew. Arthur said:

"I am opposed to our Brotherhood forming an alliance with any other class of labor. When the Brotherhood federates with any other organization it will forfeit the respect not only of the public at large, but of the employers."

It is quite possible that the Brotherhood might forfeit the respect of its employers. If it is run to curry favor with the railroad magnates it could be suggested that it might do it still better by federating with them. Indeed, this may be what Mr. Depew meant when in his speech on this occasion he said:

"The question between capital and labor has been better settled by the Brotherhood than by any other organization in the country. Labor has come to the protection of capital against demagogues."

We presume by labor, Mr. Depew means that which is represented by the Brotherhood of Locomotive Engineers, and that all other labor is characterized as having for its advocacy "demagogues." It will also be cheering news to the social and economical student to know that the question between capital and labor has been better settled by the Brotherhood of Engineers than by any other organization in the country. Within the last year or two the great upspringing of "Nationalists," the wonderful prevalence among the thinking classes of the thought that the relations of capital and labor are reaching such an intolerable condition that to "reform it altogether" seems almost inevitable; the rise of the Farmers' Alliances to protect that class; the further raids of government fed industries in the imposition of a tariff greater than the enormous one of 45 per cent. average and the disregard in it of the principle of reciprocity and the substitution thereof, so to speak, of a bounty big enough to pay better from operations in the contracted sphere of a home market—such things as those had lead most thinking people to feel that the relations of capital and labor were never more abnormal, and it will certainly be news to them to know that the Brotherhood of Locomotive Engineers has "better settled" or settled it at all. The instinct of labor, too, as well as the experience of capital, will be somewhat amused, we fancy, at Grand Chief Arthur's dictum that no federation is the high road to prosperity; that sounds so well in these days of trusts and combines. But it is always pleasant to see brethren dwelling together in unity, and the spectacle of these hard-working laborers, Arthur and Depew, enormously and mutually satisfied over the relations of capital and labor and the attitude of the Brotherhood of Locomotive Engineers, is refreshing.

The points made by the *News* will be accepted as eminently wise and opportune. The *News* is in no sense a "labor organ," but it is wide awake, comprehends the logic of events and conditions, and is fearless in expressing its views. In the stand taken by such papers as the *News*, labor finds champions of its rights and interests which tell of coming victories.

"COME, LET US REASON TOGETHER."

Mr. P. M. Arthur, Grand Chief of the Brotherhood of Locomotive Engineers, in an address delivered at New Haven, Conn., May 23d, used the language which is the caption of this article.

Mr. Arthur, on many occasions, has announced himself as the enemy of federation and in his New Haven speech, after inviting the engineers and Mr. Chauncey M. Depew to "reason together," said:

"I am opposed to an alliance with any other organized body of laborers. Our policy, in plain English, to them is, 'Mind your own business.'"

Mr. Arthur, it will be observed, does not reason worth a cent. To say, in "plain English," that he is opposed to federation with any other labor organization, and to tell other labor organizations to "mind their own business" is not reasoning together. It is not reasoning at all. Mr. Arthur is opposed to federation; he does not say why he gives no reason for his opposition. He probably has no reason to offer.

The question of federation is up for debate; the discussion has been going forward for two years or more. By thousands of locomotive engineers the subject has been accorded great prominence. They believe it involves vital principles; that in a large degree the welfare of the B. of L. E. is dependent upon conclusions in the matter.

Mr. P. M. Arthur is the chief executive officer of the great Brotherhood of Engineers. The position gives him great prominence and importance. He is paid a large salary and it would seem, since he puts himself forward as the champion opponent of federation, that he ought to be able to supply at least one sound reason for his antagonism. This he has never done, and the conclusion is rational that he is totally incapable of furnishing a reason for his hostile attitude towards all other organized bodies of laborers.

At New Haven, Mr. Arthur said: "Come let us reason together." Who did he want to come? He don't specify. Who did he want to reason with? About that he is silent. The Grand Chief had by his side that splendid after-dinner orator, Mr. Chauncey M. Depew. Mr. Depew is president of the New York Central & Hudson River Railroad and receives \$50,000 a year, or \$166.66 a day for 300 working days of a round year. If he works ten hours a day he gets \$16.66 an hour.

An engineer, working 300 days in a year at \$4 a day, would have to work about forty-two years to receive as much money as Mr. Depew receives in one year.

Mr. Arthur also had on the platform with him at the New Haven meeting, Mr. Charles P. Clark, president of the New York, New Haven & Hartford Railroad. We presume

Mr. Clark receives as much as \$25,000 a year for his services.

In the presence of these distinguished railroad officials Mr. Arthur says: "I am opposed to an alliance with any other organized body of laborers. Our policy, in plain English, to them is, 'Mind your own business.'"

We do not doubt that Mr. Arthur's declaration received the unqualified approval of Messrs. Depew and Clark. We are satisfied that Messrs. Corbin and Perkins and every other railroad president in the country, with rare exceptions, will exclaim, "Hurrah for Mr. Arthur!"

But there are multiplied thousands of locomotive engineers in the country who do not and will not indorse Mr. Arthur's declarations. They are in favor of "an alliance" with other bodies of organized laborers, and their "policy" is not, in "plain English," to say to them, "Mind your own business."

Mr. Arthur says, "Come, let us reason together," but he does not "reason" with the engineers. He simply proclaims his hostility to federation. This style pleased Messrs. Depew and Clark, the railroad magnates, and it may have pleased some of the engineers who were present, but the great body of engineers will not indorse such declarations.

The federation idea is "bigger" than Mr. Arthur; "bigger" than Mr. Depew; "bigger" than all the Vanderbilts and Goulds on the continent. The Federated Orders of Railway Employés will "mind their own business," and in minding their "own business" they will continue to agitate; discuss federation; show up its power for good; that it secures justice without violence and maintains order for the good of society. Those who would deal justly by workingmen need have no fears about federation, and those who would take advantage of weakness will find in it a power to secure the right which all honest men will applaud.

MR. DANIELS, in his address to the public, says the delegates to the Rochester convention "have merely taken from their laws a clause by which members were obliged not to engage in any strike of railroad employés. They have put nothing in place of it, and will not do so." According to Mr. Daniels' statement, the delegates made a big hole in the laws which they will never close. The hole is to remain unfilled and uncovered—a sort of a monumental hole; a hole so large that a great many conductors will pass through it out of the Order. We are inclined to the opinion that at the next convention the great vacancy will be filled in or bridged, and that the O. R. C., by its laws, will be a protective organization.

FEDERATION.

What the world wants is sensible talk on all questions relating to the interests of laboring men, and here is something in that line from the *Locomotive Engineer*:

The flood of correspondence on federation *pro* and *con* we shall have to decline—if it were all published it would fill the paper. Federation will become universal in time; in fact is now in full operation, except the engineers. The argument against the engineers' special committee, for not getting up an original plan of federation, is useless. Suppose they did get up a new plan, who would they federate with? They have only the choice to join the present federated body or stay out of it. They can't "federate" alone. It would seem as though an organization strong enough to secure valuable "agreements" would be better able to renew and enforce them than ever if their numbers were doubled. A general who has taken a fort with an army of 5,000 men does not usually surrender it because he has been reinforced by 50,000. The question is not whether or no we want federation—federation is here. The question now is, shall this magnificent array of organized railroad men fill the chairs of their Supreme Council with men of brains; men who know enough to be reasonable, honest and just; men who will be firm yet gentle with their strength; men who will meet railroad officials on common ground, and become so grand a board of arbitration that the railroad strike will be forever dead; or will they let the council become an autocratic ring of agitators and hoodlums who will make the orders behind them the clubs to show their authority, and the sewers to convey their spleen against "capital"? We have confidence in the good judgment of American railroaders when they "sit down to reason together," and believe that the present high character of the supreme council will be maintained.

That is condensed logic—something after the style of "apples of gold in pictures of silver." Federation is a good thing, a "blessed good thing." It has come to stay. It grows right along. "It is in the line of the 'survival of the fittest.'" Federation isn't a craze. There is no vagary in it. It is honest. It has the advantage of common sense, and even Chauncey M. Depew will eventually endorse federation.

BROTHERHOOD STATISTICS.

The Brotherhood of Locomotive Firemen is gaining in membership at the rate of 225 a month, *net*, or at the rate of 2,700 a year. It is a healthy growth and eminently satisfactory.

Under the present laws of the Order, relating to insurance, a fireman who joins our Brotherhood is required to take out a policy for \$1,500, and on the first day of every quarter, beginning with February, he is required to pay \$5 in advance, and upon failure, stands expelled. As a result, men who join the Order are aware of the obligations; they count the cost, are satisfied; they join and pay. If they are killed, or are disabled, or die of disease, during the quarter for which they have paid, the amount of their policy is secure beyond a peradventure. The money has been collected, is on hand, and is paid over at the earliest practicable day. This gives confidence, is popular, is admitted to be the best policy ever devised, and places the B. of L.

F. indefinitely in advance of all other beneficiary organizations. It is not believed that anything wiser can be proposed. It embodies financial wisdom that challenges criticism.

At this date there are in the B. of L. F. 3,026 road engineers and 1,151 switch engineers. Of the engineers belonging to the B. of L. F., 545 are members of the B. of L. E. Of the whole number of engineers in the Order only 191 are out of employment, a fraction over 4 per cent. Of the firemen of the Brotherhood, only 441, or a fraction over three per cent., are out of employment, and the average pay of firemen is \$60 per month. Taking the entire number out of employment, 732, and it is a fraction less than 4 per cent., of the entire membership of the Order.

In this connection it should be said that the Employment Bureau of the Order keeps a record of every member out of employment and that efforts are constantly made to find them work. That this is carrying into practice the true spirit of brotherhood no one can doubt, and that it is proving in a large degree beneficial is a matter of record.

THE O. R. C. AND PROTECTION.

The Order of Railway Conductors, had in its constitution what was called an "anti-strike" clause, more properly, perhaps, an anti-protective clause, and it was retained twenty-two years. At the Rochester, N. Y. Convention of the Order, the clause referred to was stricken out by a large majority of the delegates.

All things considered, the action of the Convention is more than ordinarily significant, and is worthy of special consideration.

In the discussion of questions relating to the welfare of workingmen, the student of problems in that line can well afford to investigate the reason why the O. R. C., in the beginning, decided against the strike as a means of protecting its members against wrongs and injustice. It will not do to say that in framing a constitution the subject was overlooked; that it was not discussed, or that it suggested it was set aside as unworthy of attention. It is safe to say the subject was discussed, and for reasons satisfactory at the time, voted down.

What were the reasons? We do not presume that it is possible for any man to give the reasons which influenced the delegates to the O. R. C. Convention to insert in the constitution of the Order a non-protective provision, unless it be some one who participated in the debate upon the proposition. In such matters we do not propose to deal in conjectures. We have no charges to make against men who nearly a quarter of a century ago organized the O. R. C. It is far better to believe, that with such lights

as they had, they did the best they could. Our criticisms lie in another direction.

Since 1868 railroad affairs have undergone great changes. It is not required to state them for the information of our readers. When the O. R. C. was organized there was in operation less than 43,000 miles of railroads in the United States, there are now in operation, approximately 160,000 miles. The mere statement of such strides of growth indicates that change in management has occurred; that new questions have come to the front touching relations between employer and employé, that on the one side there have been vast investments of capital, and vast investments of water; that railroad kings and millionaires have multiplied, that syndicates, pools and trusts have come into vogue; that greed has kept pace with gains; that employés have multiplied; and that all too often their rights and interests have been disregarded, set aside and cloven down.

It is just here that comes into view the fact that while changes have been going forward, that while railroad employés have been the victims of mercenary greed, such as would make a Dives blush, the O. R. C. has remained unchanged, unless it be that it has from time to time exhibited a growing desire to stand by the corporation in all of its methods of injustice to railroad employés.

It has not only aided the corporation to perpetuate its policy of wrong towards employés outside of its charmed circle, but has been silent when its own members were the victims of corporation injustice to an extent that defies exaggeration.

Necessarily, such things could not pass unobserved by thousands of the members of the O. R. C. They saw that the Order under its laws, was powerless to afford them any protection. They were the victims of the most outrageous wrongs—spotted, discharged, disgraced, they could not appeal their Order for redress; or, if they did make appeals, their grievances were unheeded. The members of the O. R. C. saw other employés, members of other Orders, asserting their rights and gaining victories, while they had to suffer in silence. They were thinking men. They saw wherein the Order had made the fatal mistake. They knew their weakness was the result of an error in the constitution of their Order. If their Order could not protect them it was practically valueless. The necessity for change in the fundamental law of the Order became more and more apparent as the years went by. It was growth in the mid forces of the membership. No amount of word jugglery could stay the onward march of ideas. The truth, in all its conquering power, had obtained a foothold and was bound to win. It had come to stay.

Rochester it demonstrated its power, and the *anti-protective* clause of the constitution of the O. R. C., by the fiat of a majority, disappeared.

We are interested in this matter to the extent that a victory was won for the right. In this connection, we note an official announcement on page 402 of the *Conductor's Monthly* as follows:

"While individual action of members of this Order is now in no way restricted, this organization is not on a strike basis, nor has any legislation in that direction been proposed."

It is sufficient to say that revolutions do not go backwards. Possibly a remnant of the O. R. C. will remain as a monument of an original error, but the fact remains, that a vast majority of the conductors of the country are in favor of *protection*, and if they can't have it in the Order of Railway Conductors, they will have it in the BROTHERHOOD OF RAILWAY CONDUCTORS. The edict has gone forth, and is as unchangeable as the laws of the Medes and Persians.

THE SUPREME COUNCIL.

The Supreme Council of the United Orders of Railway Employés met at Chicago in annual session on June 16th and closed its deliberations on the evening of the 17th. There was a full attendance of representatives and the meeting was in all regards harmonious and fruitful of good results.

The constitution, having met requirements, was not changed. Sufficient copies were ordered printed to supply each member with a copy. A circular of a general character was adopted which will be forwarded to each Lodge within the jurisdiction of the Supreme Council.

The following officers were unanimously chosen for the ensuing year, viz.: F. P. Sargent, President; Geo. W. Howard, Vice President and W. A. Sheahan, Secretary and Treasurer.

The representatives were unanimous in expressing satisfaction with the first year's work of the Council and pledged themselves anew to the advance of the movement.

In our next issue we will present to our readers a detailed report of the proceedings.

"Do it now or do it never," was the motto of the 214 delegates at Rochester who eliminated the anti-strike clause. Sickly-sicks voted tother way. It was their Waterloo.

MR. DANIELS says the statement "that the O. R. C. has become a striking organization is absolutely false." But it is also "absolutely false" that the O. R. C. is a non-striking organization, therefore, what is absolutely true of it? The members of the O. R. C. can now strike if they want to, there is no law to prevent them. That will do for the present.

GOING the rounds of the press is a list of women who by their talents and hard work are making fortunes. "To begin with," says a contemporary, "there is Mme. Modjeska, who, on the authority of the Chicago *Herald*, could raise \$75,000 on personal valuations to-morrow if anything of an unfortunate nature should happen to her. Mrs. Mary Livermore has \$75,000 of the \$120,000 made from her lectures, and hapless Anna Dickinson, who cleared \$25,000 in one season and \$160,000 in ten, hasn't a dollar of it left. But she is wiser than she was. Mrs. Harriet Prescott Spofford has published ten books in the last forty years, the proceeds of which amounted to about \$6,000 each. Ouida has earned more money than any woman of the century, with the exception of Mme. Patti. Mrs. Southworth's novels brought her a fortune. Mrs. Harriet Hubbard Ayre is coining money. With the exception of Mrs. William H. Vanderbilt, Mrs. Mary Ann Connelly, who came to this country forty odd years ago as a steerage passenger, and who pulled basting stitches for two years, has more money in her own right than any of the Vanderbilt women, every penny of which she made with her needle. She owns about ten cottages at Long Branch, facetiously known as the 'Party Dresses,' one of which is fit for a king, and brings in a kingly rent every summer. The most successful money-maker among modern women is Lydia Van Finkelstein, a native of Palestine, a woman of about 28, and something of a linguistic wonder. She lectures, or talks rather, on the Holy Land, knows the whole geography of Asia Minor, and could enlighten Col. Ingersoll on the mistakes of the Bible, which she knows from cover to cover. In a little less than six years this large blonde biblical talker has cleared \$100,000. She gets \$100 a lecture, with a percentage of the receipts, and talks from October to May, often giving three lectures a day.

The list could be extended, showing what women can do in the way of making fortunes, but there are other women not known to fame who are working to secure a livelihood who barely keep their souls in their wretched bodies, and for whose welfare, be it said to the eternal disgrace of our boasted civilization, creatures, calling themselves men, work together, to deny them fair wages, and keep them forever on the ragged edge of starvation and despair. Nor are men alone in this work of degradation, but thousands of wealthy women are as totally regardless of the sad condition of working women, and never more at ease than when they can secure their services for a pittance.

Men have only to observe the expenditures for luxuries on every hand, and note the cruel fate of working women in all the

great centers of population and industries, to enable them to estimate the hollowness of professions and the shams of civilization. This done, the American hog with two legs expands to such prominence as to create disgust in the ranks of his four-legged superior.

RAILROAD EMPLOYEES AND THEIR PAY.

The logic of figures is of a character from which there is no appeal. When compiled by a conscientious head and hand, they go straight to the mark, and thoughtful men can contemplate facts absolutely devoid of sophistry. The *New York Post*, April 29th, referring to Commissioner Wright's reports, says:

Carroll D. Wright, the Commissioner of Labor, submitted his fifth annual report on Friday. The single subject treated is railroad labor. This report shows that on June 30, 1889, the number of employes on all the railroads of the country was 689,912, the trainmen numbering 135,580, switchmen, flagmen and watchmen 31,896, and other employes 522,250. Sixty roads were selected for investigation in all parts of the country. There were 211,910 employes connected with them. Upon investigating the subject of the relations of employes and corporations, which was extended to about six hundred corporations, it was found that 377 companies prohibit the use of intoxicating liquors. The remainder either have no rules relating to the subject or have modified restrictions. Of the 224,570 employes 25 per cent. are employed 25 days or less out of the whole year, over 11 per cent. from 26 to 50 days, nearly 19 per cent. from 51 to 100 days; and over 8 per cent. from 101 to 150 days. These numbers which constitute nearly 58 per cent. of the whole number of employes working on the roads considered, are employed less than one-half the year: 19 per cent. work from 301 to 365 days, 2.2 per cent. work more than a full year. As to wages, it is found that over 73 per cent. are paid at rates ranging from \$1 to \$2 per day. The average daily rate of all the employes paid by specific time on the sixty roads is \$1.64, yet nearly 61 per cent. of the whole number received less than the average rate of all. It is also shown that of the whole number of employes 101,905 earn less than \$100 per year, 33,621 earn from \$101 to \$200 per year, and 21,517 earn from \$201 to \$300 per year. The average earnings on all the sixty roads per year is \$243, although something less than 60 per cent. on all earn less than this average.

The railroad enterprises of the country are ceaselessly referred to as the highest standard by which to judge of the nation's prosperity and greatness. The railroad, it is claimed, is the great civilizer. The "snort" of the iron horse, it is asserted, is as one "crying in the wilderness" prepare the way of civilization and make its paths straight. An army of 689,912 men is engaged in carrying forward railroad enterprises, and now, gods, men and angels, contemplate the fact that these men receive less than an average of \$243 a year for their work, a fraction over 77 cents a day for 313 days work. Such is the cruel logic of figures.

It is stated that the O. R. C. has been the only labor organization Austin Corbin would tolerate on the P. & R. Such an indorsement is like a certificate of good character from the devil.

THIS *Magazine*, from time to time, has pointed out to the O. R. C. its duty in the matter of protecting its members. As one of the evangelizing papers of the country it realizes that the seed sown fell upon good ground, and produced an abundant harvest at Rochester.

BROTHER WHEATON says members of the O. R. C. can strike if they want to, or words to that effect, but that the O. R. C. "is not on a strike basis." Mr. Corbin don't think so, and tells the O. R. C. conductors in his employ to "get" or leave the Order. Corbin knows the difference between a man and a slave.

WHY CAN'T WE PULL TOGETHER?

BY SWITCH.

Mr. Editor:—Why can't we pull together in a federation team?
Federation is the policy we ought to pursue—
Even Shandy Maguire might tune his tambourine
And play a tune forinst Chauncy M. Depew—
And knock that Vanderbilt
Silly, helter skelter.
Put a bee in his bonnet and a cricket in his hat.
And show Arthur, Peter M.
He was mistaken when
He tried to down federation with a railroad millionaire.

Mr. Editor:—Why can't we pull together? 'tis the order of the times—
There is no mistake about it, P. M. Arthur, notwithstanding—
All railroad employes read the signs of the times
And vote aye showing they are men of understanding—
Thousands of the O. R. C.—
Thousands of the B. L. E.
Want to pull with men who are to conviction true
And they swear 'tis past belief
When they see the B. L. Chief
Putting on million airs and hobnobbing with Depew.

Mr. Editor:—Why can't we pull together in a federation pull?
Why can't we be prepared for any coming time of need?
What's the use of standing on the track like the crazy bull.
To buck against common sense, when running at full speed?
Though Chauncy M. Depew
Would like to see us pursue
Such a dumb, driv'n cattle policy, he can't be accommodated—
Railroad employes
Are no longer on their knees.
No, no, they've inscribed upon their flag "We are federated."

Mr. Editor:—Why can't we pull together? By all the gods we can.
The word has gone forth on all the winds that blow.
The theme is poetic, and Shandy is the man
To roll it off upon the strings of his grand old bass jo.
Come Shandy, wont you saddle him?
And then wont you straddle him?
Your trusty old pegasus and make him sport a few
Dirge-like, mournful verses,
As if a train of hearsees
Were waiting for P. M. Arthur and Chauncy M. Depew?

The Brotherhood.

Correspondence concerning the Brotherhood is solicited for these columns.

Communications should be written on one side of the paper only, and forwarded so as to reach the Editor not later than the *fifteenth day* of each month

INDIANAPOLIS, IND., JUNE 15, 1890.

MR. EDITOR:—I forward to you an article that should have appeared in the columns of the *Engineers' Journal*, in answer to an article signed "J. E. S." that appeared in the June *Journal*, and special attention was given it by the Editors. This article has been declined on the plea of having sufficient copy for not only July, but August also. Now, in justice to the great cause in which we are all engaged, I feel that this should be published. Those in favor of federation have been handicapped in every effort to freely discuss this important subject, which is wrong. I therefore send this to you, feeling as I do that it will meet the eyes of many of those it was intended for.

Yours in the Cause,

F. B. A.

[The following is the article alluded to in the above note.—ED. MAGAZINE.]

MESSRS. EDITORS:—Having read the communication of "J. E. S." in the *Engineers' Journal* for June, beginning on page 428, I desire, with as much brevity as practicable, to reply.

I dislike subterfuges. I write "for the good of the Order"—I am for federation. Not because some others favor it: not because it is opposed in certain quarters. On the contrary, I am in favor of federation on the merits of the proposition. With such ability as I could command, I have investigated the subject for myself and have come to certain conclusions. I have patiently read opposing opinions. I have analyzed them, not in a spirit of determination *not* to be convinced, but rather to be convinced if wrong, and promptly adopt the right. I believe in the omnipotence of TRUTH, in the ultimate triumph of the right. I believe in "reasoning together." I believe in argument, in honest statements, without ifs and buts. The times in which we live are practical. The most important problems before the world to-day relate to labor—to the compensation of labor, to the welfare of laboring men, to their homes, to the well-being of their wives and children. Let me say, Messrs. Editors, that the term "labor" grasps all labor. I submit that while you may classify laborers, labor itself is continuous; it goes on from first to the last in any particular line of industry, and therefore necessarily and inevitably touches all and makes all interdependent.

Take an engineer. His hand is on the throttle of an engine. Now, then, who made that throttle? who made the locomotive? Beyond that, who dug the iron ore? who worked at the forge? who fashioned bolts, bars and plates? Who does not see from the initial step to the time that the "iron steed" takes its place on the track ready for the engineer, labor itself has been continuous? (Classify laborers as you may: the law relating to the continuousness of labor is immutable.)

There may be those who will attack such self-evident propositions. Let them do it. I hold in the ranks of labor there is interdependence, mutual interests; that this is inherent, fixed beyond the power of revocation. I hold that laboring men are comprehending the irreversible law as never before in the history of the world; and that thinking men outside of the ranks of labor are studying the facts with more earnestness than ever before in the history of civilized governments. Even such men as Gladstone discuss strikes, and he does not hesitate to say they have accomplished for workingmen more good than harm. Even Emperor William, with a four pound crown on his head, ablaze with jewels valued at millions, the descendant of one of the most autocratic dynasties that ever sat upon a

throne, is seeking to placate workingmen, who by their united clamorous demands for justice, make him uneasy, though backed by a million armed soldiers. I plant myself upon the indestructible fact that mutual interests exist in the ranks of labor. I issue no challenge to any brother engineer to enter the arena and debate the proposition. I make the statement simply for my own use in writing this communication. I am quite willing to concede that this general interdependence comes into bolder prominence when laborers are identified in certain classes of industries, as for instance the operatives in mills, and so on, as will readily be suggested to the minds of the intelligent reader, and this leads me to refer to the classes of laborers employed in the railroad train service of the country. Who are they? They are the *Engineers, Conductors, Firemen, Switchmen and Brakemen*. Does "J. E. S." deny that these classes are not interdependent? That they have no mutual interests? If he does, the next proposition for him to deny is, that twice two makes four. I do not suppose there is a railroad train man in the world who would deny the interdependence of the men we have named. Interdependence is *mutual dependence*, hence mutual interests to promote and protect. Now, if "J. E. S." can show there exists no interdependence of men engaged in the railroad train service; if he can prove there is no *mutual dependence*, no *mutual interests*, then he can prove that *federation* is unnecessary, and may be opposed to it with propriety. But if there is interdependence—mutual dependence, therefore mutual interest involved—every word penned by him or by others in opposition to federation, is a wrong of incalculable proportions. It is in opposition to the attainment and maintenance of the right when in conflict with the wrong. It is to sit silent and neutral when a co-employee, who is absolutely essential to the train service, is struck down by the hand of an arrogant employer. Is it prudent that in every communication I write for the *Journal* I shall be required to define the term *federation*? I apprehend that it is unnecessary. I prefer stating *circumstances* to demonstrate what *federation* means, what it has the power to accomplish; and I know of nothing more convincing than took place in Cincinnati, Ohio, about May 30th, 1890, and I commend the affair in all its bearings to "J. E. S." Stated briefly, the facts are as follows:

The engineers and firemen on the O. & M. Railway had a grievance. They sought to bring their grievance through the local committees of their respective organizations to the attention of Mr. J. F. Barnard, President of the O. & M. Railway. This official declined to recognize the committee. Then Mr. P. M. Arthur, of the B. of L. E., and Mr. F. P. Sargent, of the B. of L. E., sought an interview with Mr. Barnard, who in effect told them to "mind their own business." In other words, he informed the chief executive officers of these two great organizations that he did not recognize their organizations. The engineers and firemen thereupon took a vote and determined to strike if their respective organizations were not recognized. This done, Mr. P. M. Arthur, of the B. of L. E., telegraphed Mr. Sargent as follows:

CLEVELAND, O., May 9th, 1890.

Frank P. Sargent:

"Engineers have voted to stop. Convene your council."

P. M. ARTHUR.

The Supreme Council was convened, composed of the officers of the B. of R. C., B. of R. T., the S. M. A. A. and the B. of L. E. On May 10th Mr. P. M. Arthur addressed the following letter to Mr. Sargent:

CLEVELAND, O., May 10th, 1890.

Mr. F. P. Sargent:

DEAR SIR AND BROTHER:—Your telegram received. I have written Bro. Cox this morning, telling him to abide by the decision of your Supreme Council, so that it will not be necessary for me to be in Cincinnati on that occasion. Whatever your Council decides to do the engineers are with you, according to their votes. I hope, however, if the Council decides to have the men stop, that Mr. Barnard, upon receiving your notice, will come to his senses and realize the necessity of recognizing labor organizations. If your Council decides to make an issue and Mr. Barnard accepts of it, I hope the men will fight

it out to the bitter end. He may, when he finds the men are determined, yield, which I hope he will do for the good of all concerned.

Fraternally yours, P. M. ARTHUR, G. C. E.

The foregoing fully explains federation in a way that I think that "J. E. S." can understand—in a way that every unprejudiced brother engineer can understand. It is unvarnished history. There are no pettifoggish circumstances about it; no jugglery. If a man wants the truth, I have stated it for his benefit. Let us see:

The engineers and firemen had a grievance. President Barnard absolutely refused to recognize their respective organizations. Like Mr. Corbin, he refused to recognize any organization of railroad employees. This he said to Messrs. Arthur and Sargent. This refusal to recognize labor constituted another grievance, one which touched all organizations of employees engaged in the train service of the O. & M. I am writing to convince "J. E. S." of the mutual dependence of Engineers, Firemen, Brakemen, Switchmen and Conductors. I am writing to demonstrate the fact of their mutual interests, and to prove beyond cavil the efficiency of federation, not only by words but by deeds. When all efforts had failed to obtain the recognition of labor organizations by President Barnard to effect a settlement by arbitration or otherwise, the time had arrived to test the power of federation. No man should overlook the facts: no unprejudiced man will ignore them. Such an act would be worse than folly. The engineers on the O. & M. could not settle their grievance with Barnard, the firemen could not settle their grievance, nor could both of them combined induce Mr. Barnard to do anything in the way of a settlement. Now, then, the Supreme Council of the Federated Orders takes the matter in hand, as will be seen by the following communication:

CINCINNATI, OHIO, May 13, 1890.

John F. Barnard, Esq., President and General Manager O. & M. Ry., Cincinnati, Ohio.

DEAR SIR:—On Tuesday, May 6th, you were waited upon by Grand Chief Arthur, representing the Brotherhood of Locomotive Engineers, and Grand Master F. P. Sargent, representing the Brotherhood of Locomotive Firemen, whose mission it was to bring about a satisfactory settlement of the grievances of the engineers and firemen employed upon the O. & M. Railway, of which you are the President. The grievance has been presented to the company by a committee of engineers and firemen, and every honorable effort on their part put forth to effect a satisfactory adjustment before calling upon Messrs. Arthur and Sargent. While according these gentlemen an audience, you positively refused to recognize them officially or make a settlement with them as representatives of the organizations of which they are the executive heads. Therefore no settlement could be effected, as the engineers and firemen refused to treat with you as employees, preferring to stand by their organizations.

The grievance was then placed in the hands of the Supreme Council of the United Orders of Railway Employees, which embraces the Brotherhood of Locomotive Firemen, Brotherhood of Railway Conductors, Brotherhood of Railway Trainmen and the Switchmen's Mutual Aid Association. The Council has carefully inquired into all the details of the case as presented to them and has decided that the engineers and firemen have asked nothing more than is justly due them from the O. & M. company; and, furthermore, that the past record of the Brotherhoods of Engineers and Firemen warranted you in meeting and treating with their executive officers as is done by other railroad corporations, and your refusing to do so has placed the grievances of your engineers before this Council, and it becomes a general grievance in which all engineers, firemen, conductors, brakemen and switchmen are alike interested.

Therefore, in the name of the Supreme Council of the United Orders of Railway Employees, we ask an audience with you at the earliest possible moment, when we will be prepared to lay before you our proposition for the purpose of effecting a settlement and avoiding trouble on your lines. We will await

your reply, which you will send by the committee that presents this communication.

Yours very truly,

F. P. SARGENT, President.

[Attest.]

W. A. SHEAHAN, Secretary.

Immediately upon receipt of the foregoing communication President Barnard replied as follows:

OHIO & MISSISSIPPI RAILWAY CO.

PRESIDENT'S OFFICE.

CINCINNATI, May 13, 1890.

F. P. Sargent, Esq., Cincinnati:

DEAR SIR:—I have your communication of this date, and can give you an audience this afternoon at 2:30.

Yours truly,

J. F. BARNARD, President.

At the hour named by President Barnard the audience with the Supreme Council was held—Labor organizations were recognized by that autocratic official. The grievances of the engineers and firemen were amicably settled, a strike was avoided and work went forward.

The engineers federated with firemen, switchmen, brakemen and conductors with Mr. Arthur's approval and by his direction gained a victory.

I regard it as impracticable to state a stronger argument in favor of federation and I regard it impossible to overthrow the argument. I am glad that Mr. P. M. Arthur's name appears so prominently in this matter; glad that he requested Mr. Sargent to "convene his Supreme Council;" glad that he delegated to Bro. Cox the power to act with the Supreme Council in the interests of all the organizations of railroad employees. The history of the O. & M. affair establishes what I contended for in the opening paragraph of this communication—the interdependence and the mutual interests of the men engaged in the train service. And it demonstrates the necessity of federation, its wisdom and its efficiency when required to act.

Having written this much I am half-way inclined to desist without further reference to the communication of "J. E. S.," but Messrs. Editors a general criticism may do him some good and I therefore ask a little more space. "J. E. S." asks: Suppose that some corporation having plenty of the sinews of war, decides to try its hand at knocking out federation and is successful, what then? In the language of the Sunday School song I would say, "If at first you don't succeed, Try, Try again."

That form of conducting an argument has no end like Tennyson's brook, it goes on for ever. Suppose the B. of L. E. has a strike and don't succeed, what then? and so on. The O. & M. had "sinews of war" the "Q. & C." had "sinews of war," but federation had the most "sinews of war."

Up to a certain point one organization answers every demand. Organizations are effective and the greater membership the more effective they are. The B. of L. E. has done much for its members. A member of the Brotherhood with the powerful organization behind him is better off than he otherwise would be. But the engineers on the O. & M. to cite no other instance, were not strong enough to secure their rights; it required federation to win their victory. "J. E. S." can afford to meditate upon the facts: it will do him good. "J. E. S." desires to amend the maxim, "in union there is strength," by adding, in harmony there is strength. One of the synonyms of "union" is "harmony." It might be well enough for "J. E. S." to study synonyms, he is evidently a little deficient in that regard. If he will do that, I am satisfied he will realize that the old maxim that has passed the ordeal of the centuries "In union there is strength" does not require amendments by the use of a weaker term. "J. E. S." says the corporation is stronger than the organization. As a general proposition

that may be true, not in every case, but generally it is the stronger. As, for instance, the O. & M. was stronger than the B. of L. E., at least that was the view President Barnard took of the situation. He evidently believed that his corporation was stronger than the B. of L. E. and B. of L. F. combined, but as evidently he did not believe that the O. & M. was stronger than the B. of L. E., B. of L. F., B. of R. C., B. of R. T. and S. M. A. A. And that is the whole story in a nutshell and is deserving of the scrutiny of "J. E. S." and all others who labor under his hallucinations.

"J. E. S." says "capital can sit down at its ease and let labor starve" and yet it is a fact that labor and only labor creates capital. As certain as God made the world, if labor should cease "capital would starve," why not put it that way? There never was and there never will be any conflict between capital and labor. Capital has sought to degrade labor, and in thousands of cases has succeeded. Labor has not had its dues. It is now struggling in that direction. Federation, as in the case of the O. & M. is helping on the good work. (Capitalists don't believe in federation; they believe in the antagonistic attitudes of laboring men towards each other. Why does "J. E. S." try to help capitalists? (An he answer? "J. E. S." asks, did it ever occur to him (me) that fair wages to the switchman, fireman, brakeman, conductor and wiper meant just the same as the engineer is getting? I confess nothing of the sort ever occurred to me, nor do I believe it ever occurred to any sane man in the train service. I believe the conductors have asserted they ought to get the same wages as engineers, that is all. But were it possible for all of these named to get the same as the engineers, would "J. E. S." feel badly over it? If so, why? Is "J. E. S." envious? Does it make him feel unpleasant to contemplate the prosperity of others? On the O. & M., the firemen, switchmen, brakemen and conductors, in a way that challenges the applause of all honorable men, said they would strike if the demands of the engineers for more wages was not acceded to by President Barnard. Let "J. E. S." put that fact in his pipe and smoke it. The Q. & C. affair in which the engineers exerted their power for the weak, federated with the weak to remedy a great wrong, tells the story of how their hearts beat, tells where their sympathies were, and on the O. & M. shortly afterwards the conductors showed their remembrance of the good deeds of the engineers. "J. E. S." makes a sad mistake when he opposes federation by citing instances where federation has won victories. He should cite cases where federation has been defeated. "J. E. S." thinks if he had the time to dissect it (my previous communication) he could combat every sentence by "unanswerable argument." He seems to have had some time, enough I should think to have produced one argument at least.

"J. E. S." says the B. of L. E. have never raised the cry of federation. Let the word "cry" mean "ask," then read Mr. Arthur's telegram to Mr. Sargent. "Engineers have voted to stop. Convene your council." That will do. "J. E. S." says "we are all right and prospering. Let us remain so. When we rise from our meals and call in poorer objects of humanity from the streets to share them with us it will be time for us to advocate the elevation of other workmen in road service." As a locomotive engineer, as a member of the B. of L. E., as one who has experienced the struggle necessary to promotion, I profoundly regret our noble Brotherhood has in its ranks a man who could deliberately pen that paragraph. It does no credit to the head or heart of "J. E. S." It is cruel; it is inhuman. It does the B. of L. E. no credit. Is it to be understood that brakemen, firemen, switchmen and conductors—men who share the perils with the engineers in the road service—are to be classed with the "poor objects of humanity from the street?"

Are the engineers to be classed with *Dives*, and and the "other workmen" in road service to be classed with *Lazarus*? No! No! No! that sort of talk is not reason, it is not argument, and the great body of locomotive engineers throughout the country will never endorse it. "J. E. S." pleads the cause of the corporation even more offensively than

did the O. R. C. He would have the *Engineers' Journal* silent upon the questions of "combinations against corporations," and asks, "How would you like to see the columns of a paper called the General Manager teeming in every issue with plans to crush us?" I wish to be courteous to "J. E. S." I would have been glad to have found one argument in his communication worthy of a moment's thought. But I have not—such questions as that last one are not exasperating, they excite pity. When the General Manager wants to crush labor organizations there is no warning given, the machinery is set in motion a la Austin Corbin. The only hope of labor is agitation, organization and federation. Labor organs are not required to plead the cause of corporations; capitalists can take care of themselves. Engineers, as in the case of the O. & M., frequently have grievances which require federation to settle as justice demands. Federation is combination and the *Engineers' Journal* would do itself no discredit by advocating a policy, which as in the case of the O. & M. was of great service to the engineers and had the out-spoken endorsement of our Grand Chief P. M. Arthur.

Indianapolis, Indiana.

Div. No. 11, B. of L. E.

TAYLOR, TEXAS, May 12, 1890.

MR. EDITOR:—The current number of the *Magazine* was received to-day, and it naturally afforded me great pleasure to read the letters of Bros. Chas. Unwin and A. J. Schmidt. Although I differ with Bro. Schmidt in regard to the "instruction" of delegates, we are as a unit upon the all important subject—the change of name. I believe that the members of a lodge should thoroughly discuss in their meetings all subjects of importance that will probably come before the convention, and if a major portion of the membership are in favor of or opposed to any certain proposition they should "instruct" their delegate accordingly. Each and every lodge that is decidedly opposed to allowing the engineers the right to control the Firemen's Brotherhood should select a delegate who is personally of that belief, and also a man who will not only act as juror but one who *can* and *will* take the position of advocate. In addition to this, the lodge should arm him with written instructions which would be more binding on him and give more force to the position he takes. But the remainder of Bro. Schmidt's letter was such a "matter of felicitation" that I should not argue this question with him.

Alas! My glee at the reading of the letters of Bros. Unwin and Schmidt was of but short duration, for lo! a correspondent from Trenton "unfolds a tale" whose lightest words would make your young blood run cold, etc., etc.

This writer who signs himself "M. P." says "Poor Bro. W. S. Carter, of No. 233! It is a shame to impose upon a little fellow in his first attempt at journalism, and leave his poor, helpless form, etc., etc., etc., all of which you were the author." Bro. C. says he has "come to stay." Come to stay? What for—to whine and beg for your (the editor's) favor? It would seem so, but remember one thing, Bro. C., when you write, "Phillippics (by the way, are they related to tarantulas)" you must expect sometimes to be flipped over the ropes. If you voluntarily undertake to carry a mule don't whine if you get kicked through the side of a barn."

Mr. Webster says that a mule is a "quadruped of mongrel breed usually generated between an ass and a mare, sometimes between a horse and a she ass. When Bro. "M. P." of Trenton, classes our worthy editor as an animal of this character, I do not wonder that he is ashamed to sign his name. In berating me for "currying a mule," it is evident that Bro. "M. P." was struggling to "curry favors," but he was sadly amiss in the ancestors of our worthy editor.

Bro. "M. P." asks if I have "come to stay, to whine and beg for your (the editor's) favor?" In reply I would state that I have "come to stay," to prevent, if possible, Bro. "M. P." and others of his *genus* decaying from the firemen their Brotherhood. Since I have been "staying" I have noticed quite a change in the "style" of the *Magazine*; for instance, compare April, 1889, with the same month of 1890,

and you will see that my "Phillippics" were not in vain. It has been the success of the Firemen's Brotherhood that has exacted from the engineers recognition and respect for firemen. If the B. of L. E. has antagonized firemen's interests, it has been because that organization has been *controlled by engineers*, and the firemen of this country would approach the verge of idiocy if they, of their own accord, were to bequeath the right to the engineers to *control the B. of L. E.* which Order is their only hope for advancement and protection. When both Brotherhoods belong to and are controlled by engineers, firemen may expect to see "contracts" and "agreements" posted on round-house walls which include clauses demanding that "experienced engineers be employed whenever the company requires more runners." In preference to the promotion of firemen who have spent the best years of their lives in the service of the companies which dare not reward them because the "contract" forbids it.

It has been legislation in our conventions favorable to the well paid engineers and destructive to the poorly paid firemen that has brought about the fact that there are *only about one-fourth as many firemen belonging to labor organizations as engineers*, although there are as many of the former working for the railway companies as the latter. If you will add to the membership of the B. of L. E. a number equal to engineers and hostlers in the B. L. F. you will have an army of 40,000 strong. It is said that "comparisons are odious," but never more than in this matter, for it brings to light the fact that only about ten thousand firemen can afford the luxury of a \$1,500 insurance policy. There are probably twice this number of firemen who have not the ability or desire to belong to an "insurance" order, but who would gladly retain a membership in a "labor" organization proper. I fully comprehend the great good our insurance has done in the past, but also am aware of the fact that the country is full of insurance organizations that have as many beneficiaries or probably more than the B. of L. E., but there is only one Brotherhood to which the firemen can turn for *protection*, and it is due themselves that the remaining ten thousand firemen organize themselves into a "forlorn hope" and send delegates to San Francisco who will at least save the B. of L. F. for the firemen.

Some make a grand display of the "cheapness" of our insurance, and use this an argument in favor of increasing the policy; in fact, seem to be proud that our insurance costs less than others. If you will examine into the matter thoroughly you will find that the "cheapness" of all mutual insurance concerns depends upon the number of withdrawals and expulsions. Men invest their hard earned dollars for a year or more and then fail to make a payment and are expelled. They invest, perhaps, as much as one hundred dollars for initiation, dues, assessments, etc., and then drop out without ever having received a cent in return. This is the profit of the business; upon this depends the "cheapness." Those that continue their membership until death are the gainers, while the expelled and withdrawn are the losers. If every member should keep his policy until death it is evident that they will have to pay \$1,500 assessments for \$1,500 insurance (in proportion to their longevity). While the first to die would pay less than this amount, the last to die would have paid more. Some may say that the thousands of firemen who have been expelled for non-payment of insurance assessments are not worthy of membership in a labor organization, but this is not true, for a man's income should not be taken as a standard of worthiness. The B. of L. E. under the present laws is a brilliant success, but if the compulsory insurance was less, more firemen would belong to the Order. Do not think for a moment, Mr. Editor, that because I believe that *compulsory insurance* should be placed as low as \$300, leaving it *optional* with the members as to the number of \$300 policies he receives, that I am dissatisfied with the Firemen's Brotherhood. A few months ago some of our Brothers were greatly exercised at what they believed to be the gross imperfections of this organization. The Brotherhood of Locomotive Firemen did not suit them at all; it was a "breeding-pen," as they claimed, and the "name" was a direct insult to the engineers who had so generously stayed

with us, and above all, it was highly improper for firemen to be so presumptuous as to claim an organization as *their own* which included engineers, hostlers, life insurance agents, roundhouse foremen, etc., in its ranks. In fact, these Brothers were embarrassed at being connected with such an outrageous affair. Other members, including myself, did believe that the B. of L. F. was the proper thing, that the name was perfect; that the *Firemen did own it*, and that because a man had quit firing was no reason that the Brotherhood should also quit. We believed that the B. of L. F. was *all right*, and that those who sought to revolutionize the Order were *all wrong*, and some of us dared to say so in the columns of the *Magazine*, when, jumping Jeho-saphat, the same Brothers who had just wanted to do away with the Firemen's Brotherhood came at us like a Johnstown washout and completely capized us, overwhelming us with a multitude of heinous charges. That mysterious "something" which causes lunatics to imagine others crazy, and drunken men to believe the rest of the world intoxicated, must have acted upon our beloved Brothers when their minds conceived the idea that as "curses of organized labor" and "infirmities" we were "riding on the shirt tail of progress, yelling whoa" and "writing rot" and "phillippics" against the B. of L. F. Poor Bro. Sargent as one of these "curses" and "infirmities" bowed in silent submission to the "castigating pen of Terre Haute." Not only this, but a successor to Bro. Sargent was loudly called for by a correspondent on account of his (Bro. Sargent's) "rotten policy," which "correspondent" was highly complimented by the self-same "castigating pen." It is said that "straws show which way the wind blows." If this is the case it is evident that with *their new name* they will take a new leader. May the Lord forbid!

W. S. Carter of 25.

WELLSVILLE, O., April 14, 1890.

Editor Firemen's Magazine:

Permit me to say that Alexia Lodge, No 96, is in a prospering condition. We have lost very few members of late and are now building up one with new members and the prospects for a large membership are very good at present. For some time back the boys have not been making very good time and that accounts for us not getting new members. The spring trade is now opening up and then the firemen can afford to join our Order. Our road is what is termed a summer road.

Upon the evening of February 18th we gave our third annual ball which was a grand success financially and socially, and was conceded by all persons present to be the finest ball ever given in our town. The one who enjoyed himself, was our Road Foreman of Engines, Mr. S. D. Noragon, who wished there would be another the next night. All persons present enjoyed themselves beyond their expectations. Great credit is due to all the members for the manner in which they conducted the ball, especially Brothers Askew, Heyser, and Brother Kerr who walked through the hall with his new Prince Albert buttoned up to his chin to see that every person was in the right place. We must give Brothers Cable and Askew great credit for conducting the cloak room in the manner they did. I could give names of all the boys, but it will take up time and space that would be more usefully used for other matter. I remain yours fraternally.

Snop.

BUFFALO, N. Y., May 3, 1890.

Editor Firemen's Magazine:

Please record the names of the following members of No. 12, who have been promoted to the right hand side, viz: Brothers Con. Dugan and Cook Mc Nabb, and say, that Division No. 15, B. of L. E., would never be complete until it contained the name of Con. Dugan. Con, we are waiting for you. As for Cook, we will say: It is hard indeed to leave Attica, but you will have to brace up, and give up all of your boyish tricks. If any of the members of the Order do not remember Cook, we will say that he was the brother who showed the Buffalo boys around Toronto, during the eleventh annual Convention, remembering, however, that Cook was sick at that meeting.

More Ann.

WORKING ON A FARM.

Chopping wood for summer,
Fixing up the fences,
Clearing out the barn-yard,
Thus the work commences.
Making coops for chickens,
Shielding them from harm,
Bless me! this is pleasant,
Working on a farm.

Breaking down the cornstalks,
Putting in the oats,
Mending up the harness,
Ringing pigs and shoats;
Hauling out manure,
Digging draining ditches,
Getting mud all plastered
On a fellow's breeches.

Splitting logs for fence posts,
Making wooden wedges,
Fixing broken wagons,
Trimming up the hedges;
Getting out the barrows,
Sharpening the plows,
Cleaning out the stable,
Milking "kicky" cows.

Going through the orchard,
Pruning apple trees,
Driving balky horses,
Making hives for bees;
Working in the garden,
Cutting seed potatoes,
Making beds for onions,
Setting out tomatoes.

Plowing thread like furrows,
In the fertile field—
All are up and doing,
Who expect to yield.
Always in a hurry,
The farmer in his labors.
Thinks it is disgraceful
To be behind his neighbors.

Riding on the mower,
Raking up the hay,
Stowing it all safely
In the mow away;
Following the binder,
Shocking up the grain,
Getting it all ready
For the coming rain.

Gathering the pumpkins
For the cows to eat,
Picking up the apples,
Making elder sweet;
Out so bright and early,
On a frosty morn,
Making side-boards settle
With the ears of corn.

And when my hands were sore,
A moment would I linger,
To have the "schoolmarm" tie
A cloth around my finger,
Thinking while she did it
"What a wondrous charm!"
Bless me! that was pleasant,
Working on a farm.

Geo. W. Hall.

STANBERRY, Mo.

OIL CITY, PA., May 19, 1890.

MR. EDITOR:—Not having seen anything in the *Magazine* from No. 383, I will let you know that we are alive and prospering. The matrimonial fever is raging with Bro. S. Lowrey in the lead and Bro. Harry Bird second. Harry has been running extra on the Pittsburgh Division of the W., N. Y. & P., and was transferred to the Rochester Division on a regular engine; not content with this, he has taken Miss Susie Evans, one of Oil City's fairest daughters to keep house for him with headquarters at Olean, N. Y. The boys of 383 will miss Harry, as he was quite a parliamentarian and also a good official. The best wishes of Petroleum Lodge are with him and his bride.

Martin.

JACKSON, MICH., June 10, 1890.

MR. EDITOR:—At least two years have passed since I have read anything in our valued *Magazine* from a member of No. 240, though I have not failed to read one copy of what I consider to be the best labor journal on the market to-day. Perhaps more of our members think as I do, and if they do it is not difficult for me to understand why No. 240 is not seen in print oftener. I would rather read what men who can write have to say, then torture others with my ignorance. Though I have so frequently read lately that the *Magazine* is ours and should be used by us, that I have concluded, with your permission, to take my share of the space, and in doing so I wish to express myself regarding one communication in particular, signed "Newcomer," page 540, June *Magazine*. I am indeed very much surprised to learn that we have one man among us who would ever allow himself for one moment to advocate such a change as "Newcomer" does in his communication. I consider our insurance the grandest and very best I know of, and surely no man will dispute that the very ground work upon which it rests is the fact that it is compulsory with all members qualified for insurance. Our friend emphatically says our Order is not conducted in accordance with our motto. I claim that he is wrong in that particular if in nothing else.

I find that an insurance fostered at the expense of labor (as he claims ours is) comes much cheaper than that maintained and controlled by what I should call capital. My experience has thoroughly satisfied me on this point. Right here among us, before we had our various organizations, an insurance which was unquestionably inferior to that which we now enjoy, cost us from \$25 to \$31 per year, and we did not have the privilege of paying quarterly, but had to pay annually or semi-annually in advance, in fact, many men never saw the money they paid, but in order to be insured had to give an order on the paymaster, which very much disfigured the amount of their monthly allowance. And was that all we had to pay? No, far from it! In those days we had many men who reasonably declared their inability to insure, and no sooner did misfortune befall them than (in many cases) subscription papers had to be circulated for their relief, and those of us who were at all inclined to do what was right frequently found ourselves from \$1 to \$5 out at the end of the month. And that money I consider was going to strangers, but I cannot consider strangers as "Newcomer" does. He claims that 88 per cent. of our insurance paid out during the past fifteen months went to strangers. In the name of common sense who does he consider as strangers, and who are the members who received the 12 per cent.? Are we not all brothers, and are not the widows and orphans, and aged parents of all our members our charge? Where the strangers are, or how he makes the distinction, I cannot understand. But when a fellow employé does not care to associate with me or assist me in misfortune, or will not even promise to do so while fortune shines upon us, and I am finally called upon to contribute to his relief when misfortune has befallen him, then I consider I am giving to a stranger. I cannot even consider that I am conferring a charity, for I cannot contribute in the right spirit, but simply because others are doing so, or perhaps the person who asks me to donate chances to be a friend of mine, and I do so for acquaintance sake and nothing else.

Now I pay my \$5.75 per quarter and feel perfectly insured, and I believe all my associate members feel the same way, and subscription papers are a thing of the past. If our insurance were not compulsory, I imagine, perhaps, one-third of us would insure, thereby making it much more expensive, and in time of misfortune I am confident it would be as in days gone by, many of our members who did not carry the insurance—unless they were in better circumstances than the majority of us—would have to be assisted in time of misfortune, thereby again introducing the subscription paper and increasing the expense of those who were at all inclined to lend a helping hand.

I claim that any locomotive fireman who earns \$25.00 per month can afford to pay \$1.33 per month toward insuring himself and family against disa-

bility or death, and if he cannot, he will always find his Lodge in readiness to do so for him, provided he is a worthy member and lives true to his obligation. And if he will not do the latter, don't talk to me about his qualifications for membership in a labor organization. If that trifling \$1.33 $\frac{1}{2}$ is going to keep him out, we cannot be benefited by his membership.

"Newcomer" invites us to examine the expulsion lists and see how many men are expelled for non-payment, and how many for being untrue to the interests of labor. I have seen some of these lists, and in a majority we find expulsion for non-payment, but that does not state the case as it frequently is. Men neglected to pay; but why? Owing to their inability? No, far from it; but owing to their penuriousness or selfishness, or perhaps to having spent their money in a way that would warrant their expulsion, even though they did pay their dues. And above all things I can truthfully say this: I have known of many members being expelled, but I have yet got the first man to see expelled who properly applied for relief when he was unable to pay, and I claim that this is right. We are a labor organization, and as such we are organized for protection. Protection against what? Against the oppression of organized capital. But is this all? No, far from it; protection against misfortune, sickness, disability, and in the end against the wolf that may chance to come howling at the door of our dear ones when we have been called to appear before our creator. That is the protection which I want, and I am pleased to know that I am able to get it at so little an expense. I trust there may be few delegates at any of our coming conventions who feel as "Newcomer" does regarding our insurance. With our insurance, the laws of our Order, its management, etc., I have no fault to find. I am proud of it, with one exception, and that is regarding the reports we are receiving of our protective fund. When and how is that deficiency to be accounted for, and how can those delinquent lodges retain their charters if our grand officers are enforcing the laws. With this one exception, I am pleased to be able to say,

I am very truly,

Satisfacere.

MISSOURI VALLEY, IOWA, June 12, 1890.

Editor Firemen's Magazine:

The evening of June 7th will be one long remembered by the members of Climax Lodge, No. 254, B. of L. F., and Division No. 238, B. of L. E. As the two Orders were holding a union meeting in the new hall which they have just fitted up, they were very agreeably surprised by a visit from the wives of the various members. As soon as the ladies' presence was made known, they were welcomed by Mr. L. S. Cook, chairman of the meeting, and for the remainder of the evening the time was passed in pleasant social intercourse and enjoying the contents of the baskets which the ladies had provided.

None of the members of the two Orders here will ever again insinuate that a woman can't keep a secret, as the visit was a complete surprise to all. All the members present enjoyed the evening very much, and hope the ladies will come again.

I think that the wives here could give good pointers as to the best way to manage husbands. At least the married members seemed very quiet, and the few single men present had to do a good share of the talking.

Business here is good, and all the brothers are making fair time. Quite a number of them have been promoted lately, Bro. White to hostling, and Bros. Patching and Calwell to switch engine, from No. 17; Bros. Houston, Ketcham, Miller, Schwartz and Reincohl to hostling, and Bowens, Wolfe, Dickinson, Meanor and Peacock to switch engine, from No. 254.

The members of the B. of L. E. and B. of L. F. now have a pleasant hall, especially fitted up for them, and great praise is due Messrs. Viele, Roberts and Daily, of the B. of L. E., and Bros. Beckman and Shinkle, of the B. of L. F., for the taste they have displayed in selecting the decorations and furniture for it. We are now in hopes that an early visit from our Grand Officers will give us an opportunity to show the good feeling existing here.

Many of the brothers here are in favor of a change of name to something that will include all classes of enginemen, and also hope that some scheme will be brought up for district representation to the convention, thereby reducing the expense to a lodge, and no doubt facilitating the business.

Would like to suggest that the chairman or secretary of the General Board of Adjustment for a system or road be the one appointed to represent various lodges on that system or road. This, I would, I believe, reduce the number of delegates at least one-half, and be productive of better results.

Hope some of the more able writers will give suggestion a thought and let us hear from them about it.

All classes of trainmen and enginemen here are very much in favor of federation, and hope the day is not far distant when we will all be united.

Climax, No. 254

BOSTON, MASS., June 5, 1890.

MR. EDITOR:—In reading over my *Magazine* last month, I notice "Buckeye's" request for so many records of fast runs made by the brothers. I have not made any runs myself, but I fired the No. 14 the Old Colony for an ex-brother of No. 57, the one to which I belong, and we rode from Providence to Boston at no small pace, as can be judged by following clipping from the Boston *Herald*: "One of the fastest runs on record was made yesterday by the Providence division of the Old Colony Railroad by the train which left Providence at 11:20 A. M. under charge of Conductor White and Engine Dustin. The 44 miles to Boston were made in 10 minutes, and, as seven stops were made, the running time averaged better than one mile per minute the entire distance. In old times it used to be a big time to make this run in one hour, with stops." This is the engine from which the cars were taken that appeared in May's *Magazine*, according to the indicators she has made a mile in 46 $\frac{1}{2}$ seconds. At the time I fired her we were being seven and eight cars, and had 165 pound steam. This is my first attempt at writing for *Magazine*, although I am four years a member. Hoping this will not tire the readers, I will close.

Throatt

BOYHOOD'S HAPPY DAYS.

I am old and worn and gray;
Many years have passed away
Since I roved to school a merry fair-faced lad.
The world's grief and care.—
Of them I've had my share;
But thoughts of boyhood ever make me glad.
The schoolhouse 'neath the hill,
Methinks I see it still;
And master's look so kindly and profound.
The old mill by the stream,
I oft see in a dream;
And watch again the wheel go round and round.
In fond reverie I see.
Mother smiling down on me—
For we laid her in the village churchyard green
There is one I'll ne'er forget,
Dear Nell with eyes of jet.
Bewitching ways and form of graceful mien.
Together plucked sweet flowers.
In youth's bright happy hours;
Oh then our hearts knew naught of grief and
The rambles o'er the glade.
The fervent love vows made,
In mem'ry lingers while life does remain.

They have vanished one by one.
From the peaceful village gone;
Companions in those happy days of yore.
Many have won wealth and fame,
Pretty children bear their name.
Shall I ever, shall I ever see them more?
Some beneath the sod do rest,
Flowers above each withered breast;
And birds are warbling forth in gladsome strain
As they did when we were boys.
Oh! the frolic, Oh! the joys,
Those happy days will never come again.

TORONTO, ONT.

John Tierney.

For the Magazine :

TO MY BROTHER.

My brother thou art far away.
In southern climes you roam.
Say, do the flowers more sweetly bloom
Than around thy youthful home?

Or do the dews more lightly fall
On tree, on herb or flower.
Or twilight creep more gently on
Than around thy native bower?

Or do the stars more lustrous shine
From sky of deeper blue,
Or moonbeams fall more bright o'er pine
Than where the elm tree grow?

Do grassy brooks wind through the woods
More playfully and free
And ever merrier as they wander
In innocence and glee?

Do feathered songsters warble there
As pleasantly as here.
Or balmy breezes fan thy cheek
In sunny South as here?

Then hie thee back, we miss thee here
When shadows darken into night.
We miss thee when the stars grow dim
And darkness changes into light.

We miss thy presence when around
The frugal meal we gather.
And when we kneel in humble prayer
O, then we miss thee brother.

Mazie Youngs.

DODGE CITY, KAS., June 5, 1890.

Editor Firemen's Magazine:

Not having heard anything from Old Fort Lodge, No. 347 lately, I desire to say to the brotherhood that Old Fort is still alive and in flourishing condition. We are few in number and owing to rush of business can not hold meetings as often as we desire, but we are not flagging in energy, but all are working faithfully for the brotherhoods. We are adding some good men to our ranks. Bros. John Husser and Wm. Pinkerton have just received a much deserved promotion from the left to the right side. We met Bros. G. J. Lamont and Andrew Hanson, of Royal Gorge Lodge, No. 59, Pueblo, Colo., returning from Topeka, Kas. where they were examined for promotion. It is needless to say that they "got there," as the B. of L. F. boys usually do.

Yours fraternally,

Odd.

HOCHELAGA, CANADA, April 3, 1890.

Editor Firemen's Magazine:

If you will allow me space, I will for the first time endeavor to write a few lines to the *Magazine*. First, I would like to say that St. Adolphus Lodge No. 335, is in very comfortable circumstances, and that our numbers are slowly but surely increasing; we had the pleasure of initiating two new members last meeting, and there are several more which we soon expect to make a stand with us and swell the ranks of our now great Brotherhood. Our worthy Master, Bro. Pring, is running a freight engine, and I am glad to say he has proved himself competent as an express engineer also; he hustled the "306" around on time for a week, and I am sure for speed the express-trains on this division will compare favorably with the fastest trains in the country. Then our Receiver, Bro. Brazeau; he has a French name, but an Irish tongue, especially when talking Brotherhood matters. When the Constitution does not contain the necessary language to make his point clear, he never fails to refer to Parliamentary discipline for backing. Bro. McFall is our esteemed Vice Master, and during the absence of our Master, handles the gavel to perfection. And our Collector is just too nice for anything; he knows just how to make the boys come to time when there is any money to collect. I fancy that I can see him coming for the

next quarter's dues, with receipt book in one hand, pencil in the other, a satanic smile (on his otherwise serene countenance) and a sweet voice of almost childlike simplicity, demanding, in the name of the Brotherhood of Locomotive Firemen, the dues for the next quarter. Oh, yes! Jim is a favorite, especially with the ladies.

Past Master J. Cody, since he commenced running over into Uncle Sam's realm, quite astonishes his simple Canadian cousins with nice smooth language: so smooth in fact, that he never sounds the letter R, but we are always pleased to meet our worthy P. M., to grasp his hand, and bask in the sunshine of his genial smile. Our Chaplain, Bro. M. Cody fills his position with all due honor and respect. I would like to remind our worthy Master that he promised our Chaplain a nice white gown some two months since. Surely our Chaplain's patience must have been severely tested, waiting for the fulfillment of that promise, but he has borne it all without complaint and with meekness peculiar to himself. I am sure it is the wish of the brothers and the Chaplain, that our worthy Master fulfill his promise without further delay. Now, Mr. Editor, I hope you will enjoy a good Easter dinner and be in good humor when you open this letter.

18x24.

NORWALK, OHIO, May 4, 1890.

Editor Firemen's Magazine:

If you will grant me a little space in the columns of your valuable *Magazine* I will let our brothers know that Maple City Lodge, No. 198, is still progressing. Our goat is just having a picnic. We had one candidate at our last meeting and one again to-day and have still another for our next meeting. Business is brisk with us here on the W. & L. E. and the boys are getting all the work they want. There have been two more promotions in the last two weeks, Bro. Suydam is one of them and as he has the hardest run on the road he has the sympathy of all.

Bros. Right and Clark are casting longing eyes over at the right hand side now, being the next ones in the line of promotion. The receiver's duties of No. 198 must be very arduous, for our receiver W. Y. Dennis has been obliged to get an assistant in the form of a wife: the wedding took place at the home of the bride's parents on last Thursday evening and the young couple have gone to keeping house on Seminary street and any of the boys calling around that way will find Bro. Dennis as cosily situated as any one need ask. We think the books must have been sadly in arrears, for nothing has been seen of him since the happy event took place; he was not even up to Lodge to-day, but sent his regrets in the shape of a box of cigars, saying that business of importance kept him away and it is needless to say that his regrets were accepted and that Bro. Dennis and his wife have the best wishes of all the brothers of No. 198. Bro. Clark, our Collector says it is his turn next, but that he will have to wait until the next quarter's dues are paid in, as he had to give all the last to help Bro. Dennis out in his trouble. So boys, get your receipts when you pay your money next time. Well, as I have taken up too much space already, I will shut her off and stop.

Reuben Glue.

A SUMMER REVERIE.

Summer is here and it makes me so lazy.

I'm tired of my work and I want to go free,

To get to the woods, faith I'm almost crazy
If it wasn't for work how happy I'd be.

Now wouldn't it be nice to have plenty of money.

I could wander around and enjoy the cool breeze;
I'd not be long saying adieu to my labors

And be off to the woods, or wherever I'd please.

Of course I would take my "Daisy" out with me.

And a genuine picnic we then would enjoy,

With plenty of leisure and luxurious provisions

And nothing like duty or work to annoy.

With a rest of a month or two out on pasture

A few weeks of freedom from labor and care,

I'd gladly return to my work and my duties

And no more of my grumbings would any one hear.

East Line.

JACKSON, MICH., June 4, 1890.

MR. EDITOR:—That the Brotherhood in this vicinity is socially abreast of the times is evidenced by the fact that the members continue to captivate the most charming belles our society affords. On May 20th Bro. Thos. J. Andrews was married at St. Augustine's Church, Kalamazoo, Mich., to Miss Mamie Gannane. Bro. Andrews is one of our oldest members and for the past three years has been running a switch engine at Kalamazoo. The question was frequently asked why Tom should want to remain there, while so many younger men were going out on the road ahead of him, but the mystery is now fully explained. Evidently Tom knew where his interests were and all the boys agree that he has drawn a prize in the matrimonial lottery. Bro. Andrews did not forget to invite the boys to the wedding and in return they sent him what they thought would furnish his parlor suitably. The happy couple spent ten days at Buffalo and Niagara Falls and on their return stopped long enough to receive congratulations and treat the boys to the luxury of Havanas which were smoked to their good health. Also, Bro. Richard K. Drowley was married to Miss Mary Dannahue on May 27th. Dick was very quiet about the matter but we were all "onto him." Bro. Drowley and bride immediately left for Niagara Falls where they will spend their honeymoon. We have not yet seen them to extend our congratulations, or to smoke to their health, but we hope to have that pleasure in the due course of time.

Yours fraternally,

H. A. M.

CHARLESTON, S. C., June 2, 1890.

MR. EDITOR:—On May 25th, 1890, the representative firemen on the oldest railroad in the United States, viz., The South Carolina Railway, met and organized a lodge of the Brotherhood of Locomotive Firemen, known as Fort Sumter No. 417. Owing to an unusual press of business, Vice Grand Master J. J. Hannahan was unable to come south during the month of May, and he therefore deputized Bro. A. Hutton, of No. 245, to organize and instruct the new lodge, which was done with valuable assistance from Bro. McCormack, of No. 25, Boone, Iowa. The new lodge, although small in numbers, promises to take a prominent place in the ranks, and the firemen, although on the oldest railroad, are not old fogies in their views, but are alive to the questions and interests of the day, and are going to keep up with the procession. Charleston is a fine old city, and the people are noted for their old time hospitality, of which the writer had a full share during the short time he was there. Hoping that some of the members of 417 will exercise their talents in giving an account of their progress, and with best wishes for the future, I am, yours fraternally, H.

SALT LAKE CITY, UTAH, June 8, 1890.

Editor Magazine:

The June number of the *Magazine* just received. I find myself the subject of complimentary remarks. Thanks! In the same note I am charged with "seriously considering the matrimonial problem."

I remember at the Atlanta convention Bro. Debs, in reciting some of the trials of his editorial life, told of one man who addressed him on the back of a postal card as follows:

Mr. Editor: "I am going to get married pretty soon to a nice girl. Please give me a good send-off."

A "good send-off" was what some of my friends were trying to give me. I guess but unfortunately in this case they were running extra in advance of time. On April 3d I took a traveling car from No. 85 and have been from Dakota to Old Mexico and the Gulf, and now am back here; whether to stay or not is not yet known. In the past two months I have met many Brotherhood Firemen and have always received the same warm brotherly treatment wherever I went. A great number of Brotherhood men are employed on the roads of Mexico, and while the pay is good, the diet of red pepper, garlic and a few other ingredients equally bad is execrable. At present all the roads in the South are very dull, and I would advise Brotherhood men to keep away from that country. I find Lodge 178 here in splendid condition, with a candidate or two every week. Most of

the boys are employed on the Rio Grande West which is about to change to broad gauge.

One thing that strikes me rather forcibly is a large percentage of B. of L. F. men who are running engines on our western and southern roads seem to stay and think that the B. of L. F. bill. On inquiry I find that a great many boys favor the change of name, and think that the other changes lately made in the ranks of road employes, the future will bring less of fewer and smaller assessments and more profit generally.

With these few words I will close. I may see next *Magazine* in Portland or Victoria. B. C. In somewhere in my travels I may meet with the city that is necessary to the consummation of changes suggested by my brother in Fargo.

I had, I confess, visionary ideas of Mexican Spanish beauties, with dazzling complexion, guorous eyes, and a poetry of motion; but they were off color, their motion (or lack of it) rather consisted in finding a shady place to lie on and sleep the hours away.

Perhaps some day I will go back to Dakota if some of the boys will take me to a June 1 I may make amends for past rambling and down. In the meantime No. 85 has more candidates for the third degree. I remain as

Fraternally yours

Eugene McAuliffe, No. 85, B. of L. F.

OGDEN, UTAH, April 30.

Editor Firemen's Magazine:

In seeking space in the *Magazine* for an account of the first annual ball of Oasis Lodge, No. 85, with more of a desire to inform the boys throughout the country of the onward march of B. of L. F. in this part of the country, I published its social or financial success. It was as yesterday, that Utah was controlled by who were hostile to the flag of our country, power was increasing and flourishing until the motive whistle announced the advent of the railway train. Ever since that time the men have exerted more influence for the good of home and respect for our institutions, the other factor brought to bear on the existing Foremost in the ranks, were the members of B. of L. F., who to-day receive respect and honor for the good they have done as citizens and members of the Brotherhood. Although Oasis Lodge is long in the circle of the Brotherhood as some of its members have nearly all undergone trials which proved them to be men of worth and possessed of a true brotherly knowledge and spirit of which was displayed in a high degree, in the trial event of April the eighth. The large E. Hall, which had been neatly decorated for the occasion, was crowded with Ogden's best people, those from the surrounding railway rates. Accomplished musicians rendered music to light and satisfaction of all present during the evening, and refreshments in plentiful quantities were served. A fraternal feeling was fostered by the various railway fraternities, and those deserving special mention are Brother Bert and Pyper. B. of R. C.: "P. I." Mund Davenport. B. of R. T.: O'Brien, Miller and S. M. A. A., and Crane of the B. of L. E. members of No. 346, who were untiring in efforts to impress all who came with an idea of kind of men the B. of L. F. was composed. Smith, the efficient Master was there; M. P. lan, who, as he is bald-headed, looked very different introducing the people to one another; Joe, the enterprising brother, who recently saw his whole family of old maids to keeping a big house, and now may be often seen down town tending some farmer "how much carrots are in a bushel;" T. G. Newett, whose dress and satirical look made many people take him for a logical student; M. J. Powers, J. Payne, C. Leigh, J. H. Smith, J. Cummings, N. Smith, Ker, W. H. Hancock, S. Middaugh, A. G. Dix and H. Ward were in attendance. The dance success from every point of view and the B. of L. F. stands prominently among the Orders in Ogden.

H. M.

ELMIRA, N. Y., May 15th, 1890.

MR. EDITOR:—What pleases a fireman the most, next to a good square meal, is to have a nice clean engine; to have her jacket scoured and her brass all polished so that it dazzles his engineer's eyes. The fireman steps down on the ground and the rest of the boys come around and help him to admire her and his satisfaction is complete. He has worked on her only five hours, but she is a dandy and he is satisfied.

His engineer comes around, puts on his over-clothes, grabs his oil can and a wrench and soon he is ready to go. Of course his hands are all oil and he leaves his mark on the handles of the tanks and engine that you have just polished. You wipe them off with a clean piece of waste and think nothing about it. Engineer tries his injector and it works all right; the train comes in and you couple on to it. Engineer looks at his watch: fifteen minutes late and he says: "Bill, we've got to make up that time." A signal to go, bell rings, and engineer pulls her out. Before you have gone ten car lengths she is covered with big black spots from stack to tank. Engineer looks up in surprise and wonders where it comes from. He tries his gauge cocks, opens his cylinder cocks and by way of excuse, says she has only two gauges of water, or, that he had the injector on only a minute, even if she was full before he put it on. The fireman of course must look pleased, grin and bear it, and the first chance he gets go out and wipe her off. Engineer has to ease off to get the water worked out of her.

The next thing to do is to get up his speed, so he lets her down until he gets the fire partly through the flues, and what is left turned partly upside down in the firebox. Bye and bye engineer looks up at steam gauge and the pointer stands at 90 pounds; of course the first question is, "Bill, what's the matter with her," to which Bill would say: "I don't know."

Bye and bye they come to a water tank, engineer jumps down to oil around and fireman looks after his fire. About the time he is hooking her up, engineer will come to the gang way and yell, "hand me down a cold chisel and a hammer." Fireman drops his book, hands them down and begins again. He soon hears another yell and in reply hands down a monkey wrench. They soon get started and everything goes along all right until the engineer begins to sniff around and asks Bill if he smells anything hot.

Bill, of course, has lots of time to look around on his side of engine and the other side too. He smells something hot and they stop to see what it is. It is an engine truck box and Bill carries five or six pails of water to cool it off. Engineer gets oil, waste and necessary tools to pack box. Engineer says, "Bill, won't you crawl under there and pack that box?" Bill, of course, complies. The track is wet, Bill's clothes are moist with perspiration and it will not hurt him any to get them wet a little more. Anyhow the engineer's over-clothes are clean and it would not do to get them dirty. Box is packed and away they go.

They have lost a little time and have got to make it up, so out she comes and down she goes. The pointer goes back, engineer looks pleasant. He tries his gauge cocks, finds four solid gauges and instead of shutting off his injector and giving his fireman a chance, he looks around and again inquires if Bill knows what is the matter. Bill, as usual, does not know. They manage to get along and on hearing the end of their division they receive an order to come right back and double the division. As soon as they get in the yard, the engineer, who is tired, says, "Bill, you put the train away and I will run over to the boarding house and get a little rest." Bill, who is fresh, says nothing but puts the train away and then goes to the boarding house to get something to eat. After eating he goes back with orders to oil her up, and get her on the train and when all is ready, to call the engineer who is taking a nap. Engineer's work is so hard he needs all the sleep he can get and while the fireman's work is easy it is such that he can keep awake even if he gets sleepy. Engineer is called and away they go. Bye and bye they come to a station where there is switching to do, and engineer knowing that firemen like to handle

an engine says, "Bill will you do this switching while I run over there and get a drink?" but I forgot myself, he don't drink. It was a cigar he wanted and he got the last and only one there was in the box; gets back just in time to get on and go. After a while Bill begins to get tired and the pointer drops back a little; engineer looks pleasant, tries his water, finds four solid gauges, but he can't lose any of that so the pointer goes back a little more.

Engineer gets pleasanter and, taking pity on the fireman, says, "Bill, let me try her a while." After doing his best for about five miles and shutting off the injector once or twice he gets her hot and then with the air of a superior being says, "There Bill, see what I can do." Bill takes her and inwardly swears he will keep her hot or die in the attempt. They finally get home, and as business is rushing they are ordered out in three or four hours. Bill completely tired out murmurs a little about going out so soon, but the engineer breaks in with "I am not very tired I can stand it" and Bill goes home to get a little sleep and goes at it again; whereas if the engineer would only say we have worked hard and need rest, they would be allowed to go home and get a reasonable amount of rest, but engineer would not get time enough if he did that. Business keeps good and they need more men and the Master Mechanic comes around and wants to know what kind of an engineer Bill would make. His engineer tells the Master Mechanic that he is a pretty good fireman, but he don't know what kind of an engineer he will make. That is the recommendation Bill gets after doing his engineer's work for several years, but no matter what happens, never say a word. If you do you will know more than your superiors, so just keep still.

Young Silas.

MINNEAPOLIS, MINN., May 12, 1890.

Editor *Firemen's Magazine*:

The May number has arrived, and ain't she a daisy? Why can't every number be as free from "rag chewing" as this one? I think every member of the Order has noticed the change and is pleased accordingly. I hope the tone of the May number will continue for all time, and only changed when it becomes necessary to give to those that need it a mild roast.

Now, Mr. Editor, permit me to say a few words on the new name. The only reason that I have been able to discover for such action is that the present name does not show up the engineers that are members of the Order in their proper light. Now, I am looking at this from an engineer's standpoint, and can say that I do not desire a change nor do I know of an engineer that does. I am running an engine at the present time, and have been for five years, and have been a member of No. 82 for about nine years and expect to be for a good many more, unless I am forced out as hundreds of others will be if the name is changed. That action will not hold the engineers but will force them out, for the engineers very well know that the Order that in a measure keeps their wages up to the present standard and adjusts their grievances is not the B. of L. F. and would not remain with an Order that directly antagonized the one that is doing all this for them. Possibly there are a few non-railroading members that are not satisfied with the present title; if so, I fail to see how a change of name would benefit them. Then, again, there may be a few engineers that have run a switch engine about three months (the time when an engineer is more anxious to be known as such than at any other period) and thinks if his card reads B. L. F., men that he comes in contact with will be onto the fact that he is a plug puller. And, again, perhaps there are a few hostlers and firemen who think that if their cards read Brotherhood of the Foot-board or something very near it, that by keeping their mouths shut and looking wise they might possibly be mistaken for engineers.

The Brotherhood at large will read with benefit the article in May number, signed A. J. Schmidt. It is sensible, it is logical, right to the point and covers the whole ground. Any one that can't draw conclusions from it, simply don't want to. Lodges should take this matter up, discuss it thoroughly, and send a delegate to the next Convention that

will do as much for the Order as the previous one, and if possible, more.

And right here let me remark that any one that is not satisfied with the present name of the Order or its management, had better withdraw and join one that will change its name once a year to satisfy their longing for something new. Will say that 82 is O. K.

When you come this way, "Gene," drop in and see us. Our latch string is always out.

Fraternally, W. C. Wescott.

HINTON, W. VA., June 4, 1890.

Editor Firemen's Magazine:

I noticed a communication from Miss Eva Carol, "A dear lover of the Magazine," in the May number, and am convinced that she is not well acquainted with the boys of 236, or she would not have imputed lack of grit to their negligence in "writing up" their little Mountain City and very flourishing lodge.

As I am one of the Brotherhood boys, I will write about the lodge and let Miss Eva write up the city.

Our lodge is progressing rapidly; the meetings are largely attended, and the boys stand shoulder to shoulder for the good of our Order.

At our last meeting, worthy Master Lyons being absent on account of sickness, Bro. John Perkins acted Master *pro tem.*, and filled the office so efficiently that all say he must be our next Master—that is, if he is not absent election night to see the pet "bar."

We have quite a variety in our Lodge, such as our dignified (?) Chaplain, Dolly Womack, and cow-boy Jack Andrews, who hails from Indian Territory. Then we have Jim, the pugilist. Yes, by the way, we heard he had bought his furniture. What's that for, Jim? We also have a Lilly, not "The lily of the valley," but the Lilly of 236. Next is our great man Butler, who is always on hand with the spoons. But the most prominent of our boys is Little Willie, the ladies' pet, who wishes to go to San Francisco next September. That's right, Willie, take her along!

Our debaters are Scruggs and Ballancee. Boyd and Cobb, Receiver and Collector respectively, are noted Brotherhood men, and do honor to their offices.

If you wish a jolly glass, Tom, our Warden, can accommodate you.

The Lodge is well protected by that powerful animal, the Lyon, he being our master as well as the "Lord of beast."

That waste basket makes me refrain from saying anything more about the boys, only this: Six or seven of the boys have passed from left to the right side of the engine recently, but are still true to the B. of L. F.

I read the Woman's Department with pleasure, and esteem the letters of encouragement from all the ladies, but am sorry Miss Eva Carol, or some other Hinton lady, does not contribute more to that department instead of calling on us. Now, Miss Eva, do you think it fair to declare your love for Shandy while there are so many of us looking for wives here at home? Long life to the Magazine.

I remain yours, fraternally, Grit.

TYLER, TEXAS, April 2, 1890.

Editor Firemen's Magazine:

I desire to say that Sunny South Lodge, No. 148, is prospering, and has about forty members in good standing, and nearly half of them are on the right hand side and are doing well. Our worthy Master, Mike Bannon, when he sits with the gavel in his hand, keeps the boys in order. Brother Kasbery was married last night, and I was present, so there is no hearsay about the matter. We all wish him and his bride good luck throughout their future life, and the prospect is fair for Brother Davis to go through the same motion.

By the way, I will say something in regard to change of name of the B. of L. F. For my part, I am not in favor of it, for the simple reason, the B. of

L. F. has been good enough for the past seventy years, and I don't see why it will not do now. If we have never done anything that we should be ashamed of. Some of the brothers agree that it is only those who are running engines that want to change names. That is not so, for myself and several others here are not in favor of it, and I have been running an engine about three years, and I am bitterly opposed to the change. Don't think for a minute that I say this to hear myself talk. I mean every word I say, although I may not have the approval of some of the other brothers. I am just much like Brother W. S. Carter, of 263. He says you change the name, it will be making against engineer's Order. Now, let us not censure the B. of L. F. too much for what they have done in the past, for we can plainly see that the B. of L. F. is trying to do what is right by us, and as for what Mr. Arthur had to say about Brother Debs at the Dem Convention, I don't pay any attention to such as that. Mr. Arthur has no right to be about with Brother Debs, for I have been reading our Magazine for the past four years and I haven't seen where the editor has ever misrepresented anything about the B. of L. F.'s obnoxious laws, at the same time, he has revealed one of them, and I think by the next convention they will reveal more, provided we don't make laws that will come in conflict with them.

Your friend and brother,
J. W. Buss

MONTREAL, CANADA, May 15, 1890.

MR. EDITOR:—I take the liberty of writing the few lines to express our appreciation to the members of the B. of L. F., Montreal Lodge, for willingly responding to our mournful call. On April 14th Bro. John Cunningham, one of our members, was terribly injured between two drawbars and on April 25th died of his injuries. Great is due to Mr. J. Murphy in getting the members gathered in a body and showing the respect they owe toward our deceased Brother. The day was very uncomfortable, it being very wet, but every man stood his ground. I would judge that 100 persons attended, including the B. of L. E. and B. R. T. We hope and trust no conduct of ours ever disturb that feeling which should ever exist between the B. of L. F. and the members of the M. A. A. of N. A. Thanking them for the business shown us, I remain yours truly,
Journal Agent S. M. A. A., Lodge No. 1

[The incident above recorded bears testimony to the unwavering friendship which exists between the members of the Swiss men's Mutual Aid Association and members of the Brotherhood of Locomotive Firemen, and this is not only the case in Montreal, but throughout the jurisdiction of both organizations. We hope to see some time when members of all the organizations of railway employes will be bound together by the indissoluble ties of fellowship and friendship.—ED. MAGAZINE.]

DETROIT, Mich., June 10, 1890.

Editor Firemen's Magazine:

On Friday, June 6th, Windsor Lodge No. 421, B. F., was organized, and I had the pleasure of assisting our Worthy Vice Grand Master, Brother Hannal, to initiate fifteen members, who, by all appearances, will make 421 a good Lodge. After the meeting, we went to the Crawford House, where a banquet of good things awaited us, and where our Worthy Vice Grand Master told us of the standing of the Brotherhood throughout the country, and the occasion will long be remembered by those who were present. It is to be hoped the next time any of our Grand Masters visit us, they will have sufficient time at their disposal to enable the brethren to show them around.

Yours fraternally,
Joseph Nipp

TWO HARBORS, MINN., May 14, 1890

Editor Firemen's Magazine:

(On the evening of April 18, Itasca Lodge No. 401, gave its first annual ball in Norden Hall. It was a perfect success both socially and financially. About 160 couples participated in the pleasures of the evening. The grand march started at 9:30 and the dancing was kept up to 3:30 A. M., to enchanting music of Hoare's orchestra, of Duluth.

The floor was well looked after by Brothers A. N. Hunter, W. H. Bell, B. L. Seales, P. O'Neil, F. Lemire; Bro. Hunter acting as master of ceremonies. Bro. F. Hickman acted as ticket seller, and our two heavy weights, Bros. Wm. Grosse and O. J. Tenant looked after the door. They each weigh 201 pounds. The company gave us, to our surprise, free, the two special trains from Duluth here and Ely here, a distance of 27 and 88 miles. A vote of thanks was extended to the officials for courtesies shown us, also to Division No. 420, B. of L. E., and Lodge No. 329, B. of R. T., both train crews giving their services free. We desire special mention to be made of Messrs. Geo. Weaver, Chas. Cotter and D. Hays, of the B. of L. E., for assistance given us. No. 401 is in a prosperous condition, having been organized June 23, 1889, with eleven charter members and now having 30 on its roll. We have two engineers in our Lodge, Brothers McGuire and Chas. Penrod. Brother Penrod is pulling passengers between Ely and Duluth.

The engines here are consolidated 20x24. We haul twenty-one empties up the big hill, a grade of 137 and more and 19 loads south. Business here is all iron ore, the company shipping over 800,000 tons last year.

A Member.

ESTABROOK, COLO., May 30, 1890.

MR. EDITOR:—In looking over the April number of the *Magazine* I view an article written by some queer-minded brother from Steven's Point. He refers to the Woman's Department by saying that his *Magazine* is received at the round house so his wife may have no chance of reading it and deriving any benefit, yet he calls her his wife. I think this is poor judgment, and he should even subscribe for a daily paper for her containing the news of the day. She may gain knowledge from both, but I do not think the knowledge of the women interfered with Grover Cleveland's election, and if it did, I would like to know in what way it has interfered with this important person. In treating a wife she should be allowed privileges and his confidence, and not regarded as children, and should move in society and enjoy entertainments, etc. As to flirting by a married man, it only goes to prove that his wife is a good deal better than he is. Now I have served many years as locomotive fireman and for the past three years as engineer and have felt a different disposition in the matter, the same as nearly all others. He branches off from politics to elections of officers in this Order and stands to say that he will work against Bro. Debs and lends him this advice which is very poor indeed. If he is the only one to work against him Bro. Debs will very likely have something to say about the position he holds. This is all I have to say at present except that the brother who wrote the article from Steven's Point had better remain at home and receive medical assistance, for while he may not be light in the upper story, yet he undoubtedly must have a very bad cold in the head.

Yours,

Geo. T. Mock.

Las Animas Lodge, No. 344.

TO MISS MARY E. HARPER.

Dear Ella, take my earnest prayer
For you and those that's to you dear;
May joy increase with you each year
Since you are now eighteen.

May you live happy all your life
Whether as matron, maid or wife;
May you be free from care and strife
When you are past eighteen.

May he you love be kind and true,
(The same advice I give to you)
And every year your vows renew
When you're long past eighteen.

Edward Splaine.

RETRIBUTION.

When a paper last May struck my wondering eyes,
I was knocked out completely, transfixed with surprise.

For I witnessed an item which drove me as high
As a sky-rocket skoots on the Fourth of July.
"Mr. Manager Stone," I perused, "had resigned."
Boys, I shed bitter tears till my optics were blind;
And I said a few prayers for the peaceful repose
Of his soul, with the brine dropping down from my nose.

With a doleful Ochone!
From a heart full of grief,
Boys, I prayed for poor Stone,
Like the penitent thief.

When the spread-eagle rogue was impaled on the cross
And I feel you'll all chorus "Amen" for our loss!

Poor ex-Manager Stone! It is painful to think,
Of the cups full of gall enginemen had to drink
But a few years ago, when your head was so hot,
That your good common sense for the time was forgot.

How you ached for a fight! And you said with some cash

Our old organizations to atoms you'd smash;
Did you do it, avick? Faith! I think you did well,
And you wore a high hat for a brief little spell.

But, acushla, machree!
Poor ex-Manager Stone!
And betwixt you and me,
It cost many a groan.

And about seven millions of dollars or more
Ere the C. B. and Q. flopped us down on the floor.

Devil a prophet God ever gave to the Maguires,
They are good honest boys, and not one of them liars;
But myself blossomed into a sort of a seer,
That could pour simple truths in a rattlehead's ear;
Sure, I told you the time you were fighting so brave,
That yourself and Paul Morton right into one grave
Would be thrown without mercy when dividends ceased.

And the tolls of the Q by your actions decreased.
Where is Morton to-day?

Faith, his swell-head has shrunk,
He was driven away

From the road like a skunk,
And yourself, my poor fellow, must now at some phone
Keep your ears for hellow; poor ex-Manager Stone!

Are the Brotherhoods killed which you swore to destroy?

See our organs and count the new lodges old boy,
They appear to have grown as if magic prevailed—
And the faster they grow when hardest assailed—
And they prove that, instead of old women, they had
A big army of fighters, ferociously mad
To have at you, avick! till they conquered or died.

Till at last, sir, they made you the honors divide.
They are blooming delightful,
While Paul and yourself,
Who were foolishly spiteful,
Are stowed on the shelf;

Tossed to rot in the boneyard, bereft and alone,
Without friends to salute you, ex-Manager Stone!

I am sorry—God pardon my soul for the lie—
When I finish this stanza I'll dolefully cry.
Annasias von Morton, the blatherskite fool
Is to blame for your downfall, he made you his tool;
He concocted the schemes, and you followed your nose.

Till we flattened it out like a pancake with blows.
So you now go to manage a telephone wire,
Just because you were led by that infamous liar.

Now I'll bid you farewell,
Full of language sincere,
Mid hellos you must dwell,
With a phone at your ear.

While the Brotherhoods live and are flourishing, too,
In defiance of Morton, of Perkins and you.

Shandy Maguire.

BOONE, IOWA, May 16, 1890.

MR. EDITOR:—How many secure in their own homes, realize the danger and hardships endured by the boys on the road. Who can tell, save by experience, what a struggle it takes to be always a whole-souled, generous man, such as we find them with few exceptions, always ready to extend a helping hand to the needy and helpless, and all this from a man who is worn out in mind and body. Imagine if you can, the long days, and longer nights, when with tired body and mind, he reaches home, only to be again called out without necessary rest, and sleep. Bad enough when in fair weather, on the daylight run, all things favorable—to leave home, and loved ones, and go out into dangers known and unknown. But how infinitely worse to go in the night and darkness, when the rain falls and the thunder rolls. When every revolution of the wheel carries him farther from those at home, and for ought he knows, may carry him into *Eternity*. To the writer, it seems, that no man living values his home comforts as does this one.

The heart that beats under the blue jacket must possess courage that is sublime, and endurance that is wonderful. All honor to the boys of Connecting Link Lodge, No. 25. We are proud to know them, and to number them among our friends. We might mention a few, were it not that we know the boys are so very modest that they would blush with embarrassment at a well deserved word of praise and appreciation. We wish to make our very best bow to Connecting Link Lodge, No. 25, B. of L. F., and remain,
A Fireman's Friend.

ONEONTA, N. Y., May 26, 1890.

MR. EDITOR:—Not seeing anything in the *Magazine* of late from No. 71, I thought I would say a few words to let you know that we are still on the rails and flourishing. The boys are attending meetings more regularly than ever, and yesterday we did not have regalias enough. I was surprised for we always have them lying around by the dozen. There are two things that make it more binding now. We don't pull any freight on Sundays except the perishable, and then the Lodge has a new by-law which provides that if a member is absent and cannot furnish a satisfactory excuse he has to pay a fine of fifty cents. Bro. E. Kerr makes a good master and I am sure we will prosper under his leadership. But when everything looks bright for some, it seems darkest for others. Bro. A. E. Loucks, who was on the engine that exploded some three years ago, has had the misfortune to lose his wife, who died on the 15th and was buried on the 17th. He has our sincere sympathy. We are to have a grand excursion to Lake George on the 21st of June and thanks to the committee, it has arranged so we can go from Oneonta Lake George and return for \$1.75, including a trip on the steamer across the lake. We would be pleased to have some of our brothers from other Lodges attend, as we don't wish to have all the pleasure ourselves. Business is good on the D. and H., and they have promoted some fifteen during the past year.
G. E. B.

STANBERRY, MO., May 3, 1890.

MR. EDITOR:—As my last, was not consigned to the "scrap pile," I will try again and see what kind of luck this will meet with. No. 56 is in a very good condition considering the chance we have had. We have not seen a Grand Officer of any description since Grand Master Sargent was here July 23d, 1886, at which time he gave us some very good advice, which has not been forgotten by those who were present. With all our bad luck No. 56 is still able to swim with her head above water. She has been a victim of misplaced confidence at three different times. The man that robbed us the first time, has resorted to the great seab "order;" the second was killed in a collision; the third I understand has had the misfortune to be stricken blind in both eyes, and so it goes and should continue with every man that defrauds a Lodge of this or any other benevolent order seeking to do so much good.

Did any of our brothers every stop to think where the most Lodges of the B. of L. F. were situated? I will try and give to the readers of the *Magazine* their location: First comes Illinois and Pennsylvania

with 34 each; New York with 29; Kansas 1 Iowa 24; Ohio 22; Indiana 19; Missouri 18; Tex 18; Wisconsin 12; Minnesota 11; and California and Michigan 10 each, the remaining 32 States and Territories that contain Lodges range from one nine each with one in the District of Columbia and 34 outside of the United States.

In the thirteen States named there are 25 Lodges leaving 147 to be distributed among the balance of the States, British Columbia and Mexico. 1 Brotherhood of Locomotive Firemen extends to every State and Territory in the Union with the exceptions of North and South Carolina, Rhode Island and the Indian Territory according to the *Magazine*.

Decoration day was observed here with the programme.
Yours fraternally,
Calamity Brand

CHICAGO, ILL., May 26th, 1890.

MR. EDITOR:—Having just finished reading *May Magazine*, and seeing so much correspondence from the sister Lodges, I will endeavor to let the world know that S. S. Merrill Lodge No. 18 is on earth, although she has not been heard of for nearly three years. Our Lodge is one of the largest and most prosperous in the West. We have about one hundred members, of whom about 80 per cent. are good active members, and attend meetings when they are in the city. Our worthy W. E. P. Tobias, you will always find in his place at 3 o'clock, ready to call the brothers together, while our little hustler Lou is filling the position of Collector. Our noble Fred tells the boys that helps those who help themselves, and if you need and can't pay your dues, you will be helped. Next comes our worthy Secretary, loaded down with books and papers, right on time, to answer the call and to tell the boys what has been done the two weeks, and what will be done in the next week. We would be glad to see our worthy officers give us a call, and I think we would be pleased for them if they would come and see us.

MOBERLY, MO., May 2, 1890.

MR. EDITOR:—Anchor Lodge No. 54, is prospering and is having applicants for membership at every meeting. Our Master, John Seelye, has transferred to a run that took him away from here, resigned his office and Bro. Joe Stannard was elected to fill the unexpired term, and is making a good master.

The question regarding change of name has been discussed in our meetings and all are in favor of sticking to the old name.

B. of L. F. was engraved on our banner during the struggle with C. B. and Q. And if we were to change the name now, the public would think we were ashamed to stick to the old name, simply because we were defeated in that struggle.

I have been reading the discussion on how to manage a husband, and find that the unanimous conclusion of the ladies is kindness, and I think there is just as much kindness due from the man to the woman, and if both are kind and affectionate to each other the question of management is a dead letter, for there will be no need of it on either side.

Business is very dull on the Wabash just now, and consequently there is a larger attendance at Lodge.

Hoping my first attempt will receive your approval, I am,
B

Our readers may profit by reading the advertisement of the "Cactus Blood Cure," which appears on another page. This medicine is a sure cure for hereditary, or acquired blood diseases, and is highly endorsed by many of the members of the "Brotherhood of Locomotive Engineers" and "Order of Railway Conductors."

H. H. Moran, a member of the latter order, cured of a very bad cancer by it, and is very loud in his praise of it.

Those who are troubled with blood or skin diseases will profit by writing the company as they have skilled physicians in their employ who will advise you by mail free of charge.

Personals.

THE battle cry is "federation."

CHAS. COWDRICK is pushing the *Magazine* in New York City.

S. R. WILD and J. C. Branham are keeping things moving at Mt. Carmel, Ill.

J. P. ALCORN does service as Secretary and Collector for Golden Eagle Lodge No. 78.

GEORGE P. KERN, of Eureka Lodge No. 14, is a thoroughly efficient officer and his heart is in the cause.

FOR a new Lodge, Lake Erie, No. 241, has made an excellent record. Keep on with the good work, boys.

W. E. BRISTOW handles the quill and does the collecting for St. Joseph Lodge No. 43. Bro. B. is equal to every emergency.

GRAND MASTER SARGENT and Vice Grand Master Hannahan have lived on wheels almost constantly during the past six months.

JOHN S. SHEAHAN presides at Cincinnati and as he has all the qualifications of a Master, No. 229 is certain to prosper under his administration.

AT Sedalia will be found one of the most flourishing lodges in Missouri. The boys pull together and have lots of friends on the outside.

W. F. STOCKER, of St. Lawrence Lodge No. 15 is a happy father now and wouldn't change lots with anyone for all the wealth of the world.

THE members of St. Joseph Lodge No. 43 are forging to the front again. Under the leadership of W. E. Sullivan they are bound to get there.

THE officers of Buffalo Lodge, No. 12 are exceptionally well qualified for their respective positions and are keeping "old 12" well abreast of the times.

THE members of Fellowship Lodge, No. 121 are composed of the very best material and as a matter of course the Lodge is in excellent working order.

I. H. CROSSMAN, of 241, the old "war horse" of Buffalo, has had his title changed to the "Prince of the Skating Rink." May his shadow ever increase.

JOHN L. KREBS, Past Master of Fellowship Lodge No. 121, is one of the most popular men in the city of Corning. John is genial as June and one cannot help but like him.

CHAS. ERNST, Master of Tippecanoe Lodge, No. 36, is well and favorably known at LaFayette. Bro Ernst is a staunch supporter of the rights of labor and makes an efficient Master.

GEO. WALKER, vice Master, and S. G. Wells, collector of Empire Lodge, No. 212, were promoted on the same day, and are meeting with well deserved success.

THE Secretary of Lodge No. 160, Bro. R. T. Skinner, is the happy father of a fine baby girl, and all the boys are felicitating him upon his good fortune.

JAMES F. ROODY, holds the gavel at Corning, N. Y., and a better brotherhood man never took an obligation. The members of No. 121 are justly proud of their Master.

D. E. BARRY fills the chair of No. 241 in royal style and has the undivided support of his Lodge. Dan is an old time member and his staying qualities are of the first order.

W. E. BURNS is being urged as a candidate for the Illinois Legislature. Should Brother Burns accept the nomination we have no doubt he would be triumphantly elected at the polls.

THE members of Buffalo Lodge are all in line and some good work is being done there for the Brotherhood.

ONE of the stalwarts of No. 43 is Bro. Kane. Besides being an earnest worker for the Brotherhood, Bro. Kane is a genial, whole-souled gentleman whom it is a pleasure to know.

WHILE at Elmira, N. Y., recently we met a whole host of splendid fellows. Liberty Lodge No. 242 is made up of that kind and when a visitor arrives he is given a cordial reception.

WE are under special obligations to Bro. Sloan, of No. 235, for courtesies shown us while at Pittsburgh. Bro. Sloan is an honor to his Lodge and his fellow members appreciate him at his full value.

GRAND TRUSTEE F. P. McDONALD, whom we had the pleasure of visiting recently, has a pair of twins at his home, of whom he is justly proud. Frank wears the honors with becoming dignity.

J. H. BARTHOLOMEW, who will be remembered as a delegate to the Minneapolis convention, is still an active member of Liberty Lodge, No. 242 and as much interested as ever in the work of the Order.

JOHN L. PHILLIPS presides with ability over Smoky City Lodge No. 219, Allegheny Pa. John is quite popular among all classes of railroad men who appreciate his unselfish devotion to the cause of organized labor.

W. R. JOHNSON, of Tippecanoe Lodge, No. 36, has been running an engine for more than 25 years and yet he has interest enough in the Firemen's brotherhood to serve as Receiver of his Lodge. Bro. Johnson is an honor to our Order and the members of No. 36 are justly proud of him.

FRANK J. THOMER is the leading spirit at Pittsburgh. Bro. Thomer not only works faithfully as an officer of No. 378 but has time to look after the interests of the Brotherhood generally in that locality. Such men are the salt of the earth.

PAST GRAND MASTER J. A. LEACH, the founder of our Order, is located at Sedalia and is still actively engaged in the railway service. "Pap" Leach is held in high esteem by the boys who realize the weight of their obligation to the father of the Order.

FROM all accounts Bro. Guess of No. 402, has some trouble lately in "keeping her hot" and the boys are talking of supplying him with a porous plaster to enable him to keep the pointer where it belongs and get his train in on time.

FRANK T. KORTY is serving his second term as Chief of the Fire Department, of LaFayette, and is making an excellent record for himself. Frank is a member of Tippecanoe Lodge, No. 36, and has worked his way up unaided to the responsible position he now occupies.

MAT. TURNEY, an old and faithful member of the Order, now of Susquehanna Lodge No. 71 and located at Quaker street, N. Y., was promoted last January and has been doing some first-class service at the throttle. Mat. is a man among men and the *Magazine* wishes him uninterrupted prosperity.

BROTHER "BILLY" Hugo presided over the great union meeting at Indianapolis on May 25th with immense credit to himself and the Order. Put a gavel in Billy's hand and he is at home. He always says the right thing at the right time and keeps the machinery lubricated with the oil of good fellowship.

JAMES GABRIEL, Master of No. 361 and delegate to the Atlanta convention, won high honors for his lodge by his efficient services as Chairman of the Firemen's Committee in the O. & M. settlement. Bro. Gabriel looks at both sides of a question and has a just comprehension of the rights of all concerned.

J. J. KNAUFF, Master of Buffalo Lodge No. 12, is becoming celebrated as an expounder of the constitution.

THE members of Lodge, No. 36, LaFayette, Ind., hold in high esteem Miss Johnson, daughter of Bro. W. R. Johnson, Receiver of the Lodge, who renders her father valuable assistance in keeping his accounts and making his returns to the Grand Lodge. Miss Johnson is an accurate accountant and takes pride in having her books kept in first class order.

C. N. TERRELL, Third Vice Grand Master of the Brotherhood of Railway Trainmen, organized an excellent Lodge of that Order at Terre Haute, last month, with 19 charter members. The Lodge is composed of young and active men and if they will continue as they have begun the Lodge will be a credit to the organization, and this the *Magazine* most devoutly wishes may be the case.

C. N. TERRELL, Esq., Third Vice Grand Master of the B. of R. T. desires to express his thanks to Bro. Penn and other members of Cedar Valley Lodge No. 39, for services rendered him in instituting a Trainmen's Lodge at Waterloo, Iowa. Bro. Terrell informs us that he always finds Brotherhood firemen ready and willing to assist him in his work. This is as it should be.

T. H. HAINES, formerly Secretary and Receiver of Boston Lodge No. 57 and delegate from that Lodge to the Atlanta Convention is now running out of Water Valley, Miss., and has joined Water Lily Lodge No. 402, of which he is an active and useful member. The members say that Bro. Haines (hear! hear!) is just the man they needed and is of immense service to them in building up the interests of the Order in the South.

THE *Magazine* is never more in its element than when extending congratulations to its whilom bachelor friends, who, renouncing single solitariness, bask in the bliss of matrimony, and therefore we wish Brother McCauley and his bride a life of joy and prosperity. Brother McCauley, Master of Eureka Lodge, No. 11, was married May 1st, 1890, to Miss Josephine Fentz, of Mineral City, Ind., and are now at home at No. 123 South Noble street, Indianapolis. May their home be as bright and as joyous as one gladdened the eyes of angels.

JAMES MURPHY, Master of St. Lawrence Lodge, No. 15, has at last gone the way of most of the boys, and taken unto himself a wife in the person of Miss McKechney. "Appy Jim!" The boys took the opportunity offered and showed their appreciation of his services for the past few years, by presenting him with a handsome carved oak clock, mounted with two silver shields, one bearing the Brotherhood coat of arms and the other the presentation legend. James richly deserves it and has the very best wishes of all the boys. Long life and success to Jim and lady, not to mention olive branches.

REFERRING to Bro. Geo. C. Watt, the good-looking Receiver of W. F. Hynes Lodge No. 48, a local paper says: "If there is anything that makes a railroad an inner feel happy, it is when everything moves along with an O. K. attached. It seems that Mr. Geo. C. Watt, an engineer on the T. P. & W. has grown up with the road to the position of a first-class engineer: by patience and perseverance he has come to the front rank. Just at present he is about the proudest man in the town. Engine 36, which he run for some time, is just out of the shop, and as the old engineers look over her they say, "Watt, you're lucky." The Master Mechanic has spared neither time nor expense in rebuilding the engine, and she stands a masterpiece of his skill, and is turned over to the care of G. C. Watt again." That's very pretty George, but the question is, where were you when the electric light flashed up?

It affords the *Magazine* special pleasure to announce the marriage of Brother Frances Xavier Hall, member of Northwestern Lodge, No. 82, to Miss Anne Lou Love, daughter of Dr. Abram Love,

of Atlanta, Ga. This happy event occurred July 10th, 1890, and Mr. and Mrs. Hall will be at home after July 10th, at 804 Twenty-second street, near Minneapolis. Ordinarily the circumstance could be dismissed with the foregoing dry statement, but should be said the great happiness that has come to Brother Hall is due in some measure to holding the first biennial convention of the Brotherhood of Georgia Metropolis in 1888, an incident which whatever may be said of marriage proves that convention was not a failure. It was a case, assume, of love at first sight; a love that grew, and culminates in matrimony. Our felicitations are most cordially extended to the happy pair and in wishing them all the bliss heaven has in store for wedded life, we but voice the sentiment of a great Brotherhood of which Brother Hall is one of its most honored members. Indeed, may their life be as bright as the sunny clime of the bride, and their conjugal relations as harmonious as the loving voice of Minnehaha.

Grand Union Meeting

Of Engineers, Firemen, Brakemen, Conductors, Switchmen, to Discuss Federation. Held at Indianapolis, Ind., Sunday, May 25th, 1890.

Since the organization of the Supreme Council of the federated orders of railway employees, in July 1889, we doubt if a more notable meeting of railway employees for the purpose of discussing federation, all of its bearings, has been held than that which occurred in the city of Indianapolis, May 25th, 1890.

This meeting was held under the auspices of the Indianapolis Division, No. 11, Brotherhood of Locomotive Engineers; Capital City Lodge, No. 82, Brotherhood of Railway Conductors; Hoosier Lodge, No. 262, Brotherhood of Railway Trainmen; Indianapolis Lodge, No. 21, Switchmen's Mutual Aid Association of North America, and Eureka Lodge, No. 1, Brotherhood of Locomotive Firemen.

The committees having the matter in charge secured Tomlinson Hall, one of the most spacious and beautiful halls in the West, and at the hour appointed for business, 2 P. M., fully five hundred active workers in the various departments of the service of the railroads of the country were present.

It could be seen at a glance that the men were foundly in earnest, and were present because they desired to become fully advised in regard to the possibilities of federation in the settlement of troubles that might arise between them and their employers.

The audience was made up exclusively of men in active service, and the various orders of employees except the B. of L. E., were represented by some of their Grand Officers, but it is doubtful if any were present more profoundly interested in the meeting or more in sympathy with its purposes than were the Locomotive Engineers.

Mr. William Hugo, member of Eureka Lodge, No. 1, of L. E., and chairman of the Joint Committee, called the meeting to order. He also presided during the deliberations, and felicitously introduced the speakers.

The chairman first introduced His Honor, Mayor Sullivan, of Indianapolis, as a man on all occasions the friend of workingmen. The mayor was received with generous demonstrations of friendship. His welcome to the boys was warm and generous, well calculated to make the visiting boys feel at home. Continuing, he said:

The whole train is here, my friends—the engine

and fireman, the brakemen, the conductor and the switchman. The whole train, I say, is here, coupled together, running in one section and in one direction. So should it always run if you would have safety for the train and the passengers upon the train. I have said that the switchmen were here upon this single train. The figure of speech is true. They may not be upon this train, but they are essentially a part of it. I remember a short time ago, when I came from Danville to this city riding on the engine of the fast afternoon train of the I. & St. L. I know as I sat in the seat of the fireman I almost endeavored to hold the hair on my head. I had but one thought. I was depending upon Providence and the engineer who stood beside me. It seemed to me that the most dangerous part of the ride was when we approached Indianapolis. I would involuntarily catch hold of the seat to prevent a collision with a box car that apparently stood upon our track. But when we came to it the engine went off to one side and the danger was passed, because the switchman understood his business and was doing his duty. Therefore I say the switchman is a part of this train, and without him all of it would not be present. I didn't come here, however, to make a speech, but simply for the purpose of extending to you words of welcome and to express the hope that this meeting will terminate in such a manner as to give you both satisfaction and pleasure.

The mayor's address, though brief, was roundly applauded, and put the audience in a most agreeable frame of mind for further discussion.

Following the mayor, the chairman introduced Col. J. B. Maynard, of Indianapolis, who had been invited by the committee to discuss federation as distinguished from cooperation and amalgamation, and to outline its possible power to confer great benefits in time of need. The Colonel was greeted with expressions of friendship, and spoke as follows.

MR. PRESIDENT: This large assemblage of men, engaged in the railroad train service of the country, is immensely significant.

What is the supreme object in view?

I understand it to be the discussion of federation—the federation of organizations of railroad employes engaged in the train service of the railroads of the country. These organizations represent

Engineers.
Firemen.
Brakemen.
Conductors and
Switchmen.

These men, it is held, have mutual interests, some interests in common, and no one, so far as I am advised, is bold enough to controvert the proposition.

The protection of these interests when assailed, or disregarded, is the problem that has challenged the best thought of the most thoroughly informed men who are members of these organizations.

In solving the problem of protection, much has been accomplished by the organizations, acting separately.

Here and there, now and then, the single organization has been able to achieve success, and quite as frequently—indeed, more frequently—defeat has been experienced.

These facts have brought into prominence—have forced to the front, the inquiry, can something more be done to secure success, when rights and interests are in peril?

The organizations had the old, time-honored maxim, "In union there is strength," staring them in the face. It embodied practical wisdom. It had been utilized in forming the various organizations. It was understood that ten men were stronger than one man, that one hundred men were stronger than ten men, and so on.

But it was found, as has been stated, that the organization, though it had strength, was not strong enough to secure success, to achieve a victory; that one organization against one corporation had little chance to maintain its rights, to protect its interests.

It was furthermore found that the one corporation, with its vast resources of money and means,

was more than equal to two organizations; that in the conflict the right was cloven down and the wrong enthroned. Instances could be cited, but memories are on the alert here to-day, and it is not required that I should particularize.

Taking such things into consideration, what, I ask, could be more in consonance with the logic of events and of facts, than that thoughtful men should inquire: Cannot something more be done to enable the organizations to protect their interests and their members?

It had been demonstrated time and again that one organization, acting separately, had failed; that two, acting in concert, had suffered defeat; but it never had been demonstrated that all the organizations, acting as one, had been repulsed, and it was believed, if all could be induced to act together, an era of victory would dawn; and this belief, this faith in the power of unity, is the bed-rock principle upon which federation rests.

Federation is the climax—the *Ultima Thule* of organization.

Federation is logical and it is legal. It embodies practical wisdom. It is as free from vagary as mathematics. Federation aggregates strength. It is a means of applying power when needed and where needed. It can reach a wrong, however exalted, and pull it down. It can reach a right, trampled into the earth, and place it on high.

Federation can protect the weak, and that it can do that should be esteemed one of its chief glories.

Take the humblest man in any of the Brother hoods, to whom a grievous wrong has been done, and federation can remedy that wrong. Cast adrift, to gratify the whim or spleen of an official—federation can secure for the man a fair trial, a hearing, and a verdict founded in justice.

I am not required to catalogue the grievances of railroad employes, nor could I do so if required. They are numerous and various, often easily adjusted, and therefore the world never hears of them. But grievances are often serious, and involve principles of right which command universal attention. When such cases occur, federation expands to colossal proportions. It is then that the *Supreme Council* exerts its power, and it is then that a victory secured for one is a victory for all.

Notwithstanding such things, there exists in some quarters opposition to federation—predicated, I apprehend, upon misapprehensions of duties, obligations and methods, rather than doubts relating to what federation can accomplish when the federated body is required to act.

Federation as it exists, and as it is advocated, does not require the surrender of any rights or prerogative of any of the federated organizations; that is to say, its autonomy, its right to direct its own affairs, is in no wise disturbed.

In case of grievance, the organization proceeds to adjust it, as at present, and the other orders do not interfere in any way. Nor does the federated body interfere until every other resource is exhausted, nor even then, until required to do so.

The supreme purpose is to adjust the difficulty, be it what it may, without resorting to a strike. All that can be accomplished by discussion, by mutual concessions and arbitration, is to be proposed and urged; and it is wisely held, and it has been demonstrated as a fact, that what *one* could not do, all could do. In cases where one or two organizations failed, all acting together secured the desired result.

There are those who regard cooperation more desirable than federation; in fact, the terms federation and cooperation are regarded as strictly synonymous.

Federation does, necessarily, involve cooperation; but cooperation is not, therefore, federation. Federation is a compact, an alliance, signed and sealed. Its purpose is stated. Its operations are invariably and uniform; while cooperation is incidental, casual, contingent upon something that might occur, and therefore not reliable.

Illustrations are readily suggested: Select your system of railroads. Let it be stated that the Engineers, the Firemen, or any other of the organizations, have a grievance which they are trying to settle. If Federation of all the organizations exists, if the compact has been signed, doubts as to the utility

mate action of all the organizations, when called upon, do not exist. It is known when they will act. It is not a matter to be arranged for the occasion. The organization knows that when the time comes for action the federated body will respond.

In case of cooperation, all is at sea. No one knows what the action of any one of the organizations will be. Two might cooperate, while the others would stand aloof, and as a consequence, while with federation a victory for the right might be achieved, the probabilities are that, relying upon cooperation, the wrong would triumph.

The term, "amalgamation," is often used in connection with "federation," as if the words had some relation to each other, and could therefore be used to express the same idea.

I think such a view a mistaken view. I think it productive of erroneous conclusions relating to the aims of federation in bringing together the various orders of railway employees for mutual protection in time of trouble. There is no amalgamation in the proposition. The federated orders do not mix; they do not blend, mingle and commingle; they do not *fuse*. They maintain their separate individuality absolutely; they become parties to a contract to accomplish certain sharply defined purposes, under rules of their own enactment, and should any one of the federated orders desire to withdraw from the compact, nothing can be done to prevent such an act.

The federation of railway employees connected with the train service of the country has one supreme purpose in view, and that is to afford protection to the weak when their rights are invaded.

And I inquire, who are the weak? Do I indulge in paradox when I say that the strongest are sometimes the weak?

Let A, B, C, D, E represent the Brotherhoods, the organizations in the federated body. Select the strongest, numerically and financially. Say it is in trouble with an all grasping corporation, like the C, B, & Q. The question is, is it strong enough to win the fight? It responds, "No." In that case, the strongest becomes the weak one, and the four other organizations fly to its assistance, and a victory follows. Now, select the weakest of the organizations in the federated body—that one which is the weakest in numbers and in funds. As, in the other case, the grievance is the same. It may call for help sooner. And now comes into view the grand purpose of federation: The strong orders fly to the rescue of the weak, and again victory perches upon the banner of federation.

Do I overdraw the picture? I think not. A number of cases demonstrating the absolute truth of my conclusions come into view. I select only two: that of the Q, & C, and the O, & M., and with all the facts which distinguish these two cases, I would be willing, were I an attorney for the federated orders to submit the case to any jury of railroad men in the world.

I do not dismiss the subject at this point. I believe that federation is good for railroad employees. I believe it will prove an elevating and dignifying force in the solution of many vexed problems. It will afford conscious strength when otherwise doubts would paralyze efforts and men would submit to wrongs rather than fly to greater ills.

I believe, and I have a right to believe, that federation prevents strikes, and that when once fully enthroned, strikes will not occur. I have cited two cases in which, but for federation, strikes would have been inevitable.

I do not say that federation will always prevent a strike, but I do believe, in ninety-five cases out of a hundred it will prevent strikes, and that when nothing but a strike will answer the situation, it will be of short duration.

Nor is this all, but making every proper allowance for the antiquated notions of some railroad officials, I believe the broad-gauged men, who control the railroad interests of the country, at heart hail the coming of federation as a blessing the *actual carrier* of relations between employer and employee fruitful of an era of peace and prosperity.

Why not? A strike is war, and war is productive of asperities. Federation means peace, with all the blessings that flow from a state of tranquility and amity.

This meeting, I understand, is called to promote a spirit of federation, to bring all the organizations of railway employees engaged in the train service of the country into harmonious relations, and I hope, Mr. President and gentlemen, that a purpose so laudable may prove immensely successful.

At the conclusion of Colonel Maynard's remarks, the chairman introduced Mr. W. D. Robinson, of Vincennes. Mr. Robinson's appearance was the signal for storms of applause. The audience recognized in the man not only a veteran railroader, but the man who laid the foundation of the "great national and international" Brotherhood of Locomotive Engineers, and who was its first Grand Chief. He had come down to the engineers and the railroad men present, from a former generation. His railroad life antedated all organizations of railroad employees. A man of culture, of thought and of experience, who had kept abreast of the progressive armies, he was in a position to speak words of wisdom and to give words of advice worthy of being heeded by men of the present generation. His address was as follows:

MR. PRESIDENT: The beneficial results of organized and disciplined action on the part of labor for the purpose of protection have long since passed into history as demonstrated truths, and no longer occupy the field of speculative inquiry or debate. As this survey, of necessity, must be brief, to enter into an enumeration of these benefits and attempt to portray their various forms and magnitude at this time, would, I believe, only appear as a work of supererogation, inasmuch as they are facts so plain that he who runs may read. I believe it safe to assume that 95 per cent. of all the goodly number present have their names already inscribed on the roll of the grand army of organized labor, and here I must state the fact that these organized efforts have not been entered upon by the children of toil for purposes of amusement for themselves or the infliction of malignant mischief upon society. On the contrary, they are now and have been the legitimate outcome of haggard necessity, born of the cold-blooded, remorseless avarice of centralized wealth.

With the history of the fierce struggles of the right against the wrong, the defeat here, the triumph there, it is not the purpose now to deal; our business is now with the present and the future. If we are only true to ourselves, we must not close our eyes to the inexorable truth that we are in the midst of constantly increasing peril, that we are confronted day by day with new conditions which threaten our prosperity and menace our overthrow. Let us strive manfully, with such sagacity as we may possess, to circumvent these agencies and to solve the problem of our deliverance.

In an address which I delivered in this city, twenty-six years ago, you will find the following: "Capital has sharp perceptions and thrifty cunning, and can always afford to wait for its opportunities." In all the intervening years how rapidly its perceptions have developed, how well it has exercised its thrift and cunning, and with what adroitness it has seized upon the first and last of the many opportunities presented for its aggrandizement. The process of consolidation and centralization has gone unceasingly on, until to-day we behold in the great lines of railway on this continent, aggregations of accumulated wealth more colossal than the world before has ever witnessed. Although often appearing as rivals, we know they are constantly pooling their interests in the transportation of passengers and freight, and we believe they also pool their influence, sympathy and power throughout any prolonged conflict with labor. Beyond all cavil or question, the money power invested in the great systems of American railways has already federated its interests in all matters which may concern its relations with labor. It is against these gigantic forces, with all their well known tendencies to imperious dictations and harmful measures, that the five different

brotherhoods of railway employes now find themselves called on by the inexorable logic of events and the immutable law of self-preservation, to fortify. And wherein lies your remedy? Briefly, I answer, federation. I may be wrong; no man can properly claim infallibility of judgment, yet I verily believe this to be the key to the solution of the problem.

I find one of the favorite arguments of anti-federation to be that such a league must embody elements which would embroil a conservative majority in endless trouble for the defense of a restless and turbulent minority. If such an argument be worthy of serious consideration, I reply that a careful review of the constitution and by-laws of each and all of these brotherhoods must establish as much confidence in the conservatism, prudence, sagacity and fair-mindedness of any one of these organizations as of another. Further, I would remind our opponents that unworthy distrust is an end to logical argument, inasmuch as their premises are only conjecture or assumption. And yet another formulates his objection in the plea of unequal representation. In the name of reason and common sense let us inquire if we are to pause at this juncture to calculate the number a man may represent, when it is evident to the most obtuse that his presence fills the last vacant space, closes the circle and completes the defense. I observe that the argument of the opponents of federation are nearly all predicated upon the assumption that it must result in a condition of perpetual trouble between the employer and employed. In the very nature of things, I believe it must result in exactly the reverse. When the railway magnate finds himself confronted by a power equal to any which he can command, will he not be ready in case of disagreement or controversy to call a parley and say, "Come, let us reason together?" Mutual agreement and arbitration must follow and strikes be known only in past history. Speaking of arbitration reminds me that some years ago had any railway employe proposed to submit to arbitration any controversy between himself and his employer, he would only have been regarded as a fit subject for an insane asylum. Now, learning of this plan of federation and knowing and fearing the power it will place in our hands, they proceed to employ one of their tools to introduce a bill into the United States senate, having for its purpose arbitration—under government control—of all controversy which may arise between railway managers and their employes. The bill is so cunningly devised, that should it become a law, is must render nugatory the patient efforts of many years upon our part to better our condition and place our interests in the keeping of men who shall make oath that they are in no wise interested in our welfare.

If the railroad men of this country are on the alert, as they should be in this matter, Mr. Blair, who introduced this bill, may find himself at the conclusion of his nefarious scheme much in the situation of the poll parrot employed by a certain juggler to vociferate and applaud at the end of each act and ask for the announcement of what might follow. It appears the performer had learned a new trick with which he intended to astonish the public. But making a mistake of his combinations his chemicals exploded, knocking him insensible and scattering his paraphernalia in ruin about the stage. The parrot was hoisted by the shock to a lofty perch in the gallery, from which, with scarcely a feather left, but still true to his training he shouted down, "Pretty good trick, what next?" What next, indeed? Should we be surprised should the next trick of these gentry prove to be an attempt to federate with us? In such case we can only remember that when the wolf federates with the lamb it is only a question of brief time before we must expect to find the lamb inside the wolf. Federate only with those whose interests are the same as yours, and arbitrate your differences after methods of your own adoption and have no fear, and remember anti-federation among ourselves is only another name for continued weakness, with never-ending trouble and conflict as a logical sequence.

Let us consider for a moment one other objection which has been offered against federation, to-wit: That a locomotive engineer should consent even in

his own interest to ally himself with those so far beneath him in importance. When any man, no matter what his calling, comes to believe that he alone is indispensable to the consummation of any human purpose requiring the exercise of thought and skill, we can only commiserate him as being afflicted with an alarming case of big-head. The vocation of the locomotive engineer, or fireman, the brakeman, switchman or conductor calls into action the busy brain, the throbbing heart, the strong arm and the steady hand, the quick perception, the mentality of human existence, and no one of all these individuals engaged in the transportation, the carrying trade of the world, is more indispensable to the completion of the one grand purpose in view than another. To the true-hearted American citizen aristocracy I know is a hateful word, yet I trust you will bear with me while I speak of it for one moment. The creation of an aristocracy of birth with the laws of primogeniture and the entailment of estates was one of the first great aggressions upon labor, and yet the titled nobility of Europe has furnished history with many examples of transcendent genius, brilliant talents, heroic deeds of arms and lofty courage. Down the long list appear the poets, orators, statesmen and warriors, philosophers and scholars of profound learning, whose illustrious achievements must forever continue to challenge the admiration of the world. But what shall we say of the aristocracy of wealth, whose ranks are swarming with specimens of the genus homo looking only with undissembled scorn upon industrious poverty, men who gather, and throng, and ride along the gay boulevards of cities, ever striving by ostentatious display, a lavish use of tinseled paint, gold-leaf and varnish, to cover up and conceal the fact that their grandfathers dealt in molasses and meal, or gathered, and bought and sold rags and old iron. Pah! A close observation of these creatures of an hour in spite of their gaudy trappings always leaves upon our minds a distinct impression, audaciously suggestive of the presence of cockroaches and codfish. So let us leave them.

There is yet another aristocracy of whose birth we all have learned, still perhaps in its infancy. Speaking for myself alone I can only hope I may finish my voyage down the river of life and pass to the infinite sea toward which the white sails of every human bark are drifting, my voice forever hushed in the dark waters of eternal silence, rather than live to behold the growth and maturity of a monster with such tendencies to work irreparable mischief, such capabilities for permanent evil to my race, a deformity with such distorted figure, so narrow a visage and such deadly breath as an aristocracy of labor. I have no time or patience to discuss it in detail. I can only denounce it as a goblin of darkness, begot in the lust of human egotism upon the slimy spawn of human ignorance, with cold-blooded selfishness officiating at its birth; and now Humbug, Stupidity & Co. are trying to bring it up on a bottle filled with the meanest kind of false pretense. Many years ago some politician announced that cotton was king, and all the world paid homage accordingly; soon some statistician proved that hay was king; later we hear that corn is king, also of railway kings, and kings, and kings. Has it ever occurred to any of these gentlemen, with their pretty poll prattle, that there is a figure, as yet somewhat in the background, over whose bronzed cheek and active form they have ever striven, to cast the mantle of ridicule or contempt; that this figure is now breaking to the front and emerging slowly, perhaps, but surely from the smoke and dust, and scorn of all the years; that he shall yet appear in the glorious sunlight of true freedom; that, with his honest brow encircled with a halo of justice and truth, he will proclaim to all mankind that cotton, and corn, and all values gathered from the earth or wrested from the sea are his own legitimate offspring and subjects. He will compel the world to acknowledge at last, grudgingly though it be, that the only rightful sovereign of all this fair earth is labor. Labor is on its triumphal march; its banners are fluttering on every breeze; its hymns of deliverance, with federated action as the watchword, are vibrating the air throughout enlightened Christendom, and in the firm-set lip and steady glance we

find proclaimed the lofty purpose to achieve emancipation through methods of labor's own devising and in its own good time. Let him object who may. Brothers and friends, I truly thank you for your very considerate attention, and I will now close with a short quotation from a poem, written by myself and published in the *Engineers' Journal* for June, 1888:

By labor the granaries of the world are filled,
And the marts of commerce and trade.
Of what use were design without labor to build?
The loftiest spire which the sunset doth gild,
Or the lowliest cot in the shade.
Where the artisans dwell in their poor, squalid homes,
Without whose strong arms earth's magnificent domes.
In their grandeur could never be made.
But centralized wealth has a fiendish delight
To see labor its fellows betray:
But let them remember we've passed through the night.
And found that disunion is mildew and blight:
Through long, weary years we've been learning the right,
And darkness is turning to day.
The light has revealed to the workingman's mind,
His anchor of hope and safety combined
Lies in federate numbers, leaving discord behind:
This brings arbitration, and then we shall find
That daylight is coming to stay.

The next speaker introduced was Mr. S. E. Wilkinson, of Galesburg, Ill., Grand Master of the Brotherhood of Railroad Trainmen. It is needless to say that Brother Wilkinson was received with hearty applause. He had come up from the ranks. He knew the toils and dangers of a brakeman, and appreciated the blessings of organization and federation.

Mr. Wilkinson opened his speech with remarks relative to the birth of the various organizations. With reference to the Order of Railroad Conductors, he made a very happy bit by saying that he was glad to be able to state that it had gone down to death a few days ago. Only a few years ago a handful of brakemen had laid the foundation of the Brotherhood of Trainmen, and now it was in a flourishing condition. It was time, he said, that the employees of the great railroad corporations of this country began to learn that they must do something for their mutual interest. They were at last coming to a realization of the fact that they could accomplish nothing without federation. There was a diversity of opinion as to how federation should be effected, but it was conceded on all sides to be the only salvation for the workers, no matter in what form it came. It was time for all organizations to come closer together. They should have more confidence in one another, and not allow petty jealousies to stand in the way of accomplishing this great object.

Mr. Wilkinson retired amidst great applause, and at the conclusion of his address, the chairman introduced Mr. Frank Sweeny, Grand Master of the Switchmen's Mutual Aid Association of North America. The chairman in introducing Mr. Sweeny made a playful allusion to dynamiters, which created a ripple of laughter. In response, Mr. Sweeny said that he did not know why the switchmen should be called 'dynamiters,' unless it was because they had always asserted their manhood. Referring indirectly to the explosions on the 'Q.' road, he said that the association did not take upon itself the responsibility of acts committed prior to its organization. Although the association had been in existence for but five years and was yet in its infancy, it had a membership of 5,000. There should be no controversy on the subject of federation. It was no

longer a theory, but a fact, and as it now stood it was equal to any emergency. Federation would prevent strikes instead of precipitating them, and all sensible and far-sighted railroad officials could not but welcome its advent." In every word spoken by Bro. Sweeny, there was evinced a full appreciation of federation, and a demand on the part of railroad employees to assert and maintain their rights. The cool deliberation which characterized his address demonstrated that the Grand Master of the S. M. A. A. knows the requirements of railroad employees, and has the nerve to assert their rights when they are invaded, and the applause which greeted his remarks indicated that he had struck key notes.

The next speaker introduced was Col. G. W. Howard, Grand Chief Conductor of the Brotherhood of Railway Conductors. Col. Howard was welcomed with great applause, and made a telling speech. He said:

"I have had nearly thirty years' experience in the road business," said the speaker, "and stand before you a radical federationist. If there was nothing no governing power, to prevent an official from pinching you until almost the last vestige of a livelihood would be taken you would be pinched to the extent. We would have to admit there are some exceptions, but that is the rule. This federation of railroad labor will cause the official to pause before he will reduce you to that measure. A federation is to the benefit of the middle official; every official beneath the man who has his money invested in the railroad. Where men are fairly federated an official will stop to see whether he can make the reduction after receiving the order. I have been a district superintendent myself, with 375 miles of territory. I got an order once to make a reduction in the wages of the men of \$1,500 a month. I could not see where I could cut off a cent, but the order was imperative. I had either to make it or step down and out. The boys were not organized; had they been I would have been spared doing this. One month elapsed and I received an order to make a further reduction of \$500 a month to keep the road out of the hands of a receiver. With the stealing that was going on it was easy to see why the road couldn't pay anything on its bonded indebtedness. And that reduction was made because the men were not organized to resist it. At that time I said I hoped I would never again have men under me who were not organized to protect themselves and protect me, and I have done everything upon a railroad from using a pick and shovel up to general superintendent. [Applause.] Unless you stand organized to help yourself the subordinate official cannot help you against the encroachments of capital. Twenty odd years ago when I was a brakeman, our officials didn't have any respect for us at all. We were not organized then. You have, perhaps, been walking along and found a yellow dog in your path; he was poor and friendless and you gave him a kick. But suppose you came along some day and you find a nice fat bull-terrier there. You don't kick him, and I doesn't have to bite you, either, to protect himself. There are lots of capitalists at the head of railroad corporations who would not read a labor paper. There's where they make a mistake. If you read them you have an advantage. There is only one thing that will offset capital, and that is knowledge. When federation is thoroughly accomplished a strike cannot occur unless you have a manager who has not sense enough to grease a gimlet.

"Upon the Southern California road the pay of conductors was ordered to be reduced as much as 25% in some cases. We held a union meeting and asked for an engineer, fireman, trainman and switchman to serve upon the committee. Superintendent Sanborn had ordered the cut to take effect July 1, and we called on Mr. McCall on the 30th of June. Mr. Sanborn was in a hurry about its taking effect, but we surprised Mr. McCall by our promptness. We sent in an ultimatum asking an immediate answer. 'How is this?' he asked; 'you have engineers be-

and firemen: is this a grievance of engineers?" I told him no, but that we were all acting together in this matter. "Hold on boys," he said "I didn't intend to have that cut take effect anyhow." And it didn't.

Mr. Howard said that the officials were afraid of federation, and used every effort to prevent organization among their employes. He concluded with the remark that Chauncey Depew was attending a meeting of railroad men in New Haven, and, no doubt, giving them a large amount of "soft soap," with reference to his great love for railroad organizations."

From first to last Col. Howard kept his audience in an uproar of applause and there was evidence of regret when he gave way for the chairman to introduce Bro. J. J. Hannahan, Vice Grand Master of the Brotherhood of Locomotive Firemen. Bro. Hannahan is one of the most eloquent men on the labor rostrum, and his extensive travels and large acquaintance gives him special advantages in knowing the sentiments of railroad employes on the subject of federation. Bro. Hannahan gave the audience to understand that the sentiment was almost unanimous in favor of federation, and that every sign foretold a day near at hand, when all the orders of railroad employes, in the train service, would be under the banner of federation. Bro. Hannahan said that he hoped and thought that his auditors would go home with the feeling that their only salvation lies in federation. The organization of railroad employes had been brought about by necessity. The time had come when the question arose: "Can the organizations longer remain separate and alone?" Federation must come, and with it a unanimity of spirit. The great strike on the Missouri Pacific was a failure because it had been conducted by a single organization. So it was with the Reading strike. As a result of organization the last named road has been completely wiped out. Harmony and co-operation must be the watch-words, if employes would have their grievances adjusted.

At the conclusion of Bro. Hannahan's remarks, he introduced Eugene V. Debs. In referring to his remarks the Indianapolis *Sentinel* said:

One of the youngest and most eloquent of all the high officials of the various railroad orders is Eugene V. Debs, Grand Secretary and Treasurer of the Brotherhood of Locomotive Firemen. His effort yesterday afternoon was a most able one. He began by congratulating the several orders upon their splendid organization, saying that they were all founded on the same basis, and all had the same object in view. They were endeavoring to lift up their members and secure for them their rights. Not a single reason could be put forward why federation should not be inaugurated. Federation implied fellowship. It made all men equal. As a general proposition railroad men were opposed to strikes. The speaker said that there was no man within hearing of his voice who would engage in a strike except as a last resort. The way to obviate the necessity of strikes was to federate. By this means the employes could protect their own interests and those of the railroad corporations at the same time. The speaker referred at great length to the Reading strike, and the subsequent order of President Corbin giving the employes the alternative of withdrawing from their organizations or leaving his employ. They had chosen the former, and were now simply at the mercy of a soulless corporation. It was the spectacle of 30,000 white slaves down on their knees begging for the privilege of earning a livelihood. The speaker said that they were in the power of Corbin, the monumental scoundrel of the age. They were even denied

the right to present any grievances that they might have under penalty of discharge. The despotic rule of Russia could not equal this. After ridiculing the Reading order requiring its train men to have their whiskers shaved off he referred to the C., B. & Q. strike, saying that it had cost the engineers and firemen just \$1,500,000.00 to lead a forlorn hope. The strike was defeated almost before it began simply because federation was not in existence.

At the conclusion of Mr. Debs' remarks, which were heartily applauded, Chairman Hugo thanked the mayor for his presence, and the meeting adjourned.

In closing these notes, it should be said, that the great Union meeting was in all regards a splendid success. Not an incident occurred from first to last, to mar the harmony of the occasion, and it is known that great good was accomplished. During the evening the Lodges of the different organizations held secret meetings for the purpose of discussing federation. At the Firemen's meeting, William Hugo presided and the action of the Grand Officers of the Order, in inaugurating federation under the Supreme Council, at Chicago, June, 1889, was approved by a unanimous rising vote.

It is known, that as a result of these secret meetings of the various orders, federation as it exists with four of the orders engaged in the train service, was unqualifiedly endorsed, and in none of them more heartily than by the Indianapolis Division No. 11, of the Brotherhood of Locomotive Engineers.

AN IMPORTANT TRIAL.

Thos. Hensley of Little Giant Lodge, No. 187, vs. E. V. Debs, Grand Secretary and Treasurer, B. of L. F.

The justice of the Laws of the Brotherhood Established and the Action of the Grand Lodge in the Case of Bro. Hensley Vindicated.

Early in the month of June, 1890, Bro. Thomas Hensley, of Little Giant Lodge, No. 187, brought suit in the Superior Court of Lafayette, Ind., against E. V. Debs, Grand Secretary and Treasurer of the B. of L. F., to secure the payment of \$1,500, upon a claim for total disability, alleging that in April, 1888, he sustained an injury to his spine by a fall from his engine.

To enable him to bring suit in the Lafayette Superior Court, Bro. Hensley made Chas. Ernst and two other members of Tippecanoe Lodge, No. 36, co-defendants in the suit, it being the nearest Lodge to his home, at Winthrop, Ind.

Under a law of the Order, known as the "old law," a member of the Order was entitled to \$1,500 for total disability from any cause whatever.

It was found that this "old law" supplied many opportunities to set up fraudulent claims to deplete the treasury of the Order, and that a change in the law relating to "total disability" was imperatively demanded. This being the case, the Brotherhood of Locomotive Firemen, at its First Biennial Convention, held at Atlanta, Ga., September, 1888, changed the law, and enacted that after February 1, 1889, "total disability" should be restricted to the loss of a foot, the loss of a hand or total blindness.

To understand the case thoroughly, dates should be kept clearly in mind, because the case under discussion hinges upon dates.

Bro. Hensley claimed that his total disability occurred in April, 1888, at a time when the "old law" of the Order was in operation.

The "old law" was changed in the month of September, 1888, at least five months subsequent to the time when the total disability of Bro. Hensley is alleged to have occurred, but up to that time no claim had been made by him.

The law, though it was changed in September, 1888, did not take effect until February 1, 1889, at least

four months after its enactment, and this postponement was designed to enable a member, if he had a claim against the Order for "total disability" to present it and have it adjusted.

In this, it will be seen, that Bro. Hensley had at least *four* months from the time of his "total disability" as alleged, occurred, to February 1, 1890, when the new law went into effect.

During this period, Bro. Hensley set up no claim for "total disability," nor did he set up such claim until August, 1889, at least one year and three months subsequent to the time when the disability is alleged to have occurred, and fully six months after the new law went into effect.

As a matter of course, when the claim for \$1,500 was made, predicated upon alleged total disability, occurring in April, 1888, it was rejected by the Grand Lodge, and hence this suit.

This was the first case the Brotherhood has ever had before a jury, and it was tried before Judge Everett. The attorney for the plaintiff was W. H. Rhodes, Esq., and for the defendants, Messrs. T. W. Harper and W. H. Bryan.

The point at issue was, Has an Order the right to change its laws? Numerous authorities were produced, and all doubts upon that point were dispelled and it was made clear that an Order does possess the right to make such changes as it may deem wise and prudent.

It was shown that Bro. Hensley knew of the law and had obligated himself to abide by it.

It was shown that Bro. Hensley, if he had a just claim, had ample time to present it and have it adjusted before the new law took effect.

After the testimony was all submitted and the case had been argued, on motion of Mr. Rhodes, attorney for Bro. Hensley, the case was dismissed, and the action of the Grand Lodge in rejecting the claim was fully established.

The point the Grand Lodge made in the case was, that under the law, it had no authority to pay Bro. Hensley \$1,500, or any other amount, upon his alleged total disability, and that having postponed making his claim from April, 1888, to August, 1889, the law effectually barred his claim. This view of the Grand Lodge was sustained by the Lafayette trial.

A few reflections are in order. *First*, The laws of the Order will stand the test of the courts. *Second*, The members of the Order should make themselves familiar with its laws, and live up to their requirements. *Third*, In matters of insurance the laws are designed for the protection, not only of the membership, but of the Order as well. In matters of payment the law, not sentiment, governs. When the law is complied with, payments are *certain*. If the laws are violated, those who violate them suffer. It is inevitable.

Grand Chief Arthur on Federation.

Chicago Rights of Labor.

At a meeting of the Brotherhood of Locomotive Engineers at New Haven, Ct., on last Sunday, Chief Arthur is reported as saying:

"I am opposed to our brotherhood forming an alliance with any other class of labor. Character makes the man and without that no organization can succeed. I attribute our success to the fact that we have kept aloof from all other organizations. Our policy has been in plain solid English: 'Mind your own business.' When the brotherhood federates with any other organization it will forfeit the respect not only of the public at large but of the employees."

It is altogether probable that the Grand Chief remarks on this occasion were influenced by the presence of Chauncey Depew for it is well known that Mr. Arthur belongs to that class of labor reformers who imagine that the labor problem is solved when he can get his feet under the table of a millionaire.

Chief Arthur is entitled to his opinion, ever man is, and therefore if his remarks fail to meet the approbation of that "other class of labor" he attributes it to the fact that they misunderstand him or do not agree with his aristocratic notions on the labor question. Chief Arthur is opposed to an alliance with "other classes" of labor and says, "Character makes the man and without that no organization

can succeed," clearly intimating in a very broad manner that other labor organizations are characterless. There was a time when this "Grand" Chief was a common fireman, a hostler, when he belonged to that "other class labor." Consequently, there must have been a time when Grand Chief Arthur was without character; this is not our assertion, but the logical conclusion of his own remarks. The question naturally recurs, When did Peter M. Arthur cease to be a man without character? Was it when he exchanged the coal shovel for the throttle valve, or when he exchanged the throttle for his present position at \$5,000 a year? It must be confessed that "Grand" Chief Arthur has an exceedingly low conception of what constitutes character if he means by his remarks that the fireman, the brakeman, the switchman or section man is any the less a man of character because of the position he occupies.

There has been various reasons assigned by various persons for the loss of the "Q." strike by the "Twin Brotherhoods," and Chief Arthur now gives the true reason. In that strike the engineers condescended to take "pot luck" with the firemen and switchmen, or, rather, the switchmen concluded to try "pot luck" with the firemen and engineers; therefore the strike was lost: for, says the "Grand" Chief, "I attribute our success to the fact that we keep aloof from all other organizations." *Ergo*, when we make common cause with other organizations we fail as in the "Q." strike.

When the Brotherhood federates with any other organization it will forfeit the respect not only of the public at large but of the employers." The press report says this remark was enthusiastically applauded by Chauncey Depew, who also arose and indorsed every word uttered by the Grand Chief. Why not? Jay Gould would have indorsed it; so would Austin Corbin. The very thing these representatives of monopoly want is to keep the various organizations of labor from federating. If they can't adopt the old chestnut of dealing with their employes as individuals, they will do the next best thing and deal with them as separate organizations. The railroads will unite to regulate the freight and passenger traffic, and to black list and break up labor organizations, but for labor organizations to federate—what a horrible thought!

It is consoling to know that "Grand" Chief Arthur does not speak for all the engineers of the country. In fact, we doubt whether he even speaks for a respectable majority of them. The Brotherhood of Locomotive Firemen is rapidly absorbing the other organizations. A majority of the men who graduate from the shovel to throttle don't care to change their camps when the change involves a separation from their old associates by an arbitrary caste originated by Grand Chief Arthur. The result is that firemen who are promoted to engineers who join the B. of L. E. do it for the same reason that a New York dude says "lift" instead of "elevator" to be on good terms with the "better clawes," because "it's English, you know." The more progressive and most intelligent retain their membership in the B. of L. E., the membership of which is increasing in a much larger ratio than the B. of L. E. The effort of the Grand Chief to prevent federation is simply "kicking against the pricks." His careless talk may retard but cannot prevent that desired consummation.

An Engineers' and Firemen's Barbecue.

The Austin (Texas) *Statesman* of May 22d, gives a lengthy account of a grand gathering of the people at the Brotherhood Barbecue on the Gabriel, some five or six miles from Taylor Texas, May 21st, where there were fully 2,000 people in attendance. Says the *Statesman*: "Besides the music furnished by bands from different places and a really sumptuous spread of barbecued meats, and other inviting features, there were interesting addresses by Hon. Geo. W. Parker, of Taylor, orator for the Brotherhood, Hon. R. M. Hall, candidate for Governor, Col. T. R. Bonner, one of the Receivers for the International Railroad, and Capt. W. H. Lovelady, candidate for State Treasurer. Mr. Parker, in his address, contended 'that there should be and could be a better understanding between railroad men and their employes.' He discussed the propriety of establishing

a tribunal with power to settle disputes between them, and took high ground in favor of affording railroad employes some respite from labor, especially on Sundays." The meeting seems to have been a grand success in all regards, and the addresses delivered indicate a desire on the part of the speakers to place employer and employes in harmonious relations.

G. W. HOWARD, Grand Chief B. of R. C., organized a division of the order at Ft. Gratiot, Michigan, June 3d, with thirty-seven charter members. That's business, and proof that conductors believe that protection protects.

THE MEN WHO THINK.

We have often said that those at the top in railway management could derive much wisdom from those at the bottom. Managers are often perplexed by problems that may be readily solved by brakemen, firemen, clerks, operators and section men. All reforms in railway management come from below. It is the man below who thinks and thinks deeply. It is the man below who has the most intimate practical knowledge of the particular duties he must perform. It is the able man below whose unwearied brain is capable of the deepest thought.

Harassed by a multiplicity of cares, each demanding immediate thought and action, it is not strange if those at the head of railway management often fail to give prompt attention to suggestions relating to the various improvements in appliances, which may possibly be in the interest of economy or safety. Nor is it strange that those farther down, are often, in advance of managers in obtaining the mastery of grave problems relating to railway operation. Among the tens of thousands yet struggling at the bottom, it must be remembered that there are giant intellects, possibly not fully developed, still at the same time capable of brilliant thought. While it may be considered the peculiar province of those who have already risen to fame and occupy the high places in railway management to lead in thought, in the directions indicated, yet the vigorous, fresh and unwearied minds of the men whose duties require only healthy physical exertion, more often voluntarily give birth to the ideas that lead in the march of railway progress. While the president or manager in his private car inspects his vast system at the rate of sixty miles an hour, and drives a weary and exhausted brain at a much slower speed, pondering the unsolved problem of perfect safety in railway operation, the train dispatcher, conductor, brakeman, engineer, or fireman, with vigorous and unwearied brain is studying all the possibilities of derailments or collisions, and the section men or section master is carefully noting the effect of the fast special, a tremendous freight engine, upon each rail, spike, tie and bolt. Hence it is, in the discussion of the various railway problems we often find correspondents of the *Gazette*, though occupying humble positions, advancing original ideas of the greatest value. As we have said there are thousands of able men at the bottom. Some of them will be the great and brilliant managers of the future. Others equally as able, not favored by circumstances, will not. All of these men must think, and they think deeply. There is work, never ending work for the hands of the able employé, but he

must also furnish work for his vigorous mind, which is in perfect health and capable of the greatest exertion, since his physical health is also perfect. What is more natural than that he should exercise his mind upon problems that concern him very nearly?

Then let no brainless fool sneer because those occupying humble positions in the service, take part in the discussions of the various railway problems through the *Gazette*. Some of them are the coming managers of the future; others will deserve to be. Though their ideas may not be readily expressed, yet they often give birth to great thoughts. They are often in the advance in the solution of the most vexed and intricate problems.

The editor of the *Gazette* can point to scores of his correspondents of ten years ago, who to day are occupying the most responsible official positions in the railway service.—*Railway Service Gazette*.

TOLLING UPWARD.

From the period when the workingman was the absolute dependent and slave of the agricultural lord and the industrial master up to the present time, the history of real civilization has been the history of labor organization. The lords and ladies, the aristocracy of the earth to day, are not one whit advanced by any method of marking advancement over the aristocracies of the time of Queen Elizabeth. The workingman has written history and made history to write. He has fought his way from a place in the lord's stable to a place in government greater than a lord's; from the last place of society recognition to the first place in the world of thought to-day. From the time when he was considered too base to even fight the battles of his king and country, he has advanced until now, when kings and countries dare not go to war, except avowedly to advance in some direction the welfare and the opportunities of the man that works. All laws are made in his name, and pretendedly for his benefit; all functions of government are exercised for his gain; all officials bow before him. He who was least has become greatest; the last is now first, the servant has become greater than the lord.

The advancement of the workingman has not been simply the advancement of a class, it is rather the absorption of the energy and thought of the race into one channel—the useless has been abandoned. The masses have become greater than the classes and have ordered peace. The militarism of the class has been supplanted by the industrialism of the mass. The calloused hand was once the mark of disgrace and inferiority; it is now the badge of honesty and worth. The man of leisure must now apologize; he must show cause why he and his class shall not be shut out from the world of respectability.

And in proportion as men have stopped fighting and commenced working, in the same measure as they have left the unrealities of social distinctions for the realities of every day life, the world has advanced. Industrial freedom is the mother of political liberty and of every other kind of liberty. The workingman made the Declaration of Independence a possibility, and his blood gave its prin

ciples force and effect. These principles stand to-day facing the eternities, the only refuge and hope of the children of men.

As the ideas developed by the organization of laboring men finally overthrew the political tyranny of the king, whose power rested solely upon force, so to-day the organizations of labor are fighting and will finally overthrow the enemies of industrial liberty, whose power rests solely upon fraud. Justice is the science which determines the natural and true relationship of man to man, and freedom is the unrestricted operation of the principles of that science. The organizations of labor are fighting for liberty and to establish justice. They are fighting, not for the artisan, but for the human being—for man, woman and child. They are fighting for the homes against the castles. They are the guardians of American liberty and American equality—before the law.

They uphold the government, and without the support of the man who works the government could not stand twenty-four hours. Whoever foolishly attempts the denial of their rights and principles "kicks against the pricks" and proclaims himself an enemy of justice and law based on equality. Who so fights against them is a friend of social anarchy—the anarchy of the times when the lord of the castle owned the man in the field, his wife and son and daughter, and did with them as he pleased. He is a renegade to right. Like unto him are the proprietors of the *Item*.—*Labor Union*.

GROWLS AT WOMEN.

When a woman gets cross she gets cross at everybody.

Smile at some women, and they will tell you all the troubles they ever had.

When a woman can wash flannels so that they will not shrink she knows enough to get married.

A woman is never so badly in love that she does not try to find out the cost of her engagement ring.

One of our delicate women will never admit that she is hungry. She will say she is feeling a little faint.

There is only one thing that pleases woman more than to be referred to as a dove, and that is to hear a man referred to as the hawk.

A woman never becomes so intelligent that she learns that it is no pleasure to others to hear her coax her children to speak a piece.—*Atchison Globe*.

AN ARTISTIC DRAWING.

Young Artist (displaying a picture)—This painting is entitled "Jonah and the Whale."

Possible Purchaser—Where is Jonah?

Young Artist—You notice the rather distended appearance of the whale's stomach midway between the tail and the neck?

Possible Purchaser—Yes.

Young Artist—That's Jonah.—*Philip Welch*.

THOUGHT HE'D STOP OVER.

A new story was afloat on Prince Russell Harrison at the Fifth Avenue Hotel last night, and is credited to W. W. Dudley. It occurred on the Prince's recent visit to Europe. On the way over he told his fellow passengers that he should not stop in England at all,

but should hurry right through to Paris. At Liverpool it was noticed that Russell was preparing his baggage with an eye to stop in London.

"Why, Mr. Harrison," said a fellow passenger, "I thought you weren't going to stop in England?"

"Well," said the Prince, "it's this way: If the Prince of Wales should go to America and pass through Washington without stopping to call on father, we'd think it was darned queer, and so I thought I'd stop over here a few days and pay my respects to the Queen."—*New York Star*.

STORY OF A DIAMOND NECKLACE.

A very wealthy man gave to his wife some years since a diamond necklace which cost him \$75,000. Paris.

Her brother, under peculiar circumstances, disapproved. The family was in unspeakable grief. The great corporation whose assets he had made way with was quite willing to compromise the felony if it could be recouped pecuniarily. Taking her diamond necklace to a world-renowned establishment, she asked for how much it could be duplicated in paste, and was told that for \$2,500 a necklace absolutely a reproduction, absolutely undetectable by expert tests, could be made in three months' time. It was ordered, paid for, the original sold, the brother was saved. Shortly after that, perhaps a few years thereafter, this lady, who was in what our contemporaries call "high life,"—that is, she was rich,—attended a charity ball, situated her box, resplendent in costume, magnificent in decoration, her necklace so far outshone the jewelry of her friends and neighbors as to be included in the reportorial description the following day in the chief paper of the city.—*New York Press*.

THERE were altogether about three hundred distinct epidemics of influenza in Europe between 1713 and 1782, when the disease was first noted at Malia, and in 1729 the whole of Europe suffered severely. According to statistics published by the Novoe Vremya, the disease caused 308 deaths in London in one week, and in Vienna sixty thousand persons were affected. In 1757 and 1743 there were further outbreaks, the deaths in one week in London amounted to ten thousand. In 1775 domestic animals were attacked by it. In 1782 forty thousand persons died of it in St. Petersburg in twenty-four hours. In St. Petersburg quinine is now served out daily to the troops, mixed with vodka.

A WIDE DIFFERENCE.

Wife (whose husband has explained to her the mysteries of poker)—It seems very simple. I suppose one can play it as well as another.

Husband—No, there is a great difference in play. There's the man who can play poker, and there's the man who thinks he can. The latter is the one who has to write a check.

GASTRONOMICAL ITEM.

Waiter (to party from the country, just seated)—Here's a bill of fare, sir.

Gentleman (from the rural district)—Now, what's here? If you think I'm gwine to pay any bill, I'll fetch till I've had something to eat, you're bet yourself. Fetch on your vittles first.

GRAND LODGE.

These columns are reserved as the official department of the Grand Lodge.

All Official Documents, including notices of dues and assessments and other notices, reports and statements will be published in this department.

Officers and Members of Subordinate Lodges are requested to note carefully each month the contents of this department.

JULY, 1890.

Grand Dues Notice.

1890-91. \$1.50.

OFFICE OF THE GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., July 1, 1890.

Subordinate Lodges:

DEAR SIRS AND BROTHERS:—You are hereby notified that the amount of One Dollar and Fifty Cents (\$1.50), for Grand Dues for the year ending July 31, 1890, is now due and must be paid on or before August 1, 1890. Any member failing or refusing to make payment of his Grand Dues as above required, will stand expelled, said expulsion taking effect August 2d. Collectors are required to deliver their returns for Grand Dues, together with the proper assessments, to the Receivers of their Lodges not later than August 5th, and Receivers are required to forward the same so as to reach the Grand Lodge later than August 10th, as provided in Section 5 (Page 44), of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.
EUGENE V. DEBS, G. S. and T.

Quarterly Dues Notice.

OFFICE OF THE GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., July 1st, 1890.

Members of Subordinate Lodges:

SIRS AND BROTHERS:—Pursuant to section 50 of the Constitution, you are hereby notified that the dues for the quarter ending October 31st, 1890, (such amount as may be determined by the several lodges, provided in no case it shall be less than \$5.00 dollar), are now payable, and must be paid to the Collector of your Lodge on or before August 1st, 1890. This amount will be in full payment of Subordinate Dues and Beneficiary Assessments, as provided in section 134 of the Constitution. All beneficiary members now enrolled, and all those admitted prior to October 1st, 1890, are liable for the full amount of Quarterly Dues for said quarter. All members admitted during October (from the 1st to the 31st inclusive), are exempt from payment of Quarterly Dues for said quarter, as provided in section 131 of the Constitution. Any member failing to make

payment as above provided, will be expelled from the Order, as per section 51 of the Constitution, said expulsion taking effect August 2d, 1890, and the Secretary is required to make due report thereof to the Grand Lodge.

Yours fraternally,

F. P. SARGENT, G. M.
EUGENE V. DEBS, G. S. and T.

Notice to Secretaries.

OFFICE OF THE GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., July 1, 1890.

To Secretaries of Subordinate Lodges:

SIRS AND BROTHERS:—Pursuant to Section 51 of the Constitution, you are required to report to the Grand Lodge as expelled all members who fail to make payment of their Grand Dues for the year ending July 31st, 1891, also for Quarterly Dues and Protective Fund Dues for the quarter ending October 31st. The names of said members must be reported to you by the Collector of your Lodge not later than August 2d, and by you reported to the Grand Lodge immediately thereafter. Failing to report the names of expelled members as herein provided, the Grand Lodge will hold Subordinate Lodges liable for their assessments, as per Section 53 of the Constitution.

Fraternally yours,

F. P. SARGENT, G. M.
EUGENE V. DEBS, G. S. and T.

Notice to Receivers.

OFFICE OF THE GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., July 1, 1890.

To Receivers of Subordinate Lodges:

SIRS AND BROTHERS:—You are hereby notified, as provided in Section 56 of the Constitution, that no beneficiary assessment is required for the month of July, 1890, and that therefore none has been levied for said month.

Yours fraternally,

F. P. SARGENT, G. M.
EUGENE V. DEBS, G. S. and T.

Protective Fund Dues Notice.

OFFICE OF THE GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., July 1st, 1890.

To Members of Subordinate Lodges:

SIRS AND BROTHERS:—Pursuant to section 215 of the Constitution, you are hereby notified that the Protective Fund Dues for the quarter ending October 31st, 1890, amounting to seventy-five (75) cents, are now payable, and must be paid to the Collector of your Lodge on or before August 1st, 1890. All members now enrolled, and all those admitted prior to October 1st, 1890, are liable for the full amount of Protective Fund Dues for said quarter. All members admitted during the month of October (from the 1st to the 31st inclusive), are exempt from payment of Protective Fund Dues for said quarter, as provided in section 131 of the Constitution. Any member failing to make payment as above provided, will be expelled from the Order, as per section 51 of the Constitution, said expulsion taking effect August 2d, 1890, and the Secretary is required to make due report thereof to the Grand Lodge.

Yours fraternally,

F. P. SARGENT, G. M.
EUGENE V. DEBS, G. S. and T.

Notice to Custodians of Protective Fund.

OFFICE OF THE GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., July 1, 1890.

To Custodians of Protective Fund:

SIRS AND BROTHERS:—Pursuant to Section 215 of the Constitution, you are required to forward to the Grand Lodge, not later than August 1st, a report of the Protective Fund of your Lodge for the quarter ending July 31st, 1890. Two blank forms have been forwarded to your Lodge for this purpose; one copy of your report is to be filed with the Lodge, and one copy to be forwarded to the Grand Lodge, as above provided.

Yours fraternally,

F. P. SARGENT, G. M.
EUGENE V. DEBS, G. S. and T.

Beneficiary Statement.

OFFICE OF GRAND SECRETARY AND TREASURER,
TERRE HAUTE, IND., June 1, 1890.

Respectfully submitted,

EUGENE V. DEBS, G. S. & T.

Acknowledgments.

SMITHVILLE, ONT., April 7, 1890.

To the Officers and Members of Charity Lodge, No. 5,
Brotherhood of Locomotive Firemen:

GENTLEMEN:—Through your valuable *Magazine* I wish to thank the members of Charity Lodge, No. 5, for their great and unceasing kindness to my dear brother, Wilber, during his brief illness. Received draft for insurance with many thanks. May Heaven's blessing fall upon the members of your noble Order is the wish of one in sorrow.

EMMA MCCOLLUM.

WAUSAU, WIS., April 24, 1890.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I received to-day through Mr. C. Donnelly, a draft for \$1,500, the full amount due on the insurance of my son, Thomas D. Baker, for which I wish to thank each member and the Brotherhood in general. I shall always remember the Brotherhood with gratitude for kindness received and for what they did for my son. May your Lodge prosper is my sincere wish. Yours very gratefully.

Harriet C. Baker.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—During the recent sickness of my husband, which proved fatal on March 19, 1890, and during my deep sorrow consequent upon the great affliction, the Brotherhood Lodges in Massachusetts and Rhode Island, furnished many proofs of sympathy, for which I desire to return my grateful thanks. The tokens of kindness were appreciated by my husband during his sickness, and will never be forgotten by myself. I also desire to express my gratitude to the Superintendent of the N. Y. P. & B. R. R. and his subordinates for their kindness toward the widow of an engineer.

Yours truly,

MRS. J. C. UPDIKE.

DE HERD, TENN., April 24, 1890.

To the Officers and Members of Monte Sano Lodge, No. 279:

DEAR SIRS AND BROTHERS:—Allow me to express my heartfelt gratitude to your noble Order for the draft of \$1,500.00 received on the policy of my devoted brother, Virgil E. Cooper, who was snatched away from us in the twinkling of an eye in a railroad accident at Madison, Alabama. Hoping that the kindness and sympathy shown us through the Brotherhood may be bread cast on the waters and that other sisters may receive benefits through your noble Order is the wish of your sincere friend.

MAGGIE P. COOPER.

YOUNGSTOWN, April 4, 1890.

To the Members of Holbrook Lodge, No. 378, B. of L. F.:

GENTLEMEN:—We desire through the columns of the *Magazine* to express our sincere thanks to the B. of L. F. of Holbrook Lodge, No. 378, for their beautiful floral tribute and their many acts of kindness to our son, Shearman H. Neely, through his brief illness, and the respect shown him after death; also to members of other Lodges who called upon him and showed him acts of kindness. May the blessings of heaven rest upon you, one and all, is the sincere wish of his parents.

MR. AND MRS. C. M. NEELY.

Address Wanted.

DENNIS DRISCOLL—A member of Gate City Lodge, No. 93, left Keokuk about two years ago. When last heard of he was at Morgan City, La. Any one knowing his whereabouts will please correspond with his sister, Mrs. R. L. Starkey, 623 S. 2d street, Keokuk, Iowa.

Alexander's Ready Reference

New 1890 EDITION For
Engineers and Firemen.

Broke Down. What I Should Do.

This book contains all of the items that were in all previous editions, some of which have been greatly improved. Two pages have been added to the time and speed tables, also forty five pages of new items have been added. Two very fine and costly engravings of the Westinghouse Automatic and Air Brake have been substituted for the old cuts, one of which is 9 by 34 inches, showing on one sheet the whole brake arrangement from the pump on the engine to the rear end of a passenger car. The new QUICK-SETTING TRIPLE VALVE, and the NEW ENGINEER'S BRAKE VALVE is shown also, and very clear explanations of the manner of handling are given. A diagram of SLIDE VALVE MOVEMENT, 16¼ by 18½ inches, accompanies each book, the explanation of which is made so clear that any person can understand it. It shows EVERY PART OF VALVE MOTION, from the eccentric to the steam chest, as well as the manner in which steam is admitted to and discharged from the ports in the cylinder. It shows the piston also and everything connected with it. There are also three large engravings of engines, making five in all, in a pocket in each book. The whole work without doubt contains MORE VALUABLE INFORMATION IN FEWER WORDS, and is better understood by railroad men, than any other book now in print, because it is written in the same manner that railroad men talk to each other, and by one who has already had FORTY-TWO YEARS PRACTICAL EXPERIENCE. REMEDIES FOR BREAK DOWNS AND FAILURES OF EVERY KIND that are likely to occur on the road are given, in language familiar to every engineer or old fireman, also the BEST PRACTICES FOR RUNNING. Each edition has qualified very many good FIREMEN FOR EXAMINATION AND PROMOTION. Their letters to me say in substance, "I would not have been promoted without you," or, "It put me on the right side." The book is very valuable to MEN WORKING ON REPAIRS OF ENGINES, and is a gold mine to locomotive FIREMEN AIMING AT PROMOTION. Price \$1.50 per copy.

CAMP LIFE.

The one thing you'll always find in every cowboy's outfit when he goes on the spring round-up is a "Fish Brand" Pommel Slicker. They make the only perfect saddle coat, and come either black or yellow. They protect the whole front of the rider's body, being made to fit round the outside of the saddle entire. When used as a walking coat, the extension pieces neatly overlap each other, making a regular overcoat with a double storm-proof front. When riding, the saddle is dry as a bone, from pommel to cantle, and the rider is entirely protected in every part of his body. These "Slickers," being of extra width, make fine blankets for camp. Beware of worthless imitations, every garment stamped with "Fish Brand" Trade Mark. Don't accept any inferior coat when you can have the "Fish Brand Slicker" delivered without extra cost. Particulars and illustrated catalogue free.

tent and shave commended the rubber foot and hand for their remarkable advantages.

Awarded the highest prizes at every competitive exhibition.

Endorsed and purchased by the U. S. Government. A treatise of 400 pages with 200 illustrations and copyright formula, SENT FREE.

Fig. 1 is from an instantaneous photograph of a man ascending a ladder; he has two artificial legs substituting his natural ones, which were crushed by a railroad accident and amputated. Fig. 2 exposes his stumps. With his rubber feet he can ascend or descend a ladder, and balance himself on the rungs. He can walk and mingle with persons without betraying his loss; in fact, he is restored to his former self for all practical purposes.

With the old methods of complicated ankle-joints these results could not be so thoroughly attained.

Over 9000 in practical use, scattered in all parts of the world. Many of these have been supplied without presenting themselves to us, simply by sending measurements on a copyright formula which any one can easily fill out. Eminent surgeons and compe-

CELEBRATED

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York. 308 Walnut St., Philadelphia.
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all Railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1888. Since that time the outputs have increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

Copy from Original Letter Received from Division 95, Cincinnati, O.

Brotherhood of Locomotive Engineers.

[SEAL.]

CINCINNATI DIVISION, No. 95.

CINCINNATI, OHIO, September 5th, 1898.

This is to Certify, That Brother Chas. T. Brown is a member of this Division, No. 95, B. of L. E., has been a member of the B. of L. E. for twelve years, and we can recommend him as an upright, honorable and worthy brother.

He has lately connected himself with the Railway Officials' and Conductors' Accident Association, Indianapolis, Ind., and said Association has no connection whatever with the Order of Railway Conductors, or any other order or society—it being a distinct organization for the purpose of insuring railway employes in the United States, Canada and Mexico, against accidents. Brother Brown has been appointed Special Agent for the United States, Canada and Mexico, for the Mechanical Department of railroads. We are confident that you will find anything Brother Brown represents to be just what he says.

E. E. McMILLAN, C. E.

G. BAKER, F. A. E.

[SEAL.]

INDIANAPOLIS, IND., September 15th, 1898.

TO BROTHER ENGINEERS:—Having been appointed Special Agent for the United States, Canada and Mexico, for the RAILWAY OFFICIALS' AND CONDUCTORS' ACCIDENT ASSOCIATION, of Indianapolis, Ind., for the Mechanical Department of Railroads, and having been informed by reliable authority that some of the principal representatives of other accident companies have circulated the report among Engineers and Firemen that this Association is connected with certain Orders and Societies; on account of such representations, which are untrue in every respect, I publish copy of above letter from Cincinnati Division No. 95, B. of L. E., which will be sufficient without further explanation.

As all business from Mechanical Department of Railroads comes through my agency, I will furnish every Agent a copy of the above letter, and any application given to an Agent who has this letter in possession may be the same as given to me in person.

Trusting that I may receive a share of your patronage, and will be more than pleased to add your name and all, to our list of membership, assuring you that I will use every honest and honorable means to secure your patronage. For rates, etc., address

ALVA'S BRAZILIAN SPECIFIC.

Or Cactus Blood Cure.

What the Mexican National Conductors Say.

We, the undersigned, CONDUCTORS of the MEXICAN NATIONAL RAILWAYS, and members of City of Mexico DIVISION 159, ORDER OF RAILROAD CONDUCTORS, take pleasure in certifying that we have used the herb medicine known as "Cactus Blood Cure," with wonderful success, and we have also known many others to have used it with a like result.

Appreciating its value, we cheerfully recommend it to ALL BROTHERS, and others requiring a remedy for the purification of the blood, as the best known; and we guarantee that a trial will convince all of its merit.

H. H. MORAN,
H. H. GREENLEAF,
M. E. EGAN,
C. H. STARR,

Members of Div. 159, Order of Railroad Conductors, City of Mexico.

A Parish Priest's Certificate, Certified to by the Archbishop of Mexico.

CELAYA, October 1st, 1889.

I, Parochial Priest and Ecclesiastical Judge of Celaya, State of Guanajuato, hereby certify that I know several people who have been cured by Don Ramon Alva's remedy.

It radically and effectually dispels all impurities in the blood.

FRANCO M. GONGORA,
Parochial Priest and Ecclesiastical Judge of Celaya.

The above signature is that which he uses in all his business, officially and otherwise, and he is an old pupil of mine.

‡ A. P. ARCHBISHOP OF MEXICO.

This medicine has never failed in a single instance to cure the most virulent cases of Scrofula and Contagious Blood Disease.

In cases of diseases which have been treated with mercury by physicians, it requires a few weeks longer to effect a cure, but a perfect cure is absolutely certain in any case, and when once cured, you will find that all traces of mercury have disappeared.

It is perfectly harmless, and is as good for children as for adults.

After you have been cured by it, we ask, as a favor, that you will give your friends the benefit of your experience, by recommending it.

RETAIL PRICE, \$2.00 PER BOTTLE.

LABOR DAY.

The workingmen of the United States are making preparations to appropriately celebrate "Labor Day." The purpose is to make Labor Day, the first day of September of each year, a national holiday. The idea is in all regards praiseworthy.

Just why the 1st day of September is chosen for "Labor Day," we are not informed. It may be the anniversary of some notable event in labor affairs. Be this as it may, the fact that a day has been designated as a labor holiday, answers the demand. It is a rallying day for the hosts of workingmen and women, who go forth from their homes and from their every day employment for recreation of mind and body. They, having left their toils behind them, say and sing:

"Begone dull care, I prithee begone from me."

Labor day dates a new departure. One of the inspired writers, enumerating times for

certain things, says there is "a time to plant." We have in the United States, what is called "Arbor day," when the people go forth to plant trees. There is something very beautiful and very practical in planting trees. The purpose is always commendable, whether the tree planted be for its wood, its fruit, its flowers or its shade. On labor days, the people do not go forth to plant trees, but in the midst of their enjoyments, they may plant thoughts which, sending their roots down into their moral, intellectual and spiritual being, will grow, as grow the trees "planted by the rivers of water," thoughts which in their maturity, shall withstand the gales, and shelter them when the storms of oppression and adversity come, thoughts that shall bear the fruit of knowledge and independence, union and strength, of which all may freely partake, which shall enable them to distinguish between good and evil and be wise in their day and generation.

We are in full accord with the "Labor day" movement. It should be a day sacred to rational enjoyment, free from anxiety, a day when mind and body, relieved of the dull routine of every day life, find health and pleasure in relaxation. On such occasions the toilers of the land have opportunities to exchange opinions. Labor day is a time not only for *set* speech but for free speech, a day to "plant words, and reap actions; to plant actions, and reap habits; to plant habits, and reap principles; to plant principles, and reap character; to plant character, and reap a destiny."

We do not doubt that "Labor days" are to yield splendid harvests of blessings to the workingmen of America. During all the hours of "Labor day," Labor's emancipation day, no bell calls us to toil. The hands on the dial plate of the clock do not remind us when work begins, or when it ends. We go forth to the forests, to the green fields, to breathe the fresh air; or listen to the melody of brook and bird and bee; our minds and hearts are in harmony with nature, with the beautiful—the good, the true; it is labor's holiday, labor's jubilee; it is a benediction and a benefaction, and though unknown, we bless the man who first suggested labor day.

POLITICS.

To say that every Locomotive Fireman should be a politician is simply equivalent to saying that he should understand the science of government. In the United States of America every man should be a politician, because he has a voice in the government, because he is a sovereign citizen, because he has the ballot. All power is in the citizen: he makes, changes or abrogates constitutions and laws; he elects officers; he has all power, and necessarily, must take all responsibility. He is entitled to all the credit, if the government is virtuous; and to all the censure, if constitutions and laws are vicious. The ordinary acceptance of the term "politics" is, that politics is vicious, degrading, something to be avoided, when, in fact, just the opposite is true. There are countries where the great mass of the citizens have nothing to say about the government under which they live. The favored few govern, the many serve and obey. They are the hewers of wood and the drawers of water, "food for powder." They count in standing armies, support the throne. In America, everything depends upon the voice of the people: in governmental affairs it is *vox populi, vox Dei*. There is nothing above the voice of the people. No American citizen can give a valid reason why he should not be a politician, while a thousand could be assigned why he should understand the science of government, which is the politics we are writing about. Parties are not con-

sidered. A man who studies the science of government is the better able to detect the sophistries, dogmatisms and demagogisms of the mere partisan. Now, it is not to be presumed that every workingman, every locomotive fireman, can be a statesman; we suggest no such vagary—our idea is practical. Politics is the science of government. Governments define by constitutions and laws the rights and prerogatives of citizens. Laws are the rules of order or conduct; law touches life, liberty and prosperity; they are enacted by governments. The law touches every man, hence every man who has a ballot has something to say about the laws under which he lives. Constitutions are the fundamental, or organic laws; all other laws must conform to the constitution. Now, we hold that every man—we speak of the rule—may be familiar with the constitution of his country, of his state, and that he neglects his interests if he does not devote a portion of his time in becoming familiar with the fundamental law. It is the study of politics, the science of government. The task is not herculean; it is not beyond the reach of the average man. Such studies broaden the man, elevate him, expand his intellect, give him influence and consequence as a citizen, and are, in fact, one of the highest duties of the citizen. Questions are constantly arising which are being discussed by the press and on the platform, and which are finally submitted to the people for their decision. They relate to government, and are therefore political questions. We hear men say frequently, "Here is a measure which we want enacted into a law, but there is no politics in it," by which is meant, doubtless, that it is not a partisan measure. But there is politics in all laws, because men are governed by laws, and all laws have government in them. It is sometimes said by men, "I am out of politics," which is equivalent to saying, "I take no further interest in government; I have abdicated my position as a citizen—laid aside my sovereignty." He does not, however, mean that, exactly, but rather that he is no longer an office-seeker, or takes no further interest in the triumph of parties. It was the original intention that the people should take a profound interest in politics,

because ours is a government of the people, for the people and by the people; and should the time ever come when the people cease taking a profound interest in governmental affairs, then will be the time when the historian will write of the beginning of the decline and fall of the Republic.

There are 18,000 locomotive firemen, members of the B. of L. F. If they should determine to become students of politics, the science of government, they will be broader-gauged men than those who neglect such studies; and they will be more influential in the lodges and out of them, because the science of government is one which is wanted in the Brotherhood as well as in the state.

HON. W. E. GLADSTONE ON LABOR.

In many regards Mr. Gladstone is accounted the foremost statesman in the world. He is called the "Grand old man." He has been, we believe, three times Premier of England. He has grasped and solved, as few men have done, the most difficult problems of government relating to the welfare of the mightiest empire on the globe. He is preëminently a student of events. He is frequently referred to as inconsistent, because he recognizes that in this world of progress and change a man ought not to play oyster, glue himself to an idea, as the bivalve glues itself to a rock, to remain forever, regardless of wind, or wave or tide. Mr. Gladstone recognizes the fact that in governmental affairs the labor question, by virtue of its inherent importance, is to the front, and will not retire. Neither kings nor aristocrats, nor both combined, with all the aids that wealth and station can produce, have sufficient power to silence the demands of labor. Mr. Gladstone, in writing of labor, its rights and responsibilities, starts out as follows:

The teachings of natural philosophy, founded on observation, appear to inform us that change, insensible at the moment, but, after lengthened intervals, capable of observation and record, is continually acting, at different parts of the surface of the globe, on the relative levels of land and sea. With these changes we may compare the yet more subtle movements which, in the social aggregates of the world, incessantly modify the respective positions of class and class. Of late public attention

has fastened upon the political and social advance, in the relative scale, of what is termed the laboring class, even as in the natural world notoriety has been given to the gradual elevation and emergence from the sea of the Scandinavian peninsula.

That is to say, from the remote past changes have been going forward in matters relating to the "laboring class" similar to those in the physical world, as silent and yet as steady and as certain as those which lifted the "Scandinavian peninsula" from the depths of the sea.

The figure is a bold one, but it suits the occasion and the facts. The working man's condition has changed, and is changing. He is coming up from the depths of slavery and degradation. "Taking the history of the world as a whole," says Mr. Gladstone, "the main spring of the workingman's life has been placed for the most part as it has with a young child, as with a slave, at times almost as with a domesticated animal; that is to say, it has lain outside himself. For very large numbers of workingmen it has now gradually shifted to a point lying within his base, and is coming nearer and nearer to the very center of his own being. Instead of being principally controlled by others, he now principally, and from year to year increasingly, controls himself. Among the causes which have been bringing about this vast and (in principle and in ultimate effect) world-wide change are these: The enlargement of political franchises and the independence given, through the secrecy of voting, to their exercise; the extension of education; the cheapened access to knowledge of all kinds; the progressive remission of his once excessive and brutalizing toil."

Mr. Gladstone attributes this enormous advance to the "gospel," and reasons at some length upon that line. He asserts that the gospel is the "charter of human freedom," but that it has been corrupted. He points to a maxim of the "old philosophy," that "the corruption of the best thing is the worst thing," and adds that "the deepest among all the dyes of human guilt are accordingly those to be found within the Christian pale. The second is of wider application. Though the gospel at its threshold teaches humility and self-renunciation, yet under an infallible law,

Christianity, by bringing the mind and life out of anarchy into order, begets power; power begets enjoyment; enjoyment begets temptation in its thousand forms; by temptation yielded to the spirit is again enslaved; the seven devils find entrance, and the last state of the man is worse than the first." That meets the case exactly. Workingmen have received worse treatment from professed Christians than from any other class. These "divine right rulers" have been the pirates of all seas, the robbers of all lands. Their black flags have waved wherever men have worked. With the gospel in one hand, and goads and shackles in the other hand, they have held labor down until its groans could they be gathered into one mighty wail, would have shaken the world like the tramp of an earthquake. And this shows to what an extent hypocrisy and greed have tortured the gospel to do the bidding of knaves.

Mr. Gladstone refers to the improved condition of working men in England to the enlargement of the franchise, etc., and says:

A strike is, of course, an indication that something has gone wrong on one side or on both. The involuntary cessation of labor diminishes at once the wage fund, the produce of capital, and the commodities available for the use of the community. But these inconveniences may be, and to a vast extent have been, the price paid for the avoidance of a greater evil, such as depriving a laborer of his just hire. And, if strikes have on the whole done good, it is probable that the possibility and the fear of strikes have done much more good.

In this we have the opinion of the foremost thinker of the world, a statement *par excellence*, on strikes. It is wonderful testimony. England has had numerous strikes, and Mr. Gladstone is familiar with their history. They have occurred in his presence. He knows whereof he speaks. If workingmen of England have advanced at all, it has been by strikes, and the fear of strikes and here is further testimony from the same witness:

That disposition of the general public to look on a strike with presumptive favor to which I have referred, can hardly have been due to any mere prejudice against employers. It has rather indicated a dim and remote perception that in the continual (and not necessarily unfriendly) competition between labor and capital for the division of industrial fruits, capital and not labor has hitherto had the upper hand, and that it is time that the balance should not be reversed, but redressed. There may

come a time when labor shall be too strong for capital, and may be disposed to use its strength unjustly. I conceive that in our recent history the judgment of the masses has upon the whole been more generous and just than the judgment of the leisured classes.

Boiled down, Mr. Gladstone admits the advancement of workingmen, in spite of all opposition. He admits the strike has done more good than harm, and that the fear of a strike has become a powerful incentive to employers to deal justly.

There has been no more valuable contribution to the labor literature of the times, than the article of William E. Gladstone, the great English statesman, who in conclusion says that "the impartial citizen, then, has only to bid the laborers God speed, and heartily wish that, by their high standard of conduct, their wise choice of calling, and their equal and liberal respect for the rights of all men, or rather all human beings, they may be enabled progressively to consolidate the position they have gained, and, so far as justice may recommend, to improve it." What, we ask, is the consolidation of the position of workingmen but to federate? With federation perfected, the fear of a strike will win battles and secure the "God speed" for which all wise workingmen are laboring.

RAILWAY CONSTRUCTION AND FORECLOSURE SALES.

The *Railway Age* places the total miles of railroad construction for 1889 at 5,200 miles, as follows:

Maine	18	Tennessee	4
New Hampshire	45	Kentucky	14
Massachusetts	2	Louisiana	1
Connecticut	7	Missouri	1
New York	153	Arkansas	1
New Jersey	64	Texas	1
Pennsylvania	188	Kansas	1
West Virginia	94	Colorado	1
Maryland	31	Indian Territory	1
Ohio	112	Iowa	1
Michigan	243	Minnesota	1
Indiana	123	Dakota	1
Illinois	179	Nebraska	1
Wisconsin	107	Wyoming	1
Virginia	245	Montana	1
North Carolina	216	Washington	1
South Carolina	43	Oregon	1
Georgia	156	California	1
Florida	175	Idaho	1
Alabama	163	Utah	1
Mississippi	169		
		Total	5,200

The total as given is 1,800 miles less than in 1888 and 7,800 miles less than in 1887 when railroad construction was phenomenally reckless. In round numbers the con-

struction of 75,300 miles at \$20,000 per mile required \$106,000,000, requiring from 20,000 to 30,000 more men to operate them. With more railroads than a paying business foreclosing sales became inevitable, and as a result the following foreclosure sales were made during 1889:

Roads.	Miles.	Funded Debt.	Capital Stock.
W. Pennsylvania & Shenandoah Conn'g	22	\$400,000	\$500,000
Vicksburg & Meridian	143	4,017,000	5,800,000
Keokuk & Northwestern	52	660,000	720,000
Wabash Railway	948	27,000,000	
Richmond & Allegheny	252	9,089,000	9,000,000
Texas West (N. G.)	53	630,000	500,000
St. Jo. Val. (N. G.)	11	54,000	54,000
Font. Oxford & Pt. Austin (N. G.)	218	1,800,000	1,000,000
Alameda County	6	\$100,000	\$100,000
Denver S. Park & Pacific (N. G.)	325	7,500,000	6,250,000
Bright Hope (N. G.)	33	307,000	179,000
(Cattaraugus)	50	2,000,000	1,500,000
Canada & St. L.	23	251,000	\$200,000
Ithaca, Auburn & Western	39	898,000	1,000,000
Geneva, Ithaca & Sayre	77	1,350,000	1,675,000
Battle Creek & Bay City	17	288,000	65,000
St. Louis, Sturgis & Battle Creek	41	644,000	1,000,000
Cincinnati, Washington & Baltimore	281	22,210,000	18,879,000
St. Louis & Chicago	62	1,400,000	2,800,000
Fort Madison & N. Western (N. G.)	45	210,500	500,000
Seneca Falls & Waterloo	7	71,000	40,000
St. L. Des Moines & Northern	136	2,600,000	4,000,000
N. Y. & Tybee	18	175,000	251,000
N. Y. & Atlantic Highlands	3	20,000	\$20,000
Rome & Decatur	65	1,050,000	\$650,000
Total 25 Roads	2,930	\$84,864,000	\$52,951,000
Total funded debt and stock			\$137,815,000
Estimated.			

Such figures at a first glance appear somewhat startling, but when it is remembered that the railroad investments of the country are estimated at \$8,000,000,000, the sum of the foreclosure sales becomes comparatively insignificant.

"THE Ohio Legislature," says an exchange, "is asked to prohibit railroad companies employing telegraph operators who are in any way connected with the running of trains from requiring them to perform any other duty, and require public processions carrying a banner, to also carry the American flag." This may do for Ohio, but just think of Corbin's whiskerless slaves in procession carrying the American flag—we would just as soon expect to see a gang of Russian political convicts marching to Siberian mines and prisons under the American flag.

THE UNITED STATES SENATE.

The Senate of the United States is rapidly becoming an assemblage of millionaires. It is said that seventeen members of the Senate as now constituted are worth \$78,000,000. Under such circumstances it is most gratifying to know that there are members of the Senate who have the courage to expose the wrongs which the votaries of mammon are inflicting upon the people and give the required warning. Recently Hon. Daniel W. Voorhees, Indiana's eloquent Senator, introduced the following resolutions:

Whereas the deep and widespread depression and decay of the agricultural interests of the American people, the enormous and appalling amount of mortgage-indebtedness on agricultural lands, the total failure of home markets to furnish remunerative prices for farm products, the palpable scarcity and insufficiency of money in circulation in the hands of the people with which to transact the business of the country and effect exchanges of property and labor at fair rates, are circumstances of most overwhelming importance to the safety and the well-being of the Government: Therefore,

Be it resolved. That it is the highest duty of Congress in the present crisis to lay aside all discussion and consideration of mere party issues and to give prompt and immediate attention to the preparation and adoption of such measures as are required for the relief of the farmers and other overtaxed and underpaid laborers of the United States.

In his address in the Senate relating to matters set forth in the resolutions, the distinguished Senator, among other things, said:

The ordinary traveler speeds on and on thousands of miles through farm-lands, gazing listlessly at farm houses and farm productions, thinking nothing of the vast, fundamental lessons they teach, but looking eagerly forward to the problems, mysteries, and wealth contrivances of the crowded, speculating, stock-gambling city which he is rapidly approaching; and yet that city would wither and perish, shrivel back to a barren, naked beach: its wharves would rot, and its swollen corporation and haughty millionaires would dwindle into poverty-stricken skeletons, no better fed than Pharaoh's lean kine, were it not that the fountains of all its wealth, support and grandeur are kept open and running day and night, by the cultivation of the soil in the great domain of agriculture. Gilded palaces, baronial castles, marble halls, colossal estates outrivaling in value the richest dukedoms of the old world, all draw their sustenance from the bosom of mother earth: their roots strike deep into the mold that is turned by the plow, and the farmer at last is made to pay for all. It is estimated that over twenty millions of the present population of the United States, counting all ages and both sexes, are engaged in cultivation of the soil and on their productive labor not only the govern-

ment itself leans for support, but also all other classes of citizens derive from the same source their prosperity, their wealth, and too often their profuse and criminal luxuries. Is it not well, therefore, in the present juncture of affairs, to turn away from less important questions and look carefully into the condition of the agricultural masses, who bear the burdens and constitute the strength and glory of the republic?

It would be difficult to point out more vividly than Mr. Voorhees has done, the absolute dependence of all the people upon the farmer, and yet, in his great speech, Mr. Voorhees demonstrates that the burdens heaped upon him by vicious legislation are depriving him of prosperity and steadily forcing him into poverty and bankruptcy.

The methods introduced to fleece the farmer are practically the same as an employer's to rob the workmen of the country, who, if possible, are in a far worse condition than the farmer. Mr. Voorhees, referring to the aristocracy of money, refers to the Millionaire Carnegie as follows:

Sir, the aristocracy of money is always cruel and coarse and unmindful of all else save its own gains and meretricious splendor. Its lavish and ostentatious displays of ill gotten wealth often light up the whole argument on the relations of capital and labor, and point to the soundest conclusions ever found in history. Who is protected and enriched by a protective tariff, has been a question of debate prolonged through generations, but can be best determined now by pointing out as object lessons the condition of our agricultural communities on the one hand and certain arrogant, ambitious and dazzling demonstrations of wealth which have recently taken place on the other. There came to this country not many years ago a subject of Great Britain with a keen capacity and hungry instinct for the amassment of great riches. He became a citizen of the state of Pennsylvania and engaged in manufacturing iron and steel. The productions of his mines and his mills have been and still are protected in the American markets from foreign competition by tariff duties ranging from 40 to over 100 per cent. on imported iron and steel of various kinds and in various conditions. These enormous per cents. have been added to the price of all his sales, and have been paid at last by the farmer, whether the sales were for the equipment of railroads or the equipment of farms. What has been the effect of this policy on Mr. Carnegie and his fortunes? We know his laborers have not grown rich, for only last July he gave them notice of a heavy reduction in their wages, and persuaded them into submission by the presence of Pinkerton men and Springfield rifles. Who is it, then, if not the working people, that protection has pampered into more than oriental magnificence in the iron and steel works of Pennsylvania? Three or four weeks ago there was a banquet spread in this city, a description of which the next morning was the joy and

the glory of the newspapers, and the sensation of the whole country. Accounts were head-lined as follows: "Like Lucullus of old: Gorgeous dinner that rivaled an ancient Roman feast: Mr. Carnegie's entertainment: over two thousand tulips and crocuses and thousands of roses used: A menu which almost the whole world furnished: Delightful musical program."

We are informed that this banquet was given to the President of the United States and his Cabinet, and also to the delegates and officers of the International conference, and the brilliant reporter proceeds to say that "all that money could provide and taste suggest, to combine beauty of surroundings with the enjoyment of an epicurean repast, had been brought into requisition to secure the desired end, and the result was a success far beyond that anticipated, but none the less gratifying. * * * Undoubtedly it was the most elegant affair ever given in this city, if not in the United States. The room resembled a conservatory supplied with plants and blossoms. The side halls were almost completely hid from view by plaques of palmetto leaves, intertwined with southern smilax, deep green and glossy, and white grows wild in the Carolinas, from whence this had been brought. The north hall, back of where President Harrison and Mr. Carnegie sat, was a gem from the florist's hands." Then after a vast deal more of the same sort about "maiden hair ferns," "upholster sixteen feet high," "mammoth four-leaf clover," "mounds of Ulrich Branner, Gabrielle Lucretia and Manga Charta roses," the reporter told a gapewide world what the modern Lucullus, sired by a protective tariff, gave his guests to eat. Among other things the farmers and wage-workers of the country were informed that the fish, being a "sole, was secured from England, the mutton from Scotland, and the spring chickens from Louisiana. The celery, olives and anchovies were served in the finest cut glass, and the salted almonds and radishes in dishes of solid silver. The forks and tableware were throughout the dinner were also solid silver, while the plates and service comprised Haviland china with the exception of the fish course, which was served on plates of royal Worcester." It is also stated that the silver alone on the table cost \$3,000.

This man Carnegie has been eminently successful in receiving tribute from workmen. He has employed thousands of them, and it is well known that he never paid them fair, honest wages; and it is well known that the difference in what he should have paid them and what he did pay them was not less than \$325,000 a year—a robbery of labor, which would in ten years amount to the enormous sum of \$3,250,000. Under such circumstances, it is not surprising that he can give banquets which for magnificence defy exaggeration. But this pirate, Carnegie, is only one of thousands who give banquets and pay for them out of the earnings of workmen. To antagonize

onize this robbery is certain to be visited with such penalties as the money power can command. Mr. Voorhees said:

Mr. President, those who have sought to reform the enormous abuses growing out of consolidated wealth, legalized avarice and educated rapacity, have in all ages been met with the most vindictive, unsparring and sanguinary hostility of which history makes any record in the affairs of men. Those who have invaded the seats of ancient wrong, and disturbed the enjoyments of privileged oppression, have in every era of human progress been assailed as enemies of law and order, seeking to break down the safeguards of society; as agitators, firebrands, iconoclasts, and traitors to their government. Evils which have grown venerable and hoary in plundering the tolling masses of mankind have always been upheld by caste and aristocracy, whether in council, debate, or by the steel clad hand of war, or by the ghastly gibbet. It was the awful denunciation of the mighty Nazarene, hurled against those who were "full of extortion and excess," rather than the preaching of a new dispensation, which inspired the accusations before Pontius Pilate; and those who followed Him with bitterest execrations and most insolent triumph to His death agony on the cross were the usurers, the money changers, the accursed plutocracy of Judea. And from that great hour to this the resentment of chronic and corrupt riches, entrenched behind accumulated laws and constructions, has known no bounds at the intrusion of the reformer; it has been the most envenomed and merciless sentiment ever known to infest and pollute the human soul. The ablest statesmen and the broadest philanthropists have not been spared when found, in any age or in any part of the globe, laboring to reform the abuses of concentrated wealth.

The question arises, how long will the farmers and workmen of the country consent to be the slaves of the money power?

A writer, in the *Labor Leader*, signing himself "Shoemaker," asks, "when will the labor agitator stop?" Answers as follows:

1st. When every man and woman receives their equivalent in wages for hours employed.

2d. Not until we get our day's work down to 8 hours per day, with no reduction in pay.

3d. Never until the inhuman manufacturer realizes that the objects employed by him are human beings.

4th. Never while there is one man or woman in our shops who refuses to join our unions.

5th. Never until shop-contract work is abolished and every man put on an equal footing.

6th. Never as long as we are compelled to associate with scabs and duffers under the same roof.

7th. Never while the manufacturer puts all the cream in his pocket and gives us a paltry allowance of skim milk.

8th. Never until we see our craft par-excellence and the name of every union manufacturer labeled on the shoe.

9th. Never until every man and woman can show a clean due card before they strike a blow in the shop.

10th. Never until our legislators give us a little legislation and let the rich rest.

11th. Never while we are compelled to work in the same room with obnoxious men and women called scabs.

12th. Never until we see the banner of the International Boot and Shoe Workers' Union floating over a defeated and demoralized manufacturers union.

The spirit that animates "Shoemaker" is abroad. Thousands multiplied have caught it and agitation is to increase and agitators are to multiply. We like the signs of the times immensely.

UNDER the caption of false philanthropy an exchange says that "it is one of the strange inconsistencies of human nature that men prefer to do good through the medium of benevolence rather than through that of justice. It is not uncommon to find the seller exerting every energy to get more than a fair price for his goods, and the buyer putting forth equal efforts to obtain them for less than their true value, and yet both subsequently uniting to found some charitable institution, to uphold a church, to promote a reform, to relieve distress. There are men who will grind the faces of the poor in the morning in their business and in the afternoon subscribe a good round sum to provide them with food and shelter, says the *New York Ledger*. There are women, both wealthy and of moderate means, who will drive a sharp and hard bargain and will give only the smallest possible sum to those whom they employ to work for them, yet who will willingly give far more than they thus save when a tale of distress arouses their sympathies and excites their pity." Yes, and it frequently occurs, that these men and women who grind the faces of the poor, are the most blatant of church members, when funds are to be raised for the "benighted heathen," who, whatever else may be said of them, are free from diseases, corruptions, hypocrisy, crimes and shams of christian (?) civilization.

NUMBERING THE SLAVES.

The *New York Tribune* prints the following:

A curious circumstance brought to light by the taking of the census is the fact that in the coal regions of Pennsylvania large numbers of Hungarians, Poles and Italians are employed who are not known by their names, but simply by numbers. The system is not exactly one of slavery. These men, are, rather treated as beasts of burden, who are capable of doing a certain amount of work but are scarcely recognized as human beings at all. When accosted by the census enumerators, they refused to give their names—probably under the belief that the system to which they are subject would not allow them to call their souls their own. The amount of liberty which they can claim for themselves in this land of freedom is small indeed. There ought to be no place under our institutions for a system that treats men as of no more account than automaton or brutes.

Read the above from the *Tribune*, and then make a Fourth of July speech.

Nepotism.

And this is toil, that I a coin might jingle in my palm!

Where then is my ambition that spurred me on?
Must then our aims in life be all confined to bread.
And the pittance we receive the full measure of reward?

EVERY position, every promotion and every advance should be obtained by merit and ability. A promotion secured by favoritism, regardless of the service and merit that justifies it, is unjust to the employer and an injury to the one who accepts it, and still more so to those who have earned it, not only by possessing the necessary qualifications, but by length of service that developed those qualifications. The rights of these men are first entitled to consideration, and their claims should be respected. While I recognize the natural desire to advance the interests of a relative or friend, yet we must admit the injustice of doing so, when done at the expense of others. Promotion should not depend upon what relation the humble employé bears to any one of the officials, and while it may be borne quietly and with seeming indifference in many branches of industry, its evil characteristics are made particularly prominent in the railway service for obvious reasons that are not necessary to explain.

I have said that promotion of this character is an injury to the one who accepts it. When a fireman or engineer (and what I say of them in this relation can be applied to any other railway employé) receives a promotion by virtue of relationship, he becomes a party to an injustice that will sooner or later visit him with retribution. A change of administration would certainly destroy him and what comes quicker or more unexpectedly than a change of administration? A man of character and ability may survive the change, but can we say the same of him who holds or fires the premium run, simply because his uncle has placed and sustains him there? How will he stand with his fellows when he has lost that situation with that taint fastened upon him? By then he is disrespected and avoided, a feeling that rather grows than diminishes. He has lost an admirable trait of manhood, and when he is forced from the position he has usurped, which he certainly must surrender sooner or later, he will receive the fruits of his iniquitous conduct. It is justly concluded that a man who is guilty of this would, in all likelihood, if opportunity offers, do still worse to advance his own interests. He fills a position that in justice belongs to another. Even if he has the ability it is looked upon more as a reflected quantity from his more fortunate relative, who perhaps holds his position under similar circumstances, than the possession of any of the genuine article.

Why is this method of promotion an in-

justice to the corporation? Because often the corporation is paying for services that it does not receive, and always under nepotism a condition of affairs is established that creates a chafing discontent by which the service is injured and its best interests are frequently neglected. The writer knows of instances where men have been discharged for even complaining of this wrong, and on a certain railroad there is a confusion existing from the same cause, that looks like chaos in its demoralizing effects, brought about by advancing favorites and relatives above men who have earned and are deserving of the promotion. The incompetency of a man cannot always be ascertained without a trial. A faithful service ought to have some recognition beyond the payment of dollars and cents, and when this is practiced there is harmony of action and feeling, stimulated by the hope of reward. The very fact of its absence shows clearly that the officials in charge lack a very necessary qualification for that position. His knowledge of machinery may be superior, but who will deny that there are other qualifications equally as important to the success of a business that is carried forward by intelligent workmen? Indeed, it is small consolation to him who fires a locomotive to feel that from its toil and drudgery labor there is no better future, or a future that is unjustly prolonged by the undiscriminated of an official. He that is denied his right by those that have the giving should be promptly supported in his demand to obtain it.

Tim Fagan.

When the Train Comes In.

There are eager faces near,
And a half subdued cheer,
As around the curve the cars unsteady spin,
While impatient feet await
For the opening of the gate,
At the station when the train comes in.

There is handshaking and kissing,
And inquiries for the missing,
And a searching here and there for friends or kind,
There are sad or tearful sighs,
And a waving of good-bys,
At the station when the train comes in.

Then from out the baggage car,
Oh, so careful, lest to jar,
Comes a long and narrow box amid the din,
As the mourners gather round,
There's a sobbing, wailing sound
At the station when the train comes in.

Then the ringing of the bell,
And the whistle, clearly tell,
They are ready a new journey to begin,
For it brooks not to be late,
There are other hearts that wait
At the station when the train comes in.

Helen F. O'Neill, in Family Adm.

MECHANICAL.

Communications relating to Locomotive Running, Firing and Management, and other mechanical topics, are solicited for this Department.

Contributors are requested to be brief as possible, to write on one side of the paper only, and to forward copy so as to reach the Editor not later than the *tenth day* of each month.

MR. EDITOR: Among the many good things in the July *Magazine* I was pleased to see comments on the device for drafting water 37 feet by a correspondent signing himself "Ex-sub." Now I want to say to "Ex-sub" that it was solely for the purpose of drawing out opinions on the subject that I reproduced that device and I am pleased to see that my object has been attained, the more so as "Ex-sub" seems to be in a position where he can give the device a practical trial. It seems incomprehensible to me that a well established law of nature can be overcome by any mechanical device. I cannot see how the vacuum formed in the stand-pipe can have any other effect than to divert a portion of the water from the suction pipe after the pump has commenced running, and it seems to me that as soon as the suction pipe was cleared by the pump that atmospheric pressure would force the water into both pipes alike and the pump would lose its action. If water can be drafted 37 feet by means of this device, I see no reason why it cannot be drafted 50 or even 60 feet. I hope "Ex-sub" will give us the result of a practical demonstration soon. I want to thank "Eccentric Strap" for his good words, but I think "E. S." is inclined to give me too much credit. I am not quarreling with existing methods of computing "H.P." (it's Dr. Wilson that's doing that) what I find fault with is the orthodox method of determining duty. I may be far at sea in my application of the terms duty and efficiency; if so I want to find it out. Also it may seem very presumptuous in me to dispute Rankine, but I am rather iconoclastic in my ideas and while always open to conviction, I will dispute the highest authority on points that do not agree with my reason. I think we are all too ready to let someone else do our thinking for us and I can readily believe that the world has lost many useful inventions because they involved principles that run counter to the *highest authority*. There is ever a tendency to allow opinions to crystalize into creed, especially when some eminent author enjoying power of clear and comprehensive exposition becomes recognized as an authority. His works may be the best extant on the subject in question, they may contain more truth with less error than we can meet elsewhere, but to err is human and the best works should ever be

open to criticism. Well, I have moralized long enough and will get down to business. As I understand the term *duty*, it has no relation to the term H. P. only so far as to demonstrate the economy with which H. P. is performed—that is "it is the amount of work done with a given amount of fuel." One engine does a certain amount of work with 100 pounds of coal, another does the same amount of work with much less coal, or does much more work with the same amount of coal. We speak of the latter as having a higher duty than the former but it is entirely misleading because the quality of coal used and evaporative powers of the different boilers have not entered into the calculation at all. Now if we use steam as a basis we have something tangible, something that is always, constant in value, therefore we can speak of the result with absolute certainty as being correct. To show that there is some diversity of opinion on this subject even among recognized authorities, I will quote from some authorities on pumping engines, because that class of engines are the ones to which the term duty is most frequently applied. Bailey's method of calculating duty is to "multiply the area of the plunger in square inches by the pressure per square inch in pounds, this to give the load in pounds this times the feet per hour moved by the plunger and times the constant 100 divided by the coal in pounds per hour gives the duty. Thus suppose the plunger to have an area of 373.55 square inches and the water pressure to be 75.68 pounds per square inch then the load will be 28,293 pounds if the plunger speed is 10,908.4 feet per hour and the coal consumption 400 pounds per hour then the duty will be $28,293 \times 10,908.4 \times 100 \div 400 = 77,157,840$ representing the number of pounds of water lifted one foot high by 100 pounds of coal." Graff's formula for the duty of pumping engines is " $P \times V \times H \times 100 \div F = \text{duty}$ " where P represents pounds of water delivered per stroke as ascertained by measurement of plunger and calculation of its displacement. V the number of strokes made during the trial. H the head pressure in feet including friction through main as ascertained by gauges placed on ascending main just beyond the air chamber. F the number of pounds of coal actually consumed during the trial not deducting ashes or clinkers nor reckoning the coal used to get up steam nor banking fires." You will observe that while these two authorities differ slightly in methods of computation, their basis is alike. Now here comes Grimshaw another well known authority and says "The duty of pumping engines should be expressed in pounds of water one foot high per pound of steam at a stated pressure and degree of dryness" and I agree with him because his method agrees with my common

sense and the others don't. In my opinion the originators of this term "duty" never intended it to have any mechanical significance and it one were to trace the term carefully through all its uses to its origin he would find it had been perverted from its original use through the baleful influence of authority. What does the term amount to anyway? It expresses work in the economical sense why does not the term "efficiency" or "the ratio between the work put into an engine and the work done by it" cover this point fully? If it does not and it is necessary to retain this term "duty" why I say use a factor for computing it that amounts to something? "E. S." intimates that I made a mistake in my definition of the throw of an eccentric; maybe so, but I will wager "E. S." a new hat that I will find the throw of an eccentric by the method I stated in half the time he will by his method and 9,999 times out of 10,000 it will be the same. Now I don't want "Vulcan" to think that I criticised those cards without realizing the different conditions under which they were taken; my object was to stimulate discussion and draw out opinions on the relation between those steam lines and the set of the valve, what constitutes a theoretical card etc., etc. I think indicator diagrams are mighty good things to study in connection with valve motion. Now here are two cards taken from a "Hamilton Corliss" engine, cylinder 22"×48", Rev. 78, indicator spring 40" resistance boiler pressure in card No. 1 was 70", in card No. 2, 80".

The short line at top of crank end of cards is the line of boiler pressure, observe that admission line does not come up to line of boiler pressure; this is due to the fact that the steam travels through 70 feet of pipe from boiler to cylinder, observe where compression is shown. I have marked it in card No. 1. The double expansion line in card No. 2 illustrates the beauties of the automatic cut-off, that end of the card was taken twice; the inner line shows first point of cut-off, immediately after this end was taken more work was thrown onto the engine and she changed her cut-off to meet the

extra work; the card was run over again and you will observe that every line is preserved except the point of cut-off. There is a difference of about 40 H. P. between those two expansion lines. Now after I have seen some comments on these cards I will let you know something about H. P. developed and the way her valves are set. It may be that Corliss valve motion has no place in this department, but I think there are many who would like to know more about it than they do now. I did want to turn that injector problem over again and try to bring "Vulcan" up to the point of conviction, but I haven't time to write any more for this issue. Vacuum.

MR. EDITOR:—The following clipping is from the "Question and Answer column of the *American Machinist* :

J. C. S., Boston, Mass., asks: Is there an engine that runs from New York to Hartford and return, whose fire-box is filled with thirty tons of hard coal on starting, and requires no attention until it returns? A.—No; nor anywhere else.

The foregoing may excite surprise that it should be necessary for any one to ask such a question. Certainly none of our members would ask such a thing, and it is only the most gullible of mortals who could for a moment entertain the thought of its possibility.

The following is also from the *Machinist*:

J. B. ———, asks: If I tie a rope to a crank-pin of a locomotive wheel, the pin being on the bottom center, and pull at the end of the rope, in which direction will the wheel turn? A.—If you pull hard enough the wheel will tend to move towards you, provided you stand on the ground. 2. Does a locomotive piston travel through the cylinder, or does the cylinder travel over the piston? A.—The piston travels through the cylinder.

This revives an old question which was discussed in the *Engineers' Journal*, I think, years ago about pulling a driver by a rope and the answer above is in accord with common sense and the decision arrived at then.

If the answer to No. 2, that the piston ever travels through the cylinder, be accepted as a truth beyond cavil, it would dispose of the imps and their fulcrum at the rail in short order, and "A. D." will do well to have the *Machinist* revise its answer. *

OSKALOOSA, IA., July 7, 1890.

MR. EDITOR:—I am much obliged to "Vulcan" for his answer and suggestion. I would like to receive answer to another question: Does shutting the damper while an engine is working make the flues leak? If so, why?

Some engineers say keep the door open and the damper shut; others say keep the door open and damper open. My plan is damper shut and door shut.

A. A. Lindley.

Review of July Mechanical Department.

MR. EDITOR:—As I remarked the other day when some of our men complained of the excessive heat of the sun, "everything has its compensations, for on my night run I can ride along very comfortably and may even be obliged to close the cab to prevent getting cold," so it is that with the advent of sweltering heat of July we are compensated by the appearance of the *Magazine*, which, as I have good reason to know, is looked for and eagerly welcomed in many places, and which will rob many of the hours of their heat, while its readers are culling their appropriate portions for their individual use. Probably the only person who will not be soothed and kept cool by the July mechanical department is the "Dr.", for in the 18 to 20 columns which have been used in replying to his statements he will find not a few thoughts that burn and scintillate with brightness, and throw all the "Dr's." ideas in the shade, but as I have received no permission from our Editor, I shall not say anything more on this point, except that in corroboration of our friend "E. S." I have lately seen the pressure on a boiler rise at the rate of 15 to 20 pounds in a minute, but this proves nothing either way, except that steam is made much faster than the "Dr." thought.

LUBRICATORS. In reply to "F. H. H." let me say that the lubricators cannot control the distribution of the oil after it enters the tallow pipe, and that the only thing claimed for them is the steady feeding of the oil at all times, both when using steam and when running shut off. The steady supply of a little oil is certainly better than a flood at one time and a dearth at other times, as is the case with the common tallow pipe where you can only oil when running shut off.

COUNTER-BALANCING. Perfection under all circumstances is a very hard thing, and this is as true when applied to the counter-balance as to anything else on this mundane sphere. It is admitted by all that it would be a comparatively easy matter to balance the revolving parts, but in overcoming the momentum of the reciprocating parts the great obstacle to a perfect balancing is encountered, nor is this so apparent until steam adds its force to the conglomeration of disturbing elements. As railroad men know, nearly all engines will run down grade very smoothly at any speed, but if steam is given and the speed is not according to the calculations used in balancing, it will soon show its influence by jerking and pounding. This would seem to indicate that the parts were balanced before steam was admitted, and that the action of the steam produced the disturbance, which

would certainly result if the action of the steam was either fast or slow for the piston speed.

SMOKELESS COMBUSTION. T. Reece has some ideas which fully concur with others previously expressed in these columns, that a light fire with light feeding at frequent intervals will in a great measure abate the smoke nuisance, and render best results in steam.

SETTING AN ECCENTRIC. J. A. Hancock gives his idea on setting a slipped eccentric which would be correct were it not for the fact that the usual valve now has both lap and lead for which no advance has been made by his method. The old style valve as first gotten up was made without lap or lead, but would be too slow for our present development of high speed. The big side of the cam would thus have to be thrown forward or toward the pin enough to draw the valve back the amount of lap the valve has and the lead it is desired to have, and of course the same rule would apply to the other motion. What is meant by throwing the link over to bring the eccentric right I cannot understand and hope we shall hear from the writer again to explain it.

STEAM. We will next take up the questions in their order, the first one being: "What is steam?" The simplest and most comprehensive answer is no doubt this: Steam is an invisible gas, created by the addition of heat to water, until it reaches the "boiling point."

BOILING POINT. Ordinarily speaking, water is said to boil at 212 degrees, which is right for an open vessel at sea level, but as we ascend to higher levels, decreasing the pressure of the air, the temperature needed also decreases, and in a vacuum it only takes 92 degrees, or the heat of the hand applied to a tube containing it to make the water boil, while in a boiler under a pressure of 150 pounds it would take 365 degrees of heat to make water boil.

BOILER. In answer to "What is a boiler?" the answer from a mechanical point would be: It is a water and steam tight-vessel, so made as to give a chance to apply heat to generate steam and to retain said steam until wanted for use.

BOILER BRACES. As any kind of a vessel, made in any shape, or of any size, can and is used as a boiler, no definite answer in regard to the number of braces in a boiler can be given, for their number must certainly vary in proportion as the surface exposed to pressure is large or small.

SEAMS OF BOILERS. The seams of the boiler are first secured by rivets, and then the edges of the sheets are caulked with a tool made for that pur-

pose, care being taken not to spring the edges by too heavy caulking.

WATER SUPPLY. The boiler is supplied by a force pump, driven from some part of the running gear, or by injectors attached to the boiler.

INJECTOR. An injector may be described as an instrument composed of a number of tubes or nozzles, arranged within each other in such a manner, that steam admitted to it from the boiler takes up with it a quantity of water and forces it into the boiler against the pressure in it. I reproduce questions 8 and 9 as they are somewhat vague and require some explanation:

8th. If you were asked to find the distance between the centre of your front axle or the front drivers and the centre of your cylinder, how would you go to work to do it on a standard engine.

9th. If you should want to find out how close your piston comes to the cylinder head, how would you go to work to find out?—that is after you had knocked out the cylinder head and broken your piston.

Or as "J. H. A." says, they are questions which are asked in examination, which he has passed, he may favor us with the answers and make the points clear.

THE IMPS. Bro. Tucker has another round with the imps, but I am inclined to believe that he has another Lockwood job on hand, and when down in one place the imps will jump up in another and be imps still. I am out of the Imp, Lockwood and Wilson controversy and shall stay out.

COAL USED. "Vacuum" in the last part of his article assures me that he did not exaggerate the amount of coal used by him and others out west, and I certainly did not intend to say that I doubted his word, and it is fully corroborated by the evidence of many others who have burned as much as he has.

Now at the risk of having you all out here looking for a job to fire for me, let me tell you about how much coal we burn in a trip. In the first place, our section of the division is nearly 50 miles long and we are expected to make one round trip over it for a day and put in as many trips for a month's pay as there are working days in the month, unless we are given a "shop day," during which we work at our engine in cleaning and doing odd jobs to keep her in good shape, and for these shop days we get the same pay as for a trip over the road. A full month's pay is \$55 for firemen and \$100 for engineers; if we do not make every day we receive less; if we make overtime we get more. Now about the work: This end of the section is over 900 feet above the other, or east end, and we therefore get trains averaging about 950 tons to take east, while during the first half of our return trip we get about 425 tons, which is cut down to about 340 tons during the last half on account of its steeper grades. Our speed does not

exceed fifteen miles per hour, and it about all our "Mogul" (a Cooke of Paterson pretty well worn) can do. We burn anthracite coal and when we first got to my fireman was somewhat over anxious to clean the fire three times, but when I became better acquainted with her I urged him to try to run her further without cleaning and by simply shaking and rolling the grate bars we now run the round trip only cleaning the fire once, when half way back. I am sorry that I cannot give the figures, for our coal is not weighed out to us, (we go to the pockets and draw out what we think we have enough for the round trip) but from the best estimates we can form, we feel sure that we do not burn more than 3½ tons and perhaps three tons would be nearer right. Now how is that for firing, you fellows who tell us about showing 7, 8, 9, or even 11 and 13 tons in a trip. During June my fireman got \$2.20 a trip leaving his home at 6 P. M. and returning at, or before, 6 A. M. each working day. My pay was \$4 a day during June; (you know June is a short month and had 5 Sundays) it which left only 25 working days and made it a big pay month when reckoned by the day; this month we only get \$3.70 and \$3.20 respectively, as it has 27 working days. We have to put them all in for a month's pay. Now please don't all come on here for a job!

PUMP LIFT. Science has laid down a rule that atmospheric pressure being removed from a pump barrel, air will lift the column of water about 34 feet, and it is a matter of doubt that this device will set aside any law of nature, and any attempts in this line have been doomed to failures in the past and will no doubt continue so to the end. As we now have a pump 32 feet deep which might work better, for a day we may try to see if there is any gain in the additional pipe, and if tried will report to our readers.

AIR OVER THE FIRE. "B. A." thinks it is best to admit air by the door, really there is no other way of letting in air except it is passed through the fire, and unless it had dead spots in it would work the fire and produce that more heat. On our "Mogul" we hardly close the fire door, but keep it on the widest possible latch and find that the more "God's free air" we burn, the less it takes the company's coal, and we see no effects on the flues from it. To match "A's." story of 14 miles with 18 scoops of coal, let me say that after leaving the yard with a 950 ton train behind our "Mogul" we run about 22 miles during which time the "boy" puts in about 35 shovelfuls of coal and then has enough to run 7 miles further without feeding anymore.

ROCKER ARM "Subscriber" asks about the different rocker-arms used, and wants to know why there is a difference on engines of the same size and capacity otherwise. "Sub." will no doubt find that this arises from the position of the lower rocker-arm which carries the link-block. On engines where the link-block is in line with the centre line of the wheels, the straight rocker is used, but if the link-block hangs below the line, it drops the centre line of the eccentrics just that much, and when the valve is at the middle position on the seat the upper arm wants to stand perpendicular, while the lower one should be at right angles to the centre line of the eccentrics. The amount of "bend" in the rocker depends therefore on the distance the block hangs below the centre of the wheels. On some engines the makers shorten the lower arm, but in order to keep the travel of the valve they have less throw in the eccentric cam, thus all of the "Baldwins" have more valve travel than they have eccentric throw. Such are my opinions as I have formed them by pondering on the subject, and searching available authorities on the matter. *Vulcan.*

EAST SAGINAW, MICH., June 25, 1890.

MR. EDITOR:—I am not more satisfied with L. A. Wilson's figures this month than I was last December. If the readers of the Mechanical Department will look up their December *Magazine* and turn to page 1077 they will find the question: "How much steam is used in a 10×16 engine, 200 revolutions per minute." The Doctor takes a boiler containing 146,578 cubic inches, and uses one-tenth of that for steam space, 14,658 cubic inches, and fills that with steam at 140 pounds pressure per square inch; then he takes his 10×16 cylinder with 1256.64 cubic inches, and by his calculations makes this 10×16 cylinder use all the steam in the boiler in 3.5 seconds and then wants to know what we will do for the next 14 minutes and 56.5 seconds.

In the first place the cylinders never drew the amount of steam from the boiler claimed by the doctor, and I never saw an engine running at the rate of 200 revolutions per minute but was cut back to the 6, 8, 10 in. notch, and worked in this manner she would use from the boiler from $\frac{1}{2}$ to $\frac{3}{4}$ of the amount of steam claimed.

Again, the doctor does not give the boiler any show. He raises his steam by a rule formed from observation while standing still, and proceeds to use it while running.

Just here I want to say that a boiler that will require ten pounds of coal for each square foot of grate surface in an hour will evaporate nine pounds of water. The same boiler, running at a high rate of speed and burning 75 pounds of coal per square foot

will evaporate seven pounds of water to each pound of coal burned. The amount of water evaporated in the first instance is 10×9×90 pounds for each square foot of grate surface; and in the second case the same boiler, under forced draft, will evaporate 75×7×525 pounds for each square foot of grate surface. There is a vast difference in the total amount of evaporation, but each pound of coal under forced draft produces less steam, in the proportion of nine to seven pounds.

In the June *Magazine* the doctor gives everyone a raking who does not agree with him, and claims that steam has credit for more than is its due, and that he has demonstrated it. I can not see that he has proved a single one of his propositions.

I would ask the doctor whether he claims that an engine will evaporate as much water or make as much steam standing still as when running, and what it amounts to, to watch the rise of ten pounds when standing still. There are any amount of locomotives that will go up ten pounds in a minute when standing, and make any quantity of steam on a side-track, but when out on the road they will go backwards a good deal faster. I have no Rankine or Watt to refer to, but only give the result of my own observation and experience.

The doctor should come down a little, so that a poor fireman can "catch on" to what he is saying. *F. J. Hill.*

The "Hammer-blow" Again.

Among the news items from Congress we note that a bill has been introduced through the influence of Mr. Lockwood with the representative of his district, which proposes to appropriate the sum of \$25,000.00 to test the destructive powers of the "hammer-blow" of the counter-balance. Some time ago a circular was issued inviting the railroads of the country to make up a purse for the purpose, but it seems that they did not feel like contributing money towards a project, which if it resulted as its progenitors hoped, would consign all their locomotives to the scrap-heap as antiquated annihilators of bridges and destroyers of human lives. Attention was then called to the fact that, as a proof of the dangerous character of the "hammer-blow" would at once establish the "Shaw" as the only perfect, and therefore the only locomotive worth having, a little expense should not deter its friends from establishing its pre-eminence, and reap the reward of fame and dollars which such demonstration would bring with it. But with a persistency worthy of a better cause, it is now proposed to use "Uncle Sam" with a portion of his treasury, to lend a lacking dignity and supply the cash. It hardly seems to be the proper thing to thus saddle

"Uncle Sam" with the expense of the demonstration when it is to be presumed that none of the profits would ever be given to him, but it would, no doubt, be worth something to have the "hammer-blow" question put to an effectual test and settle the windy discussion forever.

PORT MORRIS, N. J., July 8, 1890.

MR. EDITOR: When I called attention to the books and models in the June *Magazine* I expected to be obliged to send them by express, but I find that I can send the models by mail at a uniform rate to all sections of the country and instead of being obliged to charge more for orders taken from beyond the Mississippi I can deliver them even there at the same rate, \$4 for a model, \$2 for a book, or \$5 for the two. As an inducement to clubs I will send 15 books and one model for the regular price of the books alone, namely \$30, all prepaid.

As a number of inquiries have been made about the size of the model, let me say that the driver is $3\frac{1}{2}$ inches in diameter, the piston has $1\frac{1}{2}$ inch stroke and the valve has about $\frac{1}{4}$ inch travel and that all parts are in plain view at all points of the stroke.

Yours fraternally,
Wm. Weiler.

We Move.

From far and near come the signs that locomotive engineers are waking up to a recognition of the fact that there is room for improvement in themselves as engineers. Discussion is rife, the lodge rooms are full of "engine talk," books are being purchased, models set up, and a gradual increase of self improvement is evident all over the country. It is time this came, and can but benefit all who take part. The greatest benefit will be to the companies employing these men, and they are the first to recognize it. Early this month we received a letter from a well-known master mechanic, headed, "Why is it that engineers and firemen are so afraid they will learn something?" Ten days later we got another letter from the same man, reading: "Hush, don't say a word; the engineers and firemen have started a debating club. What is the price of that valve motion model? If they last a month, we will give them one." Good deal in this; think about it.—*Locomotive Engineer.*

The New York Central & Hudson River road has placed an order with the Schenectady Locomotive Works for twelve very large passenger engines for fast trains. They will have 19×24 in. cylinders and 5 ft. 10 in. drivers, the fire boxes 8 ft. long and 58 in. boilers, so equipped that the engines may be compounded with but little additional expense. They will weigh 115,000 lb. and delivery will commence March 1.

Car Reports.

The New York, Susquehanna & Western has issued specifications for four passenger and two combination smoking and passenger cars. The contract will probably be awarded in a week.

The Chicago & Alton is building at its shops, Bloomington, Illinois, the cars for four new through passenger trains, which are soon to be put in service between Chicago and Denver.

The Wason Mfg. Co., of Springfield, Mass., is building upon 10 more cars for the Old Colony and Boston Central, and has orders also from the Boston & New York Shore line and the Cheshire road.

The West Virginia Central is receiving a lot of 60,000-lb. drop bottom gondola cars for coal, coke and lumber traffic, from the South Boston Car Works, at the rate of eight a day.

The New York Central has within a few months added 50 new standard coaches, heated by steam and lighted by the Pintsch system, to its passenger equipment.

The Duluth, South Shore & Atlantic has just ordered three new and elegant Wagner sleeping cars, embodying all the latest improvements. The cars will run between Duluth & Mackinaw.

The Georgia Pacific has received 50 more new cars from the United States Rolling Stock Co., at Alton. The company is building 50 more of these for the Georgia Pacific which will be delivered shortly.

The Northern Pacific has ordered 1,000 freight cars from the Barney & Smith Co., and 500 from the Insular Car Co. The former will be equipped with Janney couplers, the latter with the Gould couplers.

The Ohio Falls Car Co., of Jeffersonville, Ind., present employ 2,500 men. Last year the company built 2,810 freight cars and 110 passenger cars. During the first two months of the year no freight cars were built.

The Buffalo, Rochester & Pittsburg will soon be on the market for a number of box cars. They have built one as a sample, and intending bidders will be required to examine it before making bids.

The New York, Ontario and Western are about to order fifteen new passenger cars. They will be furnished with all the most approved equipments, and will be lighted with the Frost Dry Carburetter system.

The Consolidated Car Heating Company, Albany, N. Y., has absorbed the Automatic Car Company Heating Company of Detroit, Mich., and has acquired the ownership of the "Peerless" coupler and other valuable appliances for steam heating.

The Milton Car Works, at Milton, Pa., are completing an order for 100 60,000-pound hopper bottom gondola cars, and have on hand orders for a number of cars for the Lehigh Valley, New Jersey Central and other roads and some for Havana, Cuba.

The Ohio Falls Car Company, Jeffersonville, Ind., has recently taken the contract to build 22 passenger cars and 1,200 freight cars for the Central Railroad of Georgia. These works are now very busy and are turning out 2 passenger cars a week and 22 freight cars a day.

Woman's Department.

EDITED BY IDA A. HARPER.

Letters pertaining to Woman's work, such as education, temperance, home and fireside, and kindred topics, are solicited.

Correspondents are requested to write plainly, on one side of the paper only, and forward their manuscript so as to reach the Editor not later than the tenth day of each month, directing all communications for this Department to

MRS. IDA A. HARPER,
TERRE HAUTE, INDIANA.

THE WOMAN'S DEPARTMENT.

We trust our correspondents will not think it shows a want of appreciation of their most acceptable letters if we once again offer a word of criticism. It is something of a task to prepare from thirty to fifty communications for the publisher, and much of the labor might be saved for the editor if the writers would only exercise a little care and judgment. For instance, the most casual observation would show the writers how to commence their letters. First, the name of the place where they are written and the date, and then the caption "Editor Woman's Department." Some of our readers will say, "Why consume time with such a suggestion as this; of course everybody knows how to commence a letter." And yet we have to dip our pen in red ink and make these corrections upon three-fourths of all the letters received. We realize that it is impossible for everybody to write a beautiful hand, but surely all of our writers can take clean paper, write with pen and ink instead of pencil, write only upon one side and fold their letters neatly, which is not always done. It is equally impossible for all to spell, punctuate and capitalize correctly, but if our correspondents would study the published letters a little they could see that all sentences and proper names must commence with a capital letter; also the words Lodge, *Magazine*, B. of L. F., and the pronoun I. We might almost say that it is the exception when we receive a letter that does not have to have these corrections made. The names of persons should be very carefully and plainly spelled, as we cannot be expected to know how they should be written.

Nobody should ever send a letter for publication without first reading it over critically, supplying all omitted words, and correcting mistakes made through haste or carelessness, but instead of this our correspondents add a postscript, saying: "I have written this in a hurry; please correct all mistakes and prepare it for publication." This is usually the case with young writers whose time, as a rule, is not so valuable as

to necessitate such undue haste. If you write anything which you consider of sufficient importance to occupy the pages of a *Magazine* whose space is very precious, surely you can take the time to revise it or have it done by some of your friends. In regard to the subject matter of your letters, — if you have nothing to say, say nothing. With the endless number of topics demanding the attention of the women of to-day, it is not necessary to waste a postage stamp to say that you are surprised and ashamed not to see anything from Lodge No. 420; that you know nothing about them yourself, and you hope this letter will not find its way into the waste basket. That is the proper place for it. We would much prefer a recipe for making corn bread or washing overalls to one of these stereotyped letters. As for the wearisome request in regard to the waste basket, we have given up all hope of ever breaking our correspondents of making it, and are resigned to the task of crossing it out of nine out of every ten letters received.

We make these criticisms for the benefit of the Woman's Department. Our correspondents certainly would not put a keg of beer and a cuspidor into their parlors to attract the men; although a witty lady, who is a widow, says she gets some one to come in and smoke a cigar occasionally so that her house will smell as if there was a man about. This Department is our own, through the courtesy of the B. of L. F., who have set it apart for our use, just as they always provide for the women who are connected with them by the various ties of relationship. They do not want it to be like their own any more than they want their home to be like their place of business. Let us conduct it for the advantage of women and not with an eye to attracting the men. If they want to come in and visit us occasionally, as they have done in the past, let them feel that they are welcome; but let them come as men should always enter the presence of women, with the most profound respect and appreciation.

A comparison of our Department with that of each preceding year shows a steady improvement. We trust our contributors share in our ambition to make the standard still higher, to further increase the interest and usefulness of the Woman's Department, and to keep pace with the marked advancement of the entire *Magazine*. This can only be done through the active coöperation of our many friends. To them we are entirely indebted for the success of the past, and upon their assistance will depend our future prosperity.

A Type-writers' Union has lately been organized among women in London, to prevent the lowering of wages.

HOT WEATHER THOUGHTS.

A long week with the thermometer registering over a hundred degrees, with the nights as hot as the days, the leaves motionless upon the trees, the flowers drooping their pretty heads, the sun blazing down from a hot, blue sky, and not a cloud to temper its glare or shadow the parched earth! Poor, suffering humanity is exhausted by sleepless nights and uncomfortable days. What a deal of patience it takes to get through with it in a manner creditable to ourselves. It is so very hard to be courteous and amiable and even tempered when one is physically wretched, so difficult to preserve one's self-control when all around are cross and exasperating and ready to fly to pieces at an unlucky word. It is during these long hot spells that one's servants take on their most aggravating ways; that one's husband shows a disposition to return to the savage habits of his ancestors, and that wives wish they had never married,—indeed, had never been born. Human nature is most unlovely at such times, and yet how beautifully do those traits of character shine forth which are able to rise above all physical environments and enable their possessor to preserve a calm self-poise and by a kind thoughtfulness make it easier for others to endure their discomforts. We all know a few such noble souls, a large proportion indeed, when we consider the many infirmities of temper and inherited tendencies against which frail human nature must eternally contend.

The class most deserving of sympathy and consideration during hot weather are the children. Their cry of distress is heard throughout the land and it does not always meet with the tender response it deserves. Older people have the consolation of reason and experience. They understand that the heat is inevitable; that other persons are as uncomfortable as themselves; that it only makes matters worse to fret and lose one's temper; that it must soon come to an end, the cooling breezes spring up and the refreshing rain descend. But the children do not comprehend any of these things. They only know that they are miserable and they want to be comforted. Would that an appeal for these little ones might be made which would reach every heart! Would that during this long, hot summer they might not receive a cross word or an unkind blow! When parents themselves are warm and exhausted the crying and complaints of children are most aggravating and the impulse to scold or strike is almost uncontrollable but it is a grievous mistake. To punish a heated, half-sick and wholly wretched child is an unpardonable sin. O, mothers, be patient with your children. Bathe the hot bodies with cool water to which a little borax has been, added put

on fresh clothes, give them some bread and milk, take them to some shaded place to play or sleep. Be gentle and considerate with them, apply the Golden Rule, and in after years you will be very thankful for the wisdom and self-control which enabled you to be a truly loving and tender mother. Your cares are many, your burdens are not light sympathy and appreciation are often wanting where they should be given; but do not falter in your duty, a sit seems plain to you and your reward will not fail to come, even though it may not be until time touch your faces with indelible lines and wear the silver threads into your hair. It will come with that peace and serenity that mark the closing years of a life which has been faithful to its trusts.

"MAMIE," of Longview, Texas, is entitled to the new dress promised her if she would write an answer to "Kicker." She sent most vigorous one, but we were unable to use it. We have filled that much talked waste basket this month with replies to "Kicker," all spicy and readable, but I feel quite sure that our readers have been enough upon this subject. "Kicker" has been severely handled, but no more than he deserves. It will be some time before another of his kind will break into columns. Our readers must let their indignation subside and turn their attention to more agreeable subjects.

May 10th 1904

Editor Women's Department.

I noticed in the April number of the *Fireman's Magazine* the editor's article about wives meeting their husband with a smile. I have read a great many articles on this subject and often wondered where there is nothing said about husband smiling occasionally. Instead of the wife doing so much and why not compromise and both do a fair share? There are times, I know from experience, when I was an angel she could not meet her husband with a return with a smile, a really heartfelt one. Now for instance you are in her place and everything has gone wrong as some days do seem to go wrong from the time you rise until you retire. You get up in the morning with a headache, the morning is cloudy and gloomy, the fire is slow and the children are cross, and there is a big day's work to be done. You get breakfast over and the older children off to school. Now you think I'll get my work all done, sweeping, bedrooms in order, etc., etc., room straightened and dusting done, and dishes washed. Then there is that suit of overclothes I had forgot to bring home in time for the washing. I must have them ready when he gets home. Then there is some ironing left over from yesterday and some baking to be done for his dinner. You know you must always have something on hand for you can't tell when he may be home, if he should happen to go right back, you must have something for a lunch. Then there is that ironing I promised to have finished by evening and it is a good day's work in itself.

So you begin on the dishes. You get a tablecloth washed. Wasn't that a knock at the door? You hastily wipe your hands and smooth your hair and look at your dingy dish apron and feel vexed. It is an early call, but you hurry to the door. It is a neighbor with complexion powder. You tell him you don't want it, but he tells you of its superior quality and insists on you taking it. You tell him no

fact you never use complexion powder of any kind, and do not want it. Then he shows you a preparation for curling the bangs, you must try that. At last when your patience is nearly worn out you make him understand that you are not going to buy it and you see him start off. You feel relieved and go back to your dishes, get the greater part of them done, when you hear another knock and a voice in the hall. You leave your dishes to see who it is and what is wanted. It is a neighbor (who has a servant at home doing her morning work) and she feels in a gossiping humor and wants advice about the color, kind and quality of a new dress she is intending to purchase. She has "just run in for a minute," to talk to you. You offer her a chair but she refuses as she has "not time," but she stands and talks of everything but the business upon which she came, and you stand also wondering if she is ever going to talk business, and if your head can ache much worse. After a half hour she thinks if she is going to town to-day, she must be starting. She goes with very little idea of anything you have told her concerning her dress. You go back to the kitchen, the fire is out, the dish water is cold, and the dishes you left unwiped are all streaked and dry. You start the fire, get another pan of water and do your work over. This time you finish them. You then begin on your beds and all through the rest of the rooms until you come again to the kitchen. All the time your head continues to ache. At last the morning work is finished, the overclothes are on the line (but it looks so much like rain you are afraid they won't get dry.) Now you think you will hurry and get your baking ready while your irons are heating and have your kitchen work all done. You get that in the oven and then oh! how your head and the children's heads look. You must now attend to that, and the children are cross and your head does not feel better. But at last you get those few pieces ironed and think to yourself you will never leave your ironing to over to another day if you had to stay up until midnight. By this time it is dinner time. You think you can't spare the time to cook as you have lost so much time, so put a lunch on the table and use the coffee left from breakfast and tell the children you will cook when their brother gets home from school. After eating your lunch you go to your sewing room but the children have been in the front part of the house while you were so busy and have soiled paper on the floor and disarranged other things so you have that to straighten. At last you sit down to finish that piece of work. You are tired and nervous and don't feel like sewing but you have promised it should be done to-day and you must do it. Tap, tap; there is some one at the door. It is a woman with another dress she wants made, and of course you must lay down your work and show her the books and plates. She chooses first one then another and changes her mind a dozen different times. You explain each cut she admires and all the things she don't understand and at last she thinks she likes the one she chose first and will have it made like that. Then you make out a list of things and while you are putting them down she is looking through the books and has found something that just suits her. You begin another explanation and make out another list of things needed. Then you think she will be satisfied but she don't. She picks up your work turns it over and examines it, compares it with the cut, and whose it is, how much it costs and criticises the collar, etc., etc., then tells you how a dressmaker has ruined "a dress for her, and before she takes her departure you find she has changed her mind three different times before the dress was finished. After it was cut, but the dressmaker gets the name.

At last she is gone, and as you have been trying to finish while she was telling of the last dress she had made, you find you have made a slight mistake in setting on trimming, so you have to rip and do again, and you feel mad enough to pitch her old dress into the street, but you don't because you have no time to spare. Just then you hear it raining and you know it has been such a gloomy day that these overclothes are not dry and will not get to-day. So you can put down your work and hang them in and hang them near the stove and start a fire. Just then you hear a whistle and know

it is your husband's engine and understand that he has "doubled back" unexpectedly. Now you must hurry and the children now home from school, they and the little ones are hungry. So you begin your biscuits and get your hands in the dough, and here is the woman after that dress and of course it is not, done how could it be? You get the dough off of your hands and try to explain but fail and your customer is disappointed. You tell her you are sorry but that does not help the matter; perhaps she tells you you should not have let anything kept you from your sewing, etc., etc. She leaves and you go back to your biscuits and your supper. You are tired and as you gave the children only lunch for dinner they are all asking for a piece, and when will supper be ready? Then you hear your husband's step and you feel like you had been guilty of some misdemeanor. He comes in, he is tired and hungry and looks it. You look at him with the dish cloth in your hand and smile a sickly ghost of a smile. Now we know that a fireman after going over the road twice without rest and sleep can't look smiling especially if he is hungry besides, and when he sees supper is not ready, he is likely to do something else than smile. He wonders, and not smilingly, why supper ain't ready? What you have been doing? Did not you hear the whistle? etc.

Well, there is no use to explain it is too long a story and you are too tired and lack patience to explain and know he could not understand and you don't like to trouble him with your petty worries. So you tell him you were not expecting him, and your husband thinks, perhaps tells you, that you ought to know when it is supper time whether you are expecting him or not. And as he is too tired and hungry he can't smile, and a hungry man can't smile a nice smile any more than can a tired and worried woman. So there is silence save for the children, and supper is prepared and eaten and the children put to bed. Hubby goes too as he must start out again before daylight. You clear away the supper things and iron those overclothes and pack the lunch bucket, then retire. You feel too tired and worried to sleep and that in some way the day had not gone as you should have wished. You cry a little perhaps, and wonder what those writers were thinking of when they tell wives to always greet their husband with a smile and a kiss. And finally you go to sleep and dream that "marriage is a failure." Now if your husband had come home as he sometimes does, cheerful and not felt tired and worried and you had been expecting him and your work had gone right and supper been prepared, all would have been different. You both would have smiled and the evening passed off pleasantly. Now will some fireman or his wife tell me who was to blame in this instance?

A Fireman's Wife.

P. S. Since writing the above I have read "Daisy's" letter in the April number and on finishing it I smiled a great big smile. She says: "I have left my work many times early in the morning to take a morning ride with my husband, he knowing well that to have me go would necessitate his having a cold dinner and even more than that, after returning he must take up the work I left undone and do it himself, all for the pleasure of having my company for his morning ride." Now that must be nice, it sounds very nice, but I am inclined to believe her husband is a minister or a doctor. I have known them to do such things, but a fireman, never. Why I could not ask my husband to do that, but I would like to go just the same, but I think most of the worry and disagreeableness of married life is owing to the pursuit our husband follows. A man that labors as firemen do cannot be expected to humor and treat their families as a professional man can do. But I am certain that taking one month with another we firemen's wives enjoy life and its privileges as much as most wives. If one day has its clouds, the next has its sunshine. If our husbands do not smile the next time they come home we must hope they will give us a broad grin and that will make it balance. I think there is a great deal both can do to make home pleasant, and that husbands and wives should help bear one another's burdens.

WE MISS YOU.

Impromptu poem, in memory of our beloved friend, Mrs. George Oliver, who died June 2d at her home in Bergen Point. She was a tender and affectionate wife and companion, possessed of all those excellent womanly qualities which grace a home with peace and happiness. She leaves a large circle of friends and acquaintances, who feel that they have lost a valued friend, and will ever cherish the memory of her sweet and gentle life, which rested like a ray of sunshine upon all about her. Heaven has gained a treasure rich and rare, and although removed from our sight she is still our own, and our hearts reach out across the narrow boundary of the grave for her sweet presence, her dear love.

To the husband, who was always most kind and dutiful, loving and true, and who watched with the tenderest care and solicitude through the last painful hours, we extend our heartfelt sympathy.

Dear friend, we know 'tis weak and selfish
To mourn the so-called dead.
And wish that you were back again
Our love to share instead.

We know we should be glad your sorrows, over,
That you are from ills secure,
Happily escape the hard and bitter trials
That we must still endure.

But, oh forgive; for desolate and lonely
We are without you here:

We can but wish for you all times and seasons,
And miss you everywhere.

Yet while we would not bind your spirit to us,
Away from joys above,

Yet, oh, we hunger for your human presence,
Your words and deeds of love.

Your sympathetic thoughts, known, though unspoken.

Your silent, sweet caress:
The look of those kind eyes that shone upon us
With such deep tenderness.

No tree, or shrub, or vine, or bud, or flower,
But lifts sweet eyes to see,
And whispers in its dewy, fragrant language,
Some gentle memory.

No poem sweet, or strain of tender music,
Or song of happy bird,
But brings some happy recollections of you
By which our hearts are stirred.

And there's no place that we may e'er revisit,
Nor landscape we may view—
From mountain heights, to lowly purling
streamlet.

But they will speak of you.

We know that love, like spirit, is a thing immortal.

And that in your new sphere,
Amid the friends and scenes of wondrous beauty
You'll not forget us here.

You'll know that while we bear your loss with
courage,

As we know you'd have us do,
We count the hours impatiently that hold us
So long away from you.

M. E. B. A Conductor's Wife.

ROCKAWAY, N. J.

SANFORD, FLA., June 17, 1890.

Editor Woman's Department:

Presuming on former courtesy you have so kindly shown me by giving my articles space in the *Magazine*, I shall once more intrude, hoping these lines may catch the eyes of our fraternity and lady correspondents. We have no yellow fever at present, so you need not fumigate before printing.

Sanford is a very beautiful city of 1,000 inhabitants, 12½ miles south of Jacksonville, and the same distance north of Tampa, situated in a nest of orange groves and lakes, having an average of fifty trains per day during winter months.

We have many lines of railroads, but the most prominent are the Jacksonville, Tampa & Key West and South Florida: have good officials and en-

gineers, and what is most important to the fire-boy, excellent engines, and if rumor proves true, ere many months pass we will be lifting wood (we use no other fuel), into the fire-box of spanking new ones of the best make. The M. M. of the South Florida R. R. is a noble gentleman, and does all in his power to enable his employees to perform their duties with as little work as possible. Perhaps the salary is somewhat lower than adjoining roads, but that can be allowed, taking all else into consideration. When our Northern brothers are struggling with ice and snow trying to keep their engines and themselves from freezing, the Floridians can jump aboard in shirt sleeves and fly over the well-ballasted track at the rate of 35 miles per hour, without thought of anything but to reach their destination on time. Most probably you say, "Oh! how terribly warm it must be on an engine in South Florida in Summer." There again you are mistaken: our Summers are most delightful. We have the refreshing Atlantic breeze at all times, and if you Northern brothers and sisters do not believe it, just give us a call.

The engineers will shortly have a Division at this place. At present the nearest is Palatka, which is 75 miles distant, and at all times it is not convenient to attend their meetings. So in a few days there will be an organization at Sanford that will be an ornament to the B. L. E.

We can at least boast of a Lodge worthy of recognition, namely,—"Southern Star," No. 364. Bro. Chas. Perry, Master, and Andrew Holland, Collector and *Magazine* agent, are worthy of all praise. But are nearing promotion, and when they pass over to the right side the best wishes of the fraternity will accompany them. The Division is in a prosperous condition, numbering 18 in membership, with rather a good attendance at the meetings and a solid unity. There is a subject often discussed by our members, and I have no doubt is so discussed by other Divisions also.

When it is possible for members to attend their regular monthly meeting and they fall through neglect should the officers not issue an order to that effect and if not complied with charge an assessment. This is rigid, what there is of it, but nothing spectulouder than good attendance; it shows that all have proper interest in the welfare of the Lodge. I do say I am right in this matter by any means, but every one has the privilege of opinion and I have dared to give mine, with the expectation of hearing the officers and others say "interfering."

I trust by my next I will have the pleasure of relating something in favor of our expectant Division. At present Bros. Braswell and Bell, of Palatka, Fla. and John D. Rourke, of Jackson, Tenn., have the withdrawals awaiting its organization. I am glad to know "Kicker" is excluded from the editorial department, or else I would have no show. Who can his equals be found, is the next on docket.

Perhaps my contribution is already too lengthy so will conclude with many kind wishes for the noble men and grand Order.

I remain yours truly,

Fanny E. Rourke

HINTON, W. VA., June 1, 1890

Editor Woman's Department:

May I come to your wise *Magazine* for advice? I have read so much in the Woman's Department about how to manage a husband that I believe I was married I would have no difficulty in that. I am like Mrs. L. H., I think the managing should be done before marriage, and there will be no end of management afterwards.

Now suppose a young woman is engaged to a young man, and he in every respect comes up to Mrs. L. H.'s ideal: but as they are both young I think it best to wait two or three years before they will be united for better or worse, how should I treat or manage him to keep him true to her through that time and not be gushing or too cold?

Wishing success to the *Magazine* and prosperity to the firemen, I remain, The Firemen's Friend.

Pearl S.

[Our correspondents may answer this query.—Ed.]

ATLANTA, GA., May 31, 1890.

Editor Woman's Department:

I have been a constant reader of the *Firemen's Magazine* for more than a year and have never seen any communication from any of the lady friends of Kennesaw Lodge, No. 247. I wish to remind the boys that there is one who has not forgotten them. They have a splendid Lodge here in a very prosperous condition. The boys of Kennesaw Lodge are a generous and whole hearted class of men, my husband being one of the number. The first annual picnic was given by the B. of L. F., at Vining's station. Vining's is a beautiful and very appropriate place for picnics. It is situated on the north side of the Chattahoochee river and on the east side of the W. & A. R. R., about six or eight miles from Atlanta. There was dancing, fishing, boat-riding and music furnished by Gilmore's Band. The boys were lively and jolly and rendered all the assistance in their power to make the day pleasant, and of course they were successful as they are in all their efforts. I will send my receipt for keeping husbands home at evening and by giving it space in your columns you will make me feel that I am numbered one among the many lady friends of the *Firemen's Magazine*. I am a well wisher of the B. of L. F. and *Firemen's Magazine*.

RECEIPT FOR KEEPING HUSBANDS HOME EVENINGS.

First select the right kind of husband.
Then remember in what a severe and terrific battle of life,
the husband is engaged all on account of his wife.

He is not overworking for himself so much as you,
then make yourself an intelligent companion of your husband, too.

Be ever ready to assist him in anything he may desire.
Give him an affectionate kiss and have him a good fire.

Let the wife especially devote the privilege and pleasure,
rendering home happy and attractive beyond all measure.

Never let your husband have cause to complain.
Let you are more attractive and agreeable abroad than when at home you remain.

Always avoid concealment.
Let him stay at home with some agreement.
Content with such things as you can honorably afford.

Be ever ready to increase his happiness by some encouraging word.
Don't worry him about something his earnings cannot obtain.
Let him venture you will win his love, and his affections gain.

Let only for you he desires the worldly wealth,
you only have half an hour each day to yourself,
so may read upon some questions pertaining to his occupation,

Let him give him courage and information.
Let a husband don't stay at home evenings, in nine cases out of ten.

Let because he has nothing to stay for then.
Let yourself as attractive after marriage as before,
let all this and it's enough without saying any more.

Let me of you may think this a great deal to do,
let if you love your husband, as you should, it will be no task to you.

Panny, A Fireman's Wife.

The Washington W. C. T. U. has been instrumental in having a saloon and restaurant in the War Department removed. This is the third saloon that the ladies have banished from the public domain. The first was from the National Soldiers' Encampment during the Cleveland régime, and the other from Camp Ordway, when the Washington boys were encamped there last summer.

To the Editor of the Woman's Department:

I see that my short letter did not find its way to the waste basket, so here I am again knocking for admission to your charming circle. We had a trade carnival here a few weeks ago. Miss Lucille Rain represented the B. of L. F. Lone Star Lodge, No. 70. Her costume was lovely. Pale pink and blue satin, with B. of L. F. and a large gold star, and the number of the Lodge painted on the front of her dress. Really it was a splendid representation, and I don't think there were more than three or four firemen present to witness the interest we all take in them. Perhaps they did not appreciate it. I am not able to say. *May be* they will let us know.

The subject of managing a husband has been under discussion for quite a while. I agree with some of the sisters there should be no managing at all. They should try to help one another. I think the "Kicker" will be ready to crawl under the table and stay there every time he hears a woman's voice. Serves him right. I am almost sure that Mrs. W. M.'s description of him is just perfect, if there is such a man living. Surely it must be some fun loving person who wrote that letter just to hear the women express themselves, or, as the common phrase runs, to hear them quarrel. Be it as it may, I don't believe he will venture to write another letter soon. And I do wish his wife would write a letter but I guess he would not let her if he knew it.

I will close with good wishes for all the Brotherhood men.

Annie L.

KANSAS CITY, MO.

Editor Woman's Department:

I have just written to our noble boy who has lately gone to Mexico. I asked him if I should send him his last *Magazine* which is lying on the table beside me. It is a noble work and I do thank the Lord for putting it into the mind of man to edit such a book. It is plain common sense from beginning to end, and I really think there is no limit to the good it does. Our boy has lately joined the Brotherhood, and when he told us that he had subscribed to the *Magazine* we little thought that there was such a mine of wealth, moral wealth between its two covers.

I thought I had read it all through until I casually opened to "May's" letter, I feel that with the editor's permission I would like to have a talk with her. Her husband is "too tired to talk" when he comes home, but not "too tired" to go to "other homes" to play cards. We all have our hobbies: some one thing, some another. Your hobby, May, is your young child: your husband's hobby is cards. He likes to play: it rests him after a hard day's work: he can't play at home, so he naturally goes where he can play. I think that perhaps you have fallen into the same error as hundreds of others, your anxiety for your "young child" overshadows everything else and perhaps that very child, will, when he grows up, follow in his father's footsteps, and go to "other homes" for amusements which are denied him at his own home. "But," you say "he shall never know what a card is." That is all very well to say. Within sight of the window where I am now sitting is a large brick house, the home of a wealthy deacon of the Presbyterian church. That Deacon and his wife both think that their boy does not know one card from the other, whereas not only one but many of the neighbors could tell them that that very same boy goes to other boys' homes and to other boys' barns and plays for money. He does just what your husband does, and what perhaps your boy will do when he gets a little older. I would not have you neglect your boy. Give him his pleasures: be a companion to him, and join in his plays. Up to the time that our boy was fourteen my husband and myself used to take him to Church and Sunday School every Sunday, then in the afternoon I would read to him until he would get tired, after which he and I would play ball, marbles, jacks or anything else except cards. If he wanted to go walking we went with him. My husband and I play euchre with any friends who may come in and together we play chess. I used to play cards with my dear boy, but now he is past eighteen, and hardly knows one card from another, he don't care for them. You may think that we cannot be very good church members.

That is for the Lord to judge, but let me tell you that before that child was born and so long afterwards as we could we hoped one day to hear him preach Christ and Him crucified, and it was after much prayer and thought that his father signed a permission for him to go on the road, and so long as he keeps on the side of the noble men of the Order, we will have no cause to regret our boy's choice. Now, "May" you ask for advice which is the poorest thing any one can give, but I say, "Make your husband first in all things, and your 'young child' second. Your husband is away from home a good share of the time, then your child can be first. If possible learn to play cards.—I wish I could give you lessons—but until you can play invite in the members of those 'other homes' and let them play at your home, get up a little refreshment, some little thing, it need not be expensive. Let your husband enjoy his hobby at home, and if he has it at home he will not have to seek it from home. Give your child his pleasures, and as many as possible, but do not deny your husband the same privilege. My only excuse for writing this is that I always feel sorry when I see a mother devote herself so entirely to her children that the husband is often put in the shade, and I think that "May" is not alone.

A Fireman's Mother.

[Many thanks for this very sensible and apropos letter. Write again.—Ed.]

MEDICINE HAT, N. W. T., CANADA, June 13, 1890.

Editor Woman's Department:

In looking over the *Firemen's Magazine*, I have not seen much from Medicine Hat, so I thought I would write a few lines. Cascade Lodge, No. 342, is progressing finely, and the boys that belong to it are as fine a set as you could wish for. My brother is a fireman, therefore I take double interest in everything concerning the Lodges, engines, firemen and engineers, especially the firemen. The pleasantest part of the day to me is when I am watching the trains as they go out or come into our little town. Medicine Hat is a great deal larger now than it was two years ago. Some of the engines here have been repaired lately, and they look very nice: the 143 and the 38 are among them. Engine No. 99 is in the shops now, being repaired. The Medicine Hat General Hospital was formally opened on the 4th of June, and in the evening there was a public banquet, given by the ladies of Medicine Hat, which was a great success. Hoping this will find space in your Department, as it is my first attempt, I will close, with my best wishes for the B. of L. F. and their *Magazine*.

A Fireman's Sister, H. B. M.

NEWARK, OHIO, July 1, 1890.

Editor Woman's Department:

Kind Editor, may I come in. In regard to the letter from Fort Wayne, Ind., signed "May," I do sincerely feel sorry for her. I think she has done perfectly right in not playing cards with her husband. I think home too sacred to turn it into a gambling den to satisfy the depraved habits of any man. Some men can be won over by the kindness of their wives, providing that man has any nobility or manhood in him. I knew a man who was an habitual drinker and card player, whose wife won him over by simply kneeling at his knees and praying for him, and he has never been known to drink to excess or play cards since. All men are not of the same disposition, as you can judge by "Kicker's" letter. I would like to see him, as such specimens as he describes himself to be are rare. I think to catch him and build a bonfire around him would be a holiday to his wife. I would pity the poor wretch's sufferings but he would only be getting his just deserts. Do not think I rule my hubby with a rod of iron, for such is not the case; he manages himself, and I do the same, therefore we never wage war together; but when a wife asks advice for a cruel, drinking husband, do not tell her to keep her house tidy and her children clean, and make herself attractive, and wait with a smile for his drunken lordship, for that is as much as a saint can endure, and the majority of wives are not saints.

What does a half drunken husband care whether you have toiled to get him a good dinner, or made yourself or home attractive, or not? The first place he makes for when he crosses his threshold is some place to sleep off his drunken debauch, and in cases out of ten he gives his wife a licking before it takes his gentle snooze. I knew a wife whose husband would be black and blue from the gentle squeeze her hubby's drunken hands, and that wife was true and noble a woman and mother as ever lived, and how do you suppose she could smile? Oh, de no. That woman's heart was broken. Her children would run and hide from their father at weep sorrowful tears for their mother. No kinder could win that man. So you see it is not always wife's fault if her husband goes wrong. Those that have good husbands may thank their Heavenly Father, and consider themselves well blessed. I not always lay the wrong doing at the wife's door. I do not doubt but some women are to blame, but it is not always the case. I have seen a good deal of life, and most frequently the husband is to blame for no woman who really loves her husband is going to see his wants disregarded. She will sacrifice health and strength to please her husband. But do not blame any woman for paying little attention to a drinking, worthless scamp of a husband. I know I would not, and I do not ask others to do what I would not do myself. I am in favor of woman's rights, in some respects. I do not care voting or society, but I want my rights as a wife and mother.

Hubby is a member of Taylor Lodge, 175, and dorses every word I have written. God bless Brotherhood, and may the boys ever stand faithful is the wish of
A Friend

PRAIRIE DU CHIEN, WIS., June 20, 1890.

Editor Woman's Department:

Although I am neither the wife, mother, daughter nor sweetheart of a fireman, I am an interested reader of their *Magazine* and I have been listening while Kittie B. was talking to the Woman's Department in the June number and heard her say not to Nora Bull that she was laughing. She thinks must be left out because her eyes are black and snapping. No, indeed! Black and snapping may work as much influence as deep and saintly ones. Let them shine out as beacon lights in the darkest hours of trouble, lead him onward, up by their light and brilliancy. Eyes are the outlets of the soul. Let us hope that Kittie's are outlets of a soul as bright and shining as her own.

No doubt the happy bustle and bustle of a hurricane of a wife may be made to do as much towards driving the care from the mind of a tired husband as a quiet, noiseless footstep and a cosy nest by his side. It makes no difference what may be size, form or complexion, the woman who manages her husband, if manage it, may be called is the one of whom it can be said "Holy truth is ever by her side," and at all times the beauty her soul shines forth and lights up the lives of those whose happy lot it is to be near her.

And it matters not where ones "lofty ideas" set to them while nestling on a footstool or in a nest so long as those ideas do not stoop so low as to peer clothed in the garb of slang.

No matter upon what subject those ideas rest long as it is not a subject which will lead one to acquire the disagreeable habit of dispute and deal for in all things it is wise to be a little conciliatory and compliant. Never appears woman more lovely than when cheerfully and gracefully yielding her own wishes that she may comply with those her husband or persons thrown in her company. Now I may be entirely wrong both in this and in last letter, for I have never studied how to manage a husband, nor have I had one to experiment upon but from reasons and observation I have come to believe that would a wife be beloved, happy and respected, she must keep herself and show herself husband's equal but not try to "usurp authority."

Nora Bull

[You appear to be very near the solution of the question.—Ed.]

For Woman's Department:

COULD WE ONLY KNOW.

Could we know the heartfelt anguish
Of the friends we daily meet.
Could we know of fond hopes blighted—
Hopes of those we daily greet.
Would we not speak words of comfort
That might soothe each bitter woe—
Sow the seeds of love and kindness
Where the tares and thistles grow?

Could we see beneath the surface—
Could we read between the lines.
There'd be more of grief and sorrow
Than of joy, we there would find;
Tho' the lips are wreathed in laughter,
Yet the heart may stricken be—
Freighted with the weight of sadness.
Hid beneath gay repartee.

Could we know of day-dreams shattered,
From which all happiness has fled—
Could we know the heart's keen anguish—
Know of bitter tears now shed;
Would we not give friendly greeting
And words of kindly cheer
To hearts oppressed with sorrow—
Prove our friendship true, sincere?

Could we know when loved ones gather
"Round us with a fond "good-by,"
That when next we look upon them,
They in death may calmly lie;
Would not smiles and joyous laughter
Give place to tears and wailing woe.
Could we know the parting final—
Could we only, only know?"

Mrs. Nellie Bloom.

WEST OAKLAND, June 8, 1890

QUALIFICATIONS REQUISITE FOR YOUNG GENTLEMEN TO GAIN THE ESTEEM OF LADIES AND HAVING GAINED IT TO RETAIN IT.

In the first place I don't suppose that the lords of creation, as they are styled, deem it necessary they should receive any advice on the subject, and would prefer their side of the question postponed indefinitely.

Young gentlemen, if you wish to retain the regard of young ladies, remember I said if, if you wish to secure a position in society, to exert a beneficial influence in the surrounding community, and all that sort of thing, you should be perfect in everything that constitutes a true gentleman. Courteous, but not to excess, agreeable, but with a strict adherence to the ten commandments, industrious and honorable; with ready hands, willing feet, and a head well supplied with that which so many of you lack, that is brains; and in fact all the qualifications requisite for a young lady are equally so for a young gentleman; with the addition of those just mentioned.

And having described what a gentleman should be, for fearsome may feel discouraged, I will add that no man is supposed to possess all these virtues, even Adam was not perfect, and through his sin you see the words of scripture verified; that the iniquities of the father shall be visited upon their children even unto the third and fourth generation; and in being transmitted through so many generations they have naturally become greater; until the young man of to-day has become so badly demoralized, I doubt whether Adam could be induced to claim relationship with him.

Let us compare the young lady of the present period with the young man of to-day; or rather compare him with her.

It is to be supposed that every young man is engaged in some legitimate business.

That they claim as a mark of their superiority over the young ladies; but is it?

It is a well known fact that over 1,000,000 women in the United States are obliged to earn their living outside of home.

Again you claim that the girl of to-day is made up of rouge, powder, false teeth, false hair and wigs bangs. As to paint, the boys never paint; oh, no!

They don't use paint. Girls, when you see a dirty looking streak upon a young man's lip one Sunday and a nice, black mustache the next; depend upon it, he has either hooked his sister's box of black paint or else forgotten and rubbed his lips with the blacking brush instead of his boots.

Mustache dyed, hair parted in the middle, high heeled boots, natty cane twirled gracefully in a well gloved hand, stove pipe hat on an empty head, and our young man of to-day compares quite favorably with the girl of the period. Don't he?

Women spend money on dress; granted, but who encourages them in it? Who designs those costly dresses of silk and satin worn by the wives and daughters of our wealthiest men? Worth, the Parisian millionaire, a man made rich by the influence he exerts over the women of the land. Wine and women, men's hobby the world over, and not having the power to withstand temptation, they fall an easy victim to whatever sin besets them, and having through their own weakness fallen from grace, they look around them for something upon which to shift the responsibility, and choose wine and women.

I suppose when a man marries he thinks of the two evils he will choose the least and so takes the woman.

Young men if you wish to gain the esteem of young ladies, stop prating about their faults, and go to work earnestly to improve yourself; and I guarantee that you'll not only gain the esteem of the ladies, but having gained it will retain it.

E. E. S.

"TO THE BRAVE BOYS."

ANTIGO, June 5, 1890.

Editor Woman's Department:

No words can express the delight I experienced on receiving this month's *Magazine*. I had missed the May number, and it seemed like an old friend returning after a long absence. But it is not to tell the same old story I have entered, but to have a social chat with the boys.

As I write, the sweet tones of the bell on the evening passenger break on air, and across the window falls the shadow of a locomotive, while in far distance is heard the rumble and rush of the switch; and who shall wonder that amidst such scenes, and surrounded by so many brave men of the road, a desire to have a one sided conversation takes possession of me.

My youngest brother is numbered with the heroes—for are they not heroes, they who risk their lives for others, they who are ever ready to the call of duty, who go forth from their needed rest to carry, perhaps, a grieving son to the bedside of a dying parent, or a blushing bride to the arms of an adoring husband? Be it for sorrow or joy, they handle the "pick and scoop" with willing hands and cheerful faces.

Who can say they ever saw a railroad man who did not wear a smile, or who was not ready to lift the fallen or the helpless, or grasp the hand of the successful?

Yes, boys, you are a noble, self-sacrificing set, and the best wish I could frame for you is, that when you exchange the "scoop for the throttle," you will not change your principles also, will ever remember the day when you were "only a poor fireman," and stick to the Lodge through thick and thin.

And now, boys, your attention on another little matter. Please do not look quite so solemn—I promise not to detain you long; but should you grow weary, give me a gentle hint, and *mum* will be the pass-word. But to the point: I have nothing to do with ye married men; there are plenty of sisters racking their brains, likewise their hearts, for a method for "managing husbands." It is to the boys—the genuine boys—I wish to speak. Do you ever think, when reading those interesting letters in the "Woman's Department," that they strike you? Have you a pleasant smile and a cheery word for the sister or mother who meets you on your return? Do you inquire about their duties, social and otherwise, and show by your every act that their interests are yours? I know there are some of the boys who do, and others who do not. Now, boys, this is wrong, very wrong. Your mother or sister ought to

be managed, consulted, and treated as you intend to treat your future wife. I am proud to say I have no secrets from my brothers; my friends are theirs, and theirs mine. When my fireman boy comes home after a few days' absence, he inquires about all that interests me, and did he do otherwise I would feel hurt, and this is true of every fireman's sister. I would like to say more on this subject, as it has a wide margin, but I see a frown on the placid brow of the "Ed.," and I must draw the line, though I do hate to say good-by; but may God bless you, one and all.

Forget-Me-Not.

WASHINGTON, D. C., June 12, '90.

Editor Woman's Department:

For the first time I have read your valuable *Magazine*; am most pleased with it, and since the kind editor solicits correspondence I improve the opportunity to ask a long-wished favor.

I had an uncle—an engineer who went West and left his home and friends and has not been heard of for years—perhaps he has shared the same fate as most all brave men in his profession do. So what I wish to ask of the kind readers of the *Magazine* is, if any should know anything about the party in question they would be conferring a great favor on two anxious sisters. I am but his niece but thought how grand a surprise it would be for them if through the instrument of your paper I could obtain any information—(be it ever so little)—concerning their beloved brother.

I also have a cousin—a brakeman who left home under similar circumstances—but more recently—less than a year. His dear mother awaits anxiously any news of him, but alas not! so I am afraid it will be another such case as his uncle's. I have heard my cousin is in Texas. His name is Michael Kennedy, of Keyser, West Va., occupation a brakeman, aged about 25 years, medium height. My uncle no doubt would be in the neighborhood of 45 years and name Thomas Kennedy, an engineer of Wash. D. C., dark complexion and medium height.

Again let me beseech your kind intercession so that I may be hopeful of some little information and all who will take an interest in my cause will have my heartfelt gratitude. I will even be grateful for any suggestion that will put me on the right track to obtain the necessary information.

Yours respectfully,

Mamie Guiney,
No. 47 K. St., N. W., Wash., D. C.

PINE BLUFF, ARK., June 6, 1890.

Editor Woman's Department:

As I am a constant reader of the *Magazine*, and especially the Woman's Department, I would like to give the writers signed "May" a few pointers through the columns of the *Magazine*. Probably when her husband comes in off the road he is tired. He needs rest, I know, from experience, but when he gets the desired rest and starts out to enjoy himself in some one else's company, instead of trying to cheer up his wife, who has passed so many lonesome hours since his last arrival at home, would it not be a capital idea for her to start also? Pick up "May" and go out and enjoy yourself, let things at home do themselves for awhile, and if you do not enjoy your visits at all pretend that you do. Tell your husband what a lovely time you have had, make it appear better than it really was, let things go at home. When he comes in from the beer saloons and card parties, let him find the house all upside down, as it were, and if he complains at that just tell him that the price of two or three beers and as many cigars would pay the hire of a servant for one day. In other words, just give him to understand that you are going to enjoy yourself, if not in his company then in some one else's, and then if he still prefers the card tables and beer saloons, I think you are much better off alone than with him. Now do not get offended, for I have spent eight years of my life on the rails, but two years ago I lost my right arm and now I am confined to office work, and in my travels I have seen lots of cases like yours, some worse. Why God ever ordained it so is more than I

can tell,—that railroad men will work in hot and cold, rain and snow to earn their money, and when pay day comes buy beer instead of taking their wives, or mother, or sisters out in town and buying them a dress or hat, or some trivial thing, be it ever so small, it shows love and good will appreciated by them. If any one in this world has a hard time it is the women, and their reward for their husbands or brothers for their trouble is that they are very small, sometimes. I think "May's" case is a sad one, and my advice to her would be to have just as good a time as possible where I could. Some would say, maybe that would make him worse. Let me say right here, that any one who frequents saloons and card tables, though seldom at first, grows worse and worse. The devil finally gets a firm grip on him, and then the home is wrecked and ruin after half a life is spent. The quickest way is the best, and such a life had better be cut short in peace or misery. Well, this is the first time I have attempted to intrude into the Woman's Department and for fear this will be a recruit for the waste basket will close.

Most Thankfully Yours,

P. M. Fortune

[Come again.—Ed.]

K. D. Div. of R. I.
June 17, 1890

Editor Woman's Department:

I have just finished reading the letters in the *Magazine* giving it to the Kicker; hasn't he been roasted? and not any too much, he deserved it, and more, and if he survives I do not think he will ever dare speak against the Woman's Department again. How I would like to gaze on him for a second only, to see what he would resemble.

It is hard to believe that the Brotherhood contains such a being, for I think the R. R. men are the best men in all the world, and why shouldn't I who have a father and two brothers on the road? I am so sorry for "May," in the June number, but perhaps her husband will see his faults, for men will change sometimes; I would live in hopes.

I wish "Sabina's" would push some of these lost some Mexican firemen up north, just along the D. road and they would soon see how to win a wife. What few single firemen there are left will take a step or two long, for one, Bro. Jack Berg, and oh, how dreadful to think of it and all the girls admire him, Jack, and for two, Bro. "Yoag" Fulton, and Bro. Will Taylor are off now to St. Louis on a wedding tour.

Gate City Lodge, No. 83, gave their annual picnic to Quincy the 5th of June, which was a grand success, only they lost too much time at Warsaw. I were sick to go, but our brother was not at that day. I can't imagine why the fireman on the road looks so sad of late, why, unless—

As this is my first attempt, I will quit with the best wishes for the *Magazine*.

"The Farmer's Daughter"

CHARLESTON, ILL., June 8, 1890.

Editor Woman's Department:

While reading the *Magazine* I thought I would try and write a few lines, never seeing any from Beacon Lodge, 111, of which my husband is a member. It is composed of as fine a set of boys as can be found. Collector F. W. Neidreiser is a man in every respect, and as I had the pleasure of calling on his family while in Mattoon I found wife to be a perfect lady.

I think a good, true husband doesn't need making and I think I have one of that kind. He always prefers home to anywhere else. At present he is on the road, for he has a good trade and can't leave home with me. My whole soul is with the Brotherhood but when my husband is gone my life is with him, and I am better satisfied when he is at home for his meals and of nights.

I will bid the dear, old *Magazine* adieu for the present, but should these poorly composed lines appear in print I shall try to do better in the future. Best wishes for the B. of L. F. I am,

Mrs. J. W. Taylor

THE MAGAZINE.

Subscriptions must begin with the January, April, July or October number, and expire with the year.

Changes of Addresses of subscribers should be reported to us promptly to insure the safe delivery of the Magazine.

Contributors are required in all cases to give their real names, not necessarily for publication, but as a guarantee of good faith.

Subscribers failing to receive their Magazines will please notify us, giving name and location of Agent through whom they subscribed.

FEDERATION.

The Great Union Meeting at Denver, held under the auspices of Rocky Mountain Lodge, No. 77, and Denver Lodge, No. 273, B. of L. F.

For the discussion of the relative merits of System Federation as it exists on the U. P. System, and National Federation as established by the Supreme Council of the Federated Orders of Railway Employes.

A TRIUMPHANT SUCCESS.

As early as June 7, 1890, a call was issued for holding a grand union meeting at Denver, Colorado, June 25 and 26, under the auspices of Rocky Mountain Lodge, No. 77, and Denver Lodge, 273, B. of L. F., for the purpose of discussing Federation as it exists on the U. P. System, and as it has been established by the Supreme Council, representing the following named orders of railway employes, viz: The Brotherhood of Locomotive Firemen, the Brotherhood of Railroad Trainmen, the Switchmen's Mutual Aid Association and the Brotherhood of Railway Conductors.

The call received the approval of F. J. Sargent, Grand Master of the B. of L. F., and, as the purpose of the meeting was in the highest degree laudable, expectations relating to attendance and results were more than usually animating.

We doubt, all things considered, if a more important union meeting has ever been held, under the jurisdiction of our Brotherhood. From first to last, there was displayed an earnest desire to arrive at conclusions supported by facts, by arguments entirely free from legerdemain, from the arts and tricks of sophistry. Earnest, honest and conscientious men, had met to debate questions of acknowledged gravity and at no time during all the deliberations, were they swerved from their purpose. It should be understood that a series of meetings were held, the first being an open meeting for the public at large, two other meetings were open only to those who were members of labor organizations, while at the fourth

and last meeting, only those were in attendance who were members of the Brotherhood of Locomotive Firemen.

OPEN MEETING.

The opening meeting was held in the hall of Denver Lodge, 273, B. of L. F., corner of Arapahoe and 14th streets, which was largely attended. At this meeting Brother W. F. Hynes presided with grace and dignity. At the hour of 9:15 A. M., June 25, President Hynes gave the signal for the meeting to come to order, and after making a few preliminary remarks, proceeded to deliver the

OPENING ADDRESS,

as follows:

Brethren and Friends:—The progress and advancement of human society, its happiness, and I might say its very existence, is dependent upon the system and order by which the governments of nations are controlled; and as federation is founded upon these truths, it is therefore pertinent in introducing the subject to refer to their construction.

A government to be great, to be powerful, and to be enduring its fundamental principles must emanate from and rest upon the will of the governed. To be great in encouraging and advancing the formation of character based upon moral worth. To be powerful

—not in her armies' tread.
Or spread of canvas wing.
That bird-like o'er her navy float.

but in the love and patriotism of her people: and to be enduring as the sublime doctrines of Christianity, upon which the whole fabric should be constructed. Of the three forms of government—monarchy, aristocracy and democracy—the last is the only one in which the people is the sovereign power. In a monarchy the sovereignty of the state is placed in the hands of a single individual, with a tendency towards despotism. In the aristocracy the entire administration is under the control of a select class that grows tyrannically less. A monarchy is and always has been a colossal military school, and an exclusive military education is a false education. When the people advance in intelligence, brought about by outside influences, as the present wave of American democracy that is sweeping over Europe, and they show a desire to obtain self government, they are met by horse, foot and artillery and awed, if not terrorized into submission. This bangle, the crown, rests upon a military display of pomp and pageantry, as empty as the wig of a chief justice or the ostentation of a lord mayor's parade: and a people who will surrender their liberties for such a travesty upon government, deserves the tyranny of their masters. History gives us an example of this school in the person of that conqueror, who seeking the subjugation of people that had never done him an injury, cried out in the arrogance of his ambition, "I came, I saw, I conquered." Out from the hearts of the people, centuries after the death of Caesar, standing upon hallowed ground surrounded by the illustrious dead of his country's defenders, came at that inspiring exclamation from the elected representative of the nation: "A government of the people, for the people, and by the people, shall not perish."

REPUBLIC OF MINDS.

I feel convinced that a republic of minds cannot be obtained. An Emerson, a Longfellow or a Bronson, would from any position rise above the ordinary to the admiration of a grateful people. They were noble by the brilliancy of their intellect and the truth of their teaching. Shakespeare was not great because he was the son of his father. A king reigns because his ancestors wore a crown: Providence is no longer responsible for the imposition. Would it add luster to the name of Homer by adding lord? What has the genius of Edison lost, or the character of Wendell Phillips, by not receiving a distinction that can be

purchased like a cast-off garment? Has the wisdom of Lycurgus or Solon or the philosophy of Aristotle and Plato suffered by the absence of such meaningless titles as count, marquis, earl and similar offshoots of monarchical absurdities? Hundreds of mental paupers living in idleness and dissipation upon the fruits of industry, have only this glittering piece of tinsel to offer to their country and society. The world's record gives us many examples of where men have sacrificed their country for their king; nay, they more than once sacrifice their God.

"Ah!" exclaimed Wolsely, when the destroyer had approached, after a life that had placed a premium upon flattery. "If I had served my God as I have served my king. He would not have deserted me."

Oh! how the true nobility of character towers above this, as was exemplified by him who, when the time and occasion had made the sentence heroic, declared, "I would rather be right than be president." In the grandeur of its simplicity this impresses us like the sign of redemption that the eternal snows have hung upon the crest of the mountain. The mission of all governments should be the happiness and prosperity of the nation, not of any one part but of the whole, and only when necessity demands shall the interests of the minority be made subservient to that of the majority, sustaining the principle of "the greatest good to the greatest number," and securing to its people the widest liberty without license.

POPULAR FORMS.

No form of government, ancient or modern, affords greater opportunities or wider possibilities for the conducting of a successful issue, such a noble destiny, as that which is created by the people based upon and guaranteed by a written constitution, fostered by their patriotism and intelligence and sealed by their blood; and we enjoying the privileges of this great democracy, with pardonable pride, point to the magnificent illustration given by our republic. We have received and are directing the most perfect and comprehensive system of political institutions that can be maintained under the imperfect formation of man's nature; and in accepting the guardianship of this legacy, the liberties of a great people, surrounded by the tradition of its history, and the memory of the sacrifices that have been made to create and sustain it, we should do our share to preserve its integrity and purity, and bequeath it to posterity not degenerated by the corruption of an unfaithful legislature enacting laws by which our liberties are menaced, or by a foul judiciary, who may by peculiar rulings for the benefit of a class, destroy the democracy of our institutions. The permission of such crimes, countenanced if not endorsed by the indifference of the people, leads the way to our disintegration; nor under such circumstances can the safety of the state be guaranteed, either by charter or constitution, if the intelligence and patriotism of the people does not rise in defense of its preservation. Let us rather hand it to our descendants not only free from such taints, but strengthened and illuminated by the effulgence of our civilization. This is rapidly becoming the mission of organized labor and in this respect and for similar reasons, they shall become the worthy successors of the Grand Army of the Republic.

VALUE OF ORGANIZATION.

Organized labor takes the position that the perpetuity of our institutions makes the occasion of a revolution impossible, except such a revolution as that which was brought about by the application of steam and electricity.

The whole question of federated labor and every phase of its character is interwoven and identified with the underlying principles of this republic. Destroy one and you annihilate the other. The right to petition, the right to protest and the right of appeal are guarantees that give federation the right to exist. Is labor justified in organizing? In doing so has it elevated its standing? Has it spread the force of its standing, and obtained considerations that were otherwise denied, and to which it was justly entitled. If an affirmative answer to these questions is true, then it is the imperative duty of labor organizations to federate. Some object to federation because of the possible tyranny that might come

from its strength. While admitting the force of the objection, might I ask, are we to cease to navigate the ocean and destroy our shipping because of the peril that accompanies it? It is with these reflections and recognizing the dangers of those gigantic trusts and combines that have undertaken the regulation of our commerce, and are fast getting control of our state and national assemblies that have aroused organized labor to a realization of the situation; and here I desire to call your attention to the fact that the construction of these monopolies is founded upon the principles of absolute monarchy. As they are strengthened freedom of speech is weakened; as they advance democracy recedes, notwithstanding that a Republican form of government guaranteed to every state in this union. This is the idle alarm; every thinking man recognizes it. I meet and combat this danger we wisely apply the lesson taught by the existence of our government and upon its principles we propose to erect a federation of organized labor, not for the purpose of provoking strikes but, on the contrary, that their possibility may be reduced to a minimum. Federation is not for the purpose of coercion, but rather the justice may be done, and in demanding this justice for ourselves we are fully conscious and mindful of the rights of others. It is with the object of promoting this thought and advancing its consideration that this meeting has been called. Of the details of the application of federation, that may not be given by the speakers this morning, will be thoroughly explained in the afternoon and evening sessions.

The address of Bro. Hynes was well received. The speaker drew some striking contrasts, and was happy in his historical allusions. He sounded the key-note of the meeting, and all the speakers who followed were in harmony with the idea of federation as a means of solving one of the most difficult problems that has ever been submitted to railroad employes for solution. Having concluded his remarks, the President introduced

HON. JUDGE BELFORD,

who spoke as follows:

GENTLEMEN OF THE BROTHERHOOD OF LOCOMOTIVE FIREMEN:—In this country all movements, to be effective and successful, must draw their strength from the great reservoir of moral force. Public opinion, when thoroughly educated and enlightened, is unerring in its judgment on all questions involving right and wrong.

This labor question is an old one, and yet it constantly presenting new phases. The methods of settling disputes between capital and labor have been quite various. Let me call your attention to one or two of them and see how they have worked and see what good, if any, we can extract from them. At the beginning of this century—I believe in the year 1806—at the request of the workmen, Lyons, the First Napoleon established courts of arbitration and consideration. This system was the outgrowth of the trade guilds which had existed and regulated trade matters in some cases since the middle ages.

These councils were judicial in character, constituted under the authority of the Minister of Commerce, through the Chambers of Commerce, which are established at important trade centers of the country. They are composed of an equal number of employers and workmen members, each electing its own representative, with a president and vice-president named by the government. The authority of these councils extends to every conceivable question that can arise in the workshop not only between the workman and his employer but between the workman and his fellow workman. There is but one question which they cannot settle and that is future rates of wages—this is accomplished by mutual agreement. Arbitration is compulsory on the application of either, and the decisions of the court can be enforced the same

those of any other court of law. Tribunals similar to these are in existence in Belgium.

BUREAU OF LABOR.

In 1886 there was considerable trouble in this country in respect to our railroad system. The nation was to a greater or less degree convulsed by strikes, traffic was more or less impeded, and an unhealthy condition of affairs existed between the managers and operatives of various roads. At that time a bill was introduced in Congress providing for a speedy settlement of controversies and differences between common carriers engaged in interstate and territorial transportation of property or passengers or their employes.

This bill, although never enacted into a law, evoked considerable discussion on this subject of compulsory arbitration.

Congress, however, has not been insensible to the demands of labor. It has created a bureau of labor statistics and is gathering much needed information on this subject. It has applied the eight-hour law to its own departments, and by and by, so far as it has within its constitutional limits, will take note of and furnish some relief to the industrial struggles of the country.

I am glad to notice in your circular that you make a strike the last remedy to be applied. Partial revolutions, either in the field of politics or labor, generally end in failure. Whoever may be in the right, both sides suffer. When starvation, or the fear of it, compels the laborer to resume work by submitting to unjust demands, it is only a temporary triumph for the employer. It is only backing up the water, adding strength to its power and making ready for the desolating flood, whose unpent waters will overflow the innocent and guilty, the just and the unjust.

The liberties of this nation have nothing to fear from the sword, the cowl or the crown. That danger is located in the aggregate capital which aims to control all branches of the law-making power. God pity that land where the law governs the poor and the rich govern the laws. And yet, my friends, there is one thing that I do not like—that is dividing society into two classes, and calling one the idle rich and the other the industrious poor.

There are men worth millions who work as hard from daylight till dark as the clerks who toil at their desks. The trouble is, as M. Ruskin said years ago, society is afflicted with the idle poor who will not work, and the idle rich who despise labor; and the worthlessness of each class is always sitting in judgment on the best of the other. The industrious poor and the industrious rich always do and always have respected each other. It is the worthlessness of each class that produces and fosters the antagonism that vexes society.

LABOR'S INDEPENDENCE.

If you don't like the work don't do it, is another pet judicial phrase. Men must either work or starve—they can't always be choosers of the character of the work—and besides, the work must be done by some one. In the fierce rivalry of competition, in the clamor of individual and family hunger there is little room for freedom of will or choice. There is a vast network of necessity encompassing a man's acts and driving him forward, not voluntarily but involuntarily. Is no notice to be taken of this?

But I have already exceeded the time which I am warranted in exercising, and will conclude with the statement that the people of this city are glad to see you here. Denver has always an open hand and a warm heart for every convention which seeks to widen the opportunities of human labor, to elevate its standard, to diminish its burdens and to increase its rewards.

Judge Belford, it is needless to say, is not only an ardent friend of the workingmen of America, but brings to the discussion of labor questions, mental grasp rarely equalled. He comprehends the subject in its manifold details, and grasps it as only a patriotic statesman can. In the ranks of men of

commanding abilities and national renown, labor can number many men, who, like Judge Belford, recognize that labor has claims which must be recognized and amicably adjusted if the industrial enterprises of the country are to have a future of prosperity. Following the address of Judge Belford the President introduced

EUGENE V. DEBS,

who is reported as speaking as follows:

Eugene V. Debs, Grand Secretary and Treasurer of the Brotherhood of Locomotive Firemen, was then introduced. Although comparatively a young man he is a recognized leader. He made a telling speech and it was delivered in a very vigorous manner. He began by referring to the agitation of the question of federation and how essential it was to educate those who were in the dark and did not thoroughly understand the question. This is the age of organization. On every hand we see the grand army of workingmen organizing and federating for the contest that is before them. They are forming one grand union for the sole purpose of protection. This meeting is to secure more harmonious relations between the railway employes. There has been a great deal of criticism on what we have met here to bring about. You hear it said on every hand that labor is organized to promote disorder, to clash with capital and to create general disturbance. How unjust! how unfair! Nations have machinery for war, for their protection, but does it necessarily follow that they are always fighting? Just so with the grand federation we are endeavoring to bring about. We want a federation of all railway employes for the protection of our rights and to adjust our difference with the corporations. We don't want strikes they are the last expedient and one we are loth to enforce. There is not to-day on this continent a laboring man who wants to strike unless he has righteous cause for it. There must be some stern necessity which provokes or compels the enforcement of an extreme remedy to right the evil. The Brotherhood of Firemen whom I represent have been in existence for seventeen years, and but once during that time have they resorted to a strike to secure justice. Does that look as though we were organizing for striking purposes?

BELIEF IN UNITED ACTION.

It has been shown conclusively that no single organization can cope with the powerful corporations of to-day. We must unite—they recognize the strength of union. Time after time have single bodies of men endeavored to secure their rights from the corporation, and as often were they defeated. The wrong has triumphed where justice should have been enthroned. Now we want to adopt means of enforcing our rights when necessary. It can be done by federation. All classes of laboring men on the great railroads are alike interested. Their interests are identical. What benefits one will help all, and what injures one will hurt all.

The speaker here told how the engineers and firemen of the Ohio & Mississippi had enforced their demands recently. They were being treated unfairly and the officials of the line refused to make the required concessions. President Barnard declined to officially recognize Grand Chief Engineer Arthur or Grand Master Sargent of the Brotherhood of Locomotive Firemen. They happened to have federation on this road, but President Barnard had never given a thought to the powerful influence it possessed. When Chief Engineer Arthur and Grand Master Sargent of the firemen went home the railway officials thought they had won the battle. Imagine their surprise a few days later when the members of the Supreme Council of the Federation of the Railway Employes called on them. The Supreme Council represented the engineers, firemen, trainmen, switchmen and conductors. A note signed by representatives of each of these organizations was sent to the president of the road. They represented all the employes in the transportation department of his road. He consented to a conference and was in-

formed that he must adjust the grievances of the engineers and firemen. The Supreme Council told the haughty magnate, who a week before had scorned two of their officers, that he must sign the schedule. He signed it. [great Applause.] He saw the handwriting on the wall; he felt the power of federation. [Applause.] Now my brethren, don't you know that no single, no two or three organizations, could have brought this about? It required union, federation—and right triumphed. [Cheering.] Now we must profit by experiences of the past. We have got to federate in order to cope with these great corporations, and when that is done the epitaph of labor strikes may be written.

ARISTOCRACY IN LABOR.

My brethren, much remains to be done before all this can be accomplished. There has been some effort to build up an aristocracy of labor. Some of the engineers forget that they ever handled a scoop. They look down on the firemen. Some conductors think they are better than brakemen, and so on. Simply because they are elevated to positions where they wear better clothes and draw better wages they should not set themselves up on a higher social pinnacle. By federation all this would be eradicated for federation levels up and levels down. No inequality can exist, for federation promotes brotherly feeling and friendship.

It is especially appropriate on this occasion that I should announce to you the resignation of Austin Corbin, president of the Reading road. He was the implacable foe of the laboring man and was the monumental tyrant of the age. [Applause.] He was forced to resign. Labor organizations found him their worst enemy; he would not be fair or just. We want to treat all men fair, but when we encounter a man like Corbin or Stone we will strike. All strikes in the past could have been prevented had there been federation. Railway officials recognize the power of federation and when they see the organizations abreast they will be glad to make the concessions demanded. In fact labor is being more generally recognized and I am glad to know that legislation is being enacted to ameliorate the condition of the laboring man. Men of commanding influence in all positions, are beginning to give ear to the labor question.

In closing I want to make an appeal for federation. It will help all. No railroad employé gets more wages than he deserves, but many get less. I want to see the time when every man is justly compensated for his toil. The speaker closed by paying a glowing tribute to the noble, manly qualities of railroad men. Long applause followed his effort.

We think it is in order to make a few remarks about Brother Debs' speech, as for instance, it was considerably brief. We have something more than a half notion to criticise it with some severity, but withhold our inclinations, because our sensibilities at this writing are attuned to harmony, simply remarking, *en passant*, that the young man did the best he could under the circumstances. At the conclusion of his remarks the President introduced

HON. LAFE PENCE,

of Denver, who is reported as follows:

Hon. Lafe Pence was then introduced and delivered a splendid address, but owing to the fact that he had received imperative summons from the court his remarks were curtailed. He made reference to the organizations of railroad unions and spoke of their wonderful growth and power. He then took up the question of the responsibility of collaborators in case of accidents on railroads, the intent being to show how inhuman and grinding were railway officials when women were made widows and children fatherless through the carelessness of collaborators. Mr. Pence said that a great deal could be accomplished by federation. He thought it should be brought about as soon as possible. The railway employes should be upon the same footing as the men

they had to deal with. The railway companies are always federated together on every question that effected the employes and why should not the latter occupy the same attitude toward their employers. Mr. Pence's remarks were well received and he was loudly applauded.

Mr. Pence is a brilliant young lawyer of Denver, and in his brief address, evinced a happy faculty of holding his audience, and it was a matter of universal regret that he did not occupy more time. His views suited the occasion, and demonstrated that his head and heart are federated, when the interests of labor are up for debate. We hope the time is not distant when we shall have the pleasure of devoting more space to a speech of Mr. Pence on labor topics.

As Mr. Pence retired, Brother Hynes introduced

GEO. W. HOWARD,

Grand Chief of the Brotherhood of Railway Conductors, who spoke as follows:

Mr. Chairman and Brothers:—We all came here today with some object in view, and if we did not we should have come here with a view of benefiting our fellow-man. If there is a man within the sound of my voice who feels that he can live independently of the balance of the human race he has no business here, and he has no business on the face of the earth. [Applause.] The second great command that God Almighty gives you is to do your duty toward your fellow-men, and when you wrap yourselves into a cloak of selfishness and seat yourselves on a pinnacle of selfishness, thinking you can live to yourselves, you will find out in a short time that there is not a hand or a voice on the earth that would be raised in your behalf. [Applause.] And if you wish to affiliate again you have got to come back, not in the independent way you went off, but in a very humble way and ask pardon for the course you first pursued. One of the previous speeches referred to your motto, "United we stand, divided we fall." After about thirty years' experience in the railroad service, I stand before you a radical federalist. [Applause.] I do not speak to you merely as a railroad employé or an ex railroad employé, but I speak to you from an official standpoint as well, because I have had nearly eighteen years' experience as a railroad official.

REASONS FOR FEDERATION.

I will tell you why I am in favor of federation, and a general federation at that. Such a man as McCrea of the Pennsylvania system said he did not want to see any federation. Such a man as W. B. Strong, of the Atchinson, Topeka and Santa Fé said to me: "You ought to have more sense than to advise men to federate like that." Furthermore, McCrea said on one occasion that these organizations would merely pan out as soap bubbles, that we did not have sense enough to hold these men together, and even if we did have enough sense to try to hold them together, the men themselves did not have sense enough to stick together. Do you think that? [Laughter.] Gentlemen, I believe that in the past year I have converted as many as seventy-five sub-officials of our railroads to our way of thinking. Remember that it is not every sub-official you see that is your enemy or feels that it is his duty to degrade you to the lowest possibility in curtailing expenses. They do not all feel that way. I have no time on earth, I tell you here and frankly, for a man when he gets a subordinate position, say as train master, master of transportation or division superintendent, and who feels that because he has an opportunity of leaning against a capitalist's gate or lounging about upon a capitalist's back-steps he has therefore no further interest in the rights of the men from whose ranks he has come. [Applause.] I have no time for that man on earth. [Applause.]

GRIEVANCES ON THE PACIFIC.

It is about a year ago we had a little issue upon the Pacific coast with the California Central and the California Southern officials with regard to grievances on the part of the men there. It was about one of the first moves made in a federated way for the redress of grievances of railroad employes. We held a union meeting at San Bernardino and we very readily found volunteers who would serve in a federated capacity; that is upon a federated committee, to go and see the general manager in regard to those grievances. The general manager had paid no attention to the letters which had been addressed to him prior to the formation of that committee, but when he saw there was going to be a federated move made he then addressed us a letter in answer to our several communications that had been sent to him. But we thought then we would go up with the committee, that we would not write any more. The committee did go up and the consequence was that it just took him two minutes to make up his mind that his division superintendent had committed a grave wrong in reducing the pay of his employes and he rescinded that bulletin order at once and told the men to go back to their work and that it was all right. [Applause.] We had a little issue on the Queen & Crescent railroad, the Cincinnati New Orleans and Texas Pacific, formerly known as the Cincinnati Southern railway. We organized a division of the brotherhood there and Mr. Schiff thought that he did not want that brotherhood upon his system, so he discharged sixteen of our men. I went down to Cincinnati and with a committee called upon Mr. Schiff and he flatly told us that he would recognize nothing else except the right, the absolute right, to hire whom he pleased, pay them what he pleased and discharge them when he pleased, and he was under no obligation to give any reason for such dismissal. "But," I said, "Mr. Schiff, you are now in America; you are not in England now." He said, it does not make any difference, the principle is the same." I stayed there. We did not want to make the issue any worse than we could possibly help. It was two weeks before I could get him to make me a definite answer, and, through the treachery of a brotherhood man, I am sorry to say, they told me emphatically no; they would do nothing for us. But this Judas Iscariot was wrong. He made a miscalculation. He went up and lied, and when I telegraphed to Brother Arthur and Brother Sargent and to Brother Wilkinson to come down and assist me to settle that matter they responded at once, proving that what this Judas told the officers as to the engineers not staying with us on the occasion was false.

SETTLED BY ARBITRATION.

When the four executive officers of this brotherhood called on Mr. Solomon Schiff and gave him to understand that there was something just in our grievances, that he had no right to say whether a man should join a brotherhood or not; that he had no right to discharge a man for joining any brotherhood so long as that man did not interfere with the rights of other men. As soon as Mr. Schiff saw that he had to do something he said: "Will you not arbitrate this matter?" We told him: "Of course, that is the fair American way of settling all differences. We will pick one man, you pick one man and those two can pick a third and we will abide by their decision." Mr. Schiff said: "I am in favor of federation; I want all the men to federate on my system." [Laughter.] I say, don't you believe that? [Laughter.] They do not want you to do anything of the kind. We picked Rev. Father Mackay of the cathedral of Cincinnati. They picked John J. Hearne, president of the Third National Bank, and the two picked Mr. Henry C. Turner, a very prominent insurance man of Cincinnati, and it was admitted that it was the fairest board of arbitration that we could have got if we had canvassed Cincinnati over thoroughly. After a full deliberation this board decided that our men must be paid \$300 a piece as a fine on the part of the company [applause and laughter] which made \$3,750 which the brotherhood men got and the board charged \$300 for two days work, making \$6,050 that it cost that company for discharging those men wrongfully. I want to show you that it is necessary sometimes that you should have a general management in the system of federation. Suppose in the case of the grievances on

the Queen & Crescent system they had stood out against us. The engineers had voted solidly to a man to stand with us to a finish, let come what would. The Q. C. officials at once made a movement to the Louisville and Nashville men to get them to transport their freight in case of a strike. If we had not had a system of federation there I want to know how you would have gone to work to harmonize matters on both roads. Who would we see to get them to understand what their duty was in the premises so as to act in a general way to prevent the Q. C. freight being moved? Some would say use the committees all along the roads. That might possibly have been done, but it is a very hard matter to get many men with many minds to agree on the right line of action. But with a general federation under the laws of a council we can act intelligently and definitely to the best interests of all. We do not say that everything that has ever been done is right, but we learn to profit by our past mistakes. Rather than find fault as to something that has been done, if any good has been accomplished, suggest something that will be a little better. Do not reach up and try to pull down that which has been accomplished, but suggest something a little better, and I will thank any man at any time, at any stage of the game, if he will tell me of a fault or how I may better act for the benefit of my fellow-men. After we had made the move on the Pacific coast I met Mr. W. B. Strong, then president of the Atchafalpa Topeka and Santa Fe system, at Los Angeles. He said, "Howard, is this business going to be established as anything for a precedent in this country?" I said, "I do not know, Mr. Strong: I had not thought about that." "Now," he says, "you have got too much sense to lead men into anything of that kind. You know as well as I know that when they come up against you five abreast you can do nothing but throw up your hands." [Applause.] He told me that, and he knows his business. What we want to do, gentlemen, is to work closer together. If there is anything wrong between us let us eliminate it, and let us not find fault with what some one has done if any good has been accomplished. If a man is on the wrong track pull him back or find fault with him.

ADVICE TO WORKERS.

But where a body of men has made a move and any good has been accomplished, do not begin fault finding, but suggest something better and go and meet the parties interested. Do not stay away and shoot your missiles on paper. Get together and talk the matter over. A great deal that is written from time to time in the trade organs and other papers throughout the country tends to do a great deal of harm, whereas if men would come together and have a few expressions of ideas and opinions great good would be the result and often hard feelings would be prevented. [Applause.] Of course in a meeting of employes solely we talk a little, but differently to what we do before the public, and we are going to have a meeting here this afternoon as I understand it; a meeting to be composed of the organizations of railroad employes, of men in railroad service, perhaps others; the chairman will doubtless notify us of that before the meeting adjourns, but there will be a great deal more said at that time as to federation. Statistics go to show that in the past twenty-seven years the wealth of this country has become concentrated into 25 per cent. less hands and it is supposed, figuring it out in that ratio, that within the next thirty years, when perhaps there will be 75,000,000 of people in this country, the wealth of the country will be in the hands of 50,000 people. Do you understand what that means? That means that there will be but two classes in the country. The middle class will have been wiped out entirely. There will be one class of very rich people and another class of very poor people. If such a state of affairs is brought about, don't you know its possible effect? One hundred and fifty to two hundred of these men could buy up the State of Colorado. Don't you know if they bought all this property and got deeds to it they could do what they liked with it? That you will admit. Across the street there is a business house that rents for \$100 per month. Those men could say, after purchasing the property, on and after a certain date we must have \$200 a month rent. The tenant says that it is too

much, and that he cannot make that amount of rent out of his business. But the agent simply replies, I have nothing to do with that, for the owners or the syndicate have decided to have that. A month goes round and the tenant shows his books, and that he has only made \$125 profit that month, and that that is all he can pay. He is then told, "O, well, that is all right; give me the \$125 and I will make you a present of the \$75." And then the papers speak of this great philanthropist, who has been so magnanimous and has made a present to his tenants of \$75 a month rent. That is about the state of affairs in Ireland, and if nothing is done to stop that flow or concentration of money into the hands of a comparative few, you will readily see it would be but a short time, comparatively speaking, perhaps 100 years, anyway it would not be long until we would be reduced to a perfect sordid here. Thank God, the strides that labor organizations have made in the past few years, the past three or four particularly, and the grand and great progressive labor movement of the world, not only on this side of the water but on the other side, the strides that have been made have tended to even things up a little. In the institution of the eight-hour day, more time was given to a man to devote to his family and to the improvement of himself. The wages which have increased throughout the country have somewhat prevented that concentration of money into the hands of a few and we will never have things exactly right in this world until we get this matter about so evenly adjusted that we can just about keep it balanced as it comes there. This game of life is a true dead game of win or lose every time. There is no neutral standpoint on the face of the earth. You must win or lose at every turn of the wheel, and from the very first game of marbles you ever played to the greatest financial transaction that can be engaged in, it is a game of win or lose. While somebody wins somebody else has got to lose. That is all there is about it. Take a game of marbles, and one man wins them all. We are all here, and we have got to play. If he divides the marbles so that we can get some of them again we can play still. If Jay Gould and the Vanderbilts, and the Astors, and the Rothschilds would do their duty to their fellow-men, and do it right and in a way that would not hurt them, how easily they could put \$50,000,000 apiece in a pool and send round to the banks and instruct the banks to loan it to bona fide wage earners on good security at 1 per cent. per annum. But they are never content with any percentage like that. What a great benefit it would be to the wage earners if they could be favored in that way.

LEGITIMATE USE OF MONEY.

A working man has a mortgage, say of \$500, on his house, on which he pays 8 per cent. per annum interest. If these great millionaires would loan their money through the banks at 1 per cent. per annum, the workman would borrow such money and pay off his mortgage now bearing 8 per cent. per annum. Do you see where it would help him? But the millionaires seem to feel that they have got to build almshouses or monuments in order to get themselves into the kingdom of heaven. Commodore Vanderbilt did build a school for negroes at Nashville, Tennessee, as a monument perhaps to his magnanimity. Did he get into heaven on the strength of that school? I tell you no. Peter can't be fooled in that way. Let them do their duty to their fellow-men as they ought to do it, with the amount of wealth they have got. I do not suppose they ever will, however. There was a woman in Chicago made her will the other day by which she directed the setting aside of \$10,000 to buy flowers for all seasons of the year to be put on her grave. She did not think much of herself. Oh, no! Yet people are starving to death in Chicago and living in slums and hovels. Do you see the selfishness of the expenditure of that \$10,000? I think you can. I think there will be a mark made against her name and not in the right place. There is just this one question about it, which you have got to solve and answer for yourself. We cannot depend upon philanthropy. We must acknowledge our duty to our fellow-man and work shoulder to shoulder, and the way to help yourself is to work for your fellow-man. The question for us to ask ourselves is this: Have

we the courage, the manhood to do that which we know to be right? That is the question and the only question you should answer at the outset. If you have not the best plan is to step down and out and quit trying to play the game. The cause of labor will never go backward and those who stand in the way must go down before public judgment. From the period when the workman was the absolute dependent and slave of the agricultural land and the industrial master up to the present time, the history of true civilization has been the history of labor organization. [Applause.]

STRIKE WHEN NECESSARY.

It is necessary in this organization of labor to protect yourself to let the public know that you will strike when it is necessary and also that you do not want to strike. As has been said by a previous speaker, these organizations are not formed for the purpose of perpetuating or advocating strikes. But I tell you right here that there was nothing ever accomplished on the face of the earth without a strike or without an organized force behind the issue of that a strike might occur if necessary in order to accomplish the desired results. [Applause.] God Almighty was a striker himself. At the time the children of Israel were held in bondage by the Egyptians, I ask if he did not send Moses and Aaron as a committee to old Pharaoh to get him to let the Israelites go? [Applause and laughter.] Gentlemen, we are told by some that these "agitators" ought to be whipped off of the face of the earth. But nothing on the face of the earth has ever been accomplished without agitation. Every preacher on the earth is an agitator. Every man who who desires benefit his fellow-man is an agitator, and no man comes without agitation of some kind. Good God, the elements have to be agitated when they become impure. Did you see that electrical storm on Sunday night after the hot day? What is the reason of the lightning was agitating the elements and punishing them, and no good was ever accomplished anywhere here or elsewhere, without agitation. God sent Aaron and Moses down there to talk to Pharaoh. It went time and again. Moses was a little bit weakened. He told God he could not do the talking. God said he would also send Aaron, who would be the talking. The strike was brought about through the tyrannical conditions imposed on labor. The Israelites were required to keep up their daily output of brick and hustle for their straw. [Applause and laughter.] Those are facts, gentlemen, at least the bible tells us so, anyhow. After a while through the various plagues brought upon Pharaoh and his people he decided to let the Israelites go, and he concluded he had made a mistake to let them go, and followed them to bring them back. What was the result? He was annihilated with everything he had on earth and God brought the Israelites successfully out of that strike. [Applause.] As I booked for a few remarks at this afternoon's meeting I will now conclude.

In the ranks of organized labor, there is not a man within the range of our knowledge more brilliant and less boastful, more earnest and energetic, than George V. Howard. His success in building up the Brotherhood of Railway Conductors is phenomenal. He saw with an eye of a seer the necessity for an Order of Conductors who would demand protection against wrongs and outrages, and he at once threw himself into the work with all the energy he could command, and subsequent events demonstrated how fully he comprehended the wants of Railway Conductors. It goes without saying that Bro. Howard's address was admired and applauded. After its conclusion, the President introduced

FRANK M. SWEENEY,
who was reported as follows:

Frank M. Sweeney, Grand Master of the Swift

men's Mutual Aid Association, was found to be present, and he was called on by Chairman Hynes for an address. He made a short speech, in which he extolled the virtues of the different railway organizations. In referring to the matter of federation on systems, he said much of the success that had been accomplished was due to F. P. Sargent, the Grand Master of the Supreme Council. Federation, he said, was being discussed by railway employes in all positions. They had awakened fully to their position and wanted a change. It could be brought about, and one that would be beneficial, too. The railway unions were growing, were becoming more powerful, and they should assert their rights; not that they continually had grievances, but a great many wrongs existed that should be rectified. Let them consider well this question of general amalgamation, said the speaker, for it is the vital one before us. Let some system be adopted by which every man can stand shoulder to shoulder. The Switchmen's Union is becoming powerful, and was ready to affiliate on any plan that would advance their interests. If there is federation with a Supreme Council there can be no mistakes in the adjustment of labor troubles and there will be fewer strikes. There was a true ring of federation in the remarks of the speaker, and he was warmly applauded.

Bro. Sweeney, Grand Master of the Switchmen's Association, permits nothing to remain undone calculated to promote federation. He fully comprehends its power for the good of railway employes, and it has no more steadfast friend on the continent. He demands nothing that ought not to be conceded. Quiet and unobtrusive, Bro. Sweeney is nevertheless courageous and indefatigable when work is to be done, and at such times his self-reliance and executive ability inspire confidence in others. The order over which he presides is steadily growing in numerical strength, and is commanding the respect of railroad officials.

Following Bro. Sweeney, the President introduced

MR. THOMAS NEASHAM,

Chairman of District Assembly No. 82, Knights of Labor. The report of his address was in part as follows:

The last speaker was Thomas Neasham, Master Workman and Chairman of the Knights of Labor on the Union Pacific system. He had been especially delegated by Grand Master Powderly to represent him and the order at the important meeting. He prefaced his remarks by denying a statement published in a morning sheet that there was trouble among the Knights of Labor in Denver.

"We are always on the war path," said the speaker, "but that doesn't mean a storm is constantly brewing."

We form quite an important factor among your railway organizations, and our men are scattered here and there in your midst. Just think of it, we have more than 60,000 men employed on your railroads.

Mr. Neasham then took up the matter of federation and thoroughly dissected it. His words left no doubt but that the Knights of Labor employed on the roads were ready to join the movement. He said the experiments that had been made with system federation left no doubt of its final success. He execrated the railway officials and the wealthy corporations for their offensive attitude toward the laboring men.

Bro. Neasham is a man of advanced years, and is profoundly interested in the welfare of workingmen. We venerate his years, and do not doubt but that his convictions

are strictly in accord with the sentiments he expressed. Before closing, Bro. Neasham read an article from the *Journal of the Knights of Labor*, on the labor question, which was well written, and which he said fully expressed his sentiments.

With the close of Bro. Neasham's remarks the meeting adjourned. Those who attended, must have been convinced that federation was the all-absorbing topic and what had been said awakened a lively interest in the deliberations of meetings which were to follow, when only members of labor organizations would be admitted.

AFTERNOON SESSION.

The afternoon session of the meeting began at 1:30, at which only members of labor organizations were admitted. Geo. W. Howard, Grand Chief of the B. of R. C., was chosen chairman. The purpose of the meeting was to discuss the best methods, all things considered, of federation. Here it should be stated that everybody was in favor of federation, the differences of opinion related entirely to methods. But two methods were proposed, viz.: that established by the Supreme Council of the federated orders of Railway Employes, and that system of federation in existence on the U. P. System of Railroads.

The meeting being organized, we asked permission of first being heard, and further, desired the meeting at the close of our remarks, to grant us an absence of two hours to attend the wedding ceremonies of our brother which were to take place at 5 P. M., promising to be on hand again at 6 P. M., prepared to remain all night, if exigencies required such prolonged vigils. It affords us pleasure to state that these courtesies were granted. We made the additional request, that the programme might be so changed as to have the evening session open to members of all labor organizations so that any one who might hear the remarks we proposed to offer, should have ample opportunity to reply when we were present. This request, was also granted.

We then proceeded, with such ability as we could command, to discuss federation, as established by the Supreme Council, of which we are a member.

Having concluded our remarks at 4 P. M., we left the meeting, which did not adjourn till 6 P. M., but we are not advised as to what occurred, beyond the fact, that highly interesting remarks were made by a number of the persons present.

EVENING SESSION.

The meeting convened at 7:30 P. M. with Brother G. W. Howard in the chair. Having called the meeting to order, the chairman, delivered an excellent address, dwelling chiefly upon the importance of protection to railroad employes and demonstrat-

ing conclusively, that protection could be secured only through federation. He wanted the discussion to draw forth the opinions of the representatives of labor, who were present, upon the subject and thought that important and lasting benefits could be secured thereby. Having concluded his remarks, the chairman announced that discussion was in order.

The first to respond was

BROTHER J. N. CORBIN,

Editor of the *Union Pacific Employes' Magazine*. Bro. Corbin is an agreeable speaker, as well as a vigorous writer, and his argument was devoted to an explanation and defense of federation as practiced on the U. P. system. He said that the method he advocated, brought the men on the system closer together and in many ways strengthened the bonds of mutual interest and fellowship. He made an exhaustive argument, and received appreciative attention. Following Brother Corbin came Brother

W. S. CARTER, OF 263.

Brother Carter, evidently had studied the U. P. System of federation with care, and had a fair comprehension of the subject as advocated by those who favored the method inaugurated by the Supreme Council. He saw good in both systems, and thought they could be advantageously united, the Supreme Council constituting the governing head while adopting the details of the system method for the operating power. Brother Carter's views were novel and included many valuable suggestions. At the conclusion of Brother Carter's remarks Brother

THOS. NEASHAM,

representing the Knights of Labor, took the floor, and made a plea for federation, as practiced on the U. P. system. Brother Neasham is a man of sturdy convictions and has the courage to express them. He drove straight at the mark. He favored equality among workingmen, and his earnestness was creditable to his head and heart. When Brother Neasham concluded, Brother

J. H. CATER

took the floor. He is widely known as the "Blacksmith Orator," a pseudonym won on many a rostrum where intellectual giants met for debate. Brother Cater is a Knight of Labor and in the ranks of that great order, there are few, if any, whose intellectual equipment is of a type better calculated to give it high repute. Brother Cater was for twelve years employed on the U. P. system as a blacksmith, and he is now the editor of an Odd Fellows employment paper at Denver. He is a born orator, having every quality required to captivate an audience. He was clear, concise, logical, and withal, eloquent. He is analytical. He dissects a

proposition, finds its nerves, if it has any, recognizes its vitality, or exposes its weakness and then flings it aside. His speech was a happy combination of eloquence and logic. He swept along, if not like a cyclone or an earthquake, in such a way as to command the most intense interest and admiration. His plea, in behalf of the Knights of Labor, were "words fitly spoken" and will remain in the memory of those who heard him, like "apples of gold in pictures of silver." He favored system federation, because it placed men on the plane of equality. At the conclusion of Brother Cater's address, the

EDITOR OF THE FIREMEN'S MAGAZINE

and member of the Supreme Council in virtue of his office as Grand Secretary and Treasurer of the B. of L. F., took the floor. Our readers will at once appreciate our embarrassment in reporting proceedings of a meeting, in which by virtue of circumstances we are required to refer to ourselves. It will, in this connection, be sufficient to say that we sought, in the spirit of all fairness, to review every argument made by the speakers preceding us. It was our purpose to refer to every objection made to federation as established by the Supreme Council and point out in what regards it more than the system federation, responded to the requirements of railroad employes engaged in the train service of the country. How well, or how feebly we performed this task is not for us to say, but that we, like the other speakers, conscientiously did our duty, we shall hope will not be questioned. The work of all who participated in the deliberations of the first union meeting at Denver has passed into history. That nothing good was accomplished, we do not doubt. Men, courageous men, met and interchanged opinions, compared notes, and arrived at conclusions. They were brought nearer together, and it was found, however divergent were their views, each was seeking for a happy solution of difficult problems, and where that is the case, doubt need not be entertained as to final result.

THE FIREMEN'S UNION MEETING.

On the evening of June 26, there was held a union meeting, confined to the members of the B. of L. F., under the auspices of Rocky Mountain Lodge, No. 1. The meeting was called to order by Brother Thos. N. Worth, Master of the Lodge. This was the regular meeting of the Lodge, and after the regular order of business had been gone through with, it adjourned, and a union meeting was opened with Master Worth in the chair and W. S. Carter, of Lodge, 263, as secretary.

The first business in order, was to appoint a committee to draft resolutions, voting the appreciation of the kindness of the

officials of the U. P. system and thanks for the same. The following resolutions were adopted by the committee:

WHEREAS, The management of the Colorado division of the Union Pacific railway tendered to the delegates attending this meeting a special train to visit Silver Plume, giving us an opportunity to see that triumph of engineering skill, the world-famed "loop," and the beautiful scenery leading to it. It was a day made memorable by riding in a luxurious railway car to the snow line of the Rocky mountains: therefore be it

Resolved, That we open this evening session by a grateful vote of thanks and appreciation.

The object of this union meeting was to still further discuss federation, and Brother

W. F. HYNES,

Chairman of the Committee of Arrangements took the floor. He stated the objects of the meeting, and expressed the hope that the discussions would proceed in a friendly spirit. Brother Hynes' remarks were well timed and were well received. The spirit of harmony prevailed, and it was easy to see that the brothers had one purpose, and only one purpose in view, which was to promote the good of the Order.

Following Brother Hynes, Brother

JACKSON HOVER,

of Lodge No. 88, and Chairman of the General Board of Adjustment of the U. P. system, proceeded to make an argument in favor of system federation *versus* federation as established by the Supreme Council. Bro. Hover cited instances in which system federation had been of great and special service to the men. Bro. Hover is profoundly interested in the success of the B. of L. F. He is a man full of energy, and will do to tie to on all occasions. When he speaks he has something to say, and though he may differ with you, it is in no factional spirit. At the conclusion of Brother Hover's remarks, Brother

E. P. CURTIS,

Secretary of 263, spoke at length in favor of system federation, and made a good argument. He had evidently studied the subject thoroughly and proved himself a debater worthy of recognition. At the conclusion of Brother Curtis' remarks, Brother

W. F. HYNES

again took the floor and discussed exhaustively system federation. He sought to demonstrate that it was superior to federation as inaugurated by the Supreme Council. Brother Hynes is not only a ready writer but a ready debater, and his advocacy of system federation commanded close attention throughout. Following Brother Hynes, Brother

FRANK WALTON,

Secretary of the General Board of adjustment, addressed the meeting. Brother Walton's remarks were devoted to showing

the superior advantages of system federation over that established by the Supreme Council. Brother Walton, in comprehending questions relating to the welfare of railroad employes, has few superiors. In speaking, he was calm and dispassionate. He knows a strong point, and presents it in way to make the best of it. His remarks were received by the audience in a way that was complimentary to the speaker. When Brother Walton retired, Brother

W. S. CARTER, OF 263,

took the floor. He is a close student of events, and comprehends conditions. He saw many things in the two methods of federation under discussion to commend, and thought they could be united and form a perfect system of federation which would redound to the welfare of all concerned. Brother Carter commanded the attention of all who heard him, and his remarks contained many valuable suggestions. Following Brother Carter, Brother

E. V. DEBS

took the floor. We sought to explain federation as established by the Supreme Council. Nor must we be charged with egotism when saying we think we understand the subject. With regard to any argument we made, silence on our part is becoming. Many questions were asked and we answered them with one simple purpose in view—to give the required information, to eliminate doubts, to establish confidence and promote harmony. In the Supreme Council from the beginning, conversant with every proposition, watchful and hopeful, we had no hesitancy in saying to the Brothers in Council that every step taken was the result of the most conscientious care to do only such things as would secure protection when corporations sought to practice injustice. What had been accomplished we pointed out as best we could, and sought to show that from such victories as had been gained, the Brotherhood, throughout the entire bounds of its jurisdiction, could be hopeful of achievements in the future in the highest degree satisfactory to all.

In closing this extended report of the proceedings of a union meeting, we are impressed with the fact that it dates an epoch in the history of our Brotherhood of inspiring significance. It accomplished good. It was productive of confidence, of harmony, and effectually obliterated divergent lines of action. It swept away suspicions and exalted mutual trust and forbearance. It aroused a brotherhood spirit, hopes brightened as lowering clouds disappeared, and as they moved away a bow of promise spanned their dark breast, and envies and jealousies were remanded by the fiat of heaven born fraternity to their native hell.

We should be forgetful of our duty if we were to omit saying of our Brothers on the U. P. system, regardless of their views on the subject of federation, that they work together as a unit, one in thought and purpose, evincing in what they say and do, that it is possible, whatever others may say to the contrary, to bring men into such harmonious relations that an injury to one is the concern of all.

TREACHERY OF LEGISLATORS.

The following from the *Engineers' Journal*, enclosed to the *Magazine* by Brother Frank Wynkoop, of the B. of L. E., is a matter of such general interest that we give it a place and bespeak for it attentive perusal:

JERSEY CITY, N. J. June 14th, 1890.

MESSES. EDITORS: The enclosed bill is one that was introduced in our Legislature. It passed the Assembly with only one dissenting vote: Eugene C. Cole, of Cape May County. It was then sent to the Senate, where it only received the vote of Senator Geo. T. Werts as it came from the Assembly. The following Senators voted against the bill: Henry M. Nevius, Monmouth Co.; Seaman R. Fowler, Cumberland Co.; Henry D. Winton, Bergen Co.; Watter S. Leaming, Cape May Co.; Peter D. Smith, Sussex Co.; George T. Craimer, Ocean Co.; Will H. Carter, Burlington Co.; John D. Rue, Mercer Co.; Geo. Pfeiffer, Camden Co.; Robert Adrian, Middlesex Co.; Jas. L. Miller, Union Co.; Jos. B. Roe, Gloucester Co.; Lewis A. Thompson, Somerset Co.; Martin Wyckoff, Warren Co.; Aug. F. Martin, Essex Co.; Edward F. McDonald, Hudson Co.; Jno. Mallon, Passaic Co.; Moses K. Everitt, Hunterdon Co.; William Newall, Salem Co.; Jno. J. Gardner, Atlantic Co. We most earnestly call the attention of all labor organizations in the State of New Jersey to this, and we would most respectfully ask of you to use your united efforts against any of the preceding Senators who voted against this bill should they come up for any office in your county, and see that they remain at home, as they are no friends of organized labor. They violated solemn promises made to a joint committee representing all the labor organizations in railroad service in the State of New Jersey.

Yours fraternally,

FRANK WYNKOOP, F. A. E.

ASSEMBLY No. 478.

STATE OF NEW JERSEY.

Introduced April 1, 1890, by Mr. Usher.

Referred to the Committee on Labor and Industries. Supplemented to an act entitled "An act for the better securing of wages to workmen and laborers in the State of New Jersey," approved March 9th, 1877.

1. *BE IT ENACTED by the Senate and General Assembly of the State of New Jersey*, That it shall not be lawful for any corporation doing business in this state to require workmen, laborers or other employes, in their contract of employment, or prior or subsequent thereto, to sign a written consent for said corporation to retain or keep back any part of their wages when due, under pretense of investing the same, or establishing a fund for the relief or assistance of such workmen, laborers or other employes, when sick or otherwise disabled.

2. *And be it enacted*, That it shall not be lawful for any corporation in this state, or any corporation doing business in this state, to retain or keep back any part of the wages due their workmen, laborers or other employes under pretense of assisting, relieving or maintaining said employes when sick or otherwise disabled.

3. *And be it enacted*, That all such diversion of the wages of the employes of corporations aforesaid, when due, for the use, possession or control of said employes to the control or possession of said corporations, for

the pretended use or benefit of the said employes, shall be adjudged by the courts of this state to be against public policy.

4. *And be it enacted*, That all violations of the first or second sections of this act by the directors or managing officials of any corporation of this state, or corporation doing business in this state, shall be deemed a misdemeanor, and shall subject them or any of them to an indictment for misdemeanor in any county of this state where said corporation does business; and upon conviction thereof, he, she or they shall be punished by fine or imprisonment in the county jail: said fine not to exceed two hundred dollars, and said imprisonment not to exceed six months, or both, in the discretion of the court.

The *Magazine*, long ago, took a position strictly in accord with the principles set forth in the foregoing bill, which failed to become the law of New Jersey, because of the treachery of men who disregarded the rights and interests of workmen. Such politicians should be required, everywhere, to remain at home. This miserable idea of paternalism which soulless corporations act upon, in determining what is good for workmen, is one of the methods adopted to degrade them, and ought to be effectually wiped out everywhere, and will be the moment workmen fully comprehend their rights.

CORBIN GONE.

PHILADELPHIA, PA., June 22.—Austin Corbin, president of the Reading Railroad Company, has resigned in favor of A. A. McLeod, the first vice-president. The report was confirmed yesterday by Mr. Keim, who is a director of the road and president of the Reading Coal and Iron Company. Mr. Corbin is now in Europe, but it is understood that his formal resignation was received yesterday by the board of directors, and it contains a strong suggestion of Mr. McLeod as his choice as a successor. It is possible that a special meeting of the board will be called for the early part of this week to take action on the resignation. Mr. Keim said he knew of Mr. Corbin's intention to resign, and that the president told him of it just before sailing for Europe two weeks ago. Mr. Corbin then said: "I am going to resign the presidency of the Reading."

The mills of the gods grind slow perhaps, but they grind all the same, and they grind exceeding small, and since first they turned a wheel—since first the mill stones began to revolve, no more repulsive grist than Corbin was ever offered. Mean and malicious, a liar and a knave, a petty tyrant, who used his crime-stained power to degrade workmen, he has at last been required to go. Honest men could no longer tolerate him. A dead dog now, the only hope is that his stench producing carcass may no longer pollute the air of America.

"WIMODAUGHSIS" is the name of a new association started in Washington City by Susan B. Anthony. Some one asks, what does the name mean? Stock in the association is \$5.00 a share, and for that amount Susan will tell what Wimo-daugh-sis stands for.

A SHAKING grate has been introduced on the Pennsylvania freight engines and works well. An engine runs five days without clogging.

A BROTHERHOOD HOSPITAL.

We ask the attention of our readers to the following circular:

THE MIESSE-THORP RAILWAY BROTHERHOOD HOSPITAL.

April 1, 1890.

There was incorporated at Springfield, Ill., the Miesse-Thorp Railway Brotherhood Hospital, with a capital stock of \$500,000 for the benefit of railway employes and their families, to be located at Chicago, the largest railroad center in the United States.

This was one of the greatest moves ever made for the benefit of railway employes and their families; and one in which every one whose interest is in any way identified with railroads should take a deep interest.

The subject of establishing a Brotherhood hospital has been brought before several conventions but never met with success. Since the Railway Brotherhood is growing stronger each day, a Brotherhood hospital has become a necessity.

The time has arrived and our wish granted. Our convention having failed to establish one, it was left to Drs. Miesse and Thorp to undertake this noble work, which they have so far successfully accomplished.

They will prove to the railroad fraternity that the long felt want has been supplied; that the employes have a hospital for the care of their sick and injured, which they can truly call their own and where they can remain until able to follow their vocations.

Drs. Miesse and Thorp, the associated surgeons-in-chief, will employ for male nurses, as far as possible, brotherhood men who are disabled both permanently and temporarily from following their regular occupations and who will make excellent nurses and assistants.

Nurses for female and children wards will be chosen, as far as possible, among the widows and daughters of railroad men. Employes will be admitted to the Hospital only by tickets of which there will be three classes according to the occupation and amount of danger to which they are exposed.

Class "A." Yearly tickets, with two coupons, each coupon good for four weeks, \$16, payable in three installments, first month, \$6; second month, \$5; third month, \$5. These coupons are transferable to any member of your own immediate family, requiring medical or hospital services.

This class includes: Engineers, firemen, brakemen, switchmen, conductors and baggage-men.

Class "B." Yearly tickets, with two coupons, each coupon good for three weeks, \$12, payable in three monthly installments of \$4 each, can be used same as class "A."

This class includes: Blacksmiths, boiler-makers, bolt cutters, brass finishers, brass moulders, bridge carpenters, cabinet makers, car inspectors, car oilers, carpenters, car repairers, car wheel drillers, coopers, coppersmiths, car shop employes, linemen, machinists, machine hands, masons, moulders, painters, pattern makers, spring makers, tinmiths, trucksmiths, warehousemen, wheel pressers, wood machinists, express messengers and mail agents.

Class "C." Yearly tickets \$10, without coupons, payable in two monthly installments, \$5 each.

This class includes: Boiler washers, bridge tenders, car checkers, clerks, car cleaners, car distributors, car sealers, car tracers, coal heavers, hostlers, laborers, lamp cleaners, pumpers, roadmen, section-men, tallymen, targetmen, watchmen and upholsterers.

The main ticket is not transferable. When a coupon is given it must be dated and signed by ticket holder.

The hospital will be so arranged that convalescent patients will have amusements of all kinds with which to pass the time away pleasantly.

Rooms will be allotted to family games of all kinds, including a good library, also pool and billiard tables. Everything will be done to make the patients feel at home.

The female and children's wards will contain space for amusements, such as music, fancy work, drawing, etc.

Drs. Miesse and Thorp hope the near future will see this institution under the direct control and management of the Brotherhoods.

Should any further information be desired in regard to the hospital or any of its plans of operation, such will be furnished by addressing Marshall Lapham, 529 "The Rookery," Chicago, Illinois.

POWDERLY AND GOMPERS.

The *Journal of the Knights of Labor* of July 3d devotes twelve columns to an elucidation of the troubles existing between the Order of Knights of Labor and the American Federation of Labor. Of the Knights, Mr. Powderly is Grand Master Workman, and of the Federation, Mr. Gompers is President. They are men of ability and acknowledged leaders. As Mr. Powderly has been heard through the columns of the *Journal*, it is to be presumed that Mr. Gompers will also address the public in a similar manner, and the indications all point to a rupture fraught with incalculable harm to labor, without, as we view the situation, any compensations, for let victory settle where it may, labor sustains an injury, and if it is a drawn battle its influence must be of a disastrous character. The demand of the times is to harmonize and unify workmen, but the fight between Messrs. Powderly and Gompers will not have that effect. It will breed discord, asperities and enmities. Two great labor organizations at war will be accepted by the foes of labor as proof positive, that workmen cannot pull together. The verdict, while apparently true, is nevertheless false. The great mass of organized workmen, regardless of name, are friends, working for the accomplishment of the same noble and righteous purpose. To estrange them, to array them in hostile attitudes is to inaugurate a calamity far reaching in its results, which will be deplored by the friends of labor everywhere.

We note particularly what is said about the numerical strength of the federation. If the membership is less than it was thought to be, it is a matter which ought to excite regret, for, if the membership is even all that is claimed, it would still be less than it ought to be. To hear that a labor organization is losing its membership is well calculated to dampen the ardor of any other organization, and certainly there is nothing in such reports to rejoice over. We hope to see the time when the Knights of Labor can boast of regaining its numerical power, and that the federation has not been less successful. This *Magazine*, always on record as the friend of organized labor, always glad to hear of the growth of its grand army, would, were it possible to get the ear of Messrs. Gompers and Powderly, suggest that they get together and adjust their difficulties, since the continuance of the internecine conflict, cannot possibly benefit any one, except those who pray ceaselessly for the overthrow of organized labor.

MATRIMONIAL.

The Denver, Colorado *Times* of June 28th contains the following notice of the marriage of Mr. Theodore Debs and Miss Gertrude Belle Toy, of Denver:

"Happy is the bride that the sun shines on!" Colorado sunshine seemed trying to outdo itself for the sake of Miss Gertrude Belle Toy on Wednesday, June 25, her wedding day, and it was a glorious omen of the happiness she so richly deserves and which her many Denver friends heartily wish her. Miss Toy and Mr. Theodore Debs were united in marriage a few minutes after 5 o'clock, at 2910, Downing avenue, at the residence of the bride's parents, Mr. S. J. Toy, a gentleman well known in real estate, and Mrs. S. J. Toy, a lady well known and universally beloved, not only for her graceful social qualities, and charm as a hostess, but for her never ending deeds of wise and kindly charity and thoughtful helpfulness. A daughter leaving such a home could but be a light and blessing to her new one wherever it may be. That she had followed in her mother's footsteps was testified to by the numbers of the gifts poured in upon her, marking not only social and friendly esteem, but the feelings of grateful hearts for loving kindnesses of the past. Even the Chinese boys of her class in Trinity church, who had given her a costly bit of their native decorative work, made entirely of their own odd pierced coins, the number used being sufficient, they said, to support one a long time in China, added their tokens in the shape of handsome wedding gifts, as will be seen in the list.

Mr. Theodore Debs, the fortunate groom, is a well known and prosperous young man of Terre Haute, Ind. Admiring eyes followed both the tall, fine-looking groom and the strikingly beautiful bride in her lovely bridal robe of cream faille, as shortly after 5 p. m. the bridal cortege entered the parlors to the grand strains of Mendelssohn's wedding march and took up their positions before the Rev. G. N. Eldridge of Christ M. E. church. The attendants were Mr. Ed. Toy, brother of the bride, and Mrs. Ed. Toy, lovely as usual in white surah; Mr. Charles White and Miss Birdie Shuck, also in soft white, with accordion-plated skirt, both ladies carrying exquisite roses; also little Miss Gertrude Cleverger, a namesake and niece of the bride's, a little angel in white. The wedding march was played by Mr. George Cruzen, of Golden, down for the occasion. The Rev. Mr. Eldridge performed the ceremony in a very beautiful and impressive manner.

"With this ring I do thee wed,"
Until Death—

In the good old way so often omitted in these days of haste and civil marriages. The rooms were exquisitely decorated with rare plants and lovely flowers.

After the Rev. Eldridge introduced Mr. and Mrs. Theodore Debs to the gathered friends, a pleasant time of kisses and congratulations followed. Then Baur's satellites brought in one delicacy after another—salads, ices, luscious berries and cream, cakes on which household skill and love had been expended, and all that the taste of an epicure could desire, till finally the bride performed the crowning act of cutting her cake, a beautiful frosted masterpiece of the art.

The groom is widely known to our Brotherhood, and so favorably known that we are not required to draw on our imagination for the belief that those who have met him will join with his elder and only brother in wishing him and his charming wife, all the happiness that heaven designed should flow from wedded life. It has been written of matrimony—

"Thou art the nurse of virtue. In thine arms
She smiles, appearing, as in truth she is,
Heaven-born and destined to the skies again".

To say nothing of brotherly ties which

could not be stronger, the groom is possessed of those qualities of head and heart which make wedlock a benediction, and that he has wisely chosen a bride, will not be questioned by those who have been brought within the influence of her loveliness of mind and person. The poet touched the right chord when he wrote:

"There is a bliss beyond that the minstrel hath told
When two that are linked in one heavenly tie,
With heart never changing and brow never cold,
Love on thro' all ills, and love on till they die."

The young couple, after their marriage hied away to Manitou Springs, Colorado, to spend a portion of their honeymoon and to breathe the pure air of the mountains, and contemplate the beautiful scenery and in fancy they have said to each other:

"Then come the wild weather—come sleet or come snow,
We will stand by each other however it blow:
Oppression and sickness, and sorrow and pain,
Shall be to our true love as links to the chain."

Their honeymoon journey over, the bride and groom, as we write are in Terre Haute the home of the groom, where they have received the warm and loving congratulations of relatives and friends, and where all wish them heaven's choicest benedictions.

THE *Denver Times* of June 28th contains the following:

A reader of the *Times* sends to the office one of Tom Moore's gems, and says that he believes the poet had scab workmen in his eye when he wrote:

Oh, for a tongue to curse the slave
Whose treason, like a deadly blight,
Comes o'er the counsels of the brave,
And blasts them in their hour of might!
May life's unblest cup for him
Be drugged with treacheries to the brim—
With hopes that but allure to fly,
With joys that vanish while he sips,
Like Dead Sea fruits that tempt the eye
But turn to ashes on the lips!
His country's curse, his children's shame,
Outcast of virtue, peace and fame,
May he, at last, with lips of flame
On the parched desert thirsting die—
While lakes that shone in mockery nigh
Are fading off, untouched, untasted,
Like the once glorious hopes he blasted!
And when from earth his spirit flies,
Just Prophet, let the damn'd one dwell
Full in the site of Paradise!
Beholding heaven and feeling hell!

DURING the progress of the Denver Union Meeting, the following telegram was received and read:

HELENA, MONT., June 26, 1898

Eugene V. Debs, Grand Secretary and Treasurer
Locomotive Firemen:

Union meeting here to-day. Delegates from Montana, Butte, Livingston, and New Lodge (at Helena), unanimously voted for national federation first, last and all the time. Nothing else goes. Executive officers upheld in all their actions.

[Signed]

THOS. MCCARTY
JAMES BOOMER,
JAMES MARTIN,
THOS. LYNCH, } Committee

Such things are cheerfully significant.

THE LABOR PRESS.

The *Rights of Labor*, published in Chicago, in a recent issue, remarks upon the Labor press as follows:

In this age when capital has the command of the leading papers to represent its side of the case in the various struggles continually occurring between employer and employé, it is not strange that the demand of the toilers for an independent Labor press should call out a supply. The Labor press is a necessity that the toilers too often fail to recognize. But for the cause they represent it is even a greater necessity that the fundamental principles underlying the conflict should be clearly understood and logically presented. The issues being economic, it would seem essential that these subjects should be thoroughly discussed, yet how seldom is it that they are intelligently handled? To say that the workman is not disposed to read such "dry" matter is not to the point, for if a solution is to be arrived at, it can only be by intelligence.

Yet out of the great mass of our Labor exchanges, a very small portion of their space, often none at all, is given to economic principles. "Gush" there is by the column, as if a thought would frighten subscribers. Yet mere emotional sentimentalism is as barren of result as a vocabulary of the Choctaw dialect. Workmen who object to serious discussion, as well as editors who are unable to undertake it, are indirectly far more inimical to the adjustment of the labor question than are the Yerkes and Armours with their openly expressed contempt.

The toilers should heartily support the Labor paper wherein an honest attempt is made to intelligently discuss economic questions, for even if they find them "dry," they may rest assured that their cause is being presented to a large class of educated readers to whom the gushy sentiment of the average Labor press would but incite contempt. When the workers fail to recognize this they do themselves more injury than the "capitalistic press" they so roundly denounce. Intelligence, not rant, is needed.

It is seldom that we find expressions better calculated to arouse attention than the foregoing from the *Rights of Labor*. The facts should be heeded by the Labor press of the country generally. What is a labor press? Many of the so-called Labor publications are simply the "organs" of associations. They discuss the interests of a particular craft or order, and, as a general proposition, do not enter that broader field of discussion where opportunities are afforded to help all toilers, irrespective of occupation. It is not to be questioned that these "organs" are doing good work, but the demand is for a brotherhood spirit that reaches all and works for all, that all may be educated and elevated. This work of education has its initial stages. The first lesson is to impress upon the minds of workmen, and women, too, that their wages are far below what they earn, and ought to be advanced. The underlying question is that of wages—pay, honest pay. Organized capital seeks by every device to reduce wages, to degrade work and workers. To secure an advance in wages has ever been and always will be a struggle. It is the one eternal and irrepressible conflict. For workmen to win, they must organize. The first thing to be done in the way of education, is to teach the masses that it is only by organization that they can hope to improve their condi-

tion. To do this, abstruse propositions in economics need not, and ought not, to be introduced as an elementary lesson.

We know of an industrial enterprise that employs from 800 to 1,000 men. It is conducted upon penitentiary principles—no employé is permitted to talk to a co-employé during working hours. Some of the men are paid as low as 65 cents a day. Protests are not tolerated. If a man complains, he is told that a dozen men are waiting at the gate to take his place. The men employed in the enterprise are not organized; they are therefore at the mercy of a set of tyrannical employers and still more overbearing bosses. What these men need is education relating to the benefits to be derived from organization. What is the difficulty? Some of the men receive fair wages, and feel no concern whatever for those who are required to toil from ten to fourteen hours for less than is required to purchase sufficient food. Can the Labor press reach such men? In the community where these outrages are perpetrated there is a Labor paper, but it never mentions the wrongs to which we refer, except in a general way, which is of little service in overcoming specific outrages occurring constantly in almost every department of labor. As these wrongs are presented, the Labor press of the country should pounce upon them, nor cease their attacks until their perpetrators are made notoriously odious and infamous throughout the country.

CY. WARMAN.

At Denver we had the good fortune to meet Cy. Warman, the poet editor of *The Western Railway*. It must not be understood that the poetry in Bro. Warman's mental make up in any wise detracts from the vigor of his intellect. He can, when in the mood, dally with a star or a daisy. He can touch the chords of the heart as delicately as a zephyr sweeps the strings of an Æolian harp. He can *federate* with cupid, and down with his darts a cowboy, and make him kneel at the shrine of love and beauty—but, when occasion requires it, and don't you forget it, he is a cyclone or an earthquake, an avalanche or a maddened torrent. On such occasions, Cy Warman retires the poet and goes upon the warpath, and his warclub and tomahawk permits no guilty man to escape. He has made the *Western Railway* all that his most ardent friends could desire; a paper that is read and sought after. If there are still higher elevations of success for his enterprise we shall be glad to hear of his reaching them, and it affords us something more than pleasure to write Cy Warman down as our friend, and in all of the boundless felicities of the term, we reciprocate them.

THE SUPREME COUNCIL.

Proceedings of the Annual Meeting Held in Chicago June 16th and 17th, 1890.

On June 6, 1889, the authorized officials of the Brotherhood of Locomotive Firemen, the Brotherhood of Railroad Brakemen and the Switchmen's Mutual Aid Association, met in Chicago and established the Supreme Council of the federated Orders, named—and on June 16th, 1890 the first annual meeting of the Supreme Council was convened in the same city. Since the first meeting, June 6, 1889, the Brotherhood of Railway Conductors became a member of the Supreme Council, and was fully represented in the deliberations of the meeting of which we write. The four Orders named were fully represented, as provided by the constitution of the Supreme Council.

After reading of the minutes of the first annual and the Pittsburgh and Cincinnati special sessions of the Council, which were approved, the election of officers for the ensuing year was ordered, resulting in the election of F. P. Sargent, President; Geo. W. Howard, vice-President, and W. A. Sheahan, Secretary and Treasurer.

Following the election, President F. P. Sargent delivered his annual address, in which he reviewed the results of federation during the past year. He referred particularly to the plan of federation as adopted, as also to the constitution as it now stands and to many other matters of interest. The address was well received and was ordered to be spread upon the minutes.

An application for membership in the Supreme Council was received from the Brotherhood of Telegraphers, which was referred to a special committee, and was rejected for the reason that the Brotherhood of Telegraphers admits any person to membership, following "electrical pursuits," whether in the railway service or not. As this would include men not connected with the railway service of the country the application was rejected.

The constitution of the Supreme Council, as it stands, was found, upon careful investigation, to meet every requirement and was not changed, and it was ordered that a sufficient number be printed to place a copy of the constitution in the hands of every member of the federated Orders.

The following important resolution was unanimously adopted:

Resolved, That from and after the adoption of this resolution, it shall be the duty of the chief executives of the several organizations represented in this council, to oppose the so called local or system federation, and that under all circumstances they shall support the Supreme Council as now organized as the only legitimate federation of railway employes; and that they shall be directed to use their influence in bringing into line such other organizations of railway employes as are desirable to maintain and

perpetuate the rights of all, and that all propositions relating to any other plan of federation be discountenanced by the members of all the organizations embraced in the Supreme Council.

The Committee appointed for the purpose, submitted the following address, which was adopted and ordered printed:

CHICAGO, ILL., June 17.

To the Brotherhood of Railroad Trainmen, Switchmen's Mutual Aid Association, Brotherhood of Locomotive Firemen and Brotherhood of Railway Conductors, Greeting:

DEAR SIRS AND BROTHERS:—In behalf of the Supreme Council of the United Orders of Railway Employes, we beg to report at the close of our second Annual Session, that, having heard every proposition affecting our alliance, we feel safe in saying that we are to-day the strongest organization of railway employes upon our continent. We beg to report that the Brotherhood of Railroad Trainmen has been steadfast and true; that the Brotherhood of Railway Conductors, although comparatively small numerically, have been faithful to every obligation; that the Switchmen's Mutual Aid Association, and the Brotherhood of Locomotive Firemen have been loyal to their sister organizations, and in view of these facts it is urged on behalf of the Supreme Council that each member of each of the several organizations therein represented be requested, with all the influence at his command to promote the interests of all the federated organizations.

Brethren, we appeal to you in the interest of harmony and good will. We need not say that your representatives are in perfect alliance with all the representatives of the federated organizations; that they are our friends; that we are theirs; that in every emergency we stand side by side together carrying out by action as well as by words the true import and purport of federation.

Let us remember that in our relations with each other, we are mutually bound to the interest of all; that in the storm as in the calm, we shall be brothers; that when the roll is called, every member, however humble, will respond as cheerfully as the soldiers of old responded to the solemn call of death.

Pursuant to the action of the Supreme Council, there will be forwarded to each subordinate lodge or division a package of constitutions, proportionate to membership, and it is requested that the same be distributed among the rank and file to the end that each and every member may be cognizant of the laws, rules and regulations of the Supreme Council.

Brethren, we exhort you to live in peace together. The old maxim "each for all and all for each" is as applicable to-day as when first uttered. In all of your work remember that we stand side by side and shoulder to shoulder together. Remember that in the nature of things our calling involves ceaseless peril; that the primary purpose of organization and federation is to protect us against those dangers that are incident to our life on the rail. Remember again, brethren, that we are federated for the sublime purpose of standing together in demanding an honest day's wages for an honest day's work, wherever the whistle of the locomotive bears testimony to the triumphant march of civilization.

In conclusion, we are happy to say, after a year's experience as a federated organization, that our expectations have been more than realized; that every pledge has been redeemed and that we reaffirm our faith in the federation of the several organizations of railway employes, as now established as the redeeming and emancipating power of the age.

W. A. SHEAHAN, Chairman.
 GEO. W. HOWARD, Secretary.
 E. V. DEBS.
 FRANK SWEENEY,

Committee.

The meeting was in all regards harmonious. One purpose animated the delegates, and that was to promote the welfare of every railway employe engaged in the

train service. What has already been accomplished by federation, demonstrates that we are moving in the right direction and that by united, harmonious action, greater victories for the right will crown our labors.

THE INDEPENDENT ASSOCIATION OF RAILWAY CONDUCTORS.

The exceedingly contemptible minority, both in numbers and brains of the O. R. C., have seceded from the order, and organized what they call the "Independent Association of Railway Conductors," with Cal. S. Wheaton as its chief executive officer. The men who have gone into this new organization are the sort of fellows that men of the Corbin type admire. To describe them an extensive vocabulary is not required—they are simply and essentially scabs. The term as understood in all circles of railroad employes defines their principles (?) more properly, their purposes, the motives which actuate them. They are the Hessian tools of corporations, who, bankrupt in every noble trait of character, willingly prostrate themselves at the bidding of officials, and when oppressed and defrauded workmen seek for redress, without hesitancy play the part of scabs. This bigoted and stupid vulgar fraction and faction of the O. R. C. has gone off and organized, and that there may be no misapprehensions concerning its status, Wheaton is President of the gang, and Wheaton, according to the estimate of Wm. P. Daniels, is a knave, a liar, a lick-spittle, a parasite, a venal villain who ought to be in a penitentiary. Daniels, who has been in close affiliation with Wheaton for years, represents him as morally loathsome, a creature so corrupt, so rotten, so pestilential, that a case of confluent smallpox is introduced to express the detestation which all honorable men should entertain for him, and that is the sort of a man the Association of Railway Conductors has selected to preside over them and shape their destiny. Nothing could be more fitting.

The *Elmira Telegram*, of June 29th, has an editorial article on the new order, in which it says:

We are of the opinion that Cal. S. Wheaton and those associated with him have made a grave and perhaps fatal mistake in withdrawing from the Order of Railway Conductors and forming a new organization. Such action is undignified, unseemly and ill advised.

For something like ten years Mr. Wheaton and those who share his views have governed the Order of Railway Conductors and shaped its policy. That new men and new methods were selected by the Rochester convention is not sufficient excuse for the defection of the minority.

The victorious ones had themselves submitted gracefully in the past, not permitting defeat to make them forget mutual interests and a mutual aim. Mr. Wheaton and his colleagues should have been equally generous and dignified, and waited for time to again give them the ascendancy.

Besides, they should remember that in division there is always danger. There should be but one or-

ganization of railway conductors in the country, and that should be as compact and harmonious as possible. Only by such an organization can the welfare and interests of the conductors be best subverted.

To our thinking, the men who participated in the New York City convention have taken the wrong course, and one that will lead inevitably to disaster. In time they themselves will, doubtless, see that they have.

The mistake of the men who have organized the new Association lies in the fact that they are hostile to protection, to federation, to principles and policies recognized as just and proper by men of thought and high attainments, not only in the ranks of labor, but in the ranks of statesmen and philanthropists, the well wishers of society in all circles where intellect is not degraded by mercenary greed.

This *Magazine* saw the shadow of coming events in the affairs of the O. R. C. We foretold the collapse of the organization. It sought to stem the tide of ideas which demanded the emancipation of workmen from thraldoms which were worse, all things considered, than existed in the dark ages. Railway conductors caught on, and A. D. 1890 expunged the anti-protection laws from their constitution, and then permitted Wheaton and Daniels to apologize for their courageous act. As a consequence, the O. R. C. as an organization is as good as dead. What Wheaton could not do, or did not do, Wm. P. Daniels will accomplish. He knew of Wheaton's treacheries to the order and condoned them. We do not doubt that Daniels has told the truth on Wheaton, and when Wheaton tells the truth on Daniels, crape and muffled drums, and a funeral procession will be in order, and the burial of the O. R. C. will be a fitting *finale* of an organization whose high officials betrayed every trust and for years wallowed in the slum of treason to high obligations.

Among the many satisfactions experienced while in Denver was the meeting of Ed. F. O'Shea, ex-Grand Secretary and Treasurer of the B. of R. T., and W. G. Edens, ex-Vice Grand Master of the same Brotherhood. They are now in the insurance business, and beside other enterprises with which they are identified, they now represent the Railway Officials and Conductors' Accident Association, of Indianapolis, a reliable association, and we are confident that in the entire corps of its representatives no two men can be found more reliable than Brothers O'Shea and Edens.

It is proper to say that the reason why Brothers F. P. Sargent and J. J. Hannahan were not at the Denver Union Meeting, was that the imperative demands of the Brotherhood required them elsewhere, and that but for such exigencies they would have been present.

DANIELS VS. WHEATON.

So full of artless jealousy is guilt,
It spills itself in fearing to be spilt.—*Shakespeare.*

The July number of the *Railway Conductor's* is received. We have read Daniels on Wheaton, and the open letter suggests the aphorism:—"When knaves fall out," etc. The diatribe of Mr. Daniels, we propose to show him, is constructed upon boomerang principles, and is likely to do him quite as much damage as it was intended to do "Calvin, Selah."

Before proceeding further, we desire to say, that long since the *Firemen's Magazine* pointed out the disreputable methods practiced by Wheaton, and, as it now appears, were acquiesced in by Wm. P. Daniels. True, we did not know the height and depth, length and breadth of Wheaton's corruption, as did Mr. Daniels, but we had sufficient reliable data at hand to satisfy us that Wheaton was a bad egg, and it now appears, from Mr. Daniels' invective of Wheaton, that he, Daniels, was cognizant of his knavery, first, last, and all the time, and that he covered it up, condoned it, kept it a secret from the rank and file of the membership, "for the good of the order;" that is to say, Mr. Wm. P. Daniels, one of the Grand Officers of the O. R. C. who, by virtue of his position, knew of Wheaton's depravities, had not the courage to expose him, and now confesses that his cowardice betrayed him into the commission of fatal mistakes, when every consideration of fealty to truth, to honor, to integrity, and to all things of good report among men, demanded of him the arraignment of Wheaton. Daniels confesses to a "slight feeling of surprise" that Wheaton should "take any chances of having the indisputable evidence of his rascality made public." Daniels illustrates his connection with Wheaton by reference to a man "who had been in bed with a small-pox patient," and says he, Daniels, has been in bed with that sort of a fellow "for the past three years." Now let it be remembered, that during all these three years, Daniels has been proclaiming to the world that Wheaton was not morally loathsome—corrupt, rotten to the heart—a putrefying abomination, whom the members of the O. R. C. would have expelled had Daniels done his duty. During all these years Wm. P. Daniels, so far as the rank and file of the O. R. C. knew, or the public knew, regarded Wheaton sound and healthy. He never referred to Wheaton as a "cancer to be lanced," as a man whose "crookedness" existed throughout his entire career, who "repeatedly sold out the interests of the members of the order to win favor for himself with railway officials." All of this treason to the order Daniels confesses that he knew, and that he hushed it all up, because, forsooth, to have exposed

Wheaton's knavery, duplicity, treachery, and general rascality would injure the order.

"When rogues fall out," etc. Manifestly the members of the O. R. C., if not getting their dues, have been paying their dues into a sink hole. Never in the history of organized labor has there been such an exposé of long continued rascality, low, venal and vulgar treachery. It defies hyperbole. It is the most scandalous record ever made by any organization of men on the continent. It embraces the whole range of scandalism. And Daniels avers that all that "everything stated is susceptible of proof." He has got the documents. Wheaton has gone off and joined himself to a small gang of kickers. He is a dead lion. A man of low ambition and having a thirst for position and praise, he is now the target of his old associates' shafts. Mr. Daniels will now await the reply of Wheaton. The fight is on. Its beginning betokens its end—and the end must be that every self-respecting railroad conductor in the land will promptly get out of the order. They will say, after reading the article to which we have referred—if you, Brother Daniels, knew of the rascalities which you now give to the public, and all of which you confess you were familiar with, why did you not proclaim them, that we might rid the order of such a monstrosity as C. S. Wheaton? No; you wait until the order is wrecked, and when Wheaton is gone, you pounce upon him like an owl upon a dead mouse. You are valiant now when there is little or nothing left to fight for.

Long ago, we pointed out that the officials of the O. R. C. were playing false to its membership. We knew the men of whom we were talking. Honorable, above suspicion, they were not scabs. It is now disclosed by Wm. P. Daniels that they were the victims of officials who never drew an honorable breath nor asserted an honorable principle. Sold out repeatedly, placed in a false position they were subjected to humiliations that must have wrung from them many a deep-toned anathema. Wm. P. Daniels, though he may now sob like a water-plug, is caught in the meshes of his own tarantula web, and men of thought in the O. R. C. will not be slow to see his scheme to advance his personal interests by crying down a miserable man, whose *pal* he confesses to having been in every disreputable proceeding.

It affords us no satisfaction to see a great Brotherhood wrecked—we deplore such a catastrophe. In this case, however, we find no little relief in the fact that the B. of R. C. affords a safe refuge for every conductor who desires to place himself in line with the conquering sentiments of the times.

THE wealth of the United States increases at the rate of \$2,000,000,000 a year.

STRIKE.

The word "strike" is the sign of an idea which most men dislike to contemplate—and none more, we opine, than those whose purpose it is to strike.

A great many people assume that those who *strike* do so without counting the cost; without recognizing the fact that they will be called upon to make many and grievous sacrifices; that a strike means idleness; the expenditure of money saved, and after all, involving uncertainties relating to the final outcome.

We do not doubt that there have been unnecessary strikes, just as there have been unnecessary wars; we do not doubt that strikes have sometimes resulted from the leadership of men totally disqualified to give advice in such matters, and that the penalties for such mistakes have been severe.

After making such admissions, the fact stands out in haggard prominence that some times a strike is demanded regardless of costs and of sacrifices—demanded by every consideration of right and justice, and under such circumstances not to strike is to tamely submit to outrages and accept degradation; to surrender liberty, independence, self-respect—to permit the wrong to triumph without protest or struggle, and tamely become a slave.

It was said by Admiral Porter, and the declaration will bear repeating, that "a pin is worth fighting for if it involves a principle."

The announcement of the American Admiral is eminently *American*, and will do for all nations and tribes of men. It is as applicable to individuals as to nations—to workmen as to princes—to labor organizations as to States, but a miserable, subsidized, monopolistic press, and a miserable gang of politicians, who fawn about the rich men and lick the boots of millionaires, never discuss the principle which occasions strikes, but are eternally denouncing strikes and upholding those whose tyrannies are productive of strikes, and of such publications *Frank Leslie's Weekly* is a notable example.

Some months since, this paper, discussing "the cost of strikes," said:

The prime lesson for all workmen to learn is that the only true path to freedom lies through an increasing command by each individual of the capital essential to his own employment. He who does not attain this must always find himself compelled to submit to the direction of others in all the little methods of his labor, and dependent on the will of others for the opportunity to work at all.

That is to say, that it is money that secures "freedom," and without this money "workmen" will find themselves "compelled to submit to the direction of others," depending "on the will of others for the opportunity to work at all."

Such is the logic of the organ of money bags. It places the workingman without money just where the negro was before Sumpter's guns were fired—absolutely "dependent on the will of others," to accept such terms and treatment as "others" might dictate.

It would be impossible to consign American workmen to a lower level of degradation. It places them at the bottom. It makes them the "mudsills" of the social, political and business fabric. It is *caste* pure and simple—aristocracy and autocracy combined. Rights, privileges, prerogatives, liberty, independence fall prostrate in the presence of "Capital."

Take a body of workmen, employed by a capitalist. Their wages compel them to wear rags, to inhabit hovels and to subsist upon insufficient, and often offensive food. They know they are systematically robbed; they know, and the world knows, that their impoverished condition is the result of the piratical greed of their employers. The outraged men demand an increase of pay, simply to better their condition; the demand relates to the mitigation of human sufferings. The men would have better clothes, food and shelter. They would get out of the mud. They appeal to their employer for a fraction more of the wealth they create, which he is appropriating. The demand is denied. The employer's ears are deaf to all appeals. His heart is adamant. He robs and increases his wealth. The picture is not overdrawn—not over colored. The world knows it is truthful. Under such conditions the alternatives are submit or strike, and under such circumstances the press, the pulpit, the rostrum, Congress and the Legislature, the public meeting, all, all, should thunder approval of a strike. But, says the monopolistic, subsidized press, of which *Frank Leslie's Weekly* is of the meanest:

Visionaries will always be rising up and earning a cheap notoriety as friends of wage-workers, by promising them some shorter road than this to individual freedom. These visionaries, however, will generally be found to be merely using their cunning advice to others as a means to make themselves capitalists, even though the nostrum by whose sale they become capitalists in their own right be a recommendation to others to become capitalists by associated hocus-pocus.

The "visionaries" are the men who, receiving 75 cents or \$1 a day (often less than the amount named), demand more pay. The *practical* men are, in every instance, according to the monopolistic press, the men who refuse to be just, who refuse the workingman fair wages, who denounce labor organizations as "associated hocus pocus."

It does not matter. There is now a labor press. There are labor agitators, as there were in 1770 and 1776 revolutionary agitators, as there were abolition agitators at a later date. They were called "visionaries,"

but they were, nevertheless, clear-sighted, and saw coming events. The labor agitators of the present would prevent strikes, just as American patriots before the American revolution would have prevented war. They asked for justice; it was denied—then came the strike of '76. There was misery, sacrifices, death, but out of it all came liberty and independence.

Let it not be forgotten that there is something far more deplorable than strikes. It is a condition when men, subjugated and degraded, accept chains without protest. It does not matter how starry may be your flag, it does not matter how glorious may be your traditions, how boundless your country—indeed, the more highly wrought the eulogies of such things, the weaker becomes hyperbole in seeking to depict the condition of degraded men in the midst of such surroundings—men who are too degraded to strike.

DEATH AND DOGGEREL.

The *Magazine* desires to have the attention of that class of unfortunates who deem it their duty to embalm the dead in doggerel. Such people the *Magazine* regards as mentally feeble, and therefore objects of sympathy and sorrow, all the more to be pitied because they do not realize how totally bankrupt they are in all things that constitute poets of the lowest caste. Such people pursue the dead with doggerel, with such utter disregard of all things human, that the *Magazine* here and now protests and orders "down brakes." To the extent of our ability we will protect the dead, our dead brothers. The doggerel jackals and hyenas shall no more disturb their repose, and make all sensible people sick and disgusted by injecting rheumatic, dyspeptic and flatulent "in memoriam" rhymes into the *Magazine*. To write such stuff for the *Magazine* will be time thrown away. The dead are entitled to repose—exemption from ridicule. People by the score, who have no idea of a grammatical construction of a sentence, send their contributions to the *Magazine*, and ask that they be corrected and published. If it were possible to correct them, they would still insult every intelligent person. Besides, we employ no one sufficiently demented to patiently read the "in memoriam" twaddle that an inscrutable Providence permits feeble-minded persons to write and force upon our attention.

The city of New York has a ten-year-old boy who inherited a fortune of \$5,000,000. At six per cent. the youngster enjoys an income of \$300,000 a year. A fireman, working at \$2.50 a day, would have to work something over 333 years to reach the young millionaire's income for one year.

AGITATION AND AGITATORS.

Agitation is the order of nature. Nature abhors quiet as it does a vacuum.

Some one may object, and point to the "everlasting hills" in proof of their theory, forgetful of the fact, that the hills are the product of agitation.

The sea is never still. The tides forever ebb and flow. The "dead calm" presages the storm. Air in motion is the demand.

The peacefully disposed, the quiet, inert, lethargic souls, those who glory in stagnation, have never had their way. Nature prefers agitation, hence the hurricane, the tornado, the cyclone, the lightning and the thunderbolt; hence the volcano and the earthquake. Call them evils, it matters not, they are a ceaseless protest against stagnation.

Men cry "peace," but there is no peace. The elemental war goes on. Indeed, those who clamor for peace are agitators.

The pulpit is an agitator. The wranglers over creeds and dogmas, are perhaps, the most persistent of all agitators; the bed rock idea being, that a wrong exists which must be found and exterminated.

All explorers, pathfinders, in religion, morals, science, government, geography, in any and every department of human affairs, are agitators. They are seldom or never popular in the beginning of their labors. Their fate, as a rule, is to suffer derision, contumely, neglect and poverty, often penalties still more severe; the exception only vindicates the rule.

Those who are inclined to investigate facts will be satisfied that our conclusions are warranted. We could easily exhaust the space at our command by giving illustrations of the rugged road agitators have traveled, and in pointing to the ultimate triumphs they have achieved for the good of mankind.

We are not unmindful of the fact that in the army of agitators there are utopians, vagarists, men of wild fancies, impracticable people, but achievements have been of such a startling character that men who claim to be exceptionally *hot headed* will exercise great caution in rendering their verdicts in classing men as "cranks" who are the *army couriers* in proclaiming coming triumphs of mind over matter and of right over wrong.

So much as prefatory to the declaration that just now there is manifested a purpose to treat with contempt persons known as "Labor Agitators."

The employer wants quiet, stagnation; wants to be let severely alone. The agitator wont have it so. At the bottom of the labor question there exists a wrong of incalculable enormity. The labor agitator seeks to unearth it—to lay it bare, to expose it to the gaze of the world and exterminate it.

The labor agitator does not disguise his purpose. He could not if he would, and would not if he could. He is compelled to be outspoken. He must be bold. Possibly some one objects, and asserts that all labor agitators are neither honest nor in earnest; that they are wolves in sheep's clothing, traitors in disguise, unworthy of confidence and do incalculable harm. We do not hesitate to admit to some extent the impeachment. Of Christ's twelve apostles, one was a traitor. Such objections have weight, but it is as a feather compared with a mountain. The fact remains that the great body of labor agitators are honest men, working for the accomplishment of noble purposes, fraught with the highest good to men, women and children, who are the victims of wrongs as flagrant and cruel as can be inflicted under conditions which ought not to exist in any land, and which in the United States of America are infamous to an extent which defy exaggeration.

The mission of the labor agitator in the United States is first to persuade workingmen to organize—to get together for the purpose of the interchange of ideas relating to their pecuniary welfare. Organization is the practical recognition of the maxim, "in union there is strength," and without which labor has no strength. Without organization working men are at the mercy of their enemies; without organization, "labor," as was said by an Indiana member of Congress, is a "commodity, as much so as the raw materials to be worked up." Without organization the so-called "labor market" is established as it was in the days of chattel slavery, when there were slave auction blocks and slave pens, and labor was a "commodity." With organization the "market," the "block" and the pen "disappear," and labor commands wages which enable the laborer to live as becomes an American citizen.

The labor agitator wars against oppression in every form, and it is this fact that calls down upon his head the maledictions of those who have grown rich by continuous robberies.

The monopolistic, subsidized press launches its anathemas against the labor agitator; they seek to inoculate the public mind with the views of such asps as Austin Corbin and his tribe of venomous reptiles, creatures who inaugurate famine and live in luxury upon the boodle secured by their piracies.

Every labor organization that exists on the Continent to-day is a monument to the triumphs of the labor agitator. Organization is the result of agitation, not of silence and submission—not of acquiescence in the rules of wrong, but a ceaseless protest against existing evils that must be eradicated if justice is to prevail and peace be maintained.

There is now widespread agitation to secure federation of labor organizations, because federation is the culmination of the strength sought to be secured by organization.

The agitation in this direction is logical—it is natural—practicable. There is nothing associated with the agitation that has the semblance of vagary. It is not a "crank" idea. It is not visionary. No man, no set of men, no paper or periodical of character or, without character, assails the proposition. It stands secure in its symmetrical strength. All that is required is to continue the agitation, keep up the bombardment. It is a winning card. The enemies of labor are afraid of it. Already they stand apart as they see labor organizations coming into line under federated banners.

The scepter is falling from the hands of labor autocrats. From the untold millions of wealth which labor creates the time is coming when a just distribution will be ordered. There is to be more agitation, more education, a profounder recognition of great truths relating to the brotherhood of man, a more intense desire to lift up the lowly and the weak; but the trend is in that direction—watch and agitate, fight and go forward. The strong forts and citadels of the enemy are being taken, and the last will eventually fall, as did Ticonderoga when the grand old veteran took possession of it, as he said, by the "authority of the Great Jehovah and the Continental Congress."

THE *Cleveland Press* in commenting upon the claim that Birmingham, Eng., is the best governed city in the world says that it will certainly not be agreed in America that the city that allows only taxpayers to vote is an ideal city. Many Americans think that it should be so, but they forget that all who live in a town are taxpayers if they take care of themselves. The man who hands the money over to the Treasurer is generally only a go-between. He collects taxes when he collects his rents and interests. If he turns all he collects over to the Treasurer, he does uncommonly well. "The best governed city in the world will be one that gives the poor as well as the rich a voice in its government." Nothing is more common in the United States than to hear newspaper jackasses and others prate about taxpayers, as if every man who supports himself and family is not a taxpayer.

THE United States supports a minister at the capital of Peru, and the minister informs the government of the United States that "Peruvian girls are very pretty." That is what might be called peruvian bark.

CORNELIUS VANDERBILT dances in pumps, light and thin soled, while Mr. Depew dances in his everyday shoes. Think of that.

GRAND MASTER SWEENEY AND THE S.

M. A. A.

In the ranks of organized labor, Grand Master Sweeney, of the S. M. A. A., is the peer of any man for unwavering devotion to the welfare of railroad employés. Bro. Sweeney's courage, fidelity and firmness are conspicuous traits of his character. He fully appreciates conditions, and in demanding the recognition of rights, knows no such word as fear. He is prudent under all circumstances. He would improve conditions but permits things to remain as they are, in *statu quo*, until there are good reasons for believing that a change for the better can be secured. He reasons, if "eternal vigilance is the price of liberty," it not the less what must be paid to secure switchmen's rights. Bro. Sweeney is always on picket duty, and if any member of the federated Brotherhoods has a grievance, he never grows weary in his efforts to secure an honorable adjustment of the wrongs complained of, and on no occasion does he demand what is either unjust or impractical, and when a fight is on he will always be found doing his duty.

In point of numbers, the S. M. A. A. may not be as large as are enlisted under the banners of other federated orders, but what is lacking in numerical force is made up in courage and invincibility, and no order responds with more alacrity when a forlorn hope is to be led, or a battery of the enemy is to be taken and silenced. Bro. Sweeney and his army of braves which he leads are the friends of the Firemen's Brotherhood, as they are of all the Brotherhoods marshaled under the federation flag. Our Order can be of advantage to the S. M. A. A. in many ways, and we are profoundly in earnest when we say to our Brothers, stand by the switchmen and give them on all occasions and everywhere your best efforts to aid them in carrying forward their organization, for there will come times when they will repay such favors a hundred fold. If there is an order of railway employés that despises a scab more than any other, we think it is the S. M. A. A. With switchmen a scab is the most despicable creature that bears the human form. No pirate that ever scourged the seas under a black flag excited greater abhorrence in the minds of honest tars than a scab arouses in the mind of a Brotherhood switchman and woe betide the wretch, if caught plying his vocation where honest switchmen work. The S. M. A. A. is an order of railway employés deserving of the highest commendation for quick appreciation of the right and its manly defense; and we hope our brothers will give it a helping hand, whenever it can be of service to that order.

The demand for eight hours as a day's work has been made by the workingmen of Buenos Ayres, in the Argentine Republic.

INCREASE OF THE "MISERABLES."

The statistician is coming to the help of statesman and philanthropist, and the showing is anything but complimentary to our civilization. This will be seen by the following from the pen of Prof. R. W. Hume, an occasional correspondent of the *Workmen's Advocate*, who, in discussing the subject of the fearful increase in the number of imbecile persons in the United States during the past thirty years, supplies the following figures, taken from the census of 1880.

	1850	1860	1870	1880
Insane	15,610	24,052	37,423	91,997
Idiotie	15,787	18,930	24,527	76,895
Blind	9,754	12,658	20,320	48,928
Deaf	9,803	12,821	16,205	33,378
Dumb	50,954	68,561	98,675	251,198

From 1850 to 1880 population increased about 112 per cent., while the "miserables" increased during the same period nearly 400 per cent. If the rate of increase between 1870 and 1880 has been maintained between 1880 and 1890, then there will be found in the country 389,356 of these "miserables," and ratios would be about as follows:

1850, 1 to every 460 of population.

1860, 1 to every 456 of population.

1870, 1 to every 408 of population.

1880, 1 to every 195 of population.

1890, 1 to every 150 of population.

Such exhibitions of degeneracy are well calculated to make students industrious in searching for the cause, and Prof. Hume is of the opinion that it is largely owing to vicious laws, or the lack of legislation, calculated to restrain vicious men in their schemes to oppress the poor. The infernalism of monopolies, which reduces wages, blights homes, intensifies anxiety, augments the army of tramps, fills prisons and poor houses, begets physical infirmities and inflicts upon society untold evils, demands remedial legislation, and it will be had, when workingmen unify and federate to establish justice. Till then we may look for a still greater increase of physical and mental infirmities, for over-crowded asylums and prisons, greater activity in criminal courts, and more general demoralization.

SOME one says, in fact the foolish falsehood is ceaselessly going the rounds of the press, that the railroads of the United States cost \$9,000,000,000, when in fact, they did not cost the half of the sum. Of the \$9,000,000,000 at least \$5,000,000,000 is water—a fraud, the largest ever perpetrated since time began. Such a fraud could not exist an hour in any pagan land, only christian civilization permits it. Collecting dividends on \$5,000,000,000 of water, shows the sublimating influences of church and school.

CARNEGIE, says Mr. Enoch Pratt, will not "relinquish a business of \$50,000,000 a year" to become President of the B. & O.

THE wage-earners of New York and New Jersey are struggling for a weekly payment bill. It is one satisfaction, at least, to reflect that Massachusetts has passed that battle.—*Boston Labor Leader*.

The wage-earners of Massachusetts are to be congratulated, and those of New York and New Jersey should be encouraged to continue the struggle for the enactment of a law so eminently wise and just. Manifestly every state in the Union should have a law requiring employers to pay their employes every week.

In thousands of instances landlords require their wage-earning tenants to pay rent in advance, and it is well understood that in the purchase of the necessities of life, there is a difference of at least 5 per cent. between cash and credit, even when credit can be had. To the employer 5 cents may seem a small amount, but to the scantily paid employe it means a loaf of bread, and a loaf of bread every day for 300 working days is not a matter of small consequence.

We have, as we write, in our mind, a concern that employs 700 men, whose average pay is \$1.50 per day, 7 days in the week, or \$7,350 a week. These men are paid once in four weeks, but always with two weeks pay due them. When pay day comes there is due the men \$29,400.

This is withheld, an average of, say, 3½ weeks, and would earn for the employer, at 6 per cent., so withheld, say \$124, and taking the twelve payments made during the year, the employer would pocket, in the way of interest on money withheld from his employes, the snug sum of, say, \$1764—enough for a holiday excursion to a fashionable watering place, or to give to a church and receive the benediction of the "pastor." To broaden this out so as to include all the wage-earners of the country who are required to wait more than a week for their wages, and it will be seen that employers pocket a fortune every day of the year by withholding wages.

The statement goes uncontradicted that out of one hundred invitations sent to the clergymen of Indianapolis to preach sermons on the eight-hour day only two consented to do so. One couldn't see any religion in the subject, and ninety-seven kept silent. Some of the churches, where these silent preachers hold forth, sell out their seats to the highest bidder, and no poor man need apply, and all of them are exempt from taxation. It was thought that some of the preachers might have something to say because the poor Nazarene was a carpenter.

A PHILOSOPHER says, "it is just as easy to tell the truth as it is to tell a lie;" but the trouble is that some people are natural born liars; and, therefore, it is easier for them to lie than to tell the truth. Everything depends upon how a fellow is built.

THOMAS FITCH, Esq., is quoted as saying, at the National Silver Convention, that—

From a steamship to a hairpin, from a cargo of sugar to a spool of cotton, the value of every product of man's skill and industry depends upon the amount of human labor consumed in the production. The apparent debt of this nation is the number of dollars it owes; its real debt is the number of days' labor it will require to earn that number of dollars of debt it owes. Perhaps, as a people, we have not sufficiently considered these elements of political economy, and in our occasional legislation we have been too much inclined to listen to the counsels of bankers, who are supposed—I don't know why—to possess the financial wisdom of the ages, and carry upon their shoulders the credit and prosperity of this nation. I do not know why the Atlas that sustains the weight of the world should be found behind a bank counter. I say that the creditors of wealth, the people who pay the taxes, the people who plow the fields, the people who sustain the armies and bear the burdens of civil government will not be found in the places of the proud nor in the drawing-rooms of fashion. They are hammering at the anvils, they are guiding the ships, they are following the plow, they are smiting the rock, they are toiling in the cotton field, they are busy in the workshops and at the forge.

Such words would do for a gold convention, or a railroad convention, or a church convention, a convention of political economists or philanthropists, or any other convention of men, except, perhaps, Shylocks. They are words fitly spoken, and every one weighs a ton. And yet, in ten thousand instances multiplied, the men who make everything, from a hairpin to a steamship—who hew, and delve, and build, are treated as of less consequence than "dumb, driven cattle." It has been so from the beginning, and will be so to the end, unless workingmen order otherwise. If workingmen, from the bottom to the top,—the workingman at 75 cents a day and the workingman at \$5 a day,—conclude to organize and federate to obtain their just share of the wealth they create, victory will flash along their lines; otherwise defeat will overwhelm them.

THE *Boston Labor Leader* says the vital fact is that the labor question has forced itself into the field of recognition of the pulpit, and this is much when the history of past reform movements is reviewed." Now and then the pulpit exhibits some capacity in the treatment of the "labor question," but as a general proposition the "pulpit" is silent, and necessarily so, for its "weapons are not carnal" and the "strongholds of Satan" which it proposes to demolish are not trusts, syndicates and other robber devices whose barons are all too often the pillars of the church.

The last Congress, the 50th, sat 411 days, and Congressmen received \$10,000 each, or more than \$24 a day for each day of service, and yet some of them complain of poor pay.

IN Denver a horseshoer works ten hours a day except Saturday, when he works nine hours. He must not work for less than \$3 a day.

WE have on our table the *U. P. E. Magazine* for July, from which we take the following:

On June 25 and 26 at Denver, the Denver Lodges of the Brotherhood of Firemen held a union federation meeting, at which there were representatives from Firemen's Lodges throughout the West, the Brotherhood of Trainmen, Brotherhood Conductors, Brotherhood Engineers and the Knights of Labor railroad employes assemblies.

G. W. Howard, Chief of the Conductors' Brotherhood, Frank Sweeney, Chief of the Switchmen, E. V. Debs, Grand Secretary of the Firemen, were also present. The various proposed details of practical federation were thrashed out with profit to all. It being a representative meeting of the rank and file, they had a chance to have their say, and said it.

The meeting was simply instructive in its nature. No definite action being taken, but great good in bringing railroad employes closer together and to understand each other was accomplished. The "war" that has been on for some months between this *Magazine* and the *Firemen's Magazine* over the federation question was declared off. Bro. Debs in shaking hands with me, stated that he believed now that there was much in the details of practical federation that can be discussed with profit.

Our Brother federalists, Curtis and Carter, from Taylor, Texas, were in attendance, and did good work. They are true blue.

On Thursday the representatives to the meeting and friends enjoyed an excursion over the "loop" tendered by the Union Pacific Company. As a result of a number of representatives getting together on Friday, a photograph of a group of seven, entitled "Federation", was taken. The group were Hynes, Brundage, Curtis, Carter and Debs, of the Firemen's Brotherhood, Vroman of the Locomotive Engineers, and Corbin of the K. of L.

We transfer the foregoing to the columns of the *Magazine* with pleasure. It is not required to read between the lines to see that the Denver Union meeting re-established relations of amity and good will—that every line of divergence, if not totally obliterated, the high way to the success of railroad employes was made more luminous, and that the army of toilers, whose fate it is to walk therein are friends, pledged to do all things within the scope of their power and influence to better their condition. Brother Corbin, editor of the *U. P. E. Magazine*, like all the rest of us "poor wanderers of a stormy day," is human, but such a human as can forget and forgive, a trait of character which above all things makes all the world akin.

THE Indianapolis *Journal* says that a general manager who has always been very successful in operating roads, remarked that he owed his success largely to the men he had under him. In employing men the salary was secondary, the competency of the man and his willingness to work were his criterions of men in all departments. He was to-day paying salaries to certain officials considerably above the usual average in such positions, but the men earned every dollar of their salary, and he would pay them more rather than lose them. Such statements read like fiction; but truth, sometimes, is stranger than fiction. Whoever the general manager may be, he is possessed of tons of common sense.

THE Philadelphia *Press* is evidently in favor of the State owning the railways. says:

Victoria is an Australian colony with the size of the population of Kansas in 1880, or an area of 87 square miles and a population of 1,000,000.

But instead of letting corporations build the roads and giving land away to get them to do it, Victoria has kept its land and built its own railroads. The result is that this thriving little community about 1,000,000 souls, or the population of Philadelphia, had last year an income of \$41,000,000; and this sum \$16,500,000 was in the shape of profits on State railroads. Seven years ago the income of the railroads was only \$9,000,000; in 1886-8 it was \$265,000, and for the year just closed it has gone up nearly double the income of seven years ago, and no one can build roads but the State, and the State is an enterprising builder and a good manager, profits on the railroads will in time pay all the expenses of the Government. In addition Victoria only owns the post-office as the people do here, all the express business, and all the telegraph business, and the profit on these for this wise, thrifty State last year was \$2,140,000.

Victoria has a heavy debt of \$165,596,000, but but \$5,500,000 was incurred for railroads and works, which pay a heavy profit, taxpayers feel erably happy over it, and the remaining \$160,000,000 went into school buildings, which pay a profit their way, too. As all the horse-car lines are owned by the people also, the cities in Victoria get more profit from them the bigger they get, and the tax-payer again finds that it pays to own the means of communication, even if he has to pay a debt for them.

The natural result is that the surplus last year \$4,400,000, the revenue outrunning estimates by \$1,400,000. In the year just coming it will be \$5,000,000, and the "budget speech" of the Minister of Finance was principally taken up with telling of the direct and indirect taxes that could be repealed.

There are those in the United States who are anxious for the "Government" to take over the railways, telegraph, etc. They want government to be paternal and for free to be everlastingly looking to the government for help of some sort. It is the Russian, not American.

SOME one who had arrived at the conclusion that the human family is governed by selfishness, pens the following:

The world doesn't care for your woes,
Oh, no!

Not a bit!
The man who is wise never shows
His foe

That he's hit.
Every one of your neighbors has griefs of his
He greatly prefers to let your griefs alone.
And he doesn't at all enjoy hearing you groan.
So take warning and quit.

Things have been going on that way since the flood, and previous to that catastrophe we are inclined to the opinion that was, if possible, more of a hog than stork occurred.

Just now, however, things are taking a new shape. Men who have been "hiding" are preparing to strike back. There are many people who don't relish the "groans," they will have to hear them, until the silenced by the victor's shout.

WHEN a workingman strikes in Russia, the Czar finds employment for him in the army. It is the autocrat's idea of Nationalism.

President Gompers, of the American Federation of Labor, has issued the following circular under date of July 2d, viz:

TO THE WAGE-WORKERS OF ALL COUNTRIES:

COMRADES—Recognizing the identity of interests of the wage-workers of the world, the great bond of interest and sympathy which should prevail in the hearts and minds of all toilers, and inasmuch as the government of the United States of America has decided to hold an International Exhibition in the city of Chicago in 1893, in celebration of the 400th anniversary of the discovery of America, and being desirous of further cementing the friendly feeling and the necessary unity of action and concentration of thought for an amelioration in the condition and final emancipation of the toiling masses, I take pleasure in notifying you that an International Labor Congress will be held in the city of Chicago during the time of the exhibition.

The object in holding the convention is to formulate and discuss the very many questions affecting our interests and to give a greater impetus to the cause of progress and civilization, and to make known to the world by our unalterable determination, that we insist upon being larger sharers in the world's progress.

We extend to you a kind and fraternal invitation to attend this International Labor Congress, and we appeal to you to hold no other International Labor Congress in any other country during 1893.

It is our intention to have the Congress in a position to discuss the question of labor from a broad and liberal standpoint, embracing as wide a scope of economic thought as the world itself.

A temporary Executive Committee, consisting of two from each country and five from America, will be appointed in a short time to act until conventions are held.

When each National Industrial Congress shall meet, we ask them to appoint a committee of two to act as a Permanent Executive Committee on behalf of their country. In the United States each National Trade or Labor Union is requested to appoint one at their respective conventions, or if conventions are not held in time, the Executive officers (if they have the power) are requested to appoint their delegate.

Permit me to assure the organized workmen of the world that everything will be done within our power to make their stay in America both pleasant and interesting, and our Congress a credit to the great cause we have the honor to represent.

The details of arrangements will be communicated to you from time to time.

Address all communications to

Yours Fraternally,

Sam'l Gompers, President.

By order of the American Federation of Labor, 21 Clinton Place, New York City.

THE Sunday rest movement is all right, it is a grand reform, and sooner or later it is bound to conquer. It will be sooner if the gentlemen who are engineering it get rid of the hoodoos. Professional Sunday rest men are like professional labor agitators, the people catch on to them and when they do it retards the whole movement.—*Exchange.*

We regret that we do not know the name of the *nincompoop* who wrote the foregoing, but it is safe to say he is one of the gilded gang who work and write for Chinese wages in the United States. The men who demand better conditions for American workmen are denounced by corporations and a hireling press as professional labor agitators. When agitation ceases we shall have stagnation and degradation.

LINDALE is a suburb of Cleveland, about six miles distant, and is the place selected for the erection of shops and roundhouses for the Big Four at a cost of \$200,000.

THE attitude of the National Builders' Association on the eight-hour movement may be inferred by the following proposition submitted by the Boston delegation to the convention which was held in St. Paul in January last:

Recognizing the agitation for shorter hours of labor than those now prevailing, the National Association of Builders, in convention assembled, declares that as a central body, representing so many different constituents, it is not competent or proper for it to define a certain number of hours for the building trades generally to adopt, but that it should be left to the local bodies to adjust the number of hours of labor as the circumstances and condition by which they are surrounded may dictate; but we do believe that this body should persistently urge upon all local bodies that the thorough establishment of the system of payment by the hour is an absolutely necessary safeguard, and they should earnestly labor to secure the establishment of the system.

Manifestly, in one way or another, the eight-hour day is to be established, if the workmen of America so will it.

A FIRST-CLASS passenger train of five cars and a locomotive as it stands upon the track represents about \$75,000. Put, say 200 people in it, and let it go at the rate of forty miles an hour and then try to estimate the weight of responsibility upon the men who have it in charge. Having done this, it is in order to determine if it is right to underpay the men or reduce them to serfs *a la* Austin Corbin and men of his ilk?

THE Rock Island Railroad officials recently issued the following circular:

Persons known to be in the habit of becoming intoxicated must not be taken into the service of this company. Station agents, yard, train and engine men, telegraph operators, clerks and others who are known to frequent drinking places should be warned that they must stop it at once if they desire to remain in the service of this company. If known to be intoxicated either on or off duty they will be discharged. No person discharged for intoxication shall be re-employed.

SOME one has discovered that one day in the moon is equal to fourteen days on the earth. There are men on the earth, who, were they conducting business in the moon, would make their men work the entire 336 hours.

A RAILROAD train has been known to travel 92 miles in 93 minutes, and one mile in 46 seconds, and still the cry is "more speed."

A SCOTCHMAN by the name of McBean has purchased 50,000 acres of land in Wyoming, and will lay out a town and call it Beانبurg. To this, it is said, Boston objects.

THE number of people who ride on the New York elevated railways in a year is equal to eighty-five times the population of the city.

IN PASSING through the Hoosac tunnel—4½ miles long—it is usual for conductors to to cry out, "Choose your partners.

WHY not look facts squarely in the face? The labor agitation in America, and the world over, will increase. It will not be suppressed. Suppression means danger. Suppression means violent explosion. Education means agitation. It is hoped that agitation may find relief in safe development. Education has gone too far. It is no longer possible to keep the masses from thinking and learning. With thought and learning comes dissatisfaction with present conditions. That dissatisfaction will increase with greater education. It is foolish to shut our eyes against stubborn facts. There is unrest with the world's toilers. This unrest is not confined to the toilers of America. It is as broad as the world. It has been growing for several years. Labor troubles and strikes will not decrease in number, but they will increase, the railway service in America alone excepted. This exception will be due wholly to the federation or consolidation of all classes of employes. —*Railway Service Gazette.*

With the wonderful strides made in education in the United States, with school houses on every hill and in every vale; with libraries multiplying, and the press throwing off sheets by the million, how does it happen that such an enlightened gentleman as P. M. Arthur opposes federation, and is doing all in his power to keep the great Brotherhood, of which he is Grand Chief, from federating with other organizations?

SOMETHING more than twenty centuries ago a band of Gauls accidentally discovered that the ashes of burnt beech wood mixed with goats fat produced a substance which mixed with water would remove dirt from their bodies. Then the world began to wash. Now there is enough soap annually manufactured to cover the world with lather six inches deep. Notwithstanding soap is so abundant and cheap and water so plentiful there is not enough of these materials to cleanse such filthy monsters as Austin Corbin and Bonzano. Possibly fire could make them presentable. Let the devil try it on.

News comes from Italy, the land of the "Dagoes," that in some parts of the Kingdom food is so scarce that the officials are required to bury animals that die of disease at night to prevent the famishing poor from eating them, and at the same time comes the information that King Humbert's table is entirely spread with hammered gold-plate service, which is used every day. Gods! but it is a pretty picture.

"BLIND JOHNNY," a Philadelphia beggar is worth \$20,000. He begs in four cities—Chicago, Washington, Baltimore and Philadelphia. He should be called the "Big Four Beggar"—the B. F. B.

H. S. IVES, the "Young Napoleon of Finance," is out of prison and thinks of coming West to engage in business. Those having railroads not properly anchored should be on guard.

THOSE who want to railroad it above the clouds should do the Marshall pass on the Denver & Rio Grande, 10,852 feet high—292 feet more than two miles heavenward.

CORBIN.

The cable never flashed from Europe more triumphant announcement than that Austin Corbin, the heartless tyrant of the Philadelphia and Reading, had been required to retire—not only from the presidency of the system, but from the director of the corporation. It would not let the announcement come by mail, ocean steamers. Steam was too slow, or electricity was equal to the occasion. The *Magazine* felicitates itself. We have in the first sized up Corbin, and as certain sized up men who would abrogate the high prerogatives to accept subjugation at his hands, crawl in his presence and the presence of his Dago Bonzo shave and button, as might please the will of a Yankee, who concluded that America was Russia, and that he could play czar. He had demonstrated that he was such a knave, such a monstrosity of perfidy, such a disgusting abortion of greed and guilt, that even European millionaires, would not tolerate him, and Austin Corbin, with his dividends of fraud and perjury, is as loathsome as a flea that fattens in the of a mangy dog.

We are under obligations to Hon. Edw. A. Mosely for a copy of the proceedings, the second annual National Convention Railroad Commissioners, held in Washington, D. C., May 28th and 29th, 1890. During the meeting a number of important subjects were discussed, the object being as stated by Judge Cooley in his address, bringing about a uniformity of legislation relating to railroad affairs.

It affords us special satisfaction to read Vice President and General Manager J. Williams, of the Vandavia. He promptly adjusted the grievances of engineers and firemen on his system and now firemen receive 55 per cent. of the pay of engineers and everything is happy.

It is said of Bismarck that in his private capacity he carries on the business of tiller, papermaker and farmer, and has recently added that of brickmaker. He has established a large brickyard near Lauenburg, where a fine bed of clay exists.

We see it stated that there are 208 railroad bridges in the United States, total length of which is 3,213 miles. They were all good bridges firemen would be satisfied.

He, Wheaton, "has repeatedly sold the interests of the members of the Order so says Daniels. Did he always deliver goods?

THE *Railway Service Gazette* is very kind when it says:

The speech of Hon. E. V. Debs at the late union meeting at Denver is highly complimented. Mr. Debs is an able writer and speaker, and is consequently an able thinker. And most of all, he is a royal, good fellow. His heart is in the right place. They all say that. In connection with the Federation plan, he has done a noble work for the railway service. Whatever may be the future of Federation, it has already brought about a world of good.

When Brother Leflet's rose tree blooms on our side of the wall, we must be pardoned if we pluck a flower for our columns.

Six or seven years ago Walter Lackey, secretary and treasurer of the Passenger Conductors' Association of the United States, predicted that C. S. Wheaton and W. P. Daniels would sooner or later break up the Order of Railway Conductors. That prediction has come true. The Order is now split in twain, and is rapidly disintegrating.—*Railway Service Gazette*.

The Order of Railway Conductors, independent of Wheaton and Daniels, contained in itself the seeds of death. It was bound to die. It was an organization of workmen, but it framed laws which afforded these men no protection when their rights were assailed and cloven down. It was anti-American and was as certain to go, as a haystack in the pathway of a cyclone.

THE *Railway Conductors' Journal*, now that Austin Corbin no longer controls the P. & R., sits down on the pirate by saying that "those who weep over the retirement of Mr. Corbin will be very few and far between." When Corbin was in power the *Journal* kept silent, just as it did in regard to Wheaton's record. Kicking dead dogs is never engaged in by valiant men.

Literary Notices.
